end of World War II and 2 years before the Korean war, the Federal debt again began to climb.

The decline in ratio since 1948 is caused entirely by the abnormally high output of economic goods in terms of both volume and price and not by a decline in the debt level. This distinction is important. Gross national product is the arithmetical product of price multiplied by physical volume. Physical volume lately has been abnormally high because extensive military rearmament has been underway since World War II, not only for ourselves but for other nations.

Physical volume was also increased by certain relief measures and military aid for other countries and production to meet domestic demand deferred by World War II. In addition, prices have risen 49 percent since 1945. The point to be emphasized is that the physical volume of output for the period since 1940 has been abnormally high due to production for war and its waste and for demand deferred from wartime. Without another war we cannot hope to maintain this physical output regardless of what happens to prices and it should not be considered a function of Government to try it.

Disposable personal income: The citizen's reduced share of his own personal income as a percentage of the goods and services he creates is also portrayed on chart 10. The declining trend shown in table 18 is clearly defined on the chart. The trend was even more sharply downward prior to 1943 when wartime output increased greatly and to be continued, as previously mentioned, by renewed abnormal production for military purposes and deferred civilian demand.

The larger the share of production and its value absorbed by Government, the less the citizen has for his own choice of expenditures. The following data are taken from the Economic Report of the President for 1954.

1 Estimates.

Here indeed in the declining share of his own output that is allotted to him is one result of the revolution at work.

The extraordinary expenditures of Government beginning in the early thirties are continuing with increasing volume.

Changes in post war policies: Changes in governmental policy with respect to expanding participation in and control of our economic activities has been repeatedly emphasized in this study. Further light on these policies and their effect may be shown by reference to the long-term history of prices in this country. On chart 11, the trend of wholesale commodity prices in terms of 1910–14 as 100 percent are charted. Two outstanding features of this long-term trend are obvious at once:

1. The great price peaks that occur as a result of war.
2. Even in annual terms there is no such thing as price stability or normal prices.

A glance at the chart and consideration of the continuous change in the price level should suggest the impossibility of price stabilization by the Government. Complete regulation of all things economic within the country and complete insulation from all influences from without would be essential. Manifestly this is impossible. The payment of subsidy, as in agriculture, is to admit the impossibility of price control and to continue subsidy is to encourage excess production and high governmental expenditure with its evil results.

Without war the great price peaks with their resultant periods of chaos would not occur. With war, they may be temporarily distorted or deferred but the effects of abnormal war conditions cannot be permanently averted. One of the unavoidable features of war is that the cost must be paid in full in one way or another. There is no relief from this.

The great price recessions following the War of 1812, the Civil War, and World War I are typical of those which have occurred throughout history in other countries after major wars. It has now been over 8 years since hostilities ceased in World War II. Within 8 years following the close of hostilities in the prior wars mentioned, price declines from the peak values were as follows:

<table>

The depreciation of the dollar in terms of gold in 1934 would prevent an ultimate decline of prices to the low levels following earlier wars. The closer price control in effect during World War II retarded the price increase and the advent of the Korean war has helped to sustain if not to increase the latest price peak.

Present policy seems to be to prevent any such decline as we have sustained after past wars. Painful and disturbing as they were, these past declines at least resulted in paying much of the cost of the war in money of approximately the same value as that which was borrowed for its prosecution, and that except for the duration of the price peaks, those who depended upon fixed income for their living expenses were not permanently deprived of much of their purchasing power.

The new economic and debt policies seem to be designed in an effort to maintain productive activity and prices at or near the present plateau. The deluge of complaints that flow forth when a small decline from the recent peak occurs seems to indicate an unwillingness and lack of courage to face the responsibilities for our actions. This tendency is not limited to any one class or group in our citizenry. This softening of character is probably to be expected as a result of the protective and paternalistic attitude and activities assumed by Government in recent years. This may be due largely to an increased emphasis on expediency rather than to a lessening of integrity, or it may be due to both. Be that as it may, the continuation of the new philosophy will mean the retention of high-debt levels, high governmental expenses, and a high cost of living. It is important not only to balance the Federal budget but to balance it at a lower level of cost. There is no margin of safety in the advent of a serious depression or of a new war.

This is a most important point from the standpoint of public interest. In the event of a depression, Government income will drop far more rapidly than the volume of business declines. Government expenses will not decline but will increase greatly if they “remain a significant sustaining factor in the economy” as stated in the President’s Economic Report. This means additional deficit financing of large magnitude and therefore increasing public debt to unmanageable proportions.

The possibility of this coming to pass is indicated by the National Resources Planning Board in a pamphlet of its issue under the title, “Full Employment Security—Building America.” The Board asks:

1. What policies should determine the proportion of required Government outlay which should be met by taxation and by borrowing?
2. What special methods of financing, such as non-interest-bearing notes, might be used?

What are the non-interest-bearing notes to which reference is made? This is merely a euphonious term for paper money, a product of the printing press. But this paper money is also a debt of the nation. The various denominations of paper money are non-interest-bearing demand notes, payable by the Government to the holders on demand by them. The phraseology on the notes indicates this and the Supreme Court has so held:

In the case of Bank v. Supervisors (7 Wall., 31), Chief Justice Chase says: “But on the other hand it is equally clear that these notes are obligations of the United States. Their name imports obligations. Every one of them expresses upon its face an engagement of the Nation to pay the bearer a certain sum. The dollar note is an engagement to pay a dollar, and the dollar intended is the
coined dollar of the United States, a certain quantity in weight and fineness of
gold or silver, authenticated as such by the stamp of the Government. No other
dollars had before been recognized by the legislation of the National Govern-
ment as lawful money."

And in 12 Wallace, 560, Justice Bradley says:

"No one supposes that these Government certificates are never to be paid;
that the day of specie payments is never to return. And it matters not in what
form they are issues .... Through whatever changes they pass, their ultimate
destiny is to be paid."

In commenting upon these decisions Senator John Sherman said in the Senate
of the United States:

"Thus then, it is settled that this note is not a dollar but a debt due."

Aside from the fact that paper money outstanding is strictly speaking a debt
of the Nation, the importance of the non-interest-bearing note question raised
by the National Resources Planning Board lies in the threat of greatly increased
supply of paper money. The effect of such action if taken will be a renewed
stimulation of drastic inflation with all its evil results.

Based upon the most reliable data available, our margin of national solvency
is rather small. According to these figures the total debt of all forms, public
and private, in the United States was 86.5 percent of the total wealth, public
and private, in the country in 1944. Since 1944, prices have risen due to inflation,
generally from 40 to 50 percent.

In terms of current prices, this raises the value of national wealth. For this
reason and because the total debt of the country, public and private, increased
only about one-third as much as prices, the ratio of debt to wealth as of 1948,
had dropped to 63 percent. While later data are not available, the comparative
increases in prices and debt by the end of 1951 lead to the conclusion that this
ratio of debt to wealth may be somewhat higher at the present time. In 1929,
the debt-wealth ratio was 51 percent. In the interval from 1929 to 1948 the
ratio of Federal debt to national income (from which debt is paid) increased
from 4 to 32 percent. The influence of public debt on the integrity of money
values is far greater than the influence of private debt can possibly be.

If income goes down and debt goes up there will be a double adverse leverage
on the debt situation as measured by the ability to pay. If increased Federal
expenditures fail to work in stemming the depression, the situation will be loaded
with inflationary dynamite to the permanent detriment of all of us. The present
high level of prices is quite a springboard from which to take off.

Industrial production in the United States: Industrial activity is of over-
whelming importance in the economic life of the Nation. On chart 12 is shown
in graphic form a measure of this activity year by year since 1900. The smooth
line marked "calculated normal trend" was computed from two long series of
data and is based on the period from 1898 through 1940. The rising trend is
based on the increase in population from 1900 through 1953 and the annual rise
in productivity due to increased efficiency from 1898 to 1941. With this trend as
a starting point, the data made available monthly by the Cleveland Trust Co.
were used to compute the total production as shown. The Cleveland Trust Co.
is in no way responsible for the index values of total production as shown on the
chart. The dotted line shows the corresponding index as published by the Federal
Reserve Board.

Except for the war years, the agreement between these two series is close.
The disagreement during the war period is possibly due to the inclusion by the
Federal Reserve Board of certain labor-hour data in computing physical output—
a method not followed by the Cleveland Trust Co.

The long-sustained upward progression in our productivity is a testimonial to
the industry and technical ability of our people. The increasing output in terms
of both efficiency and volume is the only source of our high and continued rise
in standard of living. It shows no abatement. The temporary interruptions we
call depressions are deviations from trends and are to be expected until we rec-
ognize their causes and if possible counteract them.

The significant part of the long-term trend at this time is from 1940 to date.
Since 1940, industrial output has been accelerated far beyond normal peacetimerequirements by the wasteful consumption and demand created by war. This
was followed by a resurgence of civilian demand composed of new and deferred
replacement needs. Before this was satisfied new military preparations were
resumed and the Korean war began.

Only with the stoppage of hostilities in that area has demand begun to slacken although it is still fortified by continued production of munitions for war, some of which we still supply to other countries. This sustained abnormal production is evident on chart 12. Some of the more optimistic interpretations of these characteristics are inclined to consider that we have embarked upon a new and steeper trend to be traced from the beginning of recovery in the thirties to the present time.

Obviously, the assumption that this is a normal trend discounts completely the abnormally low starting point at the bottom of the depression and the causes for the sustained bulge previously mentioned. It also assumes an increase in productive efficiency that is not warranted by the facts. For years, the annual increase due to improving productivity has been approximately 3 percent.

An increase to 3.5 percent would mean an overall improvement of 17 percent in productivity accomplished almost overnight. During the wartime portion of this period great numbers of unskilled employees were engaged in productive work and many overtime hours were also utilized. Both of these factors reduce output per employee hour. Furthermore, the increasing practice of sharing the work and of limitations of output by labor unions have tended to offset what would otherwise mean further gains in productivity.

The reason for the discussion of this point is the emphasis placed on the conclusion that the level of output since 1940 is abnormal unless we assume that war and preparation for war are normal and that the great deferred demand for housing, clothing, automobiles, and other articles was nonexistent.

For the Government to attempt to offset a return to normal peacetime levels of output is to force a return to deficit financing on such a scale as to endanger seriously the present value of the dollar. Then would follow further increases in the cost of living and to the extent that it would occur, a further repudiation of public debt.

Conclusions: The 20-year record of expanding Federal expenditures for housing, slum clearance, public works, nutrition, public health, social security, education, and agricultural support clearly outlines the course of Federal procedure. The great and increasing expenditures for the purposes just listed have been made not in a period of declining output or depression, but simultaneously with and in further stimulation of the greatest output in our history. This undue and unwise stimulation, when output was already high, will make a return to normal conditions additionally hard to bear or to prevent if Federal expenditure is used for this purpose. The designation of "welfare state" seems to be well earned under the developments of recent years. Perhaps the philosophy behind it might be summarized in a remark made by Justice William O. Douglas in a speech made in Los Angeles in February 1949.

The sound direction of the countermovement to communism in the democracies—is the creation of the human welfare state—the great political invention of the 20th century."

Of course, this is not an invention of the 20th century. It was, for example, practiced by ancient Greece and Rome to their great disadvantage.

It would seem to be countering communism by surrendering to it, wherein the state assumes the ascendancy over the individual and the responsibility for his personal welfare and security. It would seem more courageous and forthright for the Government to cease the cultivation of clamoring minorities, for those minorities to stop demanding special favor in their behalf and for the Nation as a whole to maintain its integrity by its willingness to pay the cost of its deeds and misdeeds. Public interest many times requires the suppression of self-interest and under our Constitution requires the maintenance of the Nation intact for posterity.

Early in this study, there were listed the five channels of increased Federal expenditure which the proponents of the welfare activities of Government suggested. In tables 1 to 8 are listed the growing expenditures of the Government under these classifications. The viewpoint that these activities are not in accordance with our constitutional provisions is supported in principle by the following opinions of the Supreme Court Justices quoted:

"There can be no lawful tax which is not laid for a public purpose." (Justice Miller, 20 Wallace 655; 1874); and again:

"Tax—as used in the Constitution, signifies an exaction for the support of the Government. The word has never been thought to connote expropriation of money from one group for the benefit of another." (Justice Roberts, United States v. Butler (297 US; 1936).)

It is the departure from these long-standing principles that in a large measure is the "revolution" which its proponents are announcing and endorsing.
Power travels with money. It is not feasible for the Federal Government to assume the responsibility for collecting or printing money and for doing it out to State and local governments and their citizens without imposing the conditions upon which it will be spent. Thus by indirection Federal power will grow and insidiously penetrate the areas reserved by the Constitution to the States and their citizens.

Former Supreme Court Justice and Secretary of State James F. Byrnes, now Governor of South Carolina has said:

We are going down the road to statism. Where we will wind up no one can tell, but if some of the new programs should be adopted, there is danger that the individual—whether farmer, worker, manufacturer, lawyer or doctor—will soon become an economic slave pulling an oar in the galley of the state.

The increasing confiscation of income through the power to tax, confirms the thought expressed by Mr. Byrnes. We are on the road and it runs downhill. The evidence is strong.

Abraham Lincoln once expressed his convictions on this relationship in the following words:

"The maintenance inviolate of the rights of the states, and especially the right of each state to order and control its own domestic institutions, according to its own judgment exclusively, is essential to the balance of powers on which the perfection and endurance of our political fabric depend."

The conviction persists that the increasing welfare activities in which the Federal Government has been engaged for 20 years can only come to some such end as previously suggested if they are continued. It also seems certain that heavy Federal expenditures to counteract a depression will prove ineffective. Those important industries whose decline leads us into a depression are the ones whose expansion should take us out of it.

An increase in road building will not put idle automobile mechanics back to work, nor will a rash of public building construction or alleviation of mortgage terms send unemployed textile workers back to their spindles and looms. Proposed governmental measures will not be successful because they do not strike at the causes of the trouble they seek to cure. After all, these same things were tried in the long depression of the thirties without success. Pump priming did not pay.

There is no thought or conclusion to be derived from this study that Government has no responsibility in meeting the extraordinary conditions imposed by crises due to financial or other causes. In the "arsenal of weapons" as mentioned in the Economic Report of the President are certain responsibilities and procedures available for use as the need may develop. Undoubtedly, the most important of these, implicit even if not specifically mentioned, is the maintenance of the integrity and value of our money and of our credit system. The ventures into "revolutionary" and socialistic fields of expenditure and especially in expanding volume to stem a depression will be hazardous to and in conflict with this major responsibility.

These two conceptions are completely antagonistic especially because our tax and debt levels are so high as to leave little or no margin of financial safety. Our recurring "crises" have been utilized in accelerating the progress of the "revolution" which we are undergoing. A further depreciation of our currency value would provide opportunity for additional acceleration in the same direction.

In The New Philosophy of Public Debt, Mr. Harold G. Moulton, president of the Brookings Institution, says:

"The preservation of fiscal stability is indispensable to the maintenance of monetary stability * * *. It is indispensable to the prevention of inflation with its distorting effects on the price and wage structure, and thus to the maintenance of social and political stability."

As someone has said, "What the government gives away, it takes away," and this is true even if it comes from the printing presses.

Perhaps this study can be closed in no better manner than to quote from a statement by Mr. Dwight D. Eisenhower while president of Columbia University:

"I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us."

</table>

1. Derived from monthly data published by the Cleveland Trust Co. and independently calculated normal trend.
2. Estimated.
Mr. McNiece. Then I assume that in answering any question it would be permissible to clarify it by reading a particular section.

Mr. Hays. Surely.

Mr. Koch. The question now is whether you members would like to ask any questions with respect to any part of that report, or whether you would like to study it and ask some at a future time.

Mr. Goodwin. Mr. Hays.

Mr. Hays. I will surprise you by saying I have no questions.

Mr. Goodwin. The Chair concurs.

Mr. Koch. Then you are excused for today.

Mr. Goodwin. Thank you very much for your presentation.

Mr. Wormser. Mr. Chairman, Miss Casey has been sworn, and I think probably her oath can be considered to be continued.

Mr. Goodwin. I would say so.

Mr. Koch. Miss Casey, you have prepared a report. What is the title of that?

TESTIMONY OF KATHRYN CASEY, LEGAL ANALYST, SPECIAL COMMITTEE TO INVESTIGATE TAX-EXEMPT FOUNDATIONS

Miss Casey. It is called Summary of Activities of Carnegie Corporation of New York, Carnegie Foundation for the Advancement of Teaching, the Rockefeller Foundation, the Rockefeller General Education Board.

Mr. Koch. That is a rather long document, and I understand unless the gentlemen wish, you have no desire to read that entire document, but there were certain paragraphs you felt you would like to read. Is that it?

Miss Casey. Yes. I don't have any intention of reading this entire document. I thought I might highlight some parts of it to give the members of the committee a background. I would like to say first of all that the object of this summary was to enable the committee to have the benefit of the research done and give them the facts taken from the foundations reports.

Mr. Koch. First of all, may that report be considered in the record?

Mr. Goodwin. In the absence of objection, the report will be ordered inserted in the record.

Mr. Hays. Reserving the right to object, and I shall not object, I would just like to point out here that perhaps when some of the people representing the foundations come before us, they may have long prepared statements, and I hope there will be no objection to using the same procedure on them, unless some member of the committee wants it read. In other words, the thing I am interested in is that it is rather voluminous, and we have run to quite a few pages. I hope there will be no inclination to keep something out of the record when the minority has entered no objection to putting anything in the record that anyone thought was pertinent.

Mr. Goodwin. That certainly would be the idea of the present occupant of the Chair. I assume that it is the opinion of the staff that this material should be in the record.

Mr. Koch. Oh, yes.
Mr. Wormser. Mr. Hays, the only comment I would like to make on that is that I am asking these various foundations to give us copies sufficiently in advance so that we can at least know the material that they are going to bring up. If you have talked to any of them, I wish you would ask them to please do that. In some cases it is going to be a rather short job for them. In other cases, they have quite a lot of time.

Mr. Hays. Suppose they want to bring somebody in as the four professors were brought in, and they wanted to speak as they did, without any preparation?

Mr. Koch. Then they certainly should have the right to do that. There is no doubt about it.

Mr. Hays. I am concurring with you. Whenever they are going to have a prepared statement, they should be submitted in advance. I have no objection to that.

Mr. Goodwin. The Chairman assumes there will be no controversy over any question of this sort.

(The statement Summary of Activities of Carnegie Corporation of New York, Carnegie Foundation for Advancement of Teaching, the Rockefeller Foundation, the Rockefeller General Education Board is as follows:)

49720—54—pt. 1—48
INTRODUCTION

One of the objectives of the staff, as mentioned in Mr. Dodd’s report, was to determine whether there was a common denominator, as it were, in relation to foundation purposes. A collateral objective was to determine, if possible, whether the activities of foundations might fall into certain definite classifications.

Upon examination of the material available in the Cox committee files it was apparent that it was insufficient to support a firm conclusion on this point; as were the various reference books available on foundations and their activities. After further study and discussion as to both the quickest and the most efficient method of securing sufficient information, it was decided to examine the activities of the first major foundations, to determine whether their activities could be classified, on the theory that such an examination would also serve the dual purpose of providing a guide for study of other foundations.

With size of endowment and date organized as criteria, the selection of the agencies created by Andrew Carnegie and John D. Rockefeller were quite obvious choices, as will be seen by a glance at the following chronological list:

Carnegie Institute (of Pittsburgh), 1896.
Rockefeller Institute for Medical Research, 1901.
Carnegie Institution of Washington, 1902.
Rockefeller General Education Board, 1903.
Carnegie Hero Fund Commission, 1904.
Carnegie Foundation for the Advancement of Teaching, 1905.
Carnegie Corporation of New York, 1911.
The Rockefeller Foundation, 1913.
The Laura Spelman Rockefeller Memorial, 1918.

As a practical matter, the Carnegie Institute of Pittsburgh, the Carnegie Institution of Washington and the Carnegie Hero Fund Commission were eliminated as objects of study in relation to their fields of activity, because their purposes were so clearly specified and their activities confined thereto.

On the theory that the document itself is the best evidence, the logical source of the best information was the records of the foundations themselves, as contained in their annual reports and similar publication. When it proved difficult to obtain these reports from the Library of Congress recourse was had to the foundations themselves.

In the case of the two Rockefeller agencies—the foundation and the General Education Board—the president, Mr. Dean Rusk, upon request responded immediately and loaned to the committee copies of the annual reports of each of these organizations.

In the case of the Carnegie Endowment for International Peace a request was made to permit studies of their records from the date of organization, to which Dr. Johnson, the president, agreed without hesitation, and every cooperation was extended in placing the records, minutes of meetings, and confidential reports at the committee’s disposal. In the time available, it was not possible to cover in detail all the material available for those years, but extensive notes were made

---

1 Not only as to details, but also because it covered only the years 1936–51, inclusive.
2 In point of time.
3 In size of assets.
4 Its activities were merged with those of the Rockefeller Foundation, 1928.
5 Since only 1 copy was available for circulation, the other being for reference.
and verbatim quotations extracted; Mr. Perkins, of the Carnegie Corporation had equally cooperated but, subsequently on special request, the Library of Congress permitted the reference copies of the yearbooks of the Corporation, the foundation and the endowment to be withdrawn from the Library for use at the committee's offices. In addition to these reports, the books and articles, including biographical material, available on both Mr. Rockefeller and Mr. Carnegie and their foundations, were consulted and studied. 6

Based on these studies, and according to the records of the foundations themselves, it was concluded that their activities had been carried on in a handful of major areas, namely:

I. Education.
II. International affairs, including international law.
III. Politics (in the sense that politics is the science of civil government.)
IV. Public affairs.
V. Propaganda.
VI. Economics.

While some of these fields overlapped to a certain degree, that fact does not affect the validity of the technique of analysis, nor the statement of summation.

I. Education

GENERAL PURPOSE

Part I of this summary is devoted to answering three questions:
1. Have these foundations carried on activities in the field of education?
   (a) At elementary level?
   (b) At secondary level?
   (c) At college and university level?
2. What have these activities been (at each of the levels noted)?
3. Did such activities have any evident or traceable effects in the educational field?

Secondly, once the answers to these questions are determined, what is their relationship (if any) to education, in the light of the constitutional and historic attitudes with regard to it in this country?

The activities relating to questions 1 and 2 will be summarized separately by foundation, for the entire period of its existence, in section 1. However, since the activities of all these organizations are parallel—at least in part—the effects of all in the educational field, and their relationship (if any) to the constitutional and historic viewpoint will be summarized and compared in section 2.

GENERAL INFORMATION

Of the Carnegie and Rockefeller organizations only one—the General Education Board of Rockefeller 7—from its outset has operated exclusively in the field of education, in the sense of a relationship to institutions of learning, teaching, and so forth. In the sense that all

---

7 Terminated operations at end of 1953.
knowledge developed pertains to education, of course, then the term "education" becomes practically all-inclusive of every activity not only of foundations, but of industry and government as well. However, in the former sense—which is the sense in which it is used here—Carnegie Corp., Carnegie Foundation for the Advancement of Teaching, Carnegie Endowment for International Peace, and the Rockefeller Foundation are dedicated by their charters to purposes directly or indirectly related to what might be called the advancement of education.

In the case of the foundation, originally intended as a means of providing "retiring allowances" for professors, it is now its primary purpose. The corporation and the endowment have it as one of a multiplicity of purposes. Because this is particularly true of the endowment, and because its activities are so closely interrelated that agency's activities will be summarized as a unit when other categories of foundation activities are covered.

One further fact should be noted because it is a matter which time did not permit complete resolving. In the case of the corporation, and the foundation, there is a considerable overlapping of funds, and it is difficult at times to determine the extent to which the funds mentioned in the foundation's financial reports are duplicates of funds mentioned in the corporation's report. To a certain extent this is true also in regard to the endowment. Thus, while every effort will be made in this report to differentiate clearly between the amounts of money, it may be that sums reported in the foundation and the endowment records are duplications of sums reported in the Carnegie record.

Inasmuch as the Rockefeller Foundation and the General Education Board do not seem to have the interlocking relationships found in the Carnegie organizations it is not believed that the same possibility of duplication exists in regard to those two organizations.

However, perhaps in an excess of caution, where doubt arose, the item was not included so that whatever error has occurred has been on the side of lower totals rather than higher.

BACKGROUND MATERIAL FROM REFERENCE WORKS

Before proceeding to an analysis of information taken from the annual reports of each of the foundations to be summarized, a brief review of the activities in the field of education by these major contributors may prove helpful and also serve as a basis for evaluation.

Dr. Ernest Victor Hollis in his book Philanthropic Foundations and Higher Education, published in 1938, covers not only the background and organization of foundations, but also the specific activities of foundations in the field of education. While most of his references are to higher education, portions of his work involve secondary education indirectly, as will be seen later. Although published in 1938, which makes many of the statistics of Dr. Hollis' book somewhat outdated, it is still regarded as an excellent reference.
According to Dr. Ernest Victor Hollis⁶ "unfavorable public estimate of the elder John D. Rockefeller and Andrew Carnegie made it inexpedient in 1905 for their newly created philanthropic foundations to attempt any direct reforms in higher education.‖ The subject was approached indirectly through general and noncontroversial purposes, nearly all foundation grants made before 1920 being for such purposes.

Dr. Hollis writes:

Far-reaching college reform was carefully embedded in many of these non-controversial grants. It was so skillfully done that few of the grants are directly chargeable to the ultimate reforms they sought to effect. For instance, there is little obvious connection between giving a pension to a college professor or giving a sum to the general endowment of his college, and reforming the entrance requirements, the financial practices, and the scholastic standards of his institution. This situation makes it necessary to present qualitative influence without immediately showing the quantitative grant that made the influence possible.⁷

**REMEDIES FOR EDUCATIONAL CHAOS**

The first efforts of the foundations to influence the development of higher education, according to Dr. Hollis, were directed toward a differentiation and coordination of the levels of education, which he stated "approached chaos" around 1902-5.

It is not proposed to discuss whether the conditions existing in the educational system at that time were chaotic or inefficient; nor is it intended to deny that the foundation and the General Education Board were sincere in their belief that the system should be improved. It is true, however, that neither of these organizations announced to the public their intention to reform the educational system. On the contrary, the board asserted on many occasions that it was determined not to interfere with the institutions, nor direct their policies.⁸ The president of the foundation, in writing of the early activities of the foundation, admitted that originally even the founder, Andrew Carnegie, was not aware of any intention other than the commendable one of awarding a free pension, and in 1935 Mr. Pritchett accepted the fully responsibility for inculcating the reform idea in the pension awards.

Moreover, it is not intended to evaluate the merits of the objective and references are cited merely as indications of the intention and attitude of the two foundations which first entered this educational field. Additional references taken from the reports of the individual foundations will be included in later sections of this part, dealing with the individual foundation activity in education.

Dr. Hollis takes a very practical view of the manner in which foundations approached the situation and the logical conclusion to be drawn, when he writes:

As a condition of awarding a pension to a college professor what could be more plausible than the necessity for defining a college? Both the logic of the situation and the desire for the money caused colleges to seek the scrutiny of the foundation. By this indirectness the foundation was being importuned to do what President Pritchett most wished, and what he probably could not

---

⁶ Philanthropic Foundations and Higher Education.
⁷ Ibid., p. 127.
⁸ See sections on Foundation and Board.
have accomplished by any amount of direct grants. With pensions as the inducement the Carnegie plan for improving the colleges was explicit and avowed; the scholastic, financial, and control standards that were demanded for affiliation guaranteed that the institution would be a real college. Despite its protestations to the contrary, the General Education Board sought to effect the same reforms. I used grants to capital outlay and to general endowment as the inducement and its leadership was canny enough not to print or use an inflexible set of standards. The college seeking assistance was judged in terms of its promise within the local area. The board "made a thorough study" of the institutions calling themselves colleges and from this factual survey came to a conclusion similar to that of the Carnegie Foundation as to what should be done. Each foundation decided to organize and lead a superior system of colleges and universities as a demonstration to the rest of the country. Their purposes were almost identical, though their methods of work were radically different, as were also their attitudes toward church-controlled colleges. The actions of the Carnegie Foundation were the more open and therefore will enter more fully into this narrative. But this circumstance should not obscure the fact that the General Education Board program sought similar goals and was just as assiduously conducted. 9

Dr. Hollis goes on to say that, using this as a basis [eligibility for a Carnegie pension], the specific requirements were established as to what constituted a "college," and these requirements were later agreed to in principle at a conference, sponsored by the foundations of all agencies interested in improving college entrance requirements.

Dr. Hollis, in comparing the policies of the foundation and the General Education Board, refers to the former's standards as an "all or none" dictum which "was happily absent in the more flexible, less explicit plans of the General Education Board for improving colleges." 10

Dr. Hollis referred to the setting up of means for improving college entrance requirements which grew out of the indictment of the so-called mechanical credits which were congesting the colleges with inadequately prepared students and again notes the contribution of the foundation when he states:

At every stage of this complex kaleidoscopic problem, the philanthropic foundations interested in higher education have been aligned with the progressive educators who are seeking such changes as those described as taking part at the University of Chicago. * * * In addition to cash, the above organizations and the Carnegie Foundation furnished the highly valuable services of professional staff members. Psychological examinations, comprehensive achievement tests, cumulative permanent record forms, and related admission devices had to be planned and perfected before much actual progress could be made in improving the certificate plan of admission by units. The best professional and technical abilities of the universities and nonteaching research agencies were given to the construction of these instruments. Columbia, Chicago, and Stanford Universities were the centers in which most of this research was done, but other universities made notable contributions. The American Council on Education provided the general administrative and supervisory direction necessary to coordinate such a large cooperative undertaking. The philanthropic foundations provided $1,212,450 of the sum necessary for the work.

The six regional accrediting associations have jointly and severally been granted $150,000 as a supplement to other resources, for studies looking toward the formulation and application of qualitative standards for accrediting high schools and colleges. The north Central Association of Colleges and Secondary Schools has alone received foundation grants totaling $115,000. This sum has been devoted to developing standards for judging the effectiveness of the 285 institutions of higher education in the upper Mississippi Basin. It is expected that the research will aid in a determination and statement of the aims, purposes, and general philosophy of secondary and higher education. Aided by a foundation grant of $25,000, the Committee of Twenty-one, representing the six

9 Ibid., pp. 129-130.
10 See sections on Carnegie Foundation and Rockefeller General Education Board.
regional accrediting associations of the United States, is conducting a study of accrediting that is focused on the secondary school. It has undertaken the formulation of standards for accrediting high schools, and the outlining of procedures for their application and adoption by the regional associations. Several of the regional associations are individually undertaking minor studies aimed at the solution of parts of the general problem. Educational and foundation officials are united in the determination of supplement or supplant quantitative accrediting with qualitative measures for admission to and progress through high school and college.  

According to Dr. Hollis, the method of the General Education Board was preferable in many respects, particularly in that it was more tolerant than the foundation of which he states: “The limitation of funds, and the conception of the trust itself, as well as the philosophy of its first president, tended to maintain a rigid pattern of action.”  

He points out that the board, while it had a regard for high entrance requirements, did not insist that colleges “conform to preconceived general standards, regardless of actual local conditions.”  

It recognized that the difference in educational, financial, and social conditions in various parts of the country made it impossible, even in medical education, to achieve complete uniformity all at once, and that to force the issue might merely result in changing the terms rather than in fact raising standards. It was Dr. Hollis' opinion that the failure to follow such a policy was “The basic cause for the early bickering, strife, and only partial success of the foundation's college admission efforts.”  

Much dissension has arisen over the use of the so-called unit and in later years the Carnegie Foundation was to vigorously attempt to disassociate itself from it. In that connection it should be noted for the record that the foundation and the board did not invent the unit as a device for measuring progress through secondary schools but they did contribute to securing its more effective enforcement. They therefore share with the schools the responsibility for introducing it into secondary education although its retention past its usefulness may be charged to the schools through their accrediting associations.  

Both the foundation and the board were in agreement that the chief offenders against standards were the various Protestant religious denominations, and both agreed that there should be concentration of effort in a few colleges which would have the effect of eliminating the weak colleges through lack of finances and other causes. However, the methods selected by the foundation and the general education board differed materially.  

The bylaws of the foundation provided that no institution could share in its pension fund if it remained under the control of a religious group. The foundation also required that all affiliated institutions have a 4-year curriculum and at least 6 full professors. (This automatically established the size of the liberal arts colleges, namely, six departments); and required a minimum endowment or in the case of State universities, an annual income.

---

11 Ibid., pp. 144–146.  
13 Ibid., p. 135.  
14 Ibid., p. 136.  
15 After 1921 this was increased to 8.
The board approaches the problem by "systematic and helpful corroboration with the religious denominations, which took the form of direct support of the stronger of such colleges."

Both the foundation and the board had concluded that by withholding funds from "the weak and tottering or superfluous colleges," as they were referred to, these institutions would die a natural death, consolidate or perhaps even coordinate with institutions selected by the foundations as pivotal institutions. However, he adds, the results have not borne out that conclusion—the Office of Education Directory listing some 2,000 institutions of higher education in this country.

Moreover, according to Dr. Hollis, the waste, duplication and lack of articulation are still evident, and according to Dr. Hollis were as bad after the first World War as those facing the foundation at the turn of the century.

* * * Accompanying this dissatisfaction with organization was an even greater disapproval of the traditional content of the courses and their organization into curricula. The manner of being admitted to and guided through these offerings was reopened for further study. In short, after 1918 there was a new start in efforts to resolve the confusion existing in American higher education, and the philanthropic foundations influenced most of these undertakings.

After the war the philanthropic foundations entered into a more satisfying relation with higher education. They were no longer forced to seek change by indirection; rather, they directly concentrated their grants and influence to remedy some of the more glaring deficiencies that had been revealed by the war. A more favorable public attitude toward philanthropic trusts made their new approach possible. They now directly cooperated with the professional forces of higher education in a new attack on the problems of organization to assure institutional operation that would be more effective in modern life.

By 1920 about 90 percent of all college admissions were by the certification of 15 or more variously required units of the type of credit described by Learned. Under this system inadequately prepared students were congesting the colleges. At the same time the system hampered the effectiveness of the high school in serving the much larger group of students who would not enter college. Those college and foundation officials who subscribed to Learned's indictment of mechanical credits began to pool their money and talents to provide means for improving college entrance devices, and this soon led to more fundamental studies of the relations of secondary to higher education.

In addition to what may be termed "direct" activities, i.e., funds granted to institutions themselves, or for projects in the teaching or educational field all of the Carnegie and Rockefeller Foundations made direct contributions of funds to the following organizations:

- Adult Education
- American Council on Education
- Cooperative Test Service
- Educational Records Bureau
- Institute of International Education
- London School of Economics
- National Education Association
- Progressive Education Association.

Because of the effect of several universities on education, foundations' grants to these institutions have been tabulated. The institutions are:

- Columbia University
- Columbia University Teachers College
- University of Chicago
- Lincoln School.

* * *

1 Including grants to American Association for Adult Education.
The Carnegie Corporation of New York was the last of the philanthropic agencies created by Andrew Carnegie, and he served as its president until his death 8 years later in 1919. It was established "to promote the advancement and diffusion of knowledge and understanding" among the people of the United States and the British Dominions. Of its $135,336,869 endowment, $12 million is applicable to enterprises in the British Dominions and Colonies, at the discretion of the trustees. As of 1951 the assets of the corporation were $175,890,810.

The corporation is managed by a board of 15 trustees, 4 of whom are ex officio, 3 are presidents also of other Carnegie funds, and the president of the corporation.

GENERAL POLICY

The corporation makes grants chiefly to universities, colleges, and other organizations which the trustees believe can contribute to "the advancement and diffusion of knowledge and understanding," and devotes its entire annual income (except that necessary for administrative purposes) to such grants. Its officers do not attempt to keep in active touch with programs, nor plan nor direct projects, full responsibility being assigned to the recipient.

Question 1. From 1911 to 1952, inclusive, the last year for which the annual report is available, the corporation made funds available to:

<table>
<thead>
<tr>
<th>Appropriations</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Universities, colleges, and schools in the United States</td>
<td>$56,838,274</td>

</tbody>
</table>

1 Does not include Columbia University Teachers College or University of Chicago.
2 Including grants to the American Association for Adult Education.
3 Now called American Education Fellowship.

 Funds were given to other organizations, such as the National Advisory Council on Radio in Education, whose activities were less directly related to education, but time did not permit exploring them in detail. A brief description of the type of activity carried on by the

American Council on Education, the National Education Association, and the Progressive Education Association is given in section 2 of this summary.

Prior to 1930 the major grants of the corporation were for library buildings, laboratories, endowment of liberal arts colleges, development of such colleges through endowment, endowment of medical schools at universities, and endowment, buildings, and support of Carnegie Institute of Technology.

Question 2. All quotations are from the annual reports, and in order to avoid undue length, a few have been selected from many of a similar nature. They appear in the annual reports under the heading of "General Education," unless otherwise indicated.

1937 report
Page 20:

The field of general education, even within the limits of scholarly inquiry is too broad for any single foundation to cover, and, fortunately, more than one foundation is now active therein. The present activities of the corporation, working in close cooperation with the Carnegie Foundation, are the following: tests and measurements and records; comparative education, notably in the study of examinations; professional education, particularly in its relation to professional practice and to supply and demand in personnel; the relation of research to professional education, especially in the graduate school; new developments of undergraduate instruction, supported chiefly by direct grants to institutions; and the maintenance of what may be called educational clearing-houses, as in Australia and New Zealand. * * *

Page 21:

* * * Meanwhile, the problems of professional standards in general, the relations of the professions to one another and to other branches of education, the needs of the public and the degree to which these are being met, have all been comparatively neglected. The corporation has had opportunity to study these questions rather closely in connection with training for librarianship, but its interest includes all professions, large and small, as well as what may be called emerging professions, that is, callings which are gradually assuming a professional status. It is the writer's belief that there is a definite need today to build up a body of doctrine which will be based on reality and not on tradition. * * *

Pages 21, 22:

This general situation opens opportunities to foundations for activities of the greatest usefulness, but, unless the programs themselves are carefully organized and rigidly limited in scope, there is a real danger lest they tend to draw the foundation itself outside its proper sphere of action. It is essential not only that the foundation be insured completeness of relevant data for its study, but also that it be freed from any compulsion to press for action as a means of justifying its conclusions. While it may advise frankly concerning changes, when its advice is sought, it should never agitate for reforms or use its money or influence as a means to a political end.

1938 report
Pages 31, 32, 33: According to the report, on the basis of the general purpose of each of the grants made in the period since 1933–34 for educational studies, they might be divided as follows:

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>To understand the student</td>
<td>$50,300</td>
</tr>
<tr>
<td>To improve teaching</td>
<td>83,100</td>
</tr>
<tr>

<td>35,600</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td>540,850</td>
</tr>
</tbody>
</table>
The longest unbroken series of grants of this character made by the corporation has been voted to the Institute of Educational Research of Teachers College, Columbia University, and it should be of interest to summarize the results of cooperation with a small group of workers under distinguished leadership. In the 16 years from July 1, 1922, the researches in psychology and education at Teachers College under the direction of Dr. E. L. Thorndike have been supported by grants from the Carnegie Corp., totaling approximately $325,000. The findings are reported in nine books or monographs already published (without cost to the corporation), and nearly a hundred scientific articles, doctoral dissertations, and special reports.

Nor must it be overlooked that, since science advances as a whole, the work of gathering data which others may use, repeating experiments, adding here and there to what others have proved, may in the long run be more valuable than even such striking direct contributions.

1942 report

Pages 14, 15: In the 1942 report the corporation lists as its three major grants those made to the University Center in Atlanta, the Johns Hopkins University in Baltimore, and the New York University in New York.

Referring to the Atlanta enterprise ($150,000), it is noted that far greater grants had been given to it by the General Education Board. Its purpose is stated to be:

"... a long-planned integration of the work of the several institutions of college grade in that area under terms which will give Atlanta the advantage of a modern university without requiring the constituent colleges to sacrifice their identities."

The grant to New York University ($100,000) was made with the understanding that the fund would be used for current purposes rather than for endowment.

Pages 16, 17—The report then continues:

Two grants totaling $65,000 were made to the Carnegie Foundation for the Advancement of Teaching for continuation of cooperative work with a selected list of graduate and undergraduate schools in developing criteria for admission and in providing a basis for judgment as to ability of those already admitted to candidacy for degrees. A more detailed statement on these studies will appear in the 1942 report of the Carnegie Foundation for the Advancement of Teaching. Additional grants totaling $21,000 were also made to the foundation for two programs undertaken in cooperation with the American Council on Education. Another grant of $10,000 was voted for the formulation of special tests to be used in selecting the persons to be trained under the defense-training program of the United States Office of Education.

As was recorded in last year's report, one of the largest grants voted in 1940-41 made possible the establishment of the Institute of Adult Education at Teachers College, Columbia University. It is a pleasure to report that the institute is rapidly defining a useful role for itself, and that the American Association for Adult Education, now maintained entirely from membership fees, increased its dues-paying constituency during a year when most voluntary professional associations were suffering a decline in membership.

"Among the adult education programs initiated with corporation support in prewar days, none has proved more timely than that of the Council on Foreign Relations. The regional committees organized in 12 strategic cities across the country have met regularly for discussion of international problems and have joined in producing an interesting summary of these discussions under the title of Some Regional Views on Our Foreign Policy, 1941. An appropriation of $24,000 was voted for the continuation of this program.

In the United States it need no longer be argued that provision for the education of adults is quite as properly a responsibility of the Government as is education at other age levels. The war, indeed, has offered dramatic evidence of the social cost of not affording such opportunities, and the numerous training programs which have been improvised under pressure during the past 2 years.
Question 3. The excerpts from the annual reports given above, as well as the quotations from Dr. Hollis’ book, are pertinent to this question also. No attempt will be made to include all the statements in the year books of the corporation. Moreover, it is believed that 1 or 2 in addition to those already given will suffice.

According to Dr. Hollis the foundations are exercising the initiative accorded them to spend most of their money on exploratory work that seems only remotely connected with improving college education on the theory that research must first be done in general education in order to efficiently accomplish college reorganization.

1952 report
Page 14:

One of the developments which has produced the most lively debate in educational circles has been the widespread movement to reinvigorate the ideals embodied in the term “liberal education.” The goal is rather widely accepted, but there is substantial difference of opinion as to how to achieve it. The general educationists offer a variety of curricular reforms. Advocates of the Great Books press their claims for the wisdom of the past. Humanists decry the shift of interest from certain disciplines to certain other disciplines. Our colleges are literally awash with formulae for salvation; all of which is healthy and part of the process of getting things done in a democratic, heterogeneous, and always vigorously assertive society.

* * * President Conant and his coworkers at Harvard have provided leadership in this direction with their efforts to develop a new approach to the teaching of science as a general education course. During the current year the corporation made a grant to Harvard for the continuation of this work.

The social sciences also have a significant role to play. Serious men cannot accept the view of those humanists who rhapsodize over Platonic generalizations about society but resent the efforts of the modern social scientist to test these generalizations.

* * * Developments such as the new American studies program at Barnard College (see p. 19) and the courses in Asiatic civilization at Columbia University (see p. 21) would be impossible without vigorous participation, indeed, vigorous leadership, on the part of the humanistic fields. But there is nothing in the humanistic fields which offers a guaranty of salvation. They too have turned out narrow technicians when they might have been turning out educated men. They too have often ignored the central concerns of liberal education.

SUMMATION

Based on the foregoing, it can be assumed:

Carnegie Corp. contributed large sums of money to projects which can reasonably be considered “in the educational field” as shown by their activities during the past 40 years.

1911-20:

Total 3,0

As mentioned previously, the corporation has contributed $1,237,711 to the work of the National Education Association, the Progressive Education Association, and the American Council on Education, and their combined activities affect education at all levels.

In the early years of the activities of each of these organizations, the amount contributed by the corporation was undoubtedly a sizable portion of the funds available to each of them.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING

ESTABLISHMENT, PURPOSES

The Carnegie Foundation for the Advancement of Teaching, created by Andrew Carnegie in 1905, was the third of the philanthropic agencies he endowed and like the others has its own funds, trustees, administrative offices, and conducts its own affairs.

Fifteen years before when he was appointed a trustee of Cornell University, Mr. Carnegie had been shocked to find that college teachers were "paid only about as much as office clerks." In the summer of 1904 while on his annual visit to Scotland, he renewed an association with Henry S. Pritchett, a member of Theodore Roosevelt's Cabinet and president of Massachusetts Institute of Technology; and from that meeting grew the establishment of a fund to provide pensions for professors in American universities.

There have been two distinctly different phases of the foundation's activities:

1. Activities designed—

   to provide retiring pension without regard to race, sex, creed, or color, for the teachers of universities, colleges, and technical schools—

   within those institutions—

   who, by reason of long and meritorious service, * * * shall be deemed by the board of directors to be entitled to the assistance and aid of this corporation

   Total 38.0

   This total does not include grants:

   In millions

   To Carnegie Institute of Technology .................................................. $24.3
   For development of schools of medicine ........................................... 3.0
   For support of dental research and education ..................................... 1.3
   For educational projects and for development of educational institutions outside the United States ........................................... 4.0
   For development of college libraries and librarianships; library schools or library interests ........................................... 8.6
   For free pensions for college and university professors ..................... 21.5
   For others: such as Church Peace Union, Red Cross, etc ...................... 3.0

   Total 72.7

   Grand total ................................................................. 110.7

   As mentioned previously, the corporation has contributed $1,237,711 to the work of the National Education Association, the Progressive Education Association, and the American Council on Education, and their combined activities affect education at all levels.

   In the early years of the activities of each of these organizations, the amount contributed by the corporation was undoubtedly a sizable portion of the funds available to each of them.
or who by reason of old age or disability, may be prevented from continuing in the active work of their profession; to provide for the care and maintenance of the widows and families of the said teachers; to make benefactions to charitable and educational institutions, and generally to promote the cause of science and education.

2. Activities designed—

(b) In general, to do and perform all things necessary to encourage, uphold, and dignify the profession of the teacher and the cause of higher education within the United States, the Dominion of Canada, and Newfoundland aforesaid, and to promote the objects of the foundation, with full power, however, to the trustees hereinafter appointed and their successors from time to time to modify the conditions and regulations under which the work shall be carried on, so as to secure the application of funds in the manner best adapted to the conditions of the time.

Until 1913 the foundation confined its activities to the first phase, partly at least because the attitude of the founder was somewhat different than that of its president, Henry Pritchett. The difference is indicated in an exchange of correspondence between the two. Mr. Pritchett apparently was imbued with the idea of coordinating colleges and universities into a more cohesive group. In December 1905, he suggested as a name, “The Carnegie Foundation for Education,” and wrote Mr. Carnegie:

While the primary purpose * * * is the formulation of a pension system, our charter enables us to undertake any sort of educational work for colleges and universities * * * it may well happen in the future that our activities may cover a far greater range with respect to education.

The name did not strike the founder favorably:

The Carnegie Foundation for Education does not strike me favorably. “Foundation” seems superfluous. “Carnegie Professional Pension Fund” or “Carnegie Educational Pension Fund” seems to me better. It might be well, I think, for you to ask suggestions for the name from the (directors) * * * I don’t think that you should disguise the fact that it is first and foremost a pension fund. The closer union it may bring about is incidental, though important.

Dr. Pritchett, still president in 1916, indirectly confirms this:

The development of a pension system along sound lines is the most direct duty of the trustees, a responsibility all the more important because the pension problem, while a living problem in every State and Province of the United States and Canada, is still involved in confusion.

AS THE FOUNDATION VIEWED IT 20 YEARS LATER

The 1923 report includes the following paragraphs on page 20:

The relation of the foundation to educational development and the studies which it has carried on with respect to various current problems in education have occupied a large part of the activities of the officers and of the staff of the foundations. These studies, which have been published in 16 bulletins, have concerned themselves not only with special problems such as those of medical education, of legal education, and of engineering education, but also with the underlying fundamental questions of education which relate to good teaching, to the content of the curriculum, and to the cost of public education. The establishment of the American Law Institute during the present year, by one of the most distinguished groups of judges, lawyers, and law teachers ever brought

1 New York State Charter, granted May 8, 1905, surrendered when congressional charter granted.
2 Sec. 2 (b) of congressional charter, granted March 10, 1906. Sec. 2 (a) contains in slightly different language original provision as to pensions.
3 Fruit of an Impulse, p. 68.
together, is directly related to the studies on legal education which the foundation has carried out through its division of educational inquiry. Experience seems to indicate that an agency such as the foundation, standing apart from the immediate institutional life and having no constituency of its own, can do its greatest service by enlisting in such studies the most able students in different institutions, and that out of the contact brought about in such groups between teachers, administrators, and school systems, members of the staff of the foundation, and others there is reached a degree of knowledge and of judgment with regard to these problems which commands a larger respect and attention than can be had from the isolated statement of any one individual.

Outside of the direct activities involved in the study and establishment of pension systems and in the educational inquiries and reports that have been made, the officers of the foundation have necessarily been involved in a number of educational relations of a temporary character having to do with the inauguration and operation of the educational organizations of the country, such as the College Entrance Examination Board, the Association of American Colleges, the Association of American Universities, the American Council on Education, the American Association of University Professors, and the various other organizations of those involved in the work of teaching or organization of education.

It has thus come about that during the 18 years of its history, the foundation, while pursuing in the main two specific lines of activity—the one having to do with pensions and pension systems, the other having to do with educational studies, has nevertheless, by the very fact of these activities, been involved in greater or less degree with all those complex relations in education which arise by reason of the relationships between the schools of a nation; and the various bodies that have to do with education. The foundation has sought, during these years to be hospitably minded toward any agency in education that cared for its cooperation.

According to Dr. Savage, Dr. Pritchett's "pet idea" was realized by Carnegie's grant to the foundation for establishment of a division of educational inquiry, and credits "Pritchett's patient persistence." Dr. Hollis quotes Dr. Pritchett as saying:

I put forward the suggestion, that while the primary purpose of Mr. Carnegie's gift was the establishment of a pension system there would be involved in the administration of this gift a scrutiny of education which would not only be desirable in the granting of pensions, but would go far to resolve the confusion that then existed in American higher education. There was no general requirement of admission to college. Many institutions that were colleges in name, were really high schools, and many universities were scarcely more than modest colleges. I suggested the notion that in the administration of this agency, some criterion would have to be introduced as to what constituted a college.

**ASSETS**

The foundation received from its founder and the corporation $32,700,000. Its affairs are managed by a board of 25 trustees and according to the report for 1951 had assets of $12,874,718.84. In the 1939 report of the foundation appears the following:

The cooperative arrangement between Carnegie Cooperative of New York and the Carnegie Foundation for the Advancement of Teaching respecting projects in the field of higher education has now been in effect for about 15 years. Its success has been unqualified. A series of 148 grants totaling $1,449,393 have been made by the corporation for 85 projects, of which 14, involving 34 grants, have been carried on in the offices of the foundation, and 71 projects involving $1,087,350 in 114 grants have been carried on under the auspices of 41 other educational institutions or bodies. To these the foundation has allocated and transmitted the funds provided by the corporation. On account of 3 projects which could not be carried out as planned, $25,000 was returned to Carnegie Corporation of New York through the foundation. The total of projects effective over the past 15 years is therefore 82.

---

*Basic Facts, p. 13.
GENERAL POLICY

In the distribution of pensions, the foundation set up standards which must be met by institutions in order to be eligible for pension awards—designating those who met the requirements as “accepted” and others as “not accepted.”

While as outlined earlier the foundation’s activities began as a pension award system for college and university professors, this was shortly used as a springboard into secondary education with the explanation that:

1. It was necessary to define a college in order to grant the pension.
2. In order to define a college it was necessary to establish standards of admission and of college work.
3. If standards of admission were to be established it was necessary to prescribe the courses of study in secondary schools which would fit the student for the college—as defined.

The purposes of the foundation set out in its charter clearly place this agency among those whose sole or primary purpose is of an educational nature, as evidenced by excerpts from its annual reports.

From 1905 to 1951, inclusive, the last year for which complete records are available, the foundation made appropriations to:

Universities, colleges, and schools in the United States $62,763,560
American Council on Education 90,550
Cooperative Test Service, Educational Records Bureau, Graduate Record, College Entrance Examination Board 2,850,000
National Education Association 115,000
Progressive Education Association 92,000
Total 66,011,110

The foundation, like the corporation, gave funds to the organizations mentioned previously whose activities were also of an educational nature.

Question 1 and question 2. It would be difficult to draw a line of distinction between the quotations applicable to each of these questions, and for that reason both questions will be covered together.

All quotations are from the foundation’s annual reports unless otherwise indicated, and are only a few of the many similar quotations which might have been chosen, but which have been omitted because to include them would be merely repetitious.

Even after establishment of the division of educational inquiry in 1913 the greater portion of foundation funds were appropriated for pensions, or matters directly pertaining thereto, as shown by the following summary of grants from 1905–51:

Retiring allowances and widow’s pensions $59,298,459.42
Support of Teachers Insurance and Annuity Association 513,465.37
Grants to colleges to initiate pension plans 775,678.79
Pension studies 30,012.87
Total 60,617,616.45

8 Later changed to “associated” and “nonassociated.”
9 See pp. 26–27.
10 Although the foundation appropriated funds to NEA (either its own or the corporation’s), Mr. Pritchett himself was strongly opposed to the association’s lobbying activities for a National Department of Education (annual report for 1933).
11 See footnote 8, p. 17.
12 See p. 17.
13 By grant of $1,250,000 from corporation. Total grants of the corporation were $32.7 millions.
However, this does not mean that the foundation's activities affected only pensions. Even as early as 1907 it was becoming more and more a factor in determining not only what constituted a college, but what type of organization was best for conducting a college, including such matters as the size of the board of trustees, whether or not the president of the college should also be president of the board, and the extent to which alumni should have a government of the institution. The report, referring to fears expressed that "a great gift like this in the hands of a limited number of men might prove a centralized power which would hinder rather than aid the progress of education," discounted such a possibility because the trustees were "in the main college and university presidents who have come up through the profession of teacher, and who are not likely to lose touch with needs and aspirations of teachers."  

1911 report

Page 46—The report deplored the fact that:

* * * lack of supervision, both on the part of the General Government, and to a large extent, on the part of the State governments, has resulted not only in an extraordinarily large number of institutions bearing the name college or university, but it has resulted also in the fact that these institutions have become involved in local rivalries, so they represent in very small measure national ideas on national purposes * * *.

The first “inquiry” of the new division, which expanded rapidly, was into the training of teachers and the standards of medical and other professional schools. From the first, emphasis was put on coordination between colleges and universities, between these units and secondary education, and between both and elementary education. The “individualism,” “class feeling,” and “competition” of educational literature was deplored as was the fact that universities were critical of colleges, that State supported and privately endowed institutions viewed each other with suspicion; and relations existing between colleges and secondary schools, and between liberal and vocational education were referred to as “armed neutrality and open hostility.”

Before long, there was to come the recommendation that since educational foundations were conspicuous illustrations of educational cooperation, educational institutions could do no less. The school system is referred to as:

* * * an elaborate hierarchical device that undertakes through successive gradations of textbook makers, superintendents, principals, and supervisors to isolate and prepare each modicum of knowledge and skill so that it may safely be entrusted to the humble teacher at the bottom, who is drilled for a few weeks only, if at all, in directions for administering it ultimately to the child. Meanwhile, superintendents and school boards publicly measure their success by numbers enrolled, by buildings and material equipment added, and by multiplied kinds of schooling introduced; and the people are taught to accept this as educa-

15 2d annual report of the president and treasurer, 1907, pp. 54-55.
16 Tbid., p. 63.
Such perversions are ample comment on the thoughtlessness of our formula. Where is the school system that by enlightened and fearless propaganda has convinced its public that education consists first of all in the superior quality and skill of its individual teachers, and is otherwise meaningless?

Qualitative education, as contrasted with the present dependence upon estimates by bulk and housing, signifies a complete transformation in the character and status of the teaching profession. Such a transformation once properly accomplished, the other necessary modifications will inevitably take care of themselves. America, with its hundred millions of people, needs upward of three-quarters of a million men and women to represent her with the childhood and youth of the Nation in a deliberate and thorough educative process. If wars are to cease and democracy is permanently to hold the field, it will be a democracy with sufficient wisdom to confide this, its most responsible task, to its most competent citizens, and to prepare them thoroughly for its safe discharge. Genuine education, in a sense consistent with any honest vision of its meaning, can proceed only through immediate contact with keen minds fully informed and persuaded of what the rising generation may become, and dedicated to such achievement. Persons so equipped will in general not be had unless the distinguished rewards and opportunities of life are attainable through teaching careers. Moreover, these careers must not be mere avenues of promotion, as in notable cases today, but must constitute and be recognized as opportunities for achievement in themselves. Any other course means simply to exploit the future in the interest of the present by abandoning its control to second-rate minds. Plato's provision that the head of the state be the director of education expresses the unavoidable perspective in a completed democracy.

Marked changes must ensue in our present system of schooling if we undertake to carry out an honest interpretation of our avowed aim of "universal education" by making it not only universal but also education. In the first place our elementary and secondary school systems must be thoroughly integrated into one homogeneous and indivisible unit—a varied but coherent 12-year career for mind and body, whereby, as a youth, each citizen may acquire a certificate of the health, intelligence, and character that underlie a successful society.

Dr. Hollis comments on the foundation's activities and policies 30 years later:

The foundation had had a real battle to enforce entrance standards in the relatively homogeneous endowed liberal arts colleges concentrated in the East. With the decision to admit State universities to the benefits of the Carnegie pension system it was faced with the problem of applying on a nationwide scale what was in fact a regional accrediting standard for a group of superior institutions. Educational, financial, and social conditions in this larger territory were so uneven that many of the university officials in the South and Middle West urged a flexibility in Carnegie standards in keeping with the realities the colleges faced. After considerable study of the problem the foundation from considerations of "logical consistency" (and possibly financial expediency), decided to leave the rules a Procrustean bed for all affiliated institutions. The foundation was not constructively interested in how a college might reach eligibility, but it did advise the State universities not to raise their standards faster than the high school could meet them, even if that meant delay in securing pensions. Apparently the attitude was that growth could be stimulated by extending the hope of future affiliation.

ELEMENTARY EDUCATION

Considerable attention was given to the place of both the elementary and secondary schools in the educational picture. However, there is indication that after 15 years of effort the foundation itself questioned some of the results.

1923 report

Pages 78, 83: Commenting that after the schools became free from the hard-and-fixed curriculum and new studies intended to broaden student opportunities were added, the report adds that the resulting overexpansion was not entirely advantageous. As an example, it was

17 Philanthropic Foundations and Higher Education, p. 133.
pointed out that the organization and quantity of subjects had displaced individual contact, relegating to an inferior position the fundamental truth that education does not consist in the amount of information absorbed but rather in the ability to think clearly and to apply the information accumulated to one's everyday life.

It would, therefore, seem to be fundamental that the elementary school should accept clearly its own limitations. It should make sure that the teaching which is common to all children is done with a sharp discipline of exact requirement, but that a very large part of what is meant to be of cultural value shall be through exercises not followed by examinations, but having as their spring of influence the contact with cultivated and inspiring personalities.

Under this regime the elementary-school curriculum would be greatly simplified.

In the second place, while we must in a democracy proceed upon the assumption that every child is entitled to the fundamentals of an education in the elementary school, we must frankly recognize that a large proportion of the children of the Nation have neither the desire nor the intellectual ability to complete the work of a secondary school with profit to themselves. In no nation in the world is there a task comparable to that of the American teacher in the secondary schools, patiently and devotedly toiling to bring through to graduation multitudes of pupils who have neither the desire nor the ability for intellectual work. The high school should no longer be the refuge for mediocrity that we have made it.

This involves no discrimination against any class or group in the body politic. The stupid or indifferent child is just as likely to be the son of the well-to-do as the son of the day laborer. Teachers are coerced by parents, by school directors, by all the influences that can be brought to bear, to keep in their classes numbers of students whose happiness and usefulness are to be found elsewhere.

Again read without relation to other foundation activities, and without linking with other organizations whose work it supported, this, too, is a reasonable statement of a condition which might need study in order to advance teaching. However, in view of the results attributable to these other organizations in the installation of "uniform standards and curriculum in the public schools," the foundation's statements here and elsewhere in its reports cannot be studied alone.

One of the present conditions, for example, which is undoubtedly attributable to the philosophy reflected in this quotation is the 100-percent promotion rule which exists in many communities, and to which serious objections have been raised.

**EUROPEAN INFLUENCE—PRUSSIAN, FRENCH, ENGLISH**

At this point it should be noted that throughout the foundation's reports the references are too numerous to mention—there are comparisons between education in this country and education in Europe, always to the detriment of the United States. 18

The foundation began its exchange of secondary school teachers with Prussia in 1908 and the report for 1909 expressed the hope that more secondary schools and those in charge of them would begin to appreciate the benefits to be had from this exchange. 19 This report, and those for succeeding years, stressed the advantages of incorporating into the American secondary school, the same principles found in Prussian schools with the object of raising the quality of teach-

---

18 Annual reports for 1910 (pp. 35-39); 1911 (pp. 36-38); 1913 (pp. 57-59); 1924 (pp. 111, 116), and others.
ing and education in the United States to a level comparable to that of Prussia.

SECONDARY LEVEL

In addition to cooperation and financial assistance to the National Education Association and the Cooperative Test Service, the foundation itself carried on work in this field. Again, there are numerous examples which might be cited from the reports, but only one or two will be included here.

1924 report

Page 107 et seq.: Pointing out that the secondary school is the determining factor in the educational structure, the report goes on to state that through its entrance requirements the college dominates the educational program of the high school, yet at the same time there is an unsatisfactory situation as far as the colleges and professional schools are concerned, because of:

- a growing army of high-school graduates who lack the qualities of intellectual training which would fit them for fruitful college study. They have indeed complied with the formal college requirements for admission, but they have not learned to use their minds. A large number of the unit are eliminated in their freshman year, a process neither wholesome for the college nor just to those thus summarily dismissed.

The report recommends as a remedy:

The college can take the first great step by a sweeping change in its entrance requirements. Instead of requiring a dozen subjects and accepting a passing mark on all of them, it must test on a few fundamental subjects on which it will demand a very high order of performance and accept the work of the secondary school in all other subjects. To accept a passing mark of 60 percent has proved demoralizing alike to high school and college, to teacher, and to pupil. In fundamental subjects a high order of performance must be secured. This condition complied with, the college can leave the secondary school free to educate in its own way.

Here again it should be noted that no evaluation is made of this objective, the particular means taken to achieve it; nor is it pertinent whether the results have been good or bad.

In 1928 the foundation began its study of the relations of secondary and higher education in Pennsylvania. This study continued for several years with funds supplied by or through the foundation ($365,091.36), and formed the basis not only for studies of a similar nature both in this country and abroad, but in the publication of a number of pamphlets; and its recommendations have since been put into effect.

1929 report

Page 85:

To meet the need for a suitable record a new form was devised and is now published by the American Council on Education. On this record a student's ratings in high school and college are presented graphically and comparatively over a period of years so that his particular mental pattern appears at a glance together with the tendencies of his intellectual development. Space is given for standard test and achievement ratings of whatever nature, and provision is made for appropriate personal data on the same comparative and chronological basis, thus presenting an integrated history of a student's educational growth with the pertinent details.

20 From the corporation.
21 The most notable example is probably this suggested form which was recommended by the Progressive Education Association for use in the schools.
There can be no doubt that the foundation carried on many activities at this level, not the least of which were those in connection with its pension fund. One of the expressed hopes of the founder and others was that by this method (removal of financial worries) retirement would be accelerated, and new blood brought into this part of the educational process.

Another example is the experimental program of grants-in-aid to instructional staffs in colleges and universities of the Southeastern States which became operative during 1946-47. The organization of this program was based on 4 strategically located centers, each composed of 1 university group and at least 5 neighboring undergraduate colleges. Each center received annually $15,000 from the foundation, which it matched with $5,000 of its own funds.

Page 24: The purpose of the program as stated in the report, is to advance graduate instruction—

* * * to vitalize it; to improve its quality; to help focus attention in college and university alike on the need of improving the general quality of undergraduate teaching. That is the general aim. The choice of ways by which one might seek to achieve this general aim is wide, but, as far as this experimental program is concerned, there has been selected and agreed upon as eminently appropriate, one single way. That particular way is the encouragement of faculty members to carry on research and creative activities in fields in which they are interested and competent. The underlying theory is simple: It is that a teacher actively engaged on a scholarly research or creative project of his own choosing has more than a fair chance of maintaining an intellectual activity which directly and indirectly serves to raise his scholarly self-respect and to make him a more effective teacher. The primary interest of the program, then, is in the teacher and his research, not in the institution and its administrative and curricular problems and physical resources.

The foundation appropriated $700,000 for this program for a 5-year period, 1946-51.

Graduate testing program, cooperative test service, merger-national testing service: A related activity of the foundation has been the graduate testing program, carried out primarily with funds from the corporation with small additions from the foundation itself.

Page 13:

* * * In 1929, when the foundation was in the midst of an examination study of secondary and higher education in the State of Pennsylvania, the General Education Board made a grant of half a million dollars to establish an organization for experimental service in the construction and use of educational examinations. This impressive gift, routed through the American Council on Education, was intended for the use of its committee on measurement and guidance which had long been active in studying personnel problems under the direction of the late Herbert E. Hawkes, then dean of Columbia College. There was thus set up an agency known as the Cooperative Test Service which for many years under the wise and vigorous leadership of Dr. Ben D. Wood promoted the construction and use of excellent educational examinations in many fields. One of its notable achievements, developed shortly before the war, was the institution of a common qualifying examination for teachers which has been sponsored by the superintendents of a large number of the most important American cities. This test and the graduate record examination possess many features in common.

Funds furnished by the corporation.
With the outbreak and early progress of the war the active functioning of this agency fell into abeyance although its resources continued to accumulate. Its recent revival under a reorganized committee of control was inevitable in view of the indispensable part which objective measurement has played in the educational preparation of the Armed Forces and appears destined to retain in postwar institutional activities.

With the revived Cooperative Test Service the graduate record office has become closely affiliated in the broader matters of policy. Since February 1945, Dr. Kenneth W. Vaughn, the associate director of the Graduate Record Office, has also held the corresponding position with the Cooperative Test Service. This mutual relationship has contributed much to effect a common understanding between the two organizations and to coordinate their efforts in a common cause.

1946-47 report

Page 33: The following year there is further reference to this subject which culminated in the merger of the testing agencies in 1947.23

* * * In the main, this report directed attention to the compelling advantages to American education of such a unification and to the principles on which a national nonprofit agency might be organized. The committee in the final paragraph of its report indicated that its primary concern, in this phase of its work, had been with the principles involved, and that no attention was given to the practical problems of the several organizations whose cooperation was essential to the plan. It expressed the hope that its preliminary report would stimulate the fullest possible discussion of the practical means of arriving at the objective.

In the spirit of this statement the committee recommended the establishment of a new organization to be known as the Cooperative Educational Testing Commission. It recommended further that the College Entrance Examination Board, the Educational Records Bureau, the Cooperative Test Service, and National Committee on Teachers Examinations of the American Council and the Graduate Record Office of the Carnegie Foundation, join in the creation of this commission, and that in addition to assets contributed by these constituent agencies not less than $750,000 be provided by foundation grants.

While the report mentions serious objections raised by representations of the two largest agencies concerned, namely, the American Council on Education and the College Board, it does not state what the objections were, but added that there was no disagreement as to the need for a central agency, or as to its purposes.

MERGER OF TESTING SERVICES, 1947 REPORT

Page 40:

On December 19, 1947, the Board of Regents of the University of the State of New York granted a charter to Educational Testing Service and thus enabled it to begin operations January 1, 1948. Besides the final grant of three-quarters of a million dollars from Carnegie Corporation of New York, there were added to the resources of the new Service approximately $450,000 from the College Entrance Examination Board and the American Council on Education. The initial capital assets of Educational Testing Service therefore reached about $1,200,000.

Three trustees ex officio served in perpetuity: the president of the American Council on Education, the chairman of the College Entrance Examination Board, and the president of the Carnegie Foundation. The board consists of from 9 to 25 trustees.

THE CARNEGIE UNIT

From the beginning the reports placed increasing emphasis on the desirability of "coordinating" all schools throughout the United

States, and the setting up of so-called units which became known as Carnegie units.

Dr. Savage, tracing the influence of Dr. Pritchett in the expansion of the foundation's activities into other than pension fields refers to it as a "useful quantitative device"; and the earliest known reference in the public records of the foundation is in 1906. Undoubtedly the foundation worked assiduously for its acceptance, and was successful. When attacks began (as far back as 1909), the foundation replied that it was not standardizing, but merely working for uniformity in entrance examinations, and later that the use of the unit as originally conceived and early promulgated did not tend to injure the educational process, but it was the abuse at a later date by which "the individual student was broken on the wheel of a mechanical device." The foundation's attitude was: "What it has done is to make clear the standards of the colleges themselves, and to throw the light of publicity on the deviations from the standards they themselves have set up.

1947-48 report

Page 29: This report contains a detailed account of the origin, use, and merits of the "unit" which Dr. Savage closes with the following statement:

Such in outline is the history of one aspect of American higher education in which the Carnegie Foundation for the Advancement of Teaching had an important part. The foundation did not invent the term "unit," nor its definition. In a time of educational confusion such as the country was not again to see until 1945 Dr. Pritchett, for the foundation, used it as one instrument in an endeavor to bring order out of chaos.

The fact that the Carnegie Foundation appears to have been the first philanthropic enterprise professedly to award grants upon carefully considered appraisal of the American college, and, in connection with that appraisal, to use the unit, as invented and defined by others, is probably what led a considerable part of the academic world loosely to prefix to the word "unit" the name "Carnegie." At any rate, the foundation has long considered the implications of the phrase to be unmerited.

SUMMATION

From 1905 to June 30, 1953, the foundation spent $62,763,560 in retiring allowances and approximately $5 million on studies and research in education.

Like its sister agency, the corporation, the foundation has contributed to the work of the National Education Association the Progressive Education Association, the American Council on Education, as well as to such programs as the Cooperative Test Service, the Graduate Record Service, and the College Entrance Examination Board. While the amounts contributed to these organizations were not as substantial as those of the corporation, nevertheless we can assume that their activities and the results thereof were acceptable to the foundation.

24 Ibid., p. 102.
25 It was asserted that the "unit" was mechanical, tended to work against a true evaluation of the individual, and that in pressing for it the foundation was attempting to impose standards of its own making on American higher education.
28 Annual report, 1952-53, p. 44.
29 See sec. 12 for a description of the activities of each of these organizations.
THE ROCKEFELLER FOUNDATION—GENERAL EDUCATION BOARD

INTRODUCTION

The first of four philanthropic agencies created by John D. Rockefeller, Sr., was the Rockefeller Institute for Medical Research in 1901; the second was the General Education Board, limited to the promotion of education within the United States and its Territories, established in 1903; the Rockefeller Foundation, 1913; and the Laura Spelman Rockefeller Memorial established in 1918 in memory of his wife. His total gifts to each of these were: 30

The Rockefeller Institute for Medical Research $60,673,409.45
General Education Board 129,209,167.10
The Rockefeller Foundation 182,851,480.90
The Laura Spelman Rockefeller Memorial 73,985,313.77

Total 446,719,371.22

NOTE.—In 1928 the Laura Spelman Rockefeller Memorial was consolidated with the Rockefeller Foundation, with the exception of 1 or 2 specialized functions, which did not fit into the foundation's program and which were transferred to a new organization called the Spelman Fund of New York along with $10 million to carry on its work. This fund has since been liquidated, as has the General Education Board (on Dec. 31, 1953, when all its funds were entirely distributed).

One other agency in this field—the International Education Board, to which he gave $20,050,947.50—was created by John D. Rockefeller, Jr., in 1923, because of the charter limitations of the General Education Board. At this point it should be noted that the total of half a billion dollars represented by the total of all Mr. Rockefeller's gifts, is not the grand total of expenditures by his various agencies—it is merely the principal to which must be added approximately the same amount in income, which these agencies have also distributed, or yet have to distribute.

REARRANGEMENT OF ACTIVITIES

The General Education Board carried on activities in the field of education from 1902 to the end of 1953, but the Rockefeller Foundation itself did not become active in the field of education for some years after it was established, except to the extent that its work in the medical, health, and agricultural fields may be considered educational.

The Laura Spelman Rockefeller Memorial operated only during the decade 1918–28, and the International Education Board was in existence from 1923–38.

1928–29 report

Pages 3-6: In the board's report that year, referring to the various Rockefeller agencies, is stated that it was becoming evident that the line between the activities of each was not clearly marked, resulting in doubts on the part of the public as to the respective fields, and a duplication of time and expense in the presentation of the same projects to two or more of the boards. A committee was appointed to study the situation and to decide how the work might be carried on in closer and more clearly defined cooperative relations. It recommended that a new corporation, the Rockefeller Foundation, be created, into which would be merged the former Rockefeller Foundation and the Laura

Spelman Rockefeller Memorial. A further recommendation was extension of the scope of the new foundation to embrace as a major function—

the advancement of knowledge in—

(1) the medical sciences,
(2) the natural science (taking over the program in foreign countries of the International Education Board),
(3) the social sciences (formerly carried on by the Laura Spelman Rockefeller Memorial), and
(4) the humanities;

and the appointment of a director and staff for each of these fields.

The final recommendation was division of the field of education in the United States between the Rockefeller Foundation and the General Education Board, along definitely determined lines. The net result of this was to create two Rockefeller agencies: The Rockefeller Foundation, a broad and general operation; and the General Education Board with activities limited to the promotion of education in the United States.

According to this, "education" would fall into the orbit of the board and "research" into that of the foundation. In the case of an undertaking which embraces both objectives, the deciding factor was the principal one, if the motive was education then it was a board activity—if research a foundation activity.

The board from that time dealt chiefly with institutions rather than with learned societies or research agencies. Also, it did not sponsor individual research projects after that time except in educational psychology and the educational processes that fell within its designated fields. Thus, the exclusive activities of the board after that related chiefly to college education, public education and the processes of education, the application of art to industry, and aid in accounting methods and administration.

That year also the board withdrew from the field of medical education because it felt that its part in the endeavor had been completed. During the period 1913 to June 20, 1929, the board had contributed a total of $87,154,319.33 to universities and colleges for whites, and $18,191,328.39 to colleges and schools for Negroes, exclusive of any projects carried on in such institutions with board funds.

**The Rockefeller General Education Board**

**Establishment, Purposes, Assets**

Since the board 31 was the first of the Rockefeller philanthropic trusts in the field of education, its activities will be summarized first.

As in the case of the Carnegie agencies no attempt will be made to evaluate the merits of this agency or the Rockefeller Foundation, and this section of the summary like the other sections will be devoted to ascertaining whether it is possible to find answers to the questions raised in the opening statement.

However, it should be noted that when Mr. Rockefeller gave the $1 million to the board in 1902, he referred to the fact that the immediate work of the board would be in studying the needs and aiding to promote the educational interests of the people of the Southern

31 The General Education Board will be designated throughout this section as the board.
States, and during the early portion of its life, it was in these areas that the board's activities were concentrated. It should also be noted that the first permanent endowment, in 1905, amounting to $10 million was expressly designed to furnish an income—to be distributed to, or used for the benefit of, such institutions of learning at such times, in such amounts, for such purposes, and under such conditions or employed in such ways as the board may deem best adapted to promote a comprehensive system of higher education in the United States.\footnote{Letter of gift, June 30, 1905.}

This limitation does not appear in the charter of the board\footnote{Act of Congress, January 12, 1903.} and it was later removed by Mr. Rockefeller in subsequent letters of gift.

Management of the board's affairs was in the board of trustees, consisting of not less than 9 nor more than 17 in number, elected for a 3-year term. In following out its purpose it gave grants toward the support of educational institutions, agencies, and projects, as well as individual fellowships.

Although the board was created in 1902, the first published report was in 1914 and it contains the following introductory note:\footnote{P. XV, annual report, 1902-14.}

This volume gives an account of the activities of the General Education Board from its foundation in 1902 up to June 30, 1914. The board has made annual reports to the United States Department of the Interior and these have been regularly printed in the reports of the Department; but no further report has been hitherto issued, because, as the board's work was felt to be experimental in character, premature statements respecting the scope and outcome of its efforts were to be avoided. After something more than a decade, tangible results have begun to appear and to their description and consideration the following pages are devoted. Henceforth, statements will be issued annually, and from time to time, a more critical discussion like the present report will be published.

In view of Mr. Rockefeller's deep interest in the South and southern education, particularly elementary, the board at once set to work to acquire a thorough knowledge of conditions in the Southern States and surveys were made, State by State, culminating in a conference of county superintendents in each State. These studies covered the organization of the public-school system, its finances, the number and character of school buildings, the number, training, and pay of public schoolteachers, private and public secondary schools, institutions for the higher education of women, schools for the training of teachers, and schools, both public and private, for the education of Negroes.

1902-14 report

Page 13: In a section entitled "Policy of the General Education Board," the report states:

But the studies just referred to did more than supply facts. For out of them a conclusion of far-reaching importance soon emerged. They convinced the board that no fund, however large, could, by direct gifts, contribute a system of public schools; that even if it were possible to develop a system of public schools by private gifts, it would be a positive disservice. The best thing in connection with public-school education is the doing of it. The public school must represent community ideals, community initiative, and community support, even to the point of sacrifice. The General Education Board could be helpful only by respecting this fundamental truth. It therefore felt its way cautiously, conscious of the difficulty, complexity, and delicacy of the situation.

As a statement of policy this language leaves nothing to be desired and as referred to previously, in this respect the avowed intentions of
the Rockefeller agencies were at variance with the avowed intentions of the Carnegie Foundation for the Advancement of Teaching.

Question 1 and question 2. It is difficult, if not impossible, without duplication to completely separate the quotations pertaining to these two questions. For that reason and because they have equal validity in providing answers to both questions, no attempt will be made to distinguish between them.

Unless otherwise indicated, all quotations are from the annual reports of the board, with the year and page as noted. Because the activities of the board which relate to these questions are so varied and also because they fall into certain more or less distinct topics they have been subdivided.

ELEMENTARY AND SECONDARY EDUCATION

1902-14 report

Pages 80, 81, 83: There is a certain amount of overlapping between these two levels of education, and for that reason no dogmatic distinction has been made. Because it saw deficiencies in secondary education in the South, the board approached the problem by selecting a person or persons whose business it was to inform, cultivate, and guide professional, public, and legislative opinions. Believing there was need in every State for trained specialists in the field of secondary education, it felt this individual should also “skillfully and tactfully marshal all available forces for the purpose of securing concerted action calculated in time to realize a secondary school system.” Aware of the lack of funds in the hands of the State departments of education, or the State universities themselves, the General Education Board then entered the picture and stated its willingness—

to make appropriations to the several State universities for the salaried and traveling expenses of a professor of secondary education whose main and principal work shall be to ascertain where the conditions are favorable for the establishment of public high schools not in existence; to visit such places and to endeavor to organize in such places public high schools in accordance with the laws of the State; to endeavor to create in such communities a public sentiment that shall permanently sustain such high schools, and to place the high schools under such local leadership as shall give them intelligent and wise direction, and he and the university shall exercise a fostering care over such institutions.

While stating that the board did not attempt either to indicate or to dictate the lines along which the individuals should exert themselves, it describes their activities in the following terms:

In addition, the professors of secondary education were high-school evangelists traveling well-nigh incessantly from county to county, returning from time to time to the State university to do their teaching, or to the State capitol to confer with the State superintendent. Wherever they went, they addressed the people, the local school authorities, the county court, teachers, businessmen and business organizations, county and State conferences, etc. They sought almost any sort of opportunity in order to score a point. Law or no law, they urged their hearers to make voluntary efforts toward a county high school, if a start had not yet been made; to add a grade or a teacher to a school already started; to repair the building or to provide a new one; to consolidate weak district schools into a larger one adequate to town or county needs. Nor did they merely expose defects, tender advice, and employ exhortations; they not only urged the policy, but nursed a situation. By correspondence they kept in touch with places already visited; from time to time they returned, to renew pressure or to recognize achievement. * * *
During the 10-year period the board contributed $24,862 in 12 Southern States.

1915-16 report
Page 39: The board held meetings those years on the question of "needed reforms in elementary and secondary education," one outgrowth of which were the Occasional Papers 2 and 3. However, the Board was again quick to state that it was interested only in facilitating the trial of "promising educational experiments under proper conditions."

1918-19 report
Page 41: The board continued to make sums available to the State universities for a professor of secondary education and also made funds available for departments of secondary education. These professors of secondary education were urged and encouraged to work on the high-school curriculum and organization as well as the improvement of teachers in actual service and the administration and effect of State subsidies and Federal grants, and it was around this time that the subject of "public education" was included as a section of the annual report.

Throughout its history the board divided its activities, devoting a section to white colleges and universities, and a section to Negro education.

1923-24 report
Page 29: The board states it was becoming increasingly clear that the professors of secondary education had substantially achieved the purposes for which they were originally supported.

That same report, in referring to the improvement in the State departments of education in the Southern States, announced that it had decided that the need was for trained men and women in the field and with that object in mind it had appropriated in 1922, $50,000 to provide scholarships for persons occupying important posts and increased the sum to $80,000 during the year just closed.

The colleges most frequently selected were:
George Peabody College for Teachers
University of Chicago
Teachers College, Columbia University
Columbia University
Cornell University
University of Wisconsin
Harvard University
University of California
Hampton University

GENERAL EDUCATION INCLUDING TESTING AND ACCREDITING PROJECTS

The board began what it referred to as a general education program in 1933 and it continued for about 5 or 6 years. It was during this period that much of the work of the various testing and accrediting agencies was being done, and for that reason much of the comment in the reports is on that subject.

1933-34 annual report
Page 4: In this report there is the following statement:

From 1929 to 1932 the board gave its support to several projects for the improvement of school and college relationships and for the intensive development
of quality in college education. Through aid to institutions and to educational commissions, there were studies made of the accrediting, examining, and teaching procedures in force at a number of representative institutions and within large areas of the country. At a few places controlled experiments were carried on by the college administrative officers and staff having the responsibility of selecting students and of organizing courses of study for both schools and colleges.

1933–34 annual report

Page 5: Referring to the critics of educational practice and their request for new purposes rather than for further modification in existing routine, the report states:

It was pointed out that too little has been done to discover a form of education universally useful to man in society today; that by formal or informal methods every individual should be made familiar with the forces that he will encounter in daily living; and that apart from special preparation for earning a livelihood, he should be made ready for continuous participation in the responsibilities and satisfactions of life to the extent of his individual ability.

The purposes of a general education for individual and social usefulness can be stated, they believe, in a way that will have meaning for adults as well as for younger students; the adaptation of methods for its attainment will then be practicable through the processes of formal and informal studies. From such considerations the board reached the conclusion that assistance through the further definition and development of general education through appropriate agencies should be one of the purposes of its new program.

This is included at this time in view of the grants made later by the board to other organizations and for types of projects.

BUILDING AMERICA

1935–36 annual report

Page 8: The report contains the following, under a subheading "Reorganization of Subject Matter Fields—Society for Curriculum Study 'Building America':

In the spring of 1935, a new monthly periodical was launched by the Society for Curriculum Study with the assistance of funds provided by the General Education Board. The magazine represents an attempt on the part of the society to meet a long-felt need in secondary education for visual as well as factual study of contemporary problems of our social, political, and economic life. A characteristic feature of the publication lies in its emphasis upon pictures and graphs as a means of presenting facts and indicating problems. Housing, Men and Machines, Transportation, Health, Power, Recreation, and Youth Faces the World are among the issues already published. Throughout the various types of curriculum, ranging from instruction in subject matter to the newer types organized around basic functions or major interests of society, Building America studies are now being used in valuable organized visual aids and as useful units of study. A further appropriation of $30,000 over a 3-year period was made this year by the board with a view to developing the magazine to a point where it will be self-supporting.

1935–36 annual report

Pages 11, 12, 13:

The various educational accrediting associations of this country are in position to play a significant role in the reorganization of secondary education. For some time now, they have recognized that important modifications in standards and procedures for accrediting are imperative and a cooperative attack on the problem has been organized by a joint committee of 21 members representing the several associations.

$116,000 over a 2-year period has been made by the board to the American Council on Education.
1936–37 report

Pages 60–67: Grants were made that year in support of work by organizations and institutions in the following types of activities:

General planning of educational reorganization: Taking stock of the situation, discussion, and agreement upon the purposes of general education, and planning for such reorganization of general education as is necessary to make it attain these purposes.

Experimentation with the curriculum and evaluation of the results of such experimentations.

Preparation of new instructional materials and experimentation with new methods of teaching: This includes experimentation with new instruments of education such as film and radio.

Recruiting, selection, and education of teachers: This includes the education of teachers already in service as well as work with prospective teachers.

Study of youth: This includes studies of the special needs of various racial and economic groups as well as studies of the needs of all young people for normal physical, intellectual, and personal developments.

Again the organizations selected were the Progressive Education Association, the National Education Association Department of Secondary School Principals, and the American Council on Education as well as the National Council of Parent Education, the American Youth Committee, and Teachers College of Columbia University.

1936–37 annual report

Pages 63–65: Dr. Robert J. Havighurst, director for general education, made some interesting comments in this report. After describing the evolution of the high school from the traditional function of preparing a small selective group for positions in business and industries and another for institutions of higher learning to the education of the mass of youth for more effective living. He states:

The kind of reorganization that the secondary schools must undergo is determined by social change in two different ways. As just indicated, social change has brought young people of the most diverse capacities and interests into the secondary schools which must develop a program to meet their needs. In addition, social change is making new demands upon all people for understanding human nature and society for social change has made it necessary to discard to a large extent old ways of living, many of which could be managed by instinct, habit, tradition, and sheer untrained power. While we do not need to develop new physical organs and adapt old ones to the new life, we do need to develop new ways of living and to modify old ones. In this process a reorganized program of general education can play an important part.

One of the most significant things about the actions of educators and educational organizations in this connection is their concern for making a reorganized general education serve to help young people develop a loyalty to democratic ways of living and a confidence in democratic methods of solving social problems.

He goes on to state that both the National Education Association and the Progressive Education Association feel responsible for saying in definite terms what they believe the ideals of democracy to be and how education should be organized to lead to the realization of these ideals.

These comments are particularly significant in the light of the activities of the National Education Association and the Progressive Education Association under what they term “democracy.”

1937–38 annual report

Pages 66–69: Dr. Havighurst, after pointing out some of the deficiencies of the high school insofar as the mass of young people were concerned, because the curriculum was geared to the requirements of
the minority, pointed out that while the board could not commit itself
to any one approach to these problems, it did extend assistance to a
number of responsible and representative organizations with the idea
of formulating what, in their opinion, are the underlying purposes of
a general education for young people and following that to recommend
a series of changes calculated to make "the systematic care and educa-
tion of youth serve these purposes better."

The board gave as its reasons for selecting the American Council
on Education, the National Education Association, the Progressive
Education Association, and the regents of the University of the State
of New York the fact that "no truly representative canvass of existing
knowledge and points of view on the problems of youth could have
been made without the participation of these groups."

While Dr. Havighurst felt that the unanimity of these groups in
recommending a thoroughgoing reorganization of general education
at secondary levels was remarkable such unanimity would actually
appear to be only the logical result of the close cooperation and joint
projects of these groups and others, including Columbia University
and Teachers College.

The board went on to give grants to those organizations which it
considered to be factfinding and deliberative and these were the same
groups which had done the preliminary studies.

In his report, Dr. Havighurst made the following comments on the
work of the American Historical Association, after referring to the
various deliberative committee reports which had been effective in
shaping American public education during the years roughly of the
board's operations:

The present decade has produced several committees whose reports may be
ranked with those of previous decades. Four years ago the commission on social
studies of the American Historical Association published an important series of
books dealing with the teaching of social studies in the schools. The committee
on orientation of secondary education (a committee of the Department of Second-
ary School Principals of the National Education Association) has produced two
reports—one on the Issue of Secondary Education and othe other on the Func-
tions of Secondary Education. The Federal Government's Advisory Committee
on Education is now issuing a series of statements on its various inquiries. To
these documents may now be added reports coming from several groups which
have received aid from the General Education Board.

He goes on to discuss the reports of the regents' inquiry as to the
character and cost of education in New York and those of the Ameri-
can Youth Commission.35

One of the most important results was the issuance of three major
statements on educational policy by the Educational Policies Commiss-
ion of the National Education Association entitled "The Unique
Function of Education in American Democracy," Charles A. Beard;
the "Structure of Education in American Democracy," by George D.

1938–39 annual report

Pages 87–93 : Referring to the board's program in the fields of gen-
eral education through the American Youth Commission of the
American Council on Education, the Educational Policies Commission.

35 How Fare American Youth? Homer P. Rainey; Secondary Education for Youth in
America, Harl Douglass; Youth Tell Their Story, Howard M. Bell.
of the National Education Association and the Commission on Secondary School Curriculum of the Progressive Education Association and the inquiry staff of the New York State Board of Regents (reporting that much of the work had been completed or was nearing completion) Dr. Havighurst continues: "And is now serving not only as a basis for changes in the curricula of many secondary schools but as an incentive to experimentation with a variety of procedures for the care and education of young people."

Page 93: Dr. Havighurst, referring to the activities of the board states:

Aid to experiments with the curricula of secondary schools and junior colleges and evaluation of the results of such experiments has been an important part of the board's work in general education. Grants for work in this area have included such undertakings as the Progressive Education Association's 8-year experimental study of the 30 schools, the American Council on Education's Cooperative College Study, and the Michigan Secondary School Curriculum Study. The interest was continued by appropriations that year including a continuation of the National Education Association civic education project, one of the major objectives of which was the improvement of civic education in the United States with particular stress on the importance of developing in young people an intelligent, appreciative, and active loyalty to democracy.

1940 annual report

Page 4: A total of some $8,500,000 had been appropriated, the effects of which, the report states, it was too early to judge. But the report continues:

But it can be said with considerable assurance that the studies and experiments which have been aided by the board under its program in general education have made significant contribution toward a better understanding of the problems of youth in an age of rapid social change. Undoubtedly, projects aided by the board had stimulated a widespread interest in the development of ways for improving the care and education of young people; they have built up a new and much-needed body of organized psychological, physiological, and social knowledge about youth; and they have set in motion systematic planning on the part of institutions and national organizations for a continuing consideration of problems involved in the preparation of youth for the democratic way of life.

Page 76: Dr. Havighurst once again devoted a special section of his report to discussing the program in child growth and development which the board had been supporting since 1933, continuing the interests evidenced by the Laura Spelman Rockefeller Memorial. From 1933 to the close of 1940, $1,032,888 had been appropriated for studies of adolescents; $519,543 for studies of infancy, and $173,000 for fellowships, conferences, and special studies. In 1940 the board removed the earmarkings of the various sums which prior to that time had been segregated for different phases of the board's programs and that year, 1940, also marked the end of the general education program which began in 1933.

1949 report

Page 34: Referring to the National Citizens Commission for the Public Schools, the report states:

Among the most promising projects for rehabilitating the public schools was that begun during the year by the National Citizens Commission for the Public Schools, New York. This laymen's commission was established upon the advice of a number of leading educators, and under the chairmanship of Mr. Roy E.
Larsen and is arousing latent grassroots interests in the improvement of public education. By means of studies, conferences, printed materials, addresses and publicity the committee intends to bring about community participation in behalf of better school administration, better instruction and more generous support for local educational needs. In publicizing examples of good school and community practices, the Commission hopes to assist thousands of communities in their efforts to build stronger schools. This is the first laymen's attempt to deal with this important educational problem. Toward expenses of its first year, the board appropriated $50,000.

1950 annual report

Page 45: The following year, reporting on this commission the report states: "The Commission has stimulated group action by example rather than by direction." Good practices have been publicized, conferences and study groups have been encouraged, and in response 973 local citizens' committees have been set up across the country to deal with local school problems. The report goes on to state that regional offices have been established and subcommittees set up, and the board appropriated $75,000 for use over the next 2 years.

COLLEGES AND UNIVERSITIES

1902-14 report

Pages 142, 143, 148:

The three main features of the policy of the general education board in dealing with higher education may therefore be expressed as follows:

(1) Preference for centers of wealth and population as the pivots of the system;
(2) Systematic and helpful cooperation with religious denominations;
(3) Concentration of gifts in the form of endowments.

The board tentatively decided that an efficient college should enjoy an income from endowment covering from 40 to 60 percent of its annual expenditures and from these and subsequent reports it would appear that grants from the board were held out as an incentive to institutions to put themselves in this financial position. This procedure is in no wise unusual and was contingent upon the institution itself raising matching or greater sums. And again, no criticism is made of this approach, that such grants were in education fields, and selected educational fields and somewhat too, selected educational institutions, is only pertinent in relation to this question.

Another item which the board refers to as safeguarding the property of the institutions was to give special attention to the business methods of the institutions to whom grants were made and on this point the report states: "* * * The board was indeed bound to exercise as much care in the distribution of its income as in making investment of its principal. For this reason, the business management of colleges applying for contributions has been carefully scrutinized with a view to suggesting such improvements as might be advisable." From this it is reasonable to assume the board at least to a degree decided upon what were efficient methods.

The board itself admits that its grants were in the nature of incentive grants, and of this there can be no doubt, and at this stage in its operations the board also freely admitted that many years would have to elapse before the main task in which the board was assisting could even be approximately completed, but it felt that the board's gift served an indispensable purpose as leverage.
Until 1915 the board’s activities were grouped into the following divisions:

1. Appropriations for colleges and universities
2. Medical education
3. Education in the Southern States, including white rural schools, Negro rural schools, and secondary education.
4. Farm demonstrations
5. Educational research

In the following years the title selected was somewhat different, but the fields of activity remained practically the same, with professional education becoming a section around 1920.

**LINCOLN SCHOOL**

**1916-17 report**

Pages 48-49: This report contains the first mention of the grants made to Lincoln School, and the board states that this is an example of the service that can be performed in “support of educational experiments.” It goes on to state that the Teachers College of Columbia University had requested the board to provide the funds needed to conduct a school which endeavored “to organize a liberal curriculum out of so-called modern subjects.” The report compared this to its work in the farm demonstrating program and added: “In addition to its primary and essential task—that of endeavoring experimentally to construct another type of education—the Lincoln School will, in the judgment of its promoters, assist in developing a critical attitude throughout the field of education.”

**1924-25 report**

Page 21: The board decided that year that the Lincoln School had a permanent function to perform and it made initial appropriation of $500,000 to Teachers College toward endowment. Referring to its activities later,²⁶ the board states: “During recent years the appropriations of the board to colleges and universities have been mainly directed to the development of graduate activities.” And declaring that a fine line cannot be drawn, it continues: “The board is now looking to the development of graduate instruction and research.”

**1925-26 annual report**

Pages 36-37: In reporting its appropriation of $500,000 toward the endowment of Lincoln School, at the discretion of Teachers College, the board quotes from the annual report of Dr. Russell, dean of Teachers College, as follows:

Eight years ago, with the support of the general education board, we established the Lincoln School for the purpose of experimenting with the materials of instruction and methods of teaching suitable to a modern school. The success of the undertaking has exceeded all expectations from the standpoint both of a school and of an experiment station.

**SUMMATION**

Based on the foregoing:

1. The board contributed large sums of money to projects in the educational field.
2. In the course of its activities the board has made grants to the American Council on Education, National Education Association, and

²⁶ 1927-28 annual report.
the Progressive Education Association and others in the following amounts:

The foundation's affairs are under the direction of a board of 21 trustees, elected for 3 years, and its charter states as its purpose "To promote the well-being of mankind throughout the world." As of December 31, 1952, its assets were $167,890,851.75 and its income for that year was $16,893,519. Both principal and income may be spent.

According to the information filed with the Cox committee by the foundation, its expenditures from May 22, 1913, to December 31, 1952, were:

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Amount</th>

40 Incorporated by special act of New York State Legislature, 1913.
41 And incorporated in annual report for 1952, latest available.
42 Does not include expenditures of Laura Spelman Rockefeller Memorial prior to consolidation.
of studies had assigned to it several miscellaneous interests, including the training of nurses, aid to dispensaries, human aspects of biology, and anthropology. In time its programs and those of the other Rockefeller agencies began to overlap, and in 1928 after an extended study a plan was evolved whereby all programs of the four Rockefeller boards relating to the advance of human knowledge would be concentrated in the foundation.

The expenditures of the foundation from 1913 to December 31, 1952, in fields of major interest were:

- Appropriations for the social sciences, humanities, medicine and public health, and natural sciences and agriculture have been excluded.

While the foundation as mentioned has disclaimed any credit for results, we can assume that their contributions would not have continued had there not been some measure of approval of the activities and the results. Here again, since the foundation is an operating agency only in the field of public health and agriculture, the results of the agencies selected for contributions are pertinent, and particularly insofar as there have been traceable and evident effects in the educational field as the result of the agencies’ activities, they are attributable to the foundation itself.

The work of the agencies aided by the foundation have already been described briefly elsewhere, with the exception of the Institute of International Education, which is quite evidently in the field of education, and that description will not be repeated here. It is sufficient to state that the results of their activities are apparent.

The foundation, as well as the board, sought to influence higher education largely through the universities and the associations of learned societies, but no attempt will be made to cover the contributions of the foundation or the board to the latter group of organizations. According to Dr. Hollis, the foundation profited by the experience of the Carnegie Foundation for the Advancement of Teaching (whose methods in this field have been discussed earlier) and thus avoided much of the criticism that was directed at that agency. Perhaps another reason was that the foundation came into being after a decade of public awareness, but it should be noted that at its inception the foundation was subjected to severe attack when it applied for a congressional charter, and (although the board had been granted one in 1903) so great was the opposition that the matter was dropped.

For whatever reason, the annual reports of the foundation are much less outspoken in their evaluation of their activities and merely state in narrative and statistical terms the grants made each year. How-

47 Philanthropic Foundations and Higher Education.
ever, a glance at these grants over the years will substantiate the statement that the foundation has been active in the field of education throughout its existence and in some specialized aspects (such as teacher training and the like) it has been particularly active since the early thirties.

Moreover, this is confirmed by the extensive answers of the foundation’s Cox committee questionnaire (sec. E). In the preliminary comment to that section there is a statement of the policy of the foundation which can be summed up in the last sentence: “We are ready to state what we have done, but much of the assessment of its worth must be left to others.”

1943 annual report

Page 7: Within recent years there has been a brief statement which conveys the foundation’s own estimates:

The chartered purpose of the foundation with its wide scope and its absence of preconceived or specialized interests has in a quite informal and undersigned manner caused the foundation to become one of the crossroads of the scientific, educational, and scholarly world.

SUMMATION

In addition to its direct grants to colleges and universities, the foundation appropriated the following sums from 1929–52:

<table>
<thead>
<tr>
<th>Institution</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Universities, colleges, and schools in the United States</td>
<td>$335,000,000</td>
</tr>

</tr>
<tr>
<td>University of Chicago</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>$440,352,890</td>
</tr>
</tbody>
</table>

1 Does not include appropriations made to Chicago University, Columbia University, Teachers College, or the London School of Economics.
2 Includes grants of $35 million by John D. Rockefeller, Sr.

While the greater portion of its expenditures have been in the field of university and college education, it has also contributed to the work of the American Council on Education, the National Education Association, and the Progressive Education Association (as shown by the foregoing table), and also to adult education generally.

Question 3. It is apparent that each of the Carnegie and Rockefeller agencies referred to have carried on activities at all levels of education, either as an operating agency or through its choice of institutions and other organizations.

Among the organizations selected have been: The American Council on Education, the National Education Association, and the Progressive Education Association, the Institute of International Education and the National Citizens Commission for the Public Schools.

P. 79 of Rockefeller Answers to Questionnaires.
The American Council on Education is in the nature of a coordinating agency between the Government and educational institutions and organizations, but also carried on projects which affect education at all levels.

The National Education Association and the Progressive Education Association concentrate on primary and secondary schools.

The Cooperative Test Service, the Educational Records Bureau, and the Graduate Record and College Entrance Examination affect education at all levels.

The Institute of International Education carries on its activities in secondary schools and at college and university levels.

There is considerable evidence that the efforts of the first three of these organizations, to a greater or lesser degree, have resulted in standardization of methods, both as to teaching (including testing and training of teachers) and administrative practices in the field of education.

Even those not in the educational field recognize that today there is, in effect, a national set of standards of education, curricula, and methods of teaching prevailing throughout the United States. As a practical matter, the net result of this is nothing more nor less than a system of education which is uniform throughout the country. Moreover, in the case of the National Education Association, one of its goals for the “united teaching profession in 1951-57,” is stated on page 13 of the National Education Association Handbook for 1953-54 to be:

A strong, adequately staffed State department of education in each State and a more adequate Federal education agency.

* * * * *

Equalization and expansion of educational opportunity including needed State and national financing.

The Carnegie and Rockefeller Foundations mentioned have contributed $20,249,947 to these four agencies (or almost 9 percent of the total of all their grants in this field of activity); and since the support has continued up to now it indicates approval and sponsorship of the activities of these agencies and their results.

Among the institutions selected have been: Chicago University, Columbia University (including Teachers College) and the Institute of International Education, and the London School of Economics.

These institutions have received contributions amounting to $194,100,589, or approximately 22 percent of the total grants to all universities, colleges, and schools, including the amount contributed to pension funds by the Carnegie foundations. If the pension funds are excluded, then the contributions represent 27 percent of the funds given universities, colleges, and schools.

* Excluding grants to universities, colleges, and schools.
In addition, with the exception of the Rockefeller Foundation, all contributed to the various testing and accrediting agencies which were finally merged into the Educational Testing Service (aided also by grants from these foundations).

The amount and distribution of the appropriations are summarized in the tabulation following:

The quotations already given from the various reports relate also to this question regarding the effects of foundation activities in education, and therefore only 1 or 2 additional references will be included.

Probably the most recent self-evaluation by one of this group is that contained in the 1952 Report of the Carnegie Foundation for the Advancement of Teaching, at page 14:

1952 report

Page 14:

One of the developments which has produced the most lively debate in educational circles has been the widespread movement to reinvigorate the ideals embodied in the term “liberal education.” The goal is rather widely accepted, but there is substantial difference of opinion as to how to achieve it. The general educationists offer a variety of curricular reforms. Advocates of the great books press their claims for the wisdom of the past. Humanists decry the shift of interest from certain disciplines to certain other disciplines. Our colleges are literally awash with formulae for salvation; all of which is healthy and part of the process of getting things done in a democratic, heterogeneous, and always vigorously assertive society.

* * * President Conant and his coworkers at Harvard have provided leadership in this direction with their efforts to develop a new approach to the teaching of science as a general education course. During the current year the corporation made a grant to Harvard for the continuation of this work.
The social sciences also have a significant role to play. Serious men cannot accept the view of those humanists who rhapsodize over platonic generalizations about society but resent the efforts of the modern social scientist to test these generalizations.

Developments such as the new American studies program at Barnard College (see p. 19) and the courses in Asiatic civilization at Columbia University (see p. 21) would be impossible without vigorous participation, indeed, vigorous leadership, on the part of the humanistic fields. But there is nothing in the humanistic fields which offers a guaranty of salvation. They, too, have turned out narrow technicians when they might have been turning out education men. They, too, have often ignored the central concerns of liberal education.

A statement on this point made in the early years of its existence is found on page 87 of the 1902-14 Report of the General Education Board under the heading “Favorable Legislation”:

It can fairly be said that in framing and putting through this legislation, the high-school representatives supported by the General Education Board have in every instance taken a leading part. They would, however, be the first to refuse any undue credit. The organizations already mentioned—the Peabody Board, the Southern Education Board, and the Conference for Education in the South—had greatly stimulated the demand for adequate and orderly educational facilities; in every State, local bodies and organizations, State and local officials were working along one line or another to arouse educational interest.

The section concludes with results in terms of increased schools, buildings, and so forth, and the amounts appropriated by individual States for new and improved buildings.

In a later report of the board (1939-40, p. 22) in a section entitled “How Have the General Education Board’s Activities Been Related to These Happenings?” there is the following paragraphs:

Board-aided projects have been associated with nearly all the changes described above. It is obvious, however, that these changes have been called forth by the broad social changes of the times, not by the educators, not by educational foundations. If educational changes are well adapted to the broad social changes of the times, they find a place and are incorporated in the continuing social processes.

However, based on the records of the board itself, no other projects which might possibly have resulted in “changes” were selected except those board-aided projects.

The board, in appraising its contributions to the American Council on Education’s Cooperative Study of Secondary School Standards (1947-48 report, p. 113), wrote:

Under an earlier program of the General Education Board appropriations were made to the American Council on Education for the study of standards for the secondary schools. The regional accrediting associations for whom the study was undertaken were interested in developing methods of evaluation that would take account of significant qualitative factors, so that less reliance would need to be placed on the purely quantitative criteria in the evaluation of secondary schools. The study committee worked out and tested new criteria and procedures and published its conclusions in four volumes: How To Evaluate a Secondary School, Evaluative Criteria, Educational Temperatures, and a General Report. The committee anticipated that these materials and procedures would need review and revision about every 10 years.

That is, those such as the Eight-Year Study, the Study of Secondary School Curriculum, and the Cooperative Study of General Education.
Since 1938, almost 25 percent of the secondary schools of the country have used the new procedures. In the Southern and Middlewestern States, especially, criteria have been widely used and found helpful in raising the general level of secondary education. Meanwhile, further educational research, experience with war-training programs, and changing relations between secondary schools and colleges have made a general revision of the criteria desirable. The accrediting associations have requested such a revision. An appropriation of $24,500 was made to the American Council on Education for use by a Joint committee of the accrediting associations toward the cost of revising the materials and procedures developed in the earlier investigation.

While it is quite true that at the present time $1 billion is not particularly impressive when compared with endowments and Government spending in related fields such as research and the like, two things should be borne in mind. First, at the time the foundations first began making grants to institutions and agencies, they were the biggest and only contributors on that scale in the country. Second, all have had the same policy of giving grants to inaugurate a particular type of project or organization, withdrawing financial aid when it has become self-supporting or aroused the financial interest of other individuals or groups. Dr. Hollis, writing about this phase of foundation giving, states (excerpt from chapter 1, introduction, Philanthropic Foundations and Higher Education, by Ernest Victor Hollis):

Although foundations are important for the volume of money they distribute to cultural undertakings, the essential nature of their influence is not in the aggregate of their contributions. Rather it lies in the fact that the grants may be large enough to provide the essential supplement necessary for foundations to hold the balance of power. In the 1924 fund-raising campaign of 68 leading universities there is an illustration of the powerful influence that foundations may exert even when the amount they contribute is only a small percentage of the total. They contributed only 18.1 percent of the funds raised, but they were reputed to have exerted a dominant influence on the purposes and plans of the campaigns through being the largest single donors. The average size of grants from foundations were $376,322.76 as compared to an average of $5,902.75 from individuals who gave $1,000 or more. About 3.4 percent of the individual givers contributed 59.3 percent of the total fund but because the average of their gifts were not large enough to be considered an essential supplement, they were reputed to have exerted a negligible influence in the policies and programs of these 68 colleges. If such vital and strategic potential powers are a possibility in foundation activities, it should be known whether these new social institutions are committed to a philosophy of social and cultural values in keeping with the needs of a rapidly changing social order.

Dr. Hollis discusses the matter of foundation influence in education at some length, and according to him foundations have influenced higher education notably and increasingly “toward supporting social and cultural ideas and institutions that contribute to a rapidly changing civilization * * * the chief contribution of the foundations (being) in accelerating the rate of acceptance of the ideas they chose to promote.”

51 Ibid, pp. 3-4.
In his opinion the foundations had been "exercising the initiative accorded them to spend most of their money on exploratory work that seems only remotely connected with improving college education". "on the theory that research must first be done in general education if valid college reorganization is to be accomplished."

He asks the question, "To what extent and in what direction has higher education in the United States been influenced by the philosophy, the administration, the activities, and the money of philanthropic foundations?" 52

In reply he writes:

In order to answer one must consider not only the degree of educational control or dominance that is exercised by the foundations, but also whether their activities indicate progressive participation in a living culture that looks toward the future, or whether they indicate a static or even reactionary tendency that attempts to maintain the existing social order. While categorical answers cannot be given, enough evidence has been introduced to remove discussion from the realm of biased assertion or mere conjecture.

To the question, "To what extent and in what direction has American higher education been influenced by philanthropic foundations?" 53

To what extent and in what direction has American higher education been influenced by philanthropic foundations? An answer to the original question may now be ventured. This study concludes that the extent is roughly $680 million and the direction increasingly toward supporting social and cultural ideas and institutions that contribute to a rapidly changing civilization. Foundations at the start were dissatisfied with existing higher education and they have promoted programs that have, for the most part, been in advance of those prevailing in the institutions with which they have worked. To a large extent these ideas were originated by frontier thinkers within the professions; the chief contribution of the foundations has been in accelerating the rate of acceptance of the ideas they chose to promote.

In contending that these ideas have been closer to the "growing edge" of American culture than were the university practices they proposed to supplant, no claim is made that wiser choices could not have been made or that there has not been occasional overemphasis of foundation-supported ideas, resulting in dislocations and gaps in an ideally conceived pattern of progressive higher education. This study has often been critical of individual ideas, policies, and persons, and has illustrated the foundations' frequent lack of social awareness, their failure to anticipate educational trends, and the presence of unavoidable human fallibility in their official leadership.

The question then arises whether or not the activities of these foundations in the field of education are in harmony with the constitutional provisions with regard to education.

VIEWED IN RELATION TO THE CONSTITUTION

"Education" is not directly referred to in the Constitution, nor in any of the amendments. Under the taxing power as well as the prohibition against discrimination, there have been cases in which the question of educational opportunity or facilities was involved—that is, in decisions as to the constitutionality of State statutes.

There is a long line of cases in which the scope and effect of the 10th amendment have been precisely delineated. It is well estab-

52 Ibid., p. 282.
lished that the reservation contained in that amendment can only be interpreted to mean that, in effect, the rights of sovereignty which the respective States possessed before the adoption of the Constitution, and which they did not specifically relinquish by that document, are expressly reserved to the individual States. It was drafted because the framers of the Constitution and the Bill of Rights were well aware that under the pressure of either "emergency" or "general welfare" the National Government might attempt to assume powers that had not been granted. They were determined to leave no opening for such an assumption, and thus, if further powers seemed necessary in the future, they could only be provided for by amendment in the manner set out in the Constitution.

At times it is erroneously stated that the 10th amendment provides for a distribution of power between the United States and the States—actually, properly stated, it is a reservation of power of the States. This is readily understood when one recognizes that each of the States (Colonies) was actually an autonomous political entity, prior to the ratification of the Constitution. As such, each has all the sovereign powers (within its territorial limits) enjoyed by any foreign nation, including unlimited jurisdiction over all persons and things.

Within its own borders, education, at every level of instruction, is the sole province of each of the 48 States. This extends to the curriculum, textbooks, teachers, and methods of instruction, as well as standards of proficiency for both the student and the graduate.

The foundations, it is true, have taken the position that any standards they may have set have been in order to qualify for grants of their funds—but, in their own words, they have had in view achieving a uniformity and conformity of education and educational standards throughout the country.

Each State has by statute prescribed the methods where changes affecting its educational system shall be made, and in the case of drastic changes the usual practice is to present the matter to the electorate for its decision. From the records it is apparent that the foundations did not follow the statutory provisions of the States relating to education—and apparently it never occurred to any of them to consult the authorities concerning those of their "educational" activities which fell within the purview of State regulation. At any rate, at no time did the individual States themselves (either through an elected official or the electorate) have an opportunity to approve or disapprove the changes brought about by foundation funds.

From a practical standpoint—and again it is emphasized regardless of their merits—the changes have occurred; now it is more difficult to determine what the decision of the individual States would have been then had they been consulted, particularly because many of them (invaded as it were through the back door) have been "conditioned" to the invasion, and would probably not display the same vigorous opposition to the intrusion as might have been expected and forthcoming when this encroachment on State powers first began.

Kathryn Casey,
Legal Analyst.
Mr. Kocli. May Miss Casey make such running comments as she thinks might be pertinent to help the committee?

Mr. Goodwin. The Chair would suggest rather than read verbatim something that is in the record, if you might off the cuff make your comment.

Miss Casey. That is what I plan to do.

Mr. Goodwin. Very good. Go ahead.

Miss Casey. First, I want to explain how it was decided to do this. The decision was actually the result of the situation we found ourselves in. In trying to get material on what the foundations had done, we first had recourse to the Cox files to see whether or not there was any firm pattern which all of them followed as far as their activities were concerned.

That was not a very successful operation, so we went back to the annual reports of the foundations themselves. Of course, the four in existence longest were the ones we started with, that is, Carnegie Corporation of New York itself, the Carnegie Foundation for the Advancement of Teaching, the Rockefeller Foundation, and the Rockefeller General Education Board.

The General Education Board no longer exists, having dispensed its funds by the end of 1953. I will give you the total amount of money they spent when I come to that particular organization.

In connection with trying to find out if their activities fell into an easily classifiable group, it developed that these four foundations did. They were education, international affairs, politics, public affairs, propaganda, and some economics.

The other source of information was a bibliography which the Library of Congress furnished our office, and from which I selected books pertaining to these two organizations.

Taking the first of these activities, education, the entire report is devoted to answering three questions. One, have these foundations carried on activities in the field of education at elementary level, at secondary level, and college and university level, and what have these activities been? The third question was, Did such activities have any evident or traceable effects in the educational field?

Once the answers to those questions were determined, the idea was, if possible, to determine if there was any relationship between their activities and education in the light of the constitutional and historic attitudes with regard to it in this country.

Mr. Hays. Are you reading now from the report?

Miss Casey. I am paraphrasing it. It is on page 4. Would you like me to tell you the pages as I go along?

Mr. Hays. It might be a little helpful.

Miss Casey. All right. I may skip a few pages.

Mr. Hays. You may skip as many as you like, but if you skip from page 4 to 40—that is not a suggestion—just tell us you are on page 40, or whatever it is.

Miss Casey. All right.

Mr. Goodwin. The committee won't criticize you no matter how much you skip.

Miss Casey. I will cover this rapidly.

The other thing I should tell you is the term “education” as used here means “learning-teaching,” not just absorbing knowledge in gen-
eral. That would have necessitated a study of every activity of the
foundations and every activity of Government and industry as well,
and we did not feel that was going to be productive.

There are several differences between the foundations which are
fundamental. In the first place, the Carnegie Foundation for the
Advancement of Teaching—this is on page 5—was originally intended
to provide retiring allowances for college professors, while the Car-
negie Corporation's activity was more general. However, the Foun-
dation for the Advancement of Teaching, rather shortly after it was
founded, got into educational activity other than just granting pen-
sions and providing money for pension funds.

The Rockefeller Foundation did not get into education, other than
medical education, until around 1928 or 1929. I will come to the exact
date further on, and I can give it to you.

The General Education Board from the beginning granted funds
for endowment or other purposes.

There was also a difference in approach between the Carnegie organ-
zations and the Rockefeller Foundations, the former being much
more direct in their approach than the latter.

In that connection I will read a quotation on page 7, from Dr. Hollis'
book, Philanthropic Foundations and Higher Education. He refers
to the fact that the Carnegie Foundation for the Advancement of
Teaching made their grants in a very direct way, as far as saying
they wanted to make changes in the educational system is concerned,
that is. Dr. Hollis writes:

Far-reaching college reform was carefully embedded in many of these non-
controversial grants. It was so skillfully done that few of the grants are directly
chargeable to the ultimate reforms they sought to effect. For instance, there
is little obvious connection between giving a pension to a college professor or
giving a sum to the general endowment of his college, and reforming the
entrance requirements, the financial practices, and the scholastic standards of
his institution. This situation makes it necessary to present qualitative influence
without immediately showing the quantitative grant that made the influence
possible.

The Foundation for the Advancement of Teaching, however, set up
a definition of what was a college and what curriculum would entitle
it to be called a college before they would grant pensions to professors
in that institution.

Mr. HAYS. Would you criticize that?

Miss CASEY. Mr. Hays, may I say that I am only reporting on the
research which I personally did in relation to these four organiza-
tions. My function as a staff member was not to give opinions, but to
try to save the time of the committee members by digesting this mate-
rial for others. Dr. Hollis took a very practical view of the method
of accomplishing what they did, because he said, "What better method
is there for doing it?"

Mr. HAYS. Do you have any idea how many volumes have been
written about the foundations?

Miss CASEY. That is an interesting thing; there are not very many.

Mr. HAYS. That is what I wanted to know.

Miss CASEY. A bibliography appears on page 3. That is not the
complete bibliography by any manner of means. There are others,
such as Philanthropic Giving, Philanthropic Giving for Foundations,
which I did not include because they had no pertinent information
to the subject of these four in the field of education.
If you like, I can have the complete bibliography included.

Mr. HAYS. I think it might be interesting. I might later want to ask you why you picked 1 or 2 volumes and did not seem to quote the others.

Miss CASEY. I might say now that many of them said substantially the same thing or else did not particularly deal with the activities of these four in relation to education.

Now I am turning over to page 8. I am not going to read it, but in that connection there is one fact I want to mention. At no time did any one of these four foundations indicate that underlying their activities in giving endowments to institutions or in granting pensions to professors or anything of that type was a determination to change the system. They did not say they were going to change the educational system. They did not in any manner indicate that. From my point of view, there is no attempt in this particular summary to evaluate the merits of what they did or the methods which they used.

On page 10 there is a reference to a quotation of Dr. Hollis comparing the two systems, which I will mention now, because I did make reference to the fact that there were two methods by which they approached the question. He refers to the General Education Board approach as much more flexible than that of the foundation, which he called an all-or-nothing dictum. It was in relation to granting pensions to the institutions.

One of the things the reports show is that in all of them there was considerable discussion of what was referred to as the “Carnegie unit.” The various reference books also referred to it, and some were quite critical of the endorsement by the Carnegie system of the unit system.

Later on the Carnegie Foundation was not entirely happy with some of the results and explained its reasons for sponsoring it at that time.

Mr. HAYS. You mean a unit system of teaching?

Miss CASEY. A unit system of credits.

Mr. HAYS. If you left the unit system, you would be getting over into some of—what do they call it—modernistic?

Mr. WORMSER. Progressive.

Mr. HAYS. That is one of the things they want to get away from.

Miss CASEY. First, Mr. Hays, the foundations sponsored the unit system and then later on they argued for its elimination. One of the requirements of the foundation in connection with granting pensions was it said that in order to qualify as a college, an educational institution must have a certain number of professors and teach a certain number of subjects; and, being a teacher, Mr. Hays, you know this, I am sure, at that time there was no requirement as to how many subjects should be included in a college curriculum, nor how many professors there should be. That was one thing the foundations put into effect. So, as a matter of practicality I think originally, the institution had to have six departments in order to qualify as a college. Later they raised it to eight.

Mr. HAYS. That is probably to get away from institutions like Mr. Reece’s College of Lawsonomy.

Miss CASEY. I don’t know how many departments that has.

Mr. HAYS. It was a standard to go by.

Miss CASEY. The foundation and the board also concluded that if they withheld funds from weak and tottering colleges the institutions
would die a natural death, or would be coordinated into institutions
the foundations selected as "pivotal" institutions.

I am going over now to page 15. I shan't quote from that page
but there are listed certain organizations, four institutions, and a
heading "adult education," a type of activity they went into parti-
cularly. American Council on Education, Cooperative Test Service,
and the Educational Records Bureau and the related activities of that
group, the Institute of International Education, the London School of
Economics, the National Education Association and the Progressive
Education Association.

Funds from these four foundations flowed into those organizations
more often than into others; as a matter of fact, my recollection is that
they were the only ones, of this type, that were so generously sup-
ported, with the exception of the National Advisory Council on Radio.
But these were the ones that the most money went to most frequently.

The institutions were Columbia University, Teachers College, Uni-
versity of Chicago, and the Lincoln School of Teachers College.

I will give later the amount of money available to all of these insti-
tutions so I don't believe I will particularly go into the assets they had
and the amounts they disposed, except to say that on page 17 there is a
breakdown of who received the total of $73,243,624 given by the Car-
negie Corporation.

Mr. Goodwin. That is the corporation by itself without reference
to the Foundation for the Advancement of Teaching?

Miss Casey. Yes, sir; that is right. The agencies I mentioned
earlier are also described briefly on pages 17 and 18. Following
through, you will find various quotations from their own reports.
Practically without exception the quotations are from the annual
reports of the individual institutions and organizations, or from
the book which I mentioned, of Dr. Hollis, or one of the other books
listed in the bibliography. Those are the only sources I quote.

In the 1937 report of the corporation, the quotation begins on page
18, the foundation itself recognized that in this system of setting up
agencies which would do the testing, and be accredited, there were
some dangers. They mentioned it particularly in this report and refer

to the fact that "unless the programs are carefully organized and rigidly
limited in scope, there is a real danger lest they tend to draw the
foundation outside its proper sphere of action."

They worked for an integration of education and a coordination of
it because they felt that would be the best method of aiding both the
educational system financially and improving it.

One of the methods that they selected was to have several colleges
in a certain area integrate themselves. They mention, the General
Education Board does, pivotal institutions which would work with a
small group.

Mr. Goodwin. Have you amplified anywhere what is meant by "un-
derstanding the student"?

Miss Casey. No, sir; they did not go into that. I was unable to
find any explanation of exactly how they arrived at their understand-
ing. You are referring to page 19 at the bottom.

Mr. Goodwin. "Studies to understand the student." Go ahead.
There is a lot here I don't understand.

Miss Casey. Incidentally, that particular page shows a total of
half a million dollars, roughly speaking, in that particular field of
activity—educational studies. By 1951, and even earlier than that, the amount of money being spent on that type of thing had increased materially and it is a great deal more now. The policy, I would say, changed drastically.

Mr. Goodwin. I think it might be sometime a proper inquiry to delve a little more into the purposes. That next to the last in that same classification, “to find out what the students learn.”

Miss Casey. I will see if they have any publications of what the results of these studies were. This was a special group of studies when they were beginning on what they called educational studies and educational reports. There is no point in that report or subsequent reports at which they explain what this covered. I imagine we could find out by asking them to send their reports on it.

Mr. Goodwin. No, I would not ask for that. I imagine that before the hearings are concluded, there may be an opportunity to inquire just what was attempted to be found out here.

All right. You may go ahead.

Miss Casey. Throughout these reports there is constant mention in the foundation reports themselves, and also in Dr. Hollis’ book as well as several others, of the fact that they were actually doing exploratory work, in their own words, and that is particularly true of the quotation from Dr. Hollis. He refers to it as the remote theory that research must be done first in general education in order to sufficiently accomplish college reorganization. By that time they were talking rather more directly of reorganizing the colleges, and reorganizing the curriculum.

By the time I had finished going through the reports and these other volumes, it was apparent that the Carnegie Corporation had been engaged in fields which were educational in character. I tried as far as their reports would let me to stick strictly to the educational work and discarded anything about which there might be any question because I felt that would give a better view of what they had done, and what they had not done in education.

Practically without exception—I don’t think there is one exception to this in this particular group—they all supported the National Education Association, the American Council on Education, and the Progressive Education Association. Their sponsorship after that varied. Some would choose one and some another. But that, again, I will give you all at the end.

The next one I will take up is the Carnegie Foundation for the Advancement of Teaching. Actually the Carnegie Foundation was older in point of time than the Carnegie Corporation. It entered into its educational work almost immediately whereas the corporation did not. I mentioned earlier that the original purpose was to provide pensions and in that connection it might be interesting to know that Mr. Carnegie himself up to a point was not aware of the fact that Mr. Pritchett, who was then president of the foundation, actually looked upon that as a somewhat secondary item, and the educational activities as its primary purpose.

Mr. Carnegie also did not particularly care for the name “Carnegie Foundation for Education,” which was suggested, and thought it should be called a professional pension fund.

On page 30, I have listed the various activities which were organized and sponsored by the foundations, and that was the College Entrance
Examination Board, the Association of American Colleges, the Association of American Universities, the American Council on Education, and the American Association of University Professors.

Mr. HAYS. You say that is on page 30?

Miss CASEY. Yes, sir; it is at the end of the second quotation. In the quotation at the bottom of the page the 1913 report states that "by the very fact of these activities been involved in greater or less degree with all those complex relations in education which arise by reason of the relationships between the schools of a nation," and so forth. The reason for including that is to show that the foundation itself felt it was engaged in educational activities. When it started its original activity in pensions, it had a system which it referred to as "accepted institutions" and "nonaccepted institutions." That particular phraseology was not particularly "acceptable" to the universities and colleges and it was changed rather shortly to "associated" and "nonassociated."

The foundation itself when it began its work in educational activities confined it to colleges and universities. However, later it got into secondary education and even into elementary education, because it went on the premise—this is covered on page 32, incidentally—that before it could grant a pension it was necessary to define a college, and in order to define a college, it was necessary to establish standards of admission and college work. Then if standards of admission were to be established, it was necessary to prescribe the courses of study in secondary schools.

On page 33, there is a tabulation of the funds expended by the foundation from 1905 to 1951. That is roughly $66 million. Of that amount, $62 million went into pensions or related activities, pension funds or studies on pension giving.

All the quotations which I have given so far, and the ones that follow actually bear on all three questions I raised in the beginning. It was very difficult to divide it into these pertaining to questions 1, 2, and 3. While that has been followed more or less, it is not a firm rule.

As to question 3 on page 4, whether there were any trace—

Mr. HAYS. Are you going backwards now?

Miss CASEY. No, I am merely referring to the questions on page 4 in order to indicate their relationship to these quotations. I thought it might be easier for you to follow.

Mr. HAYS. Don't make it too easy. I like to do things the hard way. Miss CASEY. As to whether or not these activities had any evident or traceable effects in the educational field, beginning on page 34, I would say the answer to that question, as far as its own reports are concerned, is the emphasis was placed on coordination between colleges and other institutions. It was quite critical of the situation in schools and colleges at that point, and also critical of what was referred to as the hierarchical device of gradations which the schools then represented.

On page 37, of the 1919 report, pages 100 and 101, there is one quotation which I think should be read, because it sums up their attitude at that time:

Marked changes must ensue in our present system of schooling if we undertake to carry out an honest interpretation of our avowed aim of "universal education" by making it not only universal but also education.
Apparently there was a good deal of opposition to the foundation’s activities from the very beginning, and Dr. Hollis refers to it frequently, as do most of the others who cover that phase of its activity. Dr. Hollis is very outspoken on that point, and since this is a short quotation I will read it.

The foundation had had a real battle to enforce entrance standards in the relatively homogeneous endowed liberal arts colleges concentrated in the East. With the decision to admit State universities to the benefits of the Carnegie pension system it was faced with the problems of applying on a nationwide scale what was in fact a regional accrediting standard for a group of superior institutions.

The foundation felt there was no need to take into account any difference in financial or social conditions in an area. The standards were the same. The General Education Board, on the contrary, felt that in some areas the regulations in connection with what was a college, what should be the curriculum, and so forth, might differ. But the foundation did not.

About 1923, this is covered on pages 38, 39, and 40, the foundation began to be a little bit worried about the effects of some of their activities and went on to say that the schools should not be set up only for the minority of the students. The difficulties in the schools at that time in preparing all students in a huge number of subjects was quite different from any other country in the world. Throughout the foundation’s reports and throughout the others, there is constant reference to the Prussian system of education which it was felt was much more desirable than ours.

One of the results which has been attributed to this foundation’s activity is the 100 percent promotion rule which exists in many communities, and which has resulted from putting into effect the philosophy that schools should not be for the minority and their standards should be based on what the greater number of students can achieve. The foundation also recommended that the college take the first step in this reorganization of education by making sweeping changes in its entrance requirements.

This is on page 41, Mr. Hays.

It also worked with the educational groups, such as the National Education Association, the Progressive Education Association, and the American Council on Education, in setting up a record form to be used in the schools, because a report which gave more information about the student’s personality and something other than just his attainment record would be desirable, according to the foundation.

Mr. Hays. You don’t intend those quotations on page 41 to be critical?

Miss Casey. They are intended to indicate the type of work done, and what the foundation itself thought of it.

Mr. Hays. The reason I ask you that question is because I happen to concur in the items set forth on page 41, and if you thought there was something wrong with them, I thought I would debate it with you.

Miss Casey. As I said a little while ago, I don’t think it is within my province to give an opinion on what was done.

One other method was used in connection with the college- and university-level work, page 43—and this is a followup of a system they had put into effect earlier—in 1946 and 1947 the foundation set up 4 strategically located centers in the South, each composed of 1 university group, and at least 5 neighboring undergraduate colleges.
It was just about this time or shortly before that the foundation, because of its heavy load of financial liabilities on the pension end, became a little less active in the educational studies. The foundation had received a great deal of money in grants from the Carnegie Corporation, and it was decided by both organizations that until the pension fund released some of the money they had put into teachers' annuities and things of that kind, the foundation would lessen its activities and the corporation would probably increase them.

I have already mentioned, and this is referred to again on pages 43 to 45, the fact that it had been active in a graduate testing program and a cooperative test, and also gave the sum of $750,000 received from the Carnegie Corporation around 1948 for the merger of all of the testing agencies, because, it said, while there was not exactly competition there was pulling and hauling between all of them.

In the 1946-47 period, page 45, there is a quotation which refers to this subject which did culminate in the merger of the testing agencies in 1948. The foundation pointed out what was referred to as the compelling advantages to American education of unification of these organizations.

Now, on page 47, there is a more detailed discussion of the Carnegie unit. I won't read it. It is taken from the 1947-48 report. It is Dr. Savage's discussion of the unit. Incidentally, neither the foundation, that is the Carnegie Foundation for the Advancement of Teaching, nor any of the others actually evolved the unit system. They did influence the colleges and universities to accept it, but they did not evolve it.

Mr. Hays. Then after they accepted it, they pushed to do away with it; is that it?

Miss Casey. I would say from the record it would appear that way.

The major portion of the foundations' funds have always gone into pension activities. In 1953, which is the last year we have, the relationship is still $62,763,000 to approximately $5,000,000 for research, studies, and education.

Next I will take up the Rockefeller group.

Mr. Goodwin. Before you go on to that, for my information, were the activities of the Foundation for the Advancement of Teaching confined to the problems of pension and annuities?

Miss Casey. Most of the money went into that, because it set aside a fund each year for the number of prospective annuitants. By the 1940's I would say that would have become a considerable amount of the money they had received from Mr. Carnegie and others who had given it funds. So at that point their funds were somewhat limited, they received a great deal of money from the Carnegie Corporation incidently, and that is one of the difficulties in segregating their money, Mr. Goodwin. The corporation and the foundation worked very closely together in later years, and it is difficult sometimes to say which is corporation money and which is foundation money. In order to try to separate them, I did not include money that came from the corporation. I have included it as an activity, but it will not show up always in the total you have for the foundation, because it was not possible to say without any possibility of error that the money was foundation money.

So actually you have to almost read the two together.
Mr. Goodwin. All right. Now, do you want to go along with Rockefeller?

Miss Casey. The original Rockefeller philanthropic trust was the Institute for Medical Research and the General Education Board was also formed before the Rockefeller Foundation was. The other in what might be called the educational group was the Laura Spelman Memorial Fund, which operated primarily in social studies, and was merged in the Rockefeller Foundation in 1948.

The reason for that was by that time the Board and the foundation had been carrying on activities which were so similar there was duplication of requests and both felt it was an inefficient and uneconomic way to have both doing somewhat the same work.

The total of the Rockefeller grants given either by Mr. Rockefeller himself or at his or at Mrs. Rockefeller's death, totaled half a billion dollars in 1929, when the Laura Spelman-Rockefeller Memorial Funds were consolidated with those of the Rockefeller Foundation.

I think I told you earlier that the General Education Board began in 1902, and that the foundation did not get into education other than medical until around 1928–29. Primarily the foundation concentrated in the beginning on medical research, medical education, dental education to a degree, and agriculture. When they divided the activities between the two about 1929, the Board then was to deal primarily with institutions rather than learned societies and research agencies. Before that it had had some research carried on by other agencies, and also it had research and studies carried on by the learned societies.

As a matter of fact, and this has held true throughout its activities, the board originally at Mr. Rockefeller's wish was set up to operate in Negro colleges and southern colleges because he felt that was an area of the country that needed the most help as far as funds were concerned. From the very beginning, therefore, they divided their activities as to whether they were in white colleges or in Negro colleges. I am sure that is the only reason that division was made.

The Rockefeller General Education Board—and the reason for handling it before the Rockefeller Foundation is because it was in the field of education first—in setting up its activities in connection with secondary education in the South, it first made rather extensive studies, and did not issue an annual report of any kind from 1902, when established, until 1914. That report, which is a consolidated report, said the board had approached the problem by selecting a person or persons whose business it was to inform, cultivate, and guide professional, public, and legislative opinions. This is on page 56.

Such individual, this report goes on, should also—sufficiently and tactfully marshal all available forces for the purpose of securing concerted action calculated in time to realize a secondary school system.

Appropriations were made for various purposes, one of which was to State universities to pay the salary of what they called a professor of secondary education. His main and principal work would be to ascertain where the conditions were favorable for the establishment of public schools and to visit places and endeavor to organize in such places a public high school.
On page 57 there is a quotation which states the board had no intention of dictating or indicating the lines along which these individuals should work. It then describes their activities:

In addition, the professors of secondary education were high-school evangelists, traveling well-nigh incessantly from county to county, returning from time to time to the State university to do their teaching, or to the State capitol to confer with the State superintendent. Wherever they went, they addressed the people, the local school authorities, the county court, teachers, businessmen and business organizations, county and State conferences, etc. They sought almost any sort of opportunity in order to score a point. Law or no law, they urged their hearers to make voluntary efforts toward a county high school, if a start had not yet been made; to add a grade or a teacher to a school already started; to repair the buildings or to provide a new one; to consolidate weak district schools into a larger one adequate to town or county needs. Nor did they merely expose defects, tender advice, and employ exhortations; they not only urged the policy, but nursed a situation.

That is given merely to indicate their activities in the South where they were primarily directed to establishing high schools. In the South the work was entirely in high schools. That was not true of activities elsewhere.

Incidentally, those activities continued only until 1924. The report itself is not definite as to when it started, but I gathered it was shortly after the board was founded in 1902. They were stopped in 1924 because the board felt that they had achieved the purpose for which they had been employed.

About 1933 the board went into what it called a general education program. This had been called eductional studies, but at that point the board set out on what was referred to as the general educational program, which continued for about 5 or 6 years to 1939. It was during that period that most of the work was done with the various testing and accrediting agencies.

In working with the testing agencies, they carried on studies at various institutions. Chiefly: Columbia, Chicago, Teachers College, and the Lincoln School of Teachers College. It was that same year, 1934, that the board began work in connection with what later developed into the Building America series, according to their 1935–36 report. I am on page 60.

Under the subheading Reorganization of Subject Matter Fields—Society for Curriculum Study "Building America," that report refers to it as follows:

The magazine represents an attempt on the part of the society to meet a long-felt need in secondary education for visual as well as factual study of contemporary problems of our social, political, and economic life.

The General Education Board felt these educational testing and accrediting services were very important, because it said they were in a position to play a significant role in the reorganization of secondary education. That was around 1935–36.

Mr. HAYS. Perhaps instead of reading these paragraphs here and there into the record again, if you could give us the significant ones as you see them, and have us underscore them, because what we are going to do now is to read this and read the record again to see the important parts of it.
Miss Casey. That is why I am giving the page numbers, Mr. Hays.

Mr. Hays. Why don't you just give us a memo?

Miss Casey. You mean another one?

Mr. Hays. I have been following pretty closely now for about 10 minutes, and 95 percent of what you have been doing is reading a sentence or a paragraph here and there through the thing. That is exactly what we tried to get away from to save time.

Miss Casey. It was those particular paragraphs that I felt were particularly pertinent to show the trend which each agency had taken.

Mr. Hays. I understand that, and I am not criticizing at all. I am saying it would be easier for the committee in their perusal of this document if we had a list of the highlights with the page numbers, and we can relate them with the page. In this way we have to read not only this document, but the whole transcript again. Do you follow me?

Miss Casey. I do. For example, I will tell you right now that on page 61 there is a quotation which is particularly pertinent as regards the activities of the General Education Board, and which it pursued from that point on to the end of its existence in 1953.

I will merely read the types of activity they carried on. Is that agreeable?

Mr. Hays. Sure.

Mr. Goodwin. That is in line with the suggestion we made earlier, if you could give us now an off-the-cuff dissertation of what is in here, rather than quotations; it would save our time.

Miss Casey. All right, sir, fine.

Beginning in 1936–37, the General Education Board concentrated on what they referred to as general planning of educational reorganization, experiments with curriculum, preparation of new instructional materials, and selection of teachers in the study of youth.

From then on the major field of activity as far as secondary educational activities are concerned was development of what the board terms a reorganization of secondary education. In doing that it worked closely with the National Education Association and the Progressive Education Association, and to a degree with the American Council on Education.

The stated reason for that was it was felt no study would be complete unless the board had the knowledge of those representative groups.

When its activities in this field of education ended in 1939, this particular phase of education, it was felt they had made a great contribution; that a great deal of good had resulted from it, from the work of the Progressive Education Association and the National Education Association, particularly in relation to the studies which they issued, and from the work of the American Historical Association.

After 1915 the board began to use agencies other than institutions of learning. It was very much interested in the Lincoln School, and the grants to that institution total, I think, something over $6½ million. That continued from about 1918 to the early 1940's. The total amount of money the Rockefeller General Education Board expended in these fields, I will not read them, it is on page 73, was $270,750,694.

There are footnotes on Columbia University, the Lincoln School of Teachers College, and the University of Chicago, which are not
included in the total $270 million, because they are already included in the amount shown for universities, colleges, and schools in the United States.

Mr. Hays: How long did it take them to spend that money?
Miss Casey: You mean the $270 million?
Mr. Hays: Yes.
Miss Casey: From the time they were formed in 1902.
Mr. Hays: Congress spends more than that lots of times in an afternoon.
Miss Casey: You would know more about that than I would, I am sure.

The foundation, as I mentioned earlier, did not get into education right away. It received from Mr. Rockefeller a total of $241 million. That includes the Spelman Fund. It had a great influence by giving money for land and buildings, particularly in the early days, as well as to endowments and gave large sums for medical education at Chicago University and Columbia University.

It was also interested in having the university medical schools either become affiliated with a hospital and the foundation even built hospitals in many instances.

On page 77 there is a comparison between the types of activities in which the foundation engaged. You will notice there are $227 million for public health and medical sciences which is by far the major field in which it operated.

The foundation was much more reticent in taking credit for what it accomplished than the General Education Board of any one of the Carnegie groups. It is mentioned particularly in the Cox committee questionnaire in which it is stated the foundation is perfectly willing to state what it had done, but they felt any assessment of it should be left to others.

Practically the only quotation I think might be merit as its own view of the work appears on page 78 in their 1948 annual report.

From the reports it is apparent that both the Carnegie philanthropic trusts and the Rockefeller philanthropic trusts had carried on activities in the field of education. They had done it in two ways. Either through their own activities as an operating agency, or through choosing other related agencies.

On page 79 there is a total of the amount of money in millions which all four of these organizations spent. It is $994 million.

Mr. Hays: That is nothing. We have spent as high as $45 billion in an afternoon. You want to get into big money if you want to impress anybody around here. If we passed an Armed Forces appropriation of less than $30 billion, somebody feels they are deprived.

Miss Casey: I agree, Mr. Hays, that sum is not particularly impressive compared to funds available through Government sources today. But at the time it was going into this field, these four funds were the largest organizations making funds available and contributed the greatest amount of money. They were the only contributors on that scale. All four of the foundations had a common practice, that is, they all felt they should contribute funds to an organization, either to inaugurate it or to get it through its first years of operation and then cease contributions. There are frequent references to the fact that once an organization is self-supporting or getting funds from other-
soures, that these four foundations did not feel they should put the money into it.

I will not read Dr. Hollis' comments in connection with the foundations, but you might be interested in reading pages 80 and 81. He refers particularly to a fund-raising campaign of 68 leading universities. He said that while they only contribute 18.1 percent of the funds, they were reputed to have exerted a very predominant influence on the purposes and plans.

He also raises the question to what extent and in what direction has higher education in the United States been influenced by the philosophy of the foundations, and he said that would have to be viewed in the light of all other activities. You will find that quotation on page 42.

Beginning on page 83, there is a two-and-a-quarter-page reference to the question raised in the beginning of the summary as to the relationship of their activities in the educational field in the light of the Constitution and its attitude toward education.

The subject of education is not discussed in the Constitution and is not raised in any one of the amendments to the Constitution, but there is a very long line of cases as to the power and the jurisdiction of the individual States in the light of the 10th amendment to the Constitution. These cases bear out the idea that any power not expressly given to the Federal Government is expressly reserved to the States. Since education is not mentioned, it can be assumed that the question of education is entirely a State province.

The foundations have by their activities and the amount of money they have put into the field of education certainly influenced the matter. I won't read it, but on page 26 of this summary, I refer to the fact that the organizations which I mentioned earlier, National Education Association, Progressive Education Association, and American Council on Education, have to a degree caused a standardization of methods, both as to teaching and as to the testing and training of teachers, and also as always to the curriculum in various schools. There is to a degree, and I would say to a very large degree, uniformity throughout the country as far as educational curricular and methods of teaching are concerned. Of course, that does not cover every institution of learning, but by and large the National Education Association has worked very hard——

Mr. Hayes. Miss Casey, you are discouraging me. I thought we had you up to page 83. Now you are back to 26.

Miss Casey. You need not be discouraged, Mr. Hayes, I only wanted to give you the page number where I mentioned this previously. As I started to say, the National Education Association made that a major activity. We are back now to page 83.

Mr. Hayes. That is the direction I like to travel.

Mr. Goodwin. This is a temporary retrogression.

Miss Casey. Each State has prescribed methods whereby change affecting its educational system can be made, and in most instances if there is anything drastic about it, it is provided that it shall be done either by consulting with the proper official or by taking the matter to voters at election time. For that reason, many of these changes would probably not have gone into effect had the foundations at that time had to get the approval of the individual States in order to do it.
To that extent they have encroached on the powers of the individual States.

That is the end; that is page 85.

Mr. Goodwin. That completes your comments?

Miss Casey. Yes, sir.

Mr. Goodwin. Have you anything?

Mr. Koch. Just for the record, Miss Casey, what other reports are in the works, so to speak, of the staff?

Miss Casey. As far as I am concerned?

Mr. Koch. Yes.

Miss Casey. The others are mentioned on page 3, and the ones covering international affairs, politics, propaganda, and political activities. The reason for making this report as the first is because the same methods are followed in their other activities when these foundations substantially follow the setup that they put into effect in connection with education generally.

Mr. Koch. Those additional reports are not ready yet; is that right? They may be ready next week or the week after?

Miss Casey. That is right.

Mr. Koch. So this is all you have to present today?

Miss Casey. Yes.

Mr. Koch. That is all we have to present today.

Mr. Goodwin. Any questions, Mr. Hays?

Mr. Hays. No questions.

Mr. Goodwin. If not, thank you very much for this survey. It shows ample research certainly, and the committee will endeavor to match your industry by our careful reading of the survey.

Mr. Hays. One question, and not on the report. I think to keep the record in some sort of focus, I don't believe, and I am sure it was inadvertent, that Miss Casey was originally sworn just briefly to testify about some other matter that came out at the time. Could you give us something about your background, Miss Casey?

Miss Casey. Yes; I will be glad to. I went to public-

Mr. Goodwin. That doesn't require any information about the date of birth.

Miss Casey. I was wondering about that. Although I would not mind saying it, I will date myself by my activities.

I am a lawyer. I graduated from law school right here in Washington, Columbus University, a small law school that recently became affiliated with Catholic University.

I have taken various other legal subjects at Catholic University and George Washington University. I did my undergraduate work at the University of California in Berkeley.

My earlier education was in public and parochial schools in the District of Columbia. I have been a lawyer for the last 16 years.

(Discussion off the record.)

Miss Casey. I started to say I have practiced law since 1940 as a trade association executive and general counsel, and I have practiced before the various Government agencies. I am a registered lobbyist, and have appeared before congressional committees.

Mr. Hays. You are a registered lobbyist at this point?

Miss Casey. You never lose it, do you?
Mr. HAYS. I don't know. I have never been one. I just thought it might not make very good headlines if somebody would write that the committee had a registered lobbyist on its staff.

Miss CASEY. Perhaps I should say I was a registered lobbyist.

Mr. HAYS. I think that would be more preferable.

Miss CASEY. Does that cover the extent to which you wish to go, or do you want me to go further?

Mr. HAYS. That is sufficient.

Mr. KOCH. Did you ever write a book?

Miss CASEY. Yes, called Bituminous Coal Code, Annotated, I have also written articles for the magazines on various subjects, including several in connection with the Interstate Commerce Commission, before which I had a fairly extensive practice.

Mr. GOODWIN. I listened in vain for any reference to any activities east of the Hudson River.

Miss CASEY. That is where all have been. My practice has all been in Washington, D.C., Mr. Goodwin. I am admitted to the bar in the District.

Mr. GOODWIN. I referred to the Hudson. Let me say specifically New England.

Miss CASEY. The organization which I represented for some years had a good many members in New England, Mr. Goodwin. It was an agricultural group.

The CHAIRMAN (presiding). In your work with the trade association, I assume it was necessary that you write those articles?

Miss CASEY. At times, but frequently I was requested to write on a particular subject not necessarily connected with my work. I have been admitted to the Bar of the District of Columbia, I am a member of the Bar of the Supreme Court, and have been admitted in the States of Maryland, Pennsylvania, and New York by motion.

Mr. HAYS. That is all.

The CHAIRMAN. Thank you. It is now approximately 4 o'clock so I presume there would hardly be time to take up anything else. As I understood from your conversation just now, it was anticipated that Miss Casey would probably run until tomorrow, and you had no one else scheduled.

Mr. WORMSER. That is right.

The CHAIRMAN. Anticipating closing at noon tomorrow.

Mr. KOCK. Somebody put a long plea for a long weekend a couple of weeks ago so can we start on Tuesday morning?

The CHAIRMAN. That would be my inclination.

Mr. HAYS. That suits me. Of course, I don't have the dynamic program for next week from the leadership yet.

The CHAIRMAN. This farm program is coming up and that ought to be dynamic enough.

Mr. HAYS. Could we get some information?

The CHAIRMAN. Mr. Counsel, what is the outlook for next week? I am familiar with one aspect, but you go ahead and state it.

Mr. WORMSER. Mr. Reece wishes some evidence to be brought in on the League for Industrial Democracy, and the American Labor Education Service, and the Twentieth Century Fund. Beyond that, except for occasional interludes for reports which I presume will be introduced shortly, we want then to bring on the major foundations who should have an opportunity to appear.
I would like to discuss with Mr. Hays and Mr. Reece also possibly in what order to put them. I want to suit their convenience as much as I can. I would like to get in touch with them individually and perhaps clear with you two first how it should be done.

Mr. Hays. I don't know anything about this League for Industrial Democracy, except what I heard here, but are you going to subpoena somebody from that organization? I don't want to be obnoxious about it, but I want to know a little bit specifically what we are going to do.

The Chairman. We anticipated having someone to make a summary of their publications and activities from propaganda and political viewpoints, more or less, and then have some official from the league.

Mr. Hays. You mean you are going to have someone outside of the organization?

The Chairman. Yes.

Mr. Hays. Can you tell me who that is going to be?

The Chairman. I have in mind Mr. Ken Earle, who was formerly with the Senate Internal Security Committee, who is familiar with the subject, and has done a good deal of research. Mr. Wormser, with my understanding, had requested that he prepare a written statement which we hope will be available Monday for the members of the committee.

Mr. Wormser. I would like to have as much guidance as I can get on organizing the program.

Mr. Hays. By the way, right now, what progress have you made in getting the additional material on Facts Forum that I asked you about?

Mr. Koch. We wrote in for it last Friday.

(Discussion off the record.)

Mr. Koch. That is in the works now.

Mr. Hays. Can you follow it up with a wire and get that in, because I am at a sort of standstill.

Mr. Koch. Mr. Hays, Miss Casey said she telephoned so it will speed it up.

The Chairman. So far as I know, the committee will meet in this room. If there is any change, there will be an announcement made of it. So the committee will stand adjourned until 10 o'clock Tuesday morning.

(Thereupon at 3:55 p.m., a recess was taken until Tuesday, June 15, 1954, at 10 a.m.)
The special committee met at 10 a.m., pursuant to recess, in room 304, House Office Building, Hon. Carroll Reece (chairman of the special committee) presiding.

Present: Representatives Reece (presiding), Goodwin, and Hays. Also present: Rene A. Wormser, general counsel; Arnold T. Koch, associate counsel; Norman Dodd, research director; Kathryn Casey, legal analyst; John Marshall, chief clerk.

The CHAIRMAN. The committee will come to order.

Mr. Wormser, who is the next witness?

Mr. WORMSER. Mr. Earl is the next witness.

The CHAIRMAN. Mr. Earl will take the stand. Will you qualify?

That is our custom. Do you solemnly swear the testimony you are about to give in this proceeding shall be the truth, the whole truth and nothing but the truth, so help you God?

Mr. EARL. I do.

Mr. HAYS. Mr. Chairman, before we proceed, I would like to put this in in the form of a request, and I hope the committee will see fit to grant it. I received a copy of Mr. Earl’s testimony late yesterday afternoon at my office sometime, and I don’t know exactly how long, apparently not as long as I had first thought, after the press gallery had received their copies. I had only time to read it over.

And I want to make it clear that I don’t know anything about the League for Industrial Democracy. As a matter of fact, I don’t know as I have heard of the organization prior to these hearings.

I am not, and I don’t want to be, in a position of defending it or condemning it, either one at this time. But since Mr. Earl’s testimony is full of prominent names, it is full of paragraphs taken out of context, which I thought I had demonstrated was a dangerous proceeding, I would like to have an adjournment of 24 hours for the purpose of evaluating this testimony so that I can intelligently comment or question Mr. Earl about it.

It may be that everything in his testimony is true. On the other hand, there may be quite a number of things that I would like to look over. And I think before we go ahead and name all of these prominent names, and I want it made clear that I don’t intend to name any myself this morning, I believe, Mr. Chairman, under any kind of rules of procedure whatever that it would be only fair that we do have a chance to try to evaluate this so that we can intelligently talk about it.
The CHAIRMAN. Due to circumstances in my family, it was necessary for me to be out of the city over the weekend. So the gentleman from Ohio is 24 hours ahead of me so far as the statement is concerned because I have not had an opportunity to read it.

But without reference to this statement, if I may, Wayne, I would like to make one statement with reference to lifting things out of context.

I think when Mr. Dodd appeared before the committee, and the other witnesses, they had made a studious effort in every instance when a quotation was given, to give the source, the authorship, and enough of the context, a sufficient summation of the context so as not to get in a position of talking quotations out of context.

Now, I don't think, or I am not sure that that same thing can be said about what the gentleman from Ohio did when he read a couple of statements to the committee at a recent session. But so far as the committee members and so far as the committee staff is concerned, they have made a special effort not to get into a position of lifting out of context.

Having heard of the question that you raised with reference to Mr. Earl's statement being released to the press in advance of your receiving a copy, I made inquiry, and I understand that they were sent to the members and sent to the press all in a simultaneous operation. And as to who received the very first copy, I have no information. I did not get mine until this morning. On the other hand, I was not expecting it until this morning since I was out of the city.

The chairman has no disposition so far as he is concerned to rush a hearing. In fact, he has a very important, or there is a very important meeting of the Rules Committee this morning at which my presence is urgently requested, if not needed. And the gentleman from Massachusetts, whose active participation in the committee is highly appreciated and has been most helpful, has an executive session of the Ways and Means Committee this morning. So I think that it would suit our convenience entirely.

But I would suggest that we meet in the afternoon, Wayne, if that is agreeable, so as not to delay too much.

Mr. HAYS. Mr. Chairman, I appreciate the courtesy in partially agreeing with my suggestion, and I would be happy to compromise any way I could, but I just simply won't have time by afternoon to evaluate this.

Now, I will be glad to tailor my convenience to suit the committee in working an extra day, or I would be glad to hear Mr. Dodd whom we have postponed in cross-examination, or anything, to defer it; but I would like to have time to have my office staff evaluate this and look up some of the pamphlets that are quoted from and let me get on my desk the material so that I cannot only read the paragraphs that Mr. Earl has quoted but read some of the preceding and some of the following paragraphs in order to get a grip on the material. Because, frankly, Mr. Chairman, as I said before, this League of Industrial Democracy is absolutely a new field to me, and it is a thing that I know nothing about. And I just feel that I would like to be a little bit prepared on the subject.

The CHAIRMAN. I am not in a position to evaluate the League for Industrial Democracy upon the basis of the evidence because the evidence has not been presented. But I am not sufficiently naive to say
that I have been around Congress as long as I have and do not know anything about the League for Industrial Democracy. I think its impact has been in evidence in too many areas for me not to have made some observations concerning it.

Mr. Hays. Mr. Chairman, I will say to you this: that I am just a country boy from Ohio and I am very naive, as anyone who has attended these hearings can see, and so I will plead guilty to it right now.

Mr. Goodwin. My only interest is that we should get along, Mr. Chairman. I think that we should proceed with these hearings. I would like the forenoon off and the afternoon off, and as the chairman suggested I would like to be over in Ways and Means now as they are in executive session on a very important matter, the Philippine trade bill. I think, however, that this proceeding here is of great importance.

I have been considerably irked as we have gone along with the tremendous amount of time we have wasted here. I am already getting communications from people who are interested, expressing a fear that we will get along to the point where there won't be any time for some of them to be heard.

My only interest is that we should go forward as rapidly as we can.

The Chairman. The committee will stand in recess until 2:30, for various reasons, all of which have been discussed.

(Thereupon at 10:15 a.m., a recess was taken until 2:30 of the same day.)

AFTERNOON SESSION

The hearing was resumed at 2 p.m.

The Chairman. The committee will come to order.

I might first say that when the committee meets tomorrow morning, which I presume will be at 10 o'clock, we will meet in the Banking and Currency Committee room, 1301 New House Office Building.

Mr. Koch. I was going to ask Mr. Earl: Before you read your statement, will you give the committee a brief outline of your history or background? Then the committee might want to ask additional questions.

TESTIMONY OF KEN EARL, ATTORNEY, LEWIS, STRONG & EARL, MOSES LAKE, WASH.

Mr. Earl. Yes, I will be glad to. My name, of course, is Ken Earl. I am an attorney out in the State of Washington now, although for 4 years prior to going out there to practice I was an employee on the staff of the Internal Security Subcommittee and the Immigration Subcommittee over in the Senate. I mean just that, too. I wasn't the counsel or the assistant counsel, or anything of the kind. I was a person who helped out in many of the projects and tasks which they undertook, and, of course, am not at liberty to divulge just what those were.

My home originally was in Nevada. As far as background other than that is concerned, I am a graduate of the Georgetown University Law School and took my undergraduate work in Brigham Young
University, Provo, Utah. Perhaps there are other areas someone would like to ask me about.

Mr. Koch. How long have you been a member of the bar?

Mr. Earl. Since about 1951.

Mr. Koch. Are you an expert on foundations?

Mr. Earl. No, sir, I am not an expert on foundations.

Mr. Hays. I might say that, as I said this morning, I do not know much about this League for Industrial Democracy. In fact, if I were to call myself an expert, I am a 4-hour expert on it, since from 10:30 this morning until now is all the time I have had to do any research on it. Would you say you are an expert on this LID organization?

Mr. Earl. I would say this, Mr. Hays, that as far as the LID is concerned, the LID’s publications pretty well speak for themselves, and so a person’s main qualification in taking the material which I have to see what the LID has stood for and what it now stands for would be the ability to read and think.

Mr. Hays. Would you mind telling us how old you are, Mr. Earl?

Mr. Earl. I am 34 years old.

Mr. Hays. You are 34.

Mr. Earl. Right.

Mr. Hays. In what year were you born?

Mr. Earl. 1919.

Mr. Hays. In other words, in 1932, you were about 13 years old?

Mr. Earl. That is approximately right.

Mr. Hays. Well, we may have occasion to refer to that.

Mr. Hays. How did you happen to be called to testify before this committee?

Mr. Earl. I was called by the chairman of your committee, because he learned, apparently from someone here in Washington, that I had occasion in the past to at least be interested in the LID and its activities.

The Chairman. If I may interrupt, I had intended to make a preliminary statement along that line. I became interested, along with the subject of the foundations in general, in the League for Industrial Democracy, and while it may not be a foundation within the accepted impression of foundations, it is a tax-free organization and is a foundation or a comparable organization. Over a period of time, a very considerable amount of literature was acquired by me on the League for Industrial Democracy, as well as some other comparable organizations. And in order to get it in form to be presented, I felt it was best for it to be given to someone who had some background and interest in this subject, and I knew about Mr. Earl and his work with the Internal Security Subcommittee of the Senate, and I called Mr. Earl and asked if he would take what he had and might have access to or get access to, and take the information which I had, and reduce it to a summary which could be presented to the committee. He at first had some uncertainty whether he could take the time to do it, but finally decided that he could do so, and I feel that we are very fortunate to have a young man with his experience, although young, and with his training and overall familiarity with the subject-matter, particularly the phases with which he is dealing, here to present the result of his research to the committee for its evaluation.

Mr. Hays. In other words, did I understand you to say, Mr. Chairman, that it is really not a foundation? It really has no bearing on this investigation, then, does it?
The CHAIRMAN. I had a telegram from the League for Industrial Democracy today, raising the question whether the League for Industrial Democracy is a foundation. And I presume an accurate definition of foundation may have been formulated with the view of determining the scope of what foundations as embraced in the resolution. But in any event, the resolution under which we are working not only empowers us to investigate foundations but comparable organizations, and the language is written so that I think the committee has authority, for that matter, to investigate any tax-exempt organization, call it whatever you might. But, of course, I think actually the League for Industrial Democracy, receiving tax-free funds, is a foundation in the accepted sense of the word. And it is embraced in the group of some 7,000 foundations to which we have referred.

Mr. HAYS. Let me read a little of a telegram that I have here, a copy of a telegram. It says:

Recent trends indicate critical decisions during 1954 will materially affect Nation's future. * * * Radio tremendous force influencing public particularly grassroots America. * * *

Two labor unions spending over 2 millions annually on radio-television. Surely business should join spending fraction that sum. * * *

I am just reading a few sentences to give you a general idea.

I have no objection to putting the whole thing in the record.

America's future reached successful climax signing 5-year contract Mutual Broadcasting System.

They go on to say they are going to have John T. Flynn. It says:

Make check (tax deductible) payable America's Future, Inc. and send to:
Francis A. Smith, first vice president, Marine Trust Co., of western New York, Maine at Seneca, Buffalo, N. Y.

And it is signed by various people and was sent out to the presidents of practically all the large corporations in the country.

Would that come under your purview? If we are going to investigate this LID maybe we ought to investigate this group, too.

The CHAIRMAN. Without having the details, I could not say unquestionably it would come under the purview of this committee.

Mr. HAYS. Then we could just investigate anything that you take tax deductions for, including the Red Cross, according to your definition, is that right? Or your church?

I mean, you are allowed to deduct for that, if you contribute to the church; aren't you?

The CHAIRMAN. Certainly, in the general concept—

Mr. HAYS. I am trying to circumscribe the thing and get some kind of a definition as to how far afield we are going to go.

The CHAIRMAN. Then do you feel that the League for Industrial Democracy is outside the purview of this committee?

Mr. HAYS. Mr. Chairman, that is not the point at issue. The point at issue is who is deciding who the committee will investigate. You decided in your own mind apparently that that is a fertile field, and if you want my opinion you felt you had fallen down so badly with the foundations you had better get something to salvage the situation with, and maybe this would be a good thing. Understand, I am not defending the LID, because I don't know enough about it. But I am just trying to bring out the facts and let the chips fall where they may.
The Chairman. It was originally the chairman's thought that the LID would have been presented very early in the hearings, very early. And then, as a matter of policy, it was my idea that it was best to outline the broad criticisms first, and then bring in the individual foundations and organizations in accordance with the procedure which was adopted.

Mr. Hays. I have some more questions. I would like to get this thing in perspective, if there is any way to do it.

You did answer the question about being an expert on this, Mr. Earl.

Now, let me ask you this: Do you have any idea of the membership of the LID in numbers?

Mr. Earl. No, I do not.

Mr. Hays. Would you know anything about its annual budget?

Mr. Earl. No, I don't. I don't think it is really pertinent.

Mr. Hays. Well, of course, I didn't ask you that, but since you brought it up, I would be glad to discuss it with you.

Would you think its budget would be similar to that of the Ford Foundation? Do you think it spends $10 million a year? I think it is pertinent to find out what its budget is, so that we will know what its influence is.

Mr. Earl. Of course it doesn't have a budget like the Ford Foundation. I would think in comparison to Ford it would have a rather modest budget.

Mr. Hays. A kind of miniscule budget, wouldn't it?

Mr. Earl. A which?

Mr. Hays. Very minute. That is a good word, isn't it? I hope I am using it the right way. I like the word.

Mr. Earl. In comparison with the Ford Foundation, certainly.

Mr. Hays. But you don't have any idea of what its budget might be?

Mr. Earl. No, I do not.

Mr. Hays. Would you be surprised if I told you its annual budget was less than $50,000?

Mr. Earl. No, Washington doesn't surprise me a bit any more.

Mr. Hays. Well, I can see it is not going to be possible to surprise you very easily. Having been on the McCarthy committee, nothing will probably surprise you.

Mr. Earl. I am very proud of having worked on the McCarthy committee.

Mr. Hays. If you feel you have to defend it, I would be glad for you to take time to do it.

Mr. Earl. Go right ahead.

Mr. Hays. Do you have any idea how this organization derives its income, its tax-free money?

Mr. Earl. It is my understanding that it derives the greatest part from contributions from people like you and I.

Mr. Hays. You mean people of very limited income. I don't know anything about your income, but if you are talking about mine, it is in the limited class.

Mr. Koch. Minuscule?

Mr. Hays. Well, there is some debate about this. I am inclined to belong to the school thinking it is minuscule, yes.

Mr. Koch. Me, too.
Mr. Earl. But I understand that most if not all comes from contributions.

Mr. Hays. In order that this discussion can proceed with some sort of continuity, you have no objection if, when you are quoting a paragraph, I stop and ask you where it was taken from or ask you a question or two about it, do you?

Mr. Earl. Not at all.

The Chairman. Mr. Earl has a prepared manuscript.

Mr. Hays. I understand that, Mr. Chairman, but we have had so many prepared manuscripts and we have deferred the cross-examination, most of which is still pending, and since he came from such a great distance——

The Chairman. He is going to remain until the cross-examination is completed—if we follow the regular procedure.

Mr. Hays. I think if we go along we can get it in today. I don't think it will take too long.

The Chairman. I very much hope so.

Mr. Goodwin. I have been waiting for some time, Mr. Chairman, to get started.

Mr. Hays. I may say I hope I don't inconvenience you, Mr. Goodwin, but you seem to be able to start off with less background than I have, and that is just a little difference we have, and I hope that doesn't annoy you too much.

Mr. Earl. Mr. Chairman, let me preface my statement by referring to something which gave Mr. Hays concern this morning. That is that a great many prominent Americans are mentioned in my prepared statement. I assure the committee that I am not engaged in character assassination nor anything akin to it. The various persons mentioned in my statement believe wholeheartedly in the things which they have said and done, and they are not about to repudiate any connection with or support given the LID and its activities.

Nor is this an attempt to "get" the LID or paint it as a Communist front. Far from it. The LID stands very proudly upon its record, as do the men and women who are associated with it. The LID and those around it have espoused a cause, and much for which they have been accomplished; not entirely, of course, due to the efforts of the LID, but they do lay claim to have exerted some influence and have helped bring about the goals for which they stand. This I do not quarrel with.

However, I do dispute their right to be feeding a team of players with tax-exempt dollars, when the medium through which most of us engage in political activity has no corresponding tax-exempt privileges.

May I also say a word regarding the problem involved in quoting excerpts from any prepared material? One obviously cannot, in attempting to characterize certain works, read the entire contents of a publication. And so in excerpting one becomes chargeable by another with an opposite view with quoting too little material, quoting out of context, or quoting too much material.

The LID has been a producer of very prolific pamphlets, and it is my belief that all have been written for the purpose of spreading, explaining, and making more palatable the Socialist program for America.
That is the conclusion which I have reached after reading great amounts of their literature. In excerpting from these publications, I really face the problem of deciding which of a great number of quotes to use, rather than the problem of finding something spicy enough to use.

With that foreword, I would like to turn to the prepared statement that the committee has.

As I mentioned earlier, I have had occasion to be interested in the course of the LID and your chairman has asked me to come here and chart that course.

In the Treasury Department publication, Cumulative List of Organizations that are Eligible for Tax-Exempt Contributions, the LID is listed on page 174 as such an organization, and I believe that it has had tax-exempt status for a great many years.

Mr. HAYS. Do you happen to know, Mr. Earl, whether that was ever questioned or not?

Mr. EARL. It was questioned some years ago. It was questioned, I believe, in the case of Weyl, W-e-y-l.

Mr. HAYS. Weyl v. The Commission?

Mr. Kocx. And may I say, if it is helpful to the committee, that that decision was in 1932, and it wasn't until 1934 that the prohibition against propaganda was placed into the statute.

Mr. HAYS. Of course, a good deal of the things that Mr. Earl is going to quote occurred in 1932, so I thought the court decision might have some bearing.

Mr. EARL. That decision was in 1932.

Now, of course, in charting the course of any organization, I presume you have to have a starting place, and with this one I started back at the time it received a new name, back in the twenties, and I mentioned its activities and doings in the thirties, and then more recently in the forties and fifties.

Under the law, certain organizations are granted tax-exempt status providing no substantial part of their activities are devoted to propaganda, political purposes, or attempts to influence legislation. As has been pointed out by prior witnesses before this body, notably Mr. Andrews and Mr. Sugarman, the task of checking on tax-exempt organizations is difficult, because of legal provisions that are too general, and in which the terms mentioned, "substantial," "political," and "propaganda" are not defined.

Mr. HAYS. Right there, I would like to stop you and tell you that if you don't mind my saying so, I think you are misquoting Mr. Sugarman and Mr. Andrews, and I would like to read, if you will permit me, from the record, page 979 of the transcript.

Mr. EARL. Go ahead.

Mr. HAYS (reading):

Mr. SUGARMAN. As I indicated at the earlier stages, the Revenue Service at one time attempted to draw a line between propaganda and education by indicating that organizations engaged in disseminating knowledge or their views on controversial subjects may be engaged in propaganda and not entitled to exemption. The courts felt we should not draw that line into the statute. For that reason, organizations of that sort may now be granted exemptions under the existing judicial precedents.

I think that propaganda problem is one that we pretty well leave alone in the sense that in this area, like many others, we find that attempts to define terms do not help us particularly when we get to actual cases.
And then I would like to refer you also to a question that Mr. Goodwin put to Mr. Sugarman on page 992 of the transcript.

Mr. Goodwin. Now my final question: I want to put that to the Commissioner. I am sorry. He put it to Mr. Andrews.

Would it be a fair statement to say that this is an indication that the Congress is pretty well satisfied with the way the Bureau and the Department are interpreting the original terminology, and the way in which the courts are placing their decisions?

Commissioner Andrews. I think that is a fair conclusion, yes.

Mr. Earl. I did not have access to the record. My information came from an article by Robert K. Walsh, of the Washington Star. I quote:

He and Mr. Andrews—

added that the task of checking on tax-exempt organizations is difficult because of legal provisions that are too general and the agency's lack of funds and facilities.

I agree, of course, with the statement made by Mr. Sugarman or Mr. Andrews, whichever it was, that the spelling out in the statute defining very meticulously what is and what isn't political propaganda, et cetera, wouldn't be very much help in actual cases.

The Chairman. I might interject that those of us around here who have read the observations of Mr. Walsh have very great confidence in his conclusions and analyses.

Mr. Hays. I would say Mr. Walsh, who is present here today, is limited probably by the number of words he can put on the wire, and while he got across a general impression of what they did say, I think it might well be said that somewhere in here, and I don't have the exact page, they made another flat statement that they didn't want in any case to become censored down there.

Mr. Earl. It is a problem. I know that.

The Chairman. I don't think you should quote one sentence there. We have had a great deal about lifting things out of context.

Mr. Earl. I was only lifting one to quote one that had been lifted, you see. I thought it was permissible in that case.

The Chairman. There is no question but that the statute, as I understand the statute, does place responsibility upon the Bureau of Internal Revenue, in connection with activities and organizations, of determining to what extent these organizations do engage in political work and work of a propaganda nature. They are circumscribed by precedent and by decisions. We all recognize that. But, nevertheless, I think it is generally accepted that the Internal Revenue Service does have a responsibility there.

But I hope we won't take too much time discussing this angle.

Mr. Hays. I don't intend to take any more.

I was a little flattered. I hope I interpreted your remarks accurately, to signify that my expression about lifting things out of context made some impression the other day.

The Chairman. I was very much impressed that that was true in the two instances in which you were involved.

Mr. Hays. Well, that was the demonstration I was talking about. The Chairman. You may proceed.
Mr. Earl. In an attempt to obviate certain apparent difficulties of this nature, I shall refer to two definitions which Mr. Norman Dodd, director of research for this committee, used in his recent report.

I received a copy of this report shortly after I came to Washington. He defined "political" as "Any action favoring either a candidacy for public office, or legislation or attitudes normally expected to lead to legislative action." And he defined "propaganda" as "Action having as its purpose the spread of a particular doctrine or a specifically identifiable system of principles. (In use, this word has come to infer half-truths, incomplete truths, as well as techniques of a covert nature.)

However, when one tries to ascertain whether or not a "substantial" part of an organization's activity is "political," "propaganda," or "designed to influence legislation," a problem of immense proportions is encountered. An organization's activities, ordinarily, will be neither white or black, but a shade of gray, and the problem becomes one of ascertaining whether black or white predominates in the gray.

In this prepared statement I have assembled excerpts from publications of the League for Industrial Democracy which I think appropriately illustrate and demonstrate its activities, both in years past and as of now. My own comments serve to tie the excerpts together and identify them, and, of course, represent my own views. However, I think that these excerpts will speak for themselves in demonstrating LID propaganda themes, political action, and attempts to influence legislation.

Let us first find out what the LID is:

The League for Industrial Democracy is a membership society engaged in education for a new social order based on production for use and not for profit. That is taken from an LID ad on an inside back cover of 1940 pamphlet entitled "New Zealand's Labor Government at Work, by W. B. Sutch."

Some time after 1940, this statement was changed, and a recent publication entitled, "The LID and Its Activities," reads:

The League for Industrial Democracy is a nonprofit educational organization committed to a program of "education in behalf of increasing democracy in our economic, political and cultural life."

Now, as a short aside: In both, the word "democracy" pops up and I presume presents the problem of trying to find out what they mean by the word.

This last pamphlet or publication that I referred to says this:

The league seeks to encourage every movement in the fields of labor, of cooperatives, of democratic public control and ownership, of social legislation, of civic rights, of education, and of international relations, which aims at the preservation, strengthening, and fulfillment of the democratic way of life.

Mr. Hays. Well, do you question their right to promote those ideas at all?

Mr. Earl. No, I do not.

Mr. Hays. Then what is the basis of your argument? The fact that they are doing it with tax-free money?

Mr. Earl. That they shouldn't be in the political arena with tax-free dollars.

Mr. Hays. What about the Committee for Constitutional Government?
Mr. Earl. I am not going to talk about any other organization, Mr. Hays, because you are going to get into organizations about which I know nothing. If I speak of any other political parties, it will be the Democrats or the Republicans. Because I think the LID is an adjunct of the Socialist Party. Now, the Socialist Party itself, when you make a contribution—I don't infer that you do, but when anyone makes a contribution to the Socialist Party, it is my understanding that that contribution is not tax exempt, that you can't list it on your income-tax return.

Mr. Hays. You are talking pretty much about a cadaver, aren't you, Mr. Earl?

Mr. Earl. What is that?

Mr. Hays. You are pretty much concerned with a cadaver, aren't you, Mr. Earl? The Socialist Party is a corpse. It isn't even running a candidate any more. As a matter of fact, I think you will find, if you want to go back to when you started this, in 1932, and read the平台 of the Socialist Party, and then read the Republican Party platform in 1952, you will find that their aims are very similar. I don't know what you are getting at. Or the Democratic Party platform for that matter.

The Chairman. The word "cadaver"—I would question its appropriateness. The group which is generally embraced in the term "socialist," as represented in parties of that stripe, has been controlling a great many elections and had a vital influence, in my opinion, on our national life. And I think some of the quotations I have read in his statement will indicate that it is not the numbers that have the greatest influence, but it is the course of action of certain people.

Mr. Earl. Allow me, with regard to what you have said, Mr. Hays, to say this: You mentioned that the Democratic program as of today, the Republican programs as of today, embrace a great many of the things that the LID embraces and that the Socialist Party embraces. And I am the first to agree with you. I agree that they do. But I disagree when it comes down to this. The Republicans and the Democrats are putting forward that program with tax dollars. Now, you will have to agree with that.

Mr. Hays. No, I don't agree with you at all, and I will tell you why I don't.

Mr. Earl. Go ahead.

Mr. Hays. The Republican National Committee has widely advertised that its congressional budget this year will be in excess of $3 million. And it would be very interesting from my point of view to learn how much of that in excess of $3 million is going to be depletion allowance money from Texas. And that is certainly not tax dollars.

Mr. Earl. Well, I will tell you. When you or I contribute to the war party fund of either the Democrats or the Republicans, we don't list it on our income tax. And that is what I am talking about.

Mr. Hays. We don't list it on our income tax?

The Chairman. As a deduction?

Mr. Earl. As a deduction.

Mr. Hays. That is right.

Mr. Earl. If you made a contribution to the LID you could.

Mr. Hays. I suppose that people who give $5 could. But do you know how many do?
Mr. Earl. Enough do to keep them going. Put it that way.

Mr. Hays. To get up to that $45,000 a year they spend.

Mr. Earl. I don't know whether they spend 45 or how much they spend.

Mr. Hays. Well, I am telling you. I can read the exact figures as to how much they spend if you want, in promulgating these ideas of theirs.

The whole point I am making, Mr. Earl, is that it seems to me you have crossed the continent on a rather unimportant mission about a very unimportant organization, as I see it.

Mr. Earl. Perhaps that is the way you feel about it.

Mr. Hays. Which has no relation to this investigation, that I can see.

The Chairman. If Mr. Earl will be permitted to give his statement, we will be in a position to evaluate it.

Mr. Hays. I am going to evaluate, Mr. Chairman, as we go along, if you don't mind. I think we can get a better evaluation.

Mr. Goodwin. Mr. Chairman, I wonder if that is the way to do this in the most expeditious way? My desire is to make progress. It seems to me I don't want to make a motion at this stage, but I am very definitely of the idea that we should go ahead with the statement, and such speeches as are to be made from the committee rostrum should come at the conclusion of the testimony of the witness.

Mr. Hays. That is a good idea, Mr. Goodwin, except that, to use your own terminology, we never get to make the speeches, because then we have another witness the next day, and they are put off indefinitely. So that these people get to peddle all of this tripe, if you will permit me to use the word, and it gets out to the press, and they release it to the press before the committee gets it.

Mr. Goodwin. The gentleman from Ohio has thus far in the proceedings been able to get in what speeches he wanted to apparently.

Mr. Hays. And he wants to keep it up, too, if you don't object.

The Chairman. The chairman was just about to apologize for his failure to give the gentleman from Ohio any opportunity to project himself into these hearings, and I certainly don't want to be guilty of such laches in the future. And I particularly have in mind the case of one witness where a rough calculation indicated that he had only been interrupted 246 times.

Mr. Hays. Now I know where Fulton Lewis got that statement. And are you the one who told him I was put on this committee to wreck it?

The Chairman. I didn't know Fulton Lewis got the statement in the first place.

Mr. Hays. I wouldn't want to question your veracity.

The Chairman. I know by inference that you do question it. That doesn't make a particle of difference. I am not expecting you to accept my veracity in public. In private, of course, I know you would.

Mr. Hays. I would accept it even in public, Mr. Chairman. But once or twice you have tested my credulity pretty far. But I accept your veracity right down the line; and if I don't, I won't tell you by inference or innuendo. If the time ever comes, I will tell you, period. So until then don't you read anything into my remarks.

The Chairman. Well, I know that the gentleman is very frank and he isn't very credulous.
Mr. HAYS. When somebody tells me he doesn't know how television got here, I have to be credulous to accept that. But I did.

The CHAIRMAN. There is no misunderstanding as to how television got here. The organization which I presume these gentlemen represent called me before the hearings started about television and stated they wished to take a TV newscast. I told them it would be satisfactory with me, and I discussed it, I am sure, with the gentleman from Ohio and some of the other members of the committee and no objection was advanced.

Mr. HAYS. Oh, no objection at all.

The CHAIRMAN. And insofar as the hearings this morning were concerned, they came in on the basis of their prior authorization. So there is no misunderstanding about that.

Mr. HAYS. Oh, no, no.

The CHAIRMAN. And the hearings would be so much better if the gentleman from Ohio would confine his attention to the matter before the committee and not get involved in these other matters.

Mr. HAYS. If you want to debate this, we can. Did you or anyone speaking for you advise anyone that you had a witness coming in today who would blow the lid off?

The CHAIRMAN. I certainly did not.

Mr. HAYS. All right. I accept your veracity. I just heard that.

Mr. GOODWIN. I would like the record to show, Mr. Chairman, that I am suggesting that the witness be permitted to go ahead and submit his evidence without interruption. At the end of that, of course, there will be an opportunity for any members of the committee to ask questions, and I assume to make speeches from the rostrum.

Mr. HAYS. Would you have any objection to just having him insert it in the record? We do not have to be read to, or do we?

Mr. GOODWIN. I think we should hear his testimony. My only concern, Mr. Chairman, is that we go ahead and make as much speed as we can and get along. I am told that the program for this session of Congress is to adjourn on the 31st of July at the latest. I can see that, unless my suggestion is adopted, we are likely to come up to the end of this afternoon's session with probably not more than 2 pages out of 40 gone over. I think this is a waste of time.

The CHAIRMAN. The Chair hopes that the suggestion of the gentleman from Massachusetts might prevail, which is in accordance with the motion that was made and was carried earlier in the proceedings, since a script of the testimony is available to the committee, and we adjourned over until this afternoon in order to give all the members opportunity to read it or at least such members as might have had time.

Mr. HAYS. Yes, but when the gentleman finishes reading his script, which is going to be some time later this afternoon, I can just hear the chairman now saying, "It is 4:30, and it is time we adjourned, and then tomorrow we have someone else coming in as a witness and you will have to defer cross-examination." And I am just not going to submit to that kind of procedure, Mr. Chairman.

I would like to go along and be as agreeable as possible, but this business of letting these people release these stories to the press and letting it go out unchallenged—I can't sit idly by and do it, especially when they go back to 1932 and talk about things that were prevalent then.
And a lot of people made a lot of statements in 1932, and, of course, when they were living through the depression they felt very strongly about it, and they perhaps wouldn’t make them in 1952 or 1954.

I will try to not interrupt the witness any more than I can help, but there are some things, such as the statement about Mr. Andrews, that I felt had to be straightened out before we go any further.

The Chairman. With that discussion, then, the gentleman will please proceed.

Mr. Earl. We were talking about the definition of the word "democracy" and what the LID means by that word. Reference is made in a publication entitled, “Revolt”—this is a long time ago, 22 years ago, as a matter of fact, October 1932.

Mr. Hays. Who published that? May I ask that?

Mr. Earl. The LID published it.

Mr. Hays. Was that an LID publication, or of some affiliated body?

Mr. Earl. By the Intercollegiate Student Council of the League for Industrial Democracy.

Mr. Hays. Then it was not the LID itself, but an affiliate; right?

Mr. Earl. Right. We have read now where it is from, published by Intercollegiate Student Council of the League for Industrial Democracy.

Mr. Hays. That is all I wanted in the record.

Mr. Earl. And under an article entitled, “What the LID Stands For,” the concluding paragraph throws some light, I think, on what they mean by democracy.

Mr. Hays. Are you reading now from your statement? I am trying to follow you here.

Mr. Earl (reading):

The LID therefore works to bring a new social order; not by thinking alone, though a high order of thought is required; not by outraged indignation, finding an outlet in a futile banging of fists against the citadel of capitalism; but by the combination of thought and action and an understanding of what is the weakness of capitalism in order to bring about socialism in our own lifetime.

Now, of course, that is a long time ago; but my thesis is that they haven’t disavowed that. They still have the same aims. I think it is very well put there.

We are told by Harold Lewack in Campus Rebels, a Brief History of the Student League for Industrial Democracy, published in 1953, that the Intercollegiate Socialist Society, forerunner of the LID, was founded in 1905 following a call by Upton Sinclair and George H. Strobell for the organization of an association—

for the purpose of promoting an intelligent interest in socialism among college men and women.

Now, another aside from the prepared statement is that they still have their own student organizations on the campuses, and it is presumed they still have the same goal in mind.

In 1921, for various reasons cited on page 8 of Lewack’s Campus Rebels, the society’s name was changed to the League for Industrial Democracy.

Let us observe that Socialist forms of government are in power in various countries of the world, but I presume it is admitted that ours is a Republican form of government; though not long ago it would have been permissible to refer to it as a Democratic form of government.
You have referred to it as a cadaver. That is fine, but the LID is still strong and healthy. Of course, that is the problem involved here. Whether or not the LID has abused its tax-exempt status.

Let us now examine some of the agitation and propaganda themes of the LID.

This next, preceding the excerpt, is my thought as to what that attempts to do.

Mr. Hays. You are editorializing now.

Mr. Earl. That is right.

Special pleading and incitement to direct action on the picket line and elsewhere would appear to be outside the scope of the normal educational process. In Revolt, the publication to which I referred earlier, for October 1932, published by—I said LID, and now I should change that to Intercollegiate Student Council for the LID—are found practical suggestions for political agitation. Under the heading “Blueprints of Action—a Handbook for Student Revolutionists,” students are urged to do several things. Among them:

Teach labor courses, form workers’ educational groups, boycott businesses unfair to labor; parade with antiwar banners and floats from the campus to the business center of town on Armistice Day; distribute “No More War” leaflets; sell Disarm—

which was a publication.

Where ROTC is compulsory, a student strike is advocated as the most effective weapon.

And picket homes and offices of the guilty capitalists. And earlier they had referred to Tom Mooney and his troubles.

Mr. Hays. Right there, you have a star, and it says, “Not a direct quotation inside brackets.” That is your own summation?

Mr. Earl. Where I have, “Who have imprisoned Tom Mooney and other innocents,” it refers to the fact that earlier in the article they were speaking about Tom Mooney and his troubles.

Mr. Hays. What are those dots in there? That indicates you have left out sentences?

Mr. Earl. That indicates material is left out.

Mr. Hays. I don’t suppose you would want to comment, after what happened the other day, but I would just like to read you one short paragraph and see if you think it would be dangerous.

Mr. Earl. I heard what happened the other day. I read about it. And I will say right now that I probably, though you may read it, won’t comment on it.

Mr. Hays. All right. You have that privilege.

Our forefathers of a hundred or even 50 years ago likely called our present social organization socialistic. Socialism has certainly infiltrated into our social and economic structure. Our own liberal political and social philosophers have affected it, and many of the measures of President Roosevelt’s New Deal were labeled socialistic. Perhaps some were.

This part I want to emphasize—

but I feel that many conservatists were alarmed at the expression “social justice” and believed that anything connected with it was tainted with socialism. At any rate, socialism has been a strong propelling force in the last hundred years to make men’s minds more alert to the necessity of social justice.

You wouldn’t want to comment on that, would you?

Mr. Earl. No. May I go ahead now?
Mr. HAYS. Would that ring faintly familiar at all to you, Mr. Wormser?

Mr. WORMSER. I think it does.

Mr. HAYS. That is from one of your books, isn’t it?

Mr. WORMSER. That is right.

The CHAIRMAN. Since you have read that, I want to interject that that is one of the purposes of opposition, to have some effect upon the majority party.

Mr. KOCH. Mr. Chairman, on behalf of my partner, may I say Mr. Wormser is not tax-exempt.

Mr. HAYS. I just point out that there are people who have ideas and express them, and I am wondering if you are trying to stifle ideas, the free market place of ideas. Someone used that expression once. In fact, I think a president of a university used it.

Mr. EARL. No; I would be the last to try to stifle it.

The CHAIRMAN. The only thing, as I understand it, that you are trying to show by the quotation is that organizations promoting what amounts to a destruction of the institutions under which we have grown and prospered these one-hundred-sixty-odd years ought not to be financed by tax-exempt funds?

Mr. HAYS. Are they advocating the destruction or the change of them? That is the thing I want to know. And if they are advocating the change, the gentleman has already testified that he was—what?—13 years old in 1932?

Mr. EARL. I am now 34.

Mr. HAYS. But in 1932, do you remember anything about the depression at all? Who was feeding you then? Somebody must have been. You weren’t earning a living.

Mr. EARL. I will tell you. I have never had a hungry day in my life.

Mr. HAYS. You don’t know how you would feel if you did, do you?

Mr. EARL. No. I trust I never will.

Mr. HAYS. And I trust that some of these social revolution changes that have taken place, such as social security and unemployment compensation and Federal deposit insurance will keep you from that very thing.

Mr. EARL. Let me say this: I won’t argue with you about social security or the Federal Deposit Insurance Corporation or any of them, or the merits of them, either way. Because both parties have espoused them. That isn’t the problem here, as I see it. The problem is: You get into the arena with tax-exempt dollars, or don’t you?

Mr. HAYS. But you take a pretty limited view of this, Mr. Earl. That is my only quarrel with you. I think you have a legitimate point.

Maybe you would answer this question, without naming anyone. Do you think it is just as bad to get into the conservative side with tax-exempt dollars as you do the other side?

Mr. EARL. It would be a legitimate place of inquiry; sure.

Mr. HAYS. Well, that makes it a little better.

The CHAIRMAN. The question involved here is an organization using tax-exempt money, promoting “Parade With Antiwar Banners,” at a time when the security of the Nation is involved.
Mr. Hays. In 1932? The security was involved all right, but your party didn’t do anything about it; when the Japs went into Manchuria and Hitler went into the Rhineland and so on.

The Chairman (reading):

Where ROTC is compulsory, a student strike is advocated as the most effective weapon.

LID is a militant educational movement which challenges those who would think and act for a new social order based on (production for use and not for profit) that is a revolutionary slogan. It means that members of the LID think and work for the elimination of capitalism. * * *

And so forth and so on.

Those are the things that we are making inquiry about, as to whether tax-exempt money should be used to promote them.

Mr. Hay. Let me read you a revolutionary slogan and see if you think we ought to investigate it.

Whenever any form of government becomes destructive of those ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.

Now, that is real revolutionary. That is out of the Declaration of Independence. You can’t get much more revolutionary than that.

The Chairman. Of course, the Declaration of Independence refers to the right of the people to set up a government.

Mr. Hays. And to abolish it and to change it and to do whatever they think is necessary for their happiness. I don’t know anything about this LID or how bad an organization is.

Mr. Goodwin. We are trying to learn something about it.

Mr. Hays. I don’t think you are going to learn much except from one side.

The Chairman. We will be very glad to have the representative from whom we received the telegram come down and give us the other side. Now, we have been here 1 full hour.

Mr. Hays. And we have had some very profound documents read from, such as the Declaration of Independence.

Mr. Wormser, I meant no offense by quoting your book. You should be glad to have it read with such high-class literature as this. I am trying to prove that people have ideas and have a right to promote them and sell them if they can.

Mr. Wormser. I think it is only fair to say that it was read out of context.

Mr. Hays. Oh, yes. I have done a lot of reading from your books.

I want to know what goes on in the staff’s mind. And I did find that some of the things that go on in your mind click in mine. So I feel we are closer together than we have ever been.

Mr. Goodwin. That is a hopeful note to go on with.

Mr. Hays. But I keep saying, “Don’t be too optimistic.”

Mr. Earl. Any notion that the LID was to confine itself to the cloistered atmosphere of academic pursuits, as distinguished from “work” and “action” is dispelled by the editors of Revolt, who write on page 6 of this issue, under the heading “What the LID Stands for”——

Mr. Hays. Is that still 1932?

Mr. Earl. Yes.
The CHAIRMAN. If I may interject, he is going back to the beginning of the LID, when it was organized under the name of League for Industrial Democracy as the successor to the Student Communist League or whatever it was, and he is going to come on up to date, so that his quotations are not from any one period, but over a long period of years.

Mr. HAYS. We could prevent a lot of interruption, which undoubtedly must interrupt your cerebral continuity somewhat, if you would just, as you read these quotations, say, “This is 13, and this is 35” if you happen to know.

Mr. EARL. I ordinarily prefer them with that. If you can stand it, we will be to 1950 on page 11.

Mr. HAYS. I will try to wait with bated breath.

Mr. EARL. From the publication in 1932, Revolt, on page 6, under the heading of “What the LID Stands for”—

The League for Industrial Democracy is a militant educational movement which challenges those who would think and act for a new social order based on production for use and not for profit. That is a revolutionary slogan. It means that members of the LID think and work for the elimination of capitalism, and the substitution for it of a new order, in whose building the purposeful and passionate thinking of student and worker today will play an important part.

Other quotations from page 6 of this same article suggest that LID spokesmen were interested in a rather strenuous program of education:

- Men and women who would change a world must blast their way through the impenetrable rock. No stewing over drinks of tea or gin, no lofty down-from-my-favorite cloud, thinking more radical thoughts than thou attitude makes a student movement or a radical movement. LID students talk and write about conditions. LID students act about them.
- * * * a staff of 6 or 8 leave the Chicago or New York offices to help coordinate activities. They get into classrooms, they talk to classes. * * * In addition these speakers furnish a valuable link between students and their activities later on. After graduation the work continues unabated. In city chapters, in New York, Chicago, Philadelphia, Detroit, Baltimore, the work of education and action goes on.
- The LID emergency publication, the Unemployed and Disarm, have reached a circulation of one-half million. * * * Students organized squads of salesmen to sell these magazines, containing slashing attacks on capitalism and the war system, at the same time it enable the unemployed to keep alive.
- In November of this year a training school for recent graduates will be opened in New York * * * to equip students by field work to perform their tasks in the labor movement. * * *

This language about recruiting and training, I think, would be more appropriate in an Army field manual than in the journal of an educational association.

In the same issue, Paul R. Porter, a field secretary of the LID, who has more recently been a director of the ECA in Europe, and as an aside, a recipient of an LID distinguished award, expressed his fears that American business leaders might turn to fascism as a means of saving their dying world. In an article entitled, “Fascist Goat Glands for Capitalism,” Mr. Porter writes, and this, of course, is from the same publication published in October 1932:

Social systems do not commit suicide. Societies grow senile and shaky but their ruling classes hold to the last their power and privileges against the class ultimately destined to displace them. It is this fact which makes so grave the prospects of fascism, in America as well as in Europe.

Because political democracy, for all its weaknesses and delusions, is a power instrument in the hands of the workers, the ruling class will attempt to divest them of it (p. 7).
TAX-EXEMPT FOUNDATIONS

Talk of “ruling classes,” the “delusions” of democracy, the inevitability of class displacement, is language borrowed from Stalin and Lenin.

Mr. Hays. Let me read you a paragraph right here very similar to this:

President Hoover and his associates had announced there would be a short period—
this is 1932 they were talking about—
of unhappiness, after which the law of supply and demand, if not interfered with, would restore normal conditions. This might have been true, but the country felt very sick when Franklin D. Roosevelt took office and was in no mood for waiting. Those who were without jobs, who could not pay their rent, who could not sell their merchandise, who could not get their money out of banks which had failed, were not hopeful that the old capitalistic system would correct its own maladjustments. F. D. R.’s overwhelming victory at the polls was deemed a mandate to overhaul the old machinery thoroughly.

Do you think that is revolutionary?
Mr. Earl. I am not quarreling with it.
Mr. Hays. Do you think it is revolutionary, Mr. Wormser?
Mr. Wormser. I think you ought to put my whole book in evidence.
Mr. Hays. We ought to get the title in anyway. It might create a demand for it among the New Dealers.
Mr. Koch. And the price.
The Chairman. You may proceed.
Mr. Earl. Explaining that a “Socialist revolution means a redistribution” of wealth “on an equalitarian basis,” Mr. Porter advises workers and farmers that—

* * * their recourse now is to form a political party which they themselves control, and through which they might conceivably obtain state mastery over the owning class (p. 7).

Mr. Porter visualizes the onset of fascism in these words:

When Community Chests are more barren than Mother Hubbard’s cupboard and workers begin to help themselves to necessities in stores and warehouses, when bankrupt municipalities stringently curtail normal services, then vigilante committees of businessmen, abetted by selected gangsters, might quickly and efficiently assume command of governmental functions.

The assumption of power by vigilantes in a few key cities would quickly spread. The President (Hoover or Roosevelt) would declare a national emergency and dispatch troops to zones where vigilante rule was endangered. Probably he would create a coalition super-Cabinet composed of dominant men in finance, transportation, industry, radio, and the press, a considerable number of whom would be Reserve officers.

Mr. Hays. May I ask you about the “Hoover or Roosevelt” in parentheses? Does that mean that was written before the election?
Mr. Earl. This was written in October of 1932, and I think the election was in November.
The Chairman. Are you correct in this phrase here, that Mr. Porter—Paul R. Porter, we should say, to distinguish him from another distinguished man—spoke of “vigilante committees of businessmen, abetted by selected gangsters”?
Mr. Earl. Where are you reading from, sir? Oh, that is from the quote at the bottom.
The Chairman. That is pretty strong language.
Mr. Hays. That is the bottom of page 4, the second paragraph from the bottom, the next to the last line.
Mr. Earl. I will read from the magazine.
Mr. Koch. Is that a direct quotation?
Mr. Earl. Yes, it is.
Mr. Hays. I understood Mr. Porter as saying that could happen.
Right?
Mr. Earl. Yes. His thesis here seems to be that that very well could happen.
Mr. Hays. That was written in 1932?
Mr. Earl. October 1932.
Mr. Hays. You could get a lot of funny statements written back there, when people really were hungry, with 12 million unemployed.
Of course, that makes them pretty poor prophets today.
Mr. Earl (reading):

The bulldozing methods of the wartime Council of Defense would be employed against protesting labor groups and some individuals might be imprisoned or shot, though several "cooperative" A. F. of L. officials might be given posts of minor responsibility.

And then my own comment on that:
Mr. Porter's objectivity and ability to see the picture of life as a whole—valuable assets to a scholar engaged in education—are further demonstrated by this passage taken from the same publication, the same page:

The American working and middle classes are, politically and economically, among the most illiterate in the world * * *. Insofar as they (the middle class) comprehend the class structure of capitalist society their impulse is not to welcome union in struggle with the working class into whose ranks they are being pushed, but on the contrary to vent their humiliation in resentment against militant labor.

Many workers, for their part, are disgusted by the impotence of most A. F. of L. unions and would quickly respond to demagogic Fascist agitation, even as many once flocked into the Ku Klux Klan. Unemployment to them is not an inevitable consequence of maldistributed income * * *(p. 7).

Having analyzed the danger, Mr. Porter then outlines the action program that can ward it off:

Watch now those little flames of mass unrest * * * Great energy will be generated by those flames of mass revolt. But revolt is not revolution, and even though new blankets of cruel repression fail to smother the fire and in the end only add to its intensity, that energy may be lost unless it can be translated into purposive action. Boilers in which steam can be generated—if we may work our metaphor—need be erected over the fire, and that steam forced into engines of reconstruction.

Troy, in describing the role of the Bolsheviks in the Russian Revolution, has hit upon a happy figure of speech which we may borrow in this instance. No man, no group of men, created the revolution; Lenin and his associates were but the pistons driven by the steam power of the masses. The Marxist Bolshevik party saved that steam from aimless dissipation, directed it into the proper channels.
To catch and to be driven by that steam is the function of the radical parties in America today (p. 8).

Mr. Porter was a trifle unhappy because the Socialist Party was "not yet a consistently revolutionary party," and he apparently regretted the tendency towards moderation in the Socialist parties of both Great Britain and Germany.
This is from the same article:

There are members who would pattern it (the Socialist Party of America) after the German Social Democracy and the British Labor Party, despite the disastrous experiences of two great parties of the Second International. There are members who have lost to age and comfort their once-time fervor, and members who would shrink from struggle in time of crisis (p. 8).
Yet, voicing hope for the Socialist revolution in America, Mr. Porter closed on a note of optimism and advice.

They (the Socialists) must overcome the quiescent influence of those whose socialism has been dulled by intimacy with the bourgeois world, and they must speak boldly and convincingly to the American working people in the workers’ language.

If their party can rise to these tasks then perhaps capitalism can be decently buried before it has found temporary rejuvenation in a Fascist dictatorship (p. 8).

While it would not be fair to attribute these views to the entire membership of the LID, they are of special significance for the reason that Mr. Porter, as organizer and lecturer for the LID, was the missionary who contacted thousands of students in his travels about the country. They are not the opinions, therefore, of a casual contributor to a party organ, but the fixed beliefs of one of the most active of the permanent cadre of our Socialists.

In another article, Journal of the LID Chautauqua,—this was taken from Revolt, page 10, printed in October 1932—Carrie Glasser describes an LID summer school. She writes as follows in the same issue of Revolt:

We can tell also of heartening accomplishment, of the seeds of new thought we have planted, of clubs organized for working men and women (in the West Virginia coalfields), of labor plays written and acted, of songs composed by the workers themselves, and herein we see the hope of a fruition of social discontent which will lead to a social change (p. 10).

Mr. HAYS. I am going to have to comment right there: do you know about conditions in the east Ohio oilfields, adjacent to where I grew up and still live, in 1932? Do you know anything about those conditions?

Mr. EARL. I have read about them, but I am sure you are much more familiar with them than I. I realize they were very bad.

Mr. HAYS. Do you realize men worked 14 hours, sometimes going to work in the dark and coming home after dark, and that instead of a pay check, they frequently got a slip telling them how much they owed the company for groceries? Have you heard of such conditions that existed in Ohio in 1932?

Mr. EARL. I have heard that they did.

Mr. HAYS. I did not "hear that they did." I saw it and lived through it. And I saw my father extending credit to those coal miners’ families for food, knowing full well he was never going to get the money, because he could not stand to see their kids go hungry. Then you talk about a little revolutionary dogma. I am amazed they did not say worse things than that.

The CHAIRMAN. Whatever the conditions were, and they were bad, that does not justify an organization, for the purpose of sponsoring a revolt against our form of government, going in and trying to capitalize on the misery and discontent of the people.

Mr. HAYS. They wanted change and they got the change.

The CHAIRMAN. The whole tenor of what he is saying here is that they are revolting against our system of free enterprise and free labor.

Mr. HAYS. Mr. Reece, you are not proud of that free enterprise that was paying those men no wages at all in 1932?

The CHAIRMAN. I am proud of our system of free enterprise, free enterprise and free labor, which has given us the highest standard of living that any people on earth ever enjoyed. While we have our
ups and downs, the continuous course of history has been upward, and I am proud of it. And for one, I do not want to see the taxpayers' dollars used to try to break down that system.

Mr. Hays. Well now, I do not think you are as disturbed about that as you are perhaps about some other political matters, but be that as it may, let me say to you, as to the great free enterprise system, that I believe in it. I am a capitalist. And as I said to you the other day, I do not want anybody running my business.

But you know, when the capitalistic system—and as I say, I am one of them—gets in trouble, as your coal miners and operators did in 1932, they were very happy for the Government to bail them out.

The Chairman. I voted for the Bituminous Coal Act because I thought it was a good thing.

Mr. Hays. Because you thought that the Government could help out free enterprise. It is all right if it is free enterprise and they are getting a little help, but when the fellow who is doing the work gets help, that is revolution.

The Chairman. If we are through—

Mr. Hays. I do not know if we are through or not. I do not get many answers, except that I get some speeches about wrapping yourself in Old Glory and how wonderful the Fourth of July is. But these are pretty fundamental things. They were to those people then. And I have heard it said to this committee, “Just muddle along through these depressions.” Of course, if 10 or 12 million people starve to death, I expect they would not want to “muddle.” But if they want to do something about it, that is revolution. Is that what we are saying?

Mr. Goodwin. There must be a better forum, Mr. Chairman, for colloquies of this sort. I do not know quite where it would be, but I am sure it is not in this committee.

Mr. Hays. Well, I won a debate on this subject over on the floor of the House from a fellow statesman, geographically, that is, from Ohio, and I will debate it any place anyhow, because I lived through it. When you start talking about the coal miners of West Virginia and Ohio, you are talking my language. I know something about it.

The Chairman. Proceed.

Mr. Earl. Felix S. Cohen, under the heading “Politics and Economics,” has this to say in the same issue of Revolt:

The crucial issue of industrial civilization today is not between laissez-faire individualism on the one hand and collectivism on the other. History is deciding that question. The question for us is what sort of collectivism we want (p. 20). Modern technology makes collectivism inevitable. But whether our collectivism is to be Fascist, feudal, or Socialist will depend * * * upon the effectiveness with which we translate those political ideals into action (p. 20).

Mr. Cohen reminds his colleagues that political warfare to achieve a new social order is total, not limited, conflict:

You cannot fight on the economic front and stay neutral on the legal or political front. Politics and economics are not two different things, and the failures of the labor movement in this country largely arise from the assumption that they are. Capitalism is as much a legal system as it is an economic system, and the attack on capitalism must be framed in legal or political terms as well as in economic terms (p. 21).

* * * A Socialist attack on the problem of government cannot be restricted to presidential and congressional elections or even to general programs of legislation. We have to widen our battlefront to include all institutions of government, corporations, trade unions, professional bodies, and even religious bodies,
as well as legislatures and courts. We have to frame the issues of socialism and democracy and fight the battles of socialism and democracy in the stockholders' meetings of industrial corporations, in our medical associations, and our bar associations, and our teachers' associations, in labor unions, in student councils, in consumers' and producers' cooperatives—in every social institution in which we can find a foothold * * * (pp. 22-23).

This is scarcely the outline of an educational project. Rather it is the battle plan of strategic sociology, through which an entire civilization can be shifted from its cultural, economic, political, and moral foundations. Mr. Cohen's language is the jargon of the professional revolutionary, not the scholar. Consider the following:

I don't think that we can capture the New York Telephone Co. or the BMT in a day or a year. But then I don't think we can capture the Federal Government in that time, and if we did gain control of the Federal Government without having any experience * * * in other institutions which govern the country, our control of the Federal machinery might not do us much good (p. 23).

Mr. Cohen explains the advantage of infiltration over the simple use of the ballot in advancing the cause:

Even a single stockholder in a public utility may have a nuisance value that modifies the activity of that corporation in the interest of its employees or its consumers, and may have a voice that reaches the public outside of the corporation in impressive terms. Paul Blanshard has done more for socialism with his two shares of stock in the BMT and the New York Telephone Co. than a hundred men and women who vote the straight socialist ticket on election day and forget about socialism the rest of the year (p. 23).

Finally, Mr. Cohn reminds his colleagues that these tactics of penetration are useful however the revolution is finally accomplished—by legal or unconstitutional means:

But the need of fighting politically within corporations and trade associations and professional bodies, as well as labor unions, is just as pressing if we think that fundamental social change can be secured in this country only by unconstitutional measures.

In a revolution, when the ordinary political machinery of government breaks down, it is absolutely essential that the revolutionary force control the remaining centers of social power. In Russia the success of the Bolshevik revolution rested with the guilds or soviets, which were not created by the Communist Party and which antedated the revolution. A socialist revolution in this country will succeed only if our guilds, chief among them our engineering societies, have within them a coherent socialist voice (p. 23).

The author reveals his respect for the democratic process in these words:

We may not need a majority. We do need at least a few Blanshards in every important corporation and association who have made themselves familiar with the concrete evils which that corporation or association contributes to the putrid mass of capitalism, and who will be able to carry essential industrial activities through a time of crisis (p. 23).

In the December 1932 issue of the same publication, Revolt, appears an article by Amicus Most entitled "Students in the Class Struggle." Its announced purpose is to give serious though to the part that students can play in the class struggle and their place within a workers' movement. Excerpt follows:

Karl Marx in the Communist Manifesto wrote: "In times when the class struggle nears the decisive hour—a small section of the ruling class cuts itself adrift and joins the revolutionary class," and "A portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movements as a whole," goes over to the proletariat. Students will, therefore, fall into this classification. They are really idealists who are acting against the economic interests of their own class, for the middle class is actually opposed to changing the capitalist system (p. 11).
It, therefore, becomes essential, if the student who has accepted the Socialist philosophy is to become an active factor in making socialism a reality, to completely forget his class interests (p. 11).

The student must be active in strikes, in unemployment organizations, in demonstrations, etc., not as a leader, or by making an occasional speech, but by participation as a rank and file worker. He must be a picket, he must do the clerical work, distribute the leaflets, face the police and thugs, the dangers and the public condemnation just as any other worker does (p. 11).

In the same issue of Revolt, Paul Porter, field secretary, whom we referred to earlier, reports on activities of individual LID chapters:

- * * * the true measure of student Socialist strength will be found in the League for Industrial Democracy chapters and Socialist clubs that remain permanently on the campus. Their manifold activities will comprise the main stem of the radical student movement (p. 12).

Mr. Porter announced the convocation of a mass rally against war in New York.

Planned as an outgrowth of the conference will be a student delegation to Washington soon after Congress convenes, to serve notice that hundreds of students will reject the role of cannon fodder in another war, to request that the State Department furnish a list of investments for which American youth may some day be called upon to fight, and to demand that money now spent in maintaining the ROTC and the CMTC be used providing relief for the unemployed (p. 12).

Surely a march on Washington constitutes an attempt to influence legislation.

And, to quote from page 12:

Delegates are already making preparations to attend the traditional Christmas holiday conferences of the LID, which will be held for the 18th successive year in New York and for the 5th in Chicago. This year's New York theme will be "Socialism in Our Time" and has been divided into three main categories, to which: "How May Power Be Won," "Building a Power Winning Organization," and "The Morning After the Revolution." The Chicago conference will be along similar lines.

Mr. Hays. Can you tell me what year those two paragraphs were written?

Mr. Earl. They are still from 1932, sir.

It is conceivable that the subjects discussed under those headings were all theoretical, though the titles suggest "action."

Other projects of LID chapters, described by Porter, include riots and visits to soup kitchens.

Taken from page 13 of the same publication:

On Armistice Day military-minded former Senator Wadsworth * * * spoke in Ithaca on behalf of a bigger Army and Navy. Members of the Cornell Liberal Club, the Socialist Party, and student peace groups held a rival meeting after which they marched with banners past the high school in which Wadsworth was speaking. Leonard Lurie, Cornell LID representative, describes their gentle reception: "Several of the Army officers rushed at us and tore down a few posters. The police joined the destruction which was over very shortly. They prodded us along the street with their stick, and Fred Berkowitz remarked, "I wonder how much the police get for hitting people * * *".

Growing in frequency are those trips of economies and sociology classes to case illustrations, such as breadlines and strikes, of this magnificent chaos called capitalism. Recently students from Amherst and Mount Holyoke, under the leadership of Prof. Colston Warne, made the rounds of New York's choicest soup kitchens, and visited Brookwood Labor College and the officers of various radical organizations (p. 13).

Times, November 29, 1928, page 12, for report of action at the same
AFL session. (See also Appendix IX Investigation of Un-American
Activities, Select Committee on Un-American Activities, House of
Representatives, in the 78th Congress, for citations for Prof. Colston
Warne.)

Under "Blueprints for Action," on page 14 of this issue of Revolt,
students are urged to:

Transform your Thomas-for-President Club into a permanent LID chapter,
which we hope can be known as a Socialist Club, if you have not already done
so. Have each member joint the LID. Many may also wish to join the Socialist
Party, which should be encouraged. For an elaborate program of action in
the months ahead consult the detailed Blueprints in October's Revolt, or write
to Paul Porter at the LID.

Mr. HAYS. That is still 1932?
Mr. EARL. Yes, sir.
Mr. HAYS. That dangerous movement of 22 years ago folded up
pretty completely, did it not?
Mr. EARL. A message from the national chairman of the Intercol-
legiate Student Council reads:

The presidential campaign is over, but ours has just started.
It is hardly necessary to make suggestions as to what is to be done. Workers'
forums, college forums, miners' relief work, LID Lecture Series, renewed and
vigorous efforts to sell Revolt—all these projects will aid in the educational
work that is so necessary at this time.
We must look ahead 4 years. Local elections are in a sense more important
than national elections. To measure the success of the LID, is to measure the
growth of socialism in the community you are in (p. 14). [Emphasis added.]

If encouraging students to join the Socialist Party and working to
win local elections for Socialist candidates is "educational" activity,
it is difficult for me to see why the Republican and Democratic Parties
do not qualify for tax-exemption under the same provisions of the
statute.

In February 1933, the title of "Revolt" was changed to the "Student
Outlook." The editorial states:

With this issue Revolt becomes the Student Outlook. Students felt it was
more important to sell our magazines and convince by its contents than to shout
"revolution" and have no one listen. Persons who give us more than a glance
will not mistake our colors.

Another editorial on page 1 of this issue calls for "student guts":

* * * it is questionable whether the student who hasn't guts enough to get
out on his college campus and hawk the Student Outlook will overcome his
delicate scruples if the time comes to face tear gas and machine guns * * *
Only those who steeled themselves to decide with firmness during school hours
will do so at those moments that historians pick out for special mention.

Under the title "Socialism in Our Time," in the same issue of the
magazine, Helen Fisher reports on the 17th New York conference of
the LID. She writes (on p. 8):

The speeches and questions were those of participants in the building of a
power-winning organization, not spectators.
It was a conference of practical revolutionists.
Both Reinhold Niebuhr and Franz Daniel ruled out the possibility of our ever
attaining a Socialist commonwealth by purely parliamentary action * * * Both
felt that the change would come through the general strike or some weapon
similar to it.

In the discussion of the Day After the Revolution, Paul Blanshard stressed
the necessity of presenting at least a sketch of the proposed society to those we
are trying to get to fight for it. Sociolopia, according to Mr. Blanshard, would
have an international government, some international battleships and airplanes, complete control of munitions, an international language and socialized ownership of industry with control by workers, technicians, and consumers. Lewis Mumford then spoke about the need for disciplining ourselves morally and intellectually the day before the revolution.

Mr. HAYS. Mr. Earl, would you care to comment there on whether or not, as to all of these quotes you have read—and some of them sound pretty radical, I would be the first to admit—you perhaps think, though, sort of prove the case for the value of free expression; that even though people talked like that in the 1930's, when we had a depression, we solved those problems by peaceful legislation, and that the capitalistic system has become even stronger because of remedial legislation, certainly, then it was in the thirties?

Mr. EARL. I will agree with you, Congressman Hays. But I think I will have to revert again to the theme that this is what I would term "political action," and I doubt that they should have been in it.

Mr. HAYS. In other words, are you advocating now, Mr. Earl, that the Congress take some kind of action to dry up the $45,000 a year that this organization has, so that they cannot express these views?

The CHAIRMAN. You are not recommending anything, as I understand it.

Mr. EARL. I think that what I believe in and advocate is pretty well set forth here, and of course it will be up to the committee to decide. However, I have said before, I have said earlier here, that I think that their tax exempt status was certainly being violated.

The CHAIRMAN. Wayne, it is not correct, that while we won out, so to speak, there was great difficulty encountered? Take the sit-down strikes, particularly in Detroit, but which spread to other parts of the country. Take the Allis-Chalmers strike. And now it has been definitely established, I think, on a factual basis, that both of those disturbances that gave the country genuine alarm were inspired, prompted, by these and similar, comparable influences for the purpose not of helping the United States and our system here but for the purpose of destroying it insofar as they had the power to destroy it.

There were many other instances, over the country, delaying production of essential military equipment, as well as equipment to produce the supplies needed by the military, to the point that we were very greatly handicapped for a period of time, as a result of which we had great losses.

Mr. HAYS. Mr. Chairman, I would not want to get into any debate with anybody about relative merits of the various strikes that have occurred in this country.

I come from an area where strikes are not an unknown thing.

I have, as I grew up, witnessed the militia coming in and breaking up strikes, and I have even seen a few strikers shot and seen them hauled away, and all of that. And I want to say to you as objectively as I can that it has always seemed to me that in any strike that I have personally observed, there were probably two sides to the thing. There probably was more merit on one side than there was on the other. This is as I viewed the situation, when the coal miners struck in 1927, and again when they have had strikes since then. And I might tell you now, and you probably know as much about it as I do or more, that the big coal companies do not have strikes much any more, because they have finally adopted the idea that labor unions are
here to stay and we are going to do business with them. But there was always some merit there. The men were either getting not enough to live on—and I suppose from the viewpoint of the operators, they had merit, too, because they had to show a profit, and they had to try to pay some dividends to their stockholders.

It seems to me that the whole thing that has come out of it—neither this committee nor any other committee can edit the thinking that goes on in people's minds. I think the crux of this is not whether this little minute organization that has only $50,000 a year approximately to spend has espoused some, to me, rather radical ideas, if these quotations are accurate, and I assume they are. That is not the issue, as I see it, whether they have done it on tax-free dollars or whether they have not. It seems to me there is a bigger and more basic issue here. Who is going to edit the thinking of people? Who is going to say that you cannot demand social change? Who is going to say that you cannot advocate the changing of the social order? I think it is here that we have something basic.

The CHAIRMAN. In a much shorter speech, I will answer that: Nobody.

Mr. HAYS. I am glad to have that concession.

Mr. EARL. I might say this, before I continue, that it is my thinking that these quotes that we have listened to, Mr. Hays, although they concern very difficult problems of the times back in 1932 and 1933, that have since been solved to a great extent, all in the political arena. And they do more than that, as far as these people were concerned. You will notice all through here that their theme was the pushing of socialism. And a great many things that have happened are things that you and I agree with today. And just because a Socialist is supposed to love his mother and his wife, I should not turn around and say because they believe that I certainly will not love my wife or love my mother.

The things that they advocated were that all of these be done not particularly to help America and help the system that was then in, but to overthrow that system and supplant it with a system of socialism.

The CHAIRMAN. And your quotations later will indicate the doings right up to the present time.

Mr. HAYS. Mr. Earl, in a very friendly way, I am going to ask you to try to answer this question. Do you not suppose that if someone had spent as much time as you obviously have in studying the writings of people on the other side, we could come up here, somebody could come up here, with a pretty long document of pretty horrible quotations about people who were advocating the use of troops to put down the workers and to move in police and to surround the workers' homes and all that?

Do you not think we could dig up that kind of stuff?

Mr. EARL. You probably could, sir, but probably not with tax exempt money.

Mr. HAYS. Then let me say this, before you go any further. The thing that I am trying to point out is that despite all of the extreme argument on either side, I consider it kind of a tribute to the good commonsense of the American people that we rectified what were some obvious mistakes by peaceful means and did not listen to the extremists on either side. And I am just wondering about what the value
is of rehashing this 20 years later. And at the moment we are only rehashing one side of it.

As far as I am concerned, I do not even want to rehash the other side, which would be just as extreme, I am sure.

Mr. Koch. Mr. Hays, if there were another side that was financed by tax-exempt foundations, I think the staff would like to have it.

Mr. Hays. Well, now, right there, are you saying that this organization was financed by tax-exempt foundations?

Mr. Koch. No; it is a tax-exempt foundation.

Mr. Hays. No; it is not a tax-exempt foundation. It is a tax-exempt organization. I will grant you that. But it is not a foundation, by any stretch of the imagination.

Mr. Koch. I think we can agree on this. It is one of those foundations that are created under section 101, subparagraph 6. And that section, Mr. Hays, has a provision against propaganda. And, as I understand it, it is our job to check whether that definition is clear enough, or whether we should throw the thing out and let all the foundations, whether they have an income of $83 million a year or $50,000 a year, get into the act. The thing is that we have to go into this question of propaganda, as I see it, under 101, subdivision (6), and I do say that LID is one of those creatures.

Mr. Hays. Of course, there are a lot of other creatures, too. There is the Committee for Constitutional Government. But you do not want to go into that. I will promise you that you do not.

Mr. Koch. Wait a minute. Did not the witness who mentioned the outfit—did we not find out that that was 101, subparagraph (8), which has not got that propaganda clause? And the contributions to that other are not tax-exempt.

Mr. Hays. You mean to say that the contributions to the Committee for Constitutional Government are not tax-exempt?

Mr. Koch. I understand that their own income is not tax-exempt.

Mr. Wormser. There is that distinction between 101 (6) and the other.

Mr. Hays. Which one are they under? I will agree with this in principle to save further argument. And though I may disagree with some of the people who represent the Committee for Constitutional Government, I firmly agree that they have the right to espouse whatever belief they want to. But the only thing I will get into any argument on is that I think these people and the people from the Committee for Constitutional Government ought to be treated alike. If one is tax-exempt, the other should be, and if the one is not, the other should not be.

Mr. Goodwin. And you will agree that if we can conclude these public hearings seasonably, we ought to leave plenty of time in executive session to go into all of those matters?

Mr. Hays. Oh, yes. I have no optimism that we will ever be able to come to any agreement, but I am willing to devote as much time as necessary trying.

Mr. Goodwin. I am going to be much more optimistic than you are, Mr. Hays.

The Chairman. Knowing the agreeableness of the gentleman from Ohio and his great capacity to study and resolve the facts and work amicably with people when he gets behind closed doors, I have con-
fidence that we will be able to get out a report which will be signed by all the members of the committee.

Mr. Hays. Mr. Chairman, if I were as thin-skinned as you are, I would take offense at that obvious sarcasm, but I am going to accept it just as though you meant it, and when the record comes out there will not even be your inflection in there, and people will think you did mean it.

The Chairman. We do not have any trouble when we are together behind closed doors. We never have.

Mr. Hays. I will just say: Do not be too optimistic.

The Chairman. You may proceed.

Mr. Earl. Alvin Coons made a similar report on the conference in Chicago, where the LID considered everything "from technocracy to technique." This is from page 9, and this is still back in 1933, in February:

Clarence Senior, national secretary of the Socialist Party, expressed the belief that reforms would only further encumber the capitalistic system and that every concession would only hasten its end.

Affirming his faith in democracy as an instrument of social change, he advocated its use as long as possible, not however, excluding the use of other methods should it fail.

"Radical students," he declared, "can spend their time more profitably getting acquainted with the problems of the workers, than they can in studying chemistry to learn how to make bombs, or in going into the ROTC to learn how to shoot. You can hardly expect to teach the workers to shoot straight for bread if you cannot teach them to vote for it" (p. 9).

Under Blueprints for Action, in the February issue of The Student Outlook, these techniques are advocated (p. 16):

Boring from within.—Never will it be emphasized too strongly that college radicals must shunt their freshmen, particularly, onto the college paper. Especially journalism students, those that write well, and will succeed. Send so many for tryout that one, at least, will make the grade. Keep their marks up to avoid disqualification or suspension.

Make interlocking directorates, by having your men in all school activities, to promote radical activity of otherwise quiescent groups, and to make the news of these groups redly tinged. Cosponsored action, possible with interlocking directorates, makes good news.

Then, if I may, I will turn to that article. They entitle this, "This Is One Way to Sell Radicalism." And down under a subheading called, Newspaper Style, paragraph E:

Propagandize only in quotations or in adroit wording. Examples: "Capitalism is bankrupt. At least this is what 100 youths contended at a meeting."

It is now time to turn from an analysis of LID ideology and revolutionary techniques in the early thirties to an examination of contemporary activities and beliefs. A study of LID personnel and pamphlets suggests that, even today, the league is expending more energy in political action than in education. Certainly there is much evidence to support the view of LID "research" is designed to influence legislation.

On April 15, 1950, for example, the league sponsored a symposium entitled "Freedom and the Welfare State" to celebrate its 45th anniversary. Some of the speeches made at the conference will indicate the bias of the educators present. All of the quotations which follow...
TAX-EXEMPT FOUNDATIONS

are taken from Freedom and the Welfare State, a published account of the conference.

Dr. Harry Laidler, executive director of the LID, called upon his associates to meet the need of college students for guidance from those who do "honest, independent thinking" and thus offset "reactionary" propaganda in the colleges and the "totalitarian" propaganda from abroad.

This is taken from pages 5 and 6 of that publication, which I have here.

We in the league are happy to record the social progress that has been made during the first half of the century. We are, however, conscious of the fact that the goals of full democracy and economic security have not as yet been reached ** Economic injustices in the distribution of the fruits of industry are widespread. An inner circle of owners and executives of mammoth corporate groups still possess vast power over the lives of our people.

Mr. HAYS. Mr. Earl, right there, on that very last sentence that you read, starting with "An inner circle," would you disagree with that statement?

Mr. EARL. I would not necessarily disagree with it, no.

You mean, as regards my own thinking?

Mr. HAYS. Yes. It is more or less a true statement, is it not?

The CHAIRMAN. I personally disagree with it, myself, but you have a perfect right to express your opinion if you care to do so.

Mr. HAYS. This committee has apparently been trying to make out the thesis that an inner circle of executives of foundations possess vast power over the lives of our people, and I am wondering if it is not true that an inner circle of owners and executives of great corporations possess vast power over the lives of our people.

Mr. Reece has a right to his own opinion, but I think he is pretty far out on a limb there.

To go back to my more or less famous quotation of last week, exactly the same words almost—

The CHAIRMAN. All of our corporations now are controlled by the Government, under the law which has been set up to provide free competition in the enterprise system, so that today an inner circle of owners and executives of corporations can control the lives of the people.

Mr. HAYS. Of course, the law says that they shall not do that, but again any law is only as good as its enforcement agencies, and of course you will never forget, I do not suppose, and probably never will be able to live down the statement that "what is good for General Motors is good for the country."

The CHAIRMAN. Even the inner circle of the great New York Central Railroad was not able to control the lives of its own stockholders, much less the people.

Mr. HAYS. And that is the case right there, because I did not know how to get my friend, Mr. Young, into this. He went out and fought for the stockholders and the little people in the New York Central, and he had a tough time getting his battle won. It was not easy, and he will tell you that himself.

The CHAIRMAN. Of course, we had better not get into that discussion. All of his associates were not particularly little people.

Mr. HAYS. No. That is true. They certainly were not. But he has put forth a program and a platform for the little stockholders,
and he has done an unusual thing in his very first meeting, saying that his board of directors are not even going to take expenses. So I kind of feel like the little stockholders are going to get a break.

The CHAIRMAN. I have a very high regard and very warm affection for Mr. Young. And I suffered no great pangs of disappointment when he gained control in his fight.

You may go ahead.

Mr. EARL. (reading):

The league, with its program of total democracy in industry, government, and human relations, has surely a great educational task before it. We are seeking to meet the social challenge in many ways. We are continuing to send distinguished lecturers from here and abroad to our colleges and cities. We have published more pamphlets on educational and social problems this year than in many years past. We are conducting a campaign for the organization of city chapters which is meeting with remarkable success.

And I mention again that this is in 1950.

Our dinners and conferences during the last year or so, with Senator Humphrey, President David Dubinsky, John Dewey, Senator Lehman, and Walter Reuther, among others, as honored guests, have been of historic significance. Such college conferences as the recent regional conference at Harvard have been of a high order.

Our greatest educational task, is, however, before us. In the college world, the 2½ million young people on the campuses are today groping for light on problems of democratic social change. They are being propagandized by numerous reactionary organizations which have large sums of money at their disposal. They are being propagandized by totalitarian forces that receive their line not from hard, honest, independent thinking, but from a dictatorial government abroad. They are bewildered. Students are looking to democratic organizations like the league for enlightenment and guidance (p. 6).

Recruiting, training, organizing, public relations—these are still the chief activities of the LID by the testimony of its own commanding officers.

Both Mr. Ewing and Mr. Reuther—Mr. Ewing, as an aside, is Mr. Oscar Ewing, who went to represent President Truman at this particular meeting—seemed to feel that the real threat to America was from reactionaries.

The conservatives may yell "socialism" at any suggestion for improvement. They may feel the hot breath of revolution with every proposal for change. But most dangerous enemies we have to our American way of life are those very people whose emblem is not the eagle but the ostrich * * * (p. 13).

Those blind forces of reaction in America who would lead us back down the road to so-called normalcy and commit the American economy to the economics of scarcity and special privilege, are the Cominform's most valuable allies. These same blind forces, if permitted to grow unchecked in America, will drive us again to depression and disaster as they did in 1929, and provide the Cominform with a weapon more devastating than a stockpile of H-bombs.

Mr. HAYS. Just one question there, Mr. Earl. Do you not agree that if we did have another depression, it would be a good weapon for the Cominform?

Mr. EARL. Would be what, sir?

Mr. HAYS. A very good weapon for the Cominform.

Mr. EARL. Sure, I agree.

The CHAIRMAN. It is now 4:30. It would appear evident that Mr. Earl is going to be unable to complete his testimony this afternoon, and I thought we ought to discuss what the program is.
We had anticipated completing with Mr. Earl today, but not finding it convenient to proceed this morning, and being delayed somewhat in the afternoon, it is now certain that we cannot complete today.

Some of us have some obligations in our offices that must be fulfilled. What are your suggestions, Mr. Wormser?

Mr. Wormser. I think we had better continue first thing in the morning with Mr. Earl. We have the Social Science Research Council scheduled for tomorrow, but I suggest that we put them on after Mr. Earl.

The Chairman. If that is agreeable, then, we will go ahead with Mr. Earl.

Mr. Hays. Is there any objection to inserting the rest of his statement into the record? We can have time to read it tonight and question him in the morning.

The Chairman. There may be some parts of it that he might suggest be put in the record, and some read. I have not, myself, had opportunity to read it yet, and I have had no one to assist me in digesting it, so that I am not in a position, as one member of the committee, really to say.

Mr. Hays. My only point is this, Mr. Chairman. He is going to read it into the record, and I certainly am not going to object to his reading it. I would think that we could expedite the thing, since it has already been released to the press, and they have had a chance to cull over any parts of it they want, and the committee may have an opportunity to go over it tonight, and we could just consider it read and go on in the morning.

The Chairman. I am sure there are certain parts he would like to read.

Mr. Earl. If I may suggest this: I will go through this tonight and digest the rest of it.

Mr. Hays. Why not insert it in the record, and then if you have any comments on various pages, you could go through it and note your comments. Do you think that would work out?

The Chairman. Let us determine that tomorrow. This is valuable testimony, in all probability, that he is now getting ready to present, and the chairman would not like to see the committee restrict him too much in the presentation of it.

Mr. Hays. I had no idea of restricting him. I would be willing for him to comment at any length he wanted. But it seems to me the mere reading of it, since it has been released——

The Chairman. At the gentleman’s insistence, we have suggested to the witnesses to prepare written statements of their evidence, and I am sure the gentleman does not intend to reflect on the importance of the testimony by reason of the fact that it has been prepared in writing and therefore is presented by the way of reading it.

Mr. Hays. No; the gentleman from Ohio has no such intention, and my only idea in this in the beginning was to do the very thing we have done now. We go up to quitting time, and if the witness is not through, in order to prevent a break in his presentation, we could allow him, as we did for the staff, to put it in the record and continue his comments at another time.
The CHAIRMAN. I am sure of that. But we canceled the session this morning, and in the first hour of the session this afternoon, practically the full hour was consumed in colloquy between the members of the committee, which the chairman does not remove himself from as a participant, but the result has been that the witness has only occupied 1 hour this afternoon.

Mr. Hays. I have no objection, Mr. Chairman, to the witness reading the rest of it in the morning if he wants to. I was only trying to expedite the thing and give some continuity to his presentation.

The CHAIRMAN. That can be done.

The committee will stand adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 4:35 p.m., the hearing was adjourned until 10 a.m., Wednesday, June 16, 1954.)
The special committee met at 10 a.m., pursuant to adjournment, in room 1301, New House Office Building, Hon. B. Carroll Reece, chairman of the special committee, presiding.

Present: Representatives Reece (presiding), Goodwin, Hays, and Pfost.

Also present: Rene A. Wormser, general counsel; Arnold T. Koch, associate counsel; Norman Dodd, research director; Kathryn Casey, legal analyst; John Marshall, chief clerk.

The CHAIRMAN. The committee will come to order.

You may proceed, Mr. Earl.

Mr. GOODWIN. I wonder, before Mr. Earl starts, Mr. Chairman, if we could not get some sort of a stipulation from the committee that we will be as easy as possible on the questioning. I notice that we are running behind schedule all the time. We learned yesterday that there was a possibility that the House may go into a 3-day recess period beginning with the first of next month. I know that those of us who like to get home occasionally would dislike very much to be held in Washington for the continuation of the public hearings. If the members of the committee could perhaps forego the temptation of cross-examining, it might be possible to expedite.

The CHAIRMAN. If Mr. Earl could be permitted to conclude his prepared statement, I think that would be well.

Mr. HAYS. I would like to have him put his statement in the record.

The CHAIRMAN. I haven't had the opportunity to study his statement, myself. As one Member of Congress, I would like to hear it. There might be some questions at the end that I would like to ask him.

Mr. HAYS. I would just like to say that I will try to refrain. I am just as anxious to get home as anybody else. But since I have sat patiently through a lot of testimony, some relevant and some not so relevant, about foundations, I am not going to show any inclination to shut this questioning off. I think the thing is very fundamental, and ample time should be given to this.

Mr. Goodwin. My thought is that we could get down to the fundamentals the gentleman from Ohio refers to much more quickly if we use a little more discretion.

Mr. HAYS. I appreciate the gentleman's position, and I will try to cooperate, but I think the discretion will have to be left up to each
member of the committee. I don't believe anybody can decide but me what I think it is best to ask about and what is not.

Mr. Goodwin. The last thing I would attempt to do is to tell you how you should conduct your questioning.

The Chairman. We will do the best we can to expedite the presentation, I am sure.

You may proceed, then, Mr. Earl.

**TESTIMONY OF KEN EARL, ATTORNEY, LEWIS, STRONG & EARL, MOSES LAKE, WASH.—Resumed**

Mr. Earl. Might I ask first whether or not the sound system is working? Is my voice heard up there now?

Mr. Hays. If you will pull the microphone as close to you as you can, Mr. Earl, that will help. These are not as sentitive as some microphones.

Mr. Earl. We had gotten to the middle of page 12 of my prepared statement. We were speaking about a conference which the LID held in 1950. They reported that conference in a pamphlet entitled, "Freedom and the Welfare State." And beginning with the middle of page 12:

Mr. Israel Feinberg, vice president of the ILGWU and a member of the Board of the LID, had this to say:

Labor, in effect, must become the vanguard of the welfare state. But welfare measures alone don't go to the heart of the problem. Labor must lead an attack on the private monopoly power of the giant corporations. It must seek a redistribution of income so that the working people have sufficient purchasing power to halt the drift to depression. All this would require further Government interventions into our economic life. To see to it that the necessary programs are carried out democratically, labor should insist on a voice in formulating and administering them. Labor should be represented on management councils, whether the ownership be private or public—that would be real industrial democracy.

Another LID board member, Mr. Norman Thomas, Socialist leader and chairman of the Post War World Council, attacked anticomunism in these words. This is also taken from the same publication. This is obviously a summary written by one of the editorial writers of the LID:

"Within the trade unions, in the growth of which he rejoiced, there was grave danger that, under cover of a fight against communism—which, properly conducted, is legitimate and necessary in our unions—certain leaders may attempt to fasten a kind of Fascist dictatorship of their own on the unions."

At Washington and in some of the State capitals, we suffer from a rash of stupid and reactionary proposals—such as the Mundt-Ferguson-Nixon bill, which would, if enacted—jeopardize all of our liberty while doing nothing important to stop communism. The setbacks in civil liberties Mr. Thomas blamed on "the whole Communist technique of conspiratorial deceit," on the reactionaries who exploit the situation caused by Communists, "partly to cover their own bad records by a bolsterous partiotism," and on the Republican Party, which is trying to find itself an issue in "socialism versus liberty" (p. 31).

I injected both of those excerpts, because I think that they are strictly in the political arena.

On April 11, 1953, just a year ago, the LID held its 48th annual luncheon in the Hotel Commodore. The subject was "The Crisis in American and World Resources." Speakers included Mrs. Eleanor
Roosevelt; Oscar L. Chapman, former Secretary of the Interior; Thomas C. Douglas, Premier of Saskatchewan, Canada; Adolph Held, chairman of the Jewish Labor Committee; Paul R. Porter, former United States Deputy for Economic Affairs in Europe. Dr. Ralph J. Bunche, Senator Paul H. Douglas, Congressman Jacob K. Javits and Dr. Harry A. Overstreet sent messages of congratulation and admiration to the league.

Mr. HAYS. Mr. Earl, could you tell me just why you put these names in right there, and what significance it has?

Mr. EARL. I put the names in partly because a little later I refer to some of their messages, and also to indicate the political character of the persons who attended the conference. And also, although this came up yesterday, I would like to refer to it: You mentioned yesterday that you figured I had come a long way to testify concerning a very unimportant organization. I rather suspect that persons of Mrs. Roosevelt's stature and Mr. Chapman's stature, and various other people who have been honored by the league and who pay it homage, would be rather at odds with you about that, because they obviously consider it an important organization.

Mr. HAYS. Well, I suppose, Mr. Earl, that they would be able to testify about that better than you would. I don't think you need to put any words in their mouths, and if they want to take issue with you, they can. But if you put their names in here for the purpose of trying to indicate that they are mixed up with any leftwing organization, I happen to know a couple of these people, namely, Congressman Javits and Senator Douglas, and I want to say to you that there are no more outstanding Americans in Washington today than those two men, and both of them have a long record of anticommunism.

Mr. EARL. Mr. Hays, I did not say that these people were left-wingers, that they were Communists, or anything of the sort. I would like to point out that these people are proud of their association with the LID, and what the LID has done. They have said so. And they are going to be the last persons in the world to disavow anything that they have said concerning it.

Now, I put their names in here to indicate the type of people who are associated with the LID and who nurture the things that the LID stands for. That is the reason I put their names in there.

They have been associated at their affairs, and some of these people have been honored by the LID and have gone there to receive their plaudits and banquets, et cetera. And I don't think any of them are going to disavow what the LID has said.

Mrs. Pfost. Mr. Earl, do you think that is bad, for them to be mixed up, as you say, with the LID?

Mr. EARL. No, Mrs. Pfost, I don't think that it is "bad." I say that it demonstrates the political nature of the LID, and the fact that it is constantly in the political arena. I am not here to judge the merits or the demerits of the program that the LID has espoused, except to say that the LID has espoused socialism, and that they are for certain things, and that, being for a certain political program, for certain legislation, I think they should be plumping for it with dollars that remain after their income has been taxed.

Mrs. Pfost. By your dropping these names in or referring to these people as being associated with or mixed up with the L. I. D.,
does that mean that you feel that these people are trying to further socialism? Is that the implication, by bringing the names in?

Mr. Earl. I think that the implication stands for itself. The LID stands for certain principles. It has made no bones about what those principles are. I think the record of the various conferences indicates what those are. You and I know that a great many of those principles have been espoused by both the Republican and the Democratic parties. So I will just drop it there.

Mr. Hays. Well, let's not drop it there, for just a minute. You use a technique that is not one that you have developed yourself. It has been around here before; in which you start off with the premise that these people are not Communists, and thereby plant the seed; just as though I would say to you, "Now, Mr. Earl, don't for a minute think that I think you are stupid," and if I hadn't brought that up, nobody would have thought about it, would they? I am just using that as an illustration, not that I mean you are. But that is the kind of technique you are using on these names.

Mr. Earl. I disagree with you, but that is all right.

The Chairman. It is pretty difficult to discuss an organization without discussing some of the names that are associated with it, it seems to me. But, as I understand, the whole purpose here, or the primary purpose here, is to indicate the political characteristics of the activities of the organization, which is supported by tax-exempt funds.

Mr. Hays. Well, I will just give you a little example. We get over here, and he says Senator Douglas received an award, and he says he sent a speech up which would make interesting reading, implying there is something bad about it. When we come to that I am going to read it.

Mr. Earl. I was going to read it.

Mr. Hays. I would like to read it, and you may comment on it.

The Chairman. Proceed.

Mr. Earl. The LID, according to the luncheon program, "serves as a liaison between many liberal forces of this country and abroad." It is questionable if liaison work with political activists is "educational" within the limits of our statutes relating to tax exemption. It is even more doubtful that giving public relations support to the political leader of a Canadian Socialist Party is pure research.

The Chairman. It was my impression that the State Department served as liaison between this country and the forces abroad. Maybe I was in error in that.

Proceed.

Mr. Hays. From some of the comments I have read about the State Department, I would say that almost anything you might say about them could be in error.

Mr. Earl. Here is the league's citation to Thomas C. Douglas, Premier and Minister of Cooperatives, Saskatchewan, Canada:

In 1944, following a brilliant career as ethical leader and member of the Canadian Parliament, you were elected, against the powerful opposition of the forces of special privilege, the C.C.F. Premier of Saskatchewan.

Four and eight years later, you and your able and dedicated coworkers were returned to power with overwhelming majorities. Under your dynamic, creative and socially visioned leadership, the Cooperative Commonwealth Federation Government assured to the people a clean and honest administration; enacted the most advanced legislation on the American continent in the fields of natural
resources, human rights, health and social insurance; worked out a harmonious relationship between the strong cooperative movement and expanding public enterprise; steadily improved the cultural and recreational services, and gave to the world an example of social and economic planning with freedom that has placed every democratic country in its debt.

In recognition of these historic achievements, the League for Industrial Democracy, at its 48th Annual Conference, takes pleasure in presenting to you its 1953 Award to a Distinguished Leader from Abroad, and looks forward to your continued pioneering services to your Province, your country and the democratic world.

Mr. Norman Thomas, in presenting citations to Paul Porter and Clarence Senior, said:

Today we wish to show our appreciation to two active student officers of the late twenties who have since been of great service to our country and the world. * * * nowhere in their career is it mentioned they were active Socialists. Paul Porter used to give me kind of a headache too about the kind of Socialist he was at times, but it’s not mentioned now; he perfectly safe as far as I am concerned. And as for Clarence Senior, I read that * * * following his graduation, after a decade of service in the fields of adult education * * * public housing and labor and Socialist political action, * * * he entered the field of inter-American * * * relations.” Now the truth about this man must be told; he was once the national secretary of the Socialist Party and he did a very good job.

I am awfully proud to have known these men so long, and awfully proud of what they have done. They have done the kind of work that might have saved us if more people had done it. For instance, imagine if by their work in the days of their less reputable calling they could have made Texas or Louisiana Socialist?

Do you think we would have had to worry about who would own the oil? I don’t. I am quite sure that there would have been an extraordinary change in our theory of States rights, Mr. Ex-Secretary Chapman, at this point. They did a grand job and they are doing it now. (From the luncheon program.)

The LID News Bulletin, January 1953, in announcing this forthcoming conference (referred to above) used this language:

At a time when the country is using up many of its natural resources at an unprecedented rate; * * * when powerful lobbies are seeking to take our offshore oil resources out of the control of the Federal Government, to return the TVA to private monopoly and to prevent the further public development of the Nation’s vast hydroelectric resources, and when adequate aid in the development of resources of other lands is vital to the maintenance of world democracy, it is most fitting that the LID should give its attention this year to this important problem of conservation (p. 1).

If there is any doubt that the bulletin is anything other than a rallying cry for a militant lobby—rather than an educational journal—such doubt can be dispelled by turning to page 6 of this same issue. There the LID’s program for “democracy in action for 1953” is set forth by Dr. Harry Laidler, executive director. It should be noted that the academic recommendations endorsed by the league just happen to deal with the issues then before Congress. Moreover, instead of presenting both sides, they urge action in behalf of a particular piece of legislation. Excerpts from this democratic program follows:

In presenting this program, Dr. Laidler declared that advocates of a strengthened democracy would be confronted in 1953 with powerful opponents, well supplied with funds, and that, for the first time in 20 years, the main body of the Nation’s press would be aligned on the side of the party in control of our national government * * * (p. 6).

1. Conservation of natural resources: It urged the increase of forestland public ownership and control; the retention of offshore oil by the Federal Government and the use of revenues from oil resources for educational purposes; extension of the TVA principle to other river basin developments * * *

2. Social security: The program recommended that the Nation consider the enactment of a democratically operated national health insurance system * * *
and the strengthening of the old-age pension and unemployment insurance system... 

3. Labor legislation: (reorganize child labor laws)

4. Economic stability: It favored the formulation of plans for the maintenance of economic stability when defense tapers off, by means of credit controls, progressive taxation, useful public works, social-security programs, and other measures.

5. Housing: It proposed Federal aid for the construction annually by municipal housing authorities of a minimum of 135,000 apartments for low income and middle income groups—

Mr. HAYS. That is the Eisenhower and Taft program.

Mr. EARL (reading):

6. Education: (Federal aid, better salaries for teachers, "freedom of inquiry," etc.)

7. Civil rights and antidiscrimination legislation: (stressed need for Federal and State FEPC laws, liberalization of our immigration laws, fair hearing to all public employees charged with un-American activities.)

8. Corruption: (Favored purge of dishonest officials.)

9. Foreign policy: The program favored, in addition to military aid, increased economic, social, and educational assistance to developed and underdeveloped countries...

10. Labor and cooperative movements: It urged labor unity, the strengthening of collective bargaining in white collar trades. It likewise urged the strengthening of the consumers' and producers' cooperative movement...

* * * the league report viewed as antidemocratic trends the increased influence of such public figures as Senator McCarthy on important Senate committees; * * * the increased confusion among Americans regarding what should constitute a realistic democratic foreign policy; the bitter propaganda against the United Nations which had been witnessed on all sides during the year and the continued threats of men like Governor Byrnes to destroy their State's public school system rather than abolish segregation in the public schools (p. 6).

Whatever the merits of these proposals, they suggest the platform of a political party or the legislative guide of an organized lobby—not the reflection of an educational institution.

An examination of some of the pamphlets recently published by the LID reveals that the league is still marketing a product suspiciously close to "propaganda."

From—Needed: A Moral Awakening in America, a symposium; report on LID luncheon, April 25, 26, 1952—this is a summary by the editor.

August Claessens, national chairman of the Social Democratic Federation, took a dimmer view of trends in business morality than did Mr. Rennie, and declared that, in his opinion, "capitalism, now so inoffensively called 'private enterprise,' is essentially immoral. It is a source of corruption in business and politics. Private enterprise corrupts Government enterprise and the only effective steps toward the elimination of these immoral influences are the rapid extension of collectivism and the advance of the cooperative movement" (p. 28).

At the same luncheon, Walter Reuther presented a citation to Philip Murray on behalf of the LID. The citation was received by James B. Carey for Mr. Murray, who was unable to be present. Mr. Reuther referred to the Government seizure of steel as an example of the need for morality in American industry:

The steel industry cries aloud in protest against Government seizure, yet the steel industry fails to realize that in a free society there is no substitute for the voluntary acceptance and discharge of moral and social responsibility. It was the failure of the steel industry voluntarily to discharge its social responsibility by bargaining in good faith that created the crisis that compelled the Government, as the agency of the people and the guardian of the public good, to intervene. Never in the history of Industrial relations has there been a greater need for,
and such a tragic lack of the moral leadership on the part of American industry (p. 7).

James B. Carey, secretary-treasurer, CIO, made the following remarks in accepting the citation on behalf of Mr. Murray:

It is fitting, therefore, that a League for Industrial Democracy should honor a Congress for Industrial Organization. The aspirations and goals of our two organizations are more than similar—they are complementary.

The steel barons of our day are determined to victimize not only their own employees, but all American consumers and wage earners. In their complete abandonment of moral and ethical sensibility, they would undermine the living standards of millions of Americans and even jeopardize the national defense program itself. * * *

Our country needs, and our world needs, collective indignation that takes on strength and crusading power only by the cohesion of brotherhood inspired by the common economic, political, and social goals that all working men and women share. * * * (p. 11).

Mr. Abraham Lefkowitz, principal of Samuel J. Tilden High School, made the case for progressive education as a means of fighting corruption. This is taken from pages 24 and 25.

Mr. Goodwin. Where is the Samuel J. Tilden High School?
Mr. Earl. The Samuel J. Tilden High School is in New York.

Democratic education creates social individuals, not individualists. The individualist works for a self and subtracts from others; but the social individual is most to be desired because of what he bestows upon others, through no loss to himself.

Having attracted first-class minds free to develop the highest spiritual ideals, how can our schools help pupils to be receptive to these values? We know exhortation is no more effective than mere possession of knowledge. Children must face vital social problems and participate in their solution, based on recognized social values that evolve from group planning, discussion, study, and action. Hence, our schools, now dominated by the competitive ideal of each for himself and the devil take the hindmost, must subordinate the competitive ideal with its marks and rivalry for individual gain to the social service ideal of cooperation for the common good or for group objectives or the development of talent (pp. 24, 25).

Perhaps there is no more succinct explanation of the interrelationship of progressive "education" and socialism.

Mrs. Pfoest. What connection does Mr. Lefkowitz have with LID?
Mr. Earl. I am not sure what his current affiliation is. I would have to check. H appeared as a speaker at this particular program.

Mrs. Pfoest. I beg pardon?
Mr. Earl. I say he appeared as a speaker at this particular luncheon.

Mr. Lefkowitz continues:

A critical study of social problems; emphasis on sports where the individual, despite his desire to shine, is taught to subordinate self to the team chosen without discrimination; or stress on creative arts or school group activity based on democratic planning, etc.—all these develop a social outlook and should make for spiritual values (p. 25).

Toward Nationalization of Industry, by Harry W. Laidler, executive director of the LID, was published in 1949 and represents a fairly recent explanation of LID views on this subject. Excerpts from this pamphlet follow:

One of the outstanding questions before the American people today is whether they should work for the increase or the decrease of the powers of the Federal Government over the economic and social life of the country (p. 3).
Among our public utilities, one corporation controls a practical monopoly of the telephone business and another of the telegraph business of the country. Great holding and investment corporations control much of our electrical industry, while a major part of the mileage on the Nation's railways is directed by a handful of large railroad systems and banking groups. One, two, three, and four overlords of industry control more than half of the business in many of our manufacturing industries, while a few large banks, centering in New York, possess an enormous influence over the industrial structure of the country (p. 4).

Mr. Koch. Mr. Earl, a pamphlet such as this, Toward Nationalization of Industry, is that for sale, or sold, by the LID, or is that distributed free of charge? Do you know?

Mr. Earl. On the front it reads, "Price 25 cents," so they must have been for sale.

Mr. Koch. And, of course, we don't know whether they make money or lose money on some of their publications, but they do publish books, don't they, or pamphlets?

Mr. Earl. Yes, they have quite a list of pamphlets that they list on the back of each of their publications.

The selection of facts, the emphasis and the choice of vocabulary here combine to distort the picture of America in much the same fashion that it is distorted by the propaganda mills of the U.S.S.R. Dr. Laidler continues:

Under a system where the basic industries of the country are privately owned and run primarily for profit, therefore, much of the income of its wealthiest citizens bears little or no relation to their industry, ability, or productivity (p. 6).

Here is the familiar theme, common to all Marxists, that capitalists are drones and parasites. Moreover, it will be seen from what follows, that they are actual or potential fascists. Then we go on, on pages 8 and 9:

The development of our system of private industry, furthermore, has been accompanied by attempts at autocratic controls of economic, political, and social relationships by owners and managers of our giant industries.

Many of our great leaders of industry who have constantly and bitterly opposed the extension of Federal power and nationalization on the ground of "regimentation," for years spent much of their time in an attempt to regiment their own labor forces and, through the use of the spy system, armed guard, police, constabulary, militia, injunction, and blacklists, to prevent the workers under them from exercising their American right to organize and to bargain collectively. Laws passed during the thirties have made illegal many of these practices, but ruthless and undemocratic procedures in labor relations are still resorted to in industry after industry by the possessors of economic power. These same leaders have sought to control and regiment political organizations, the press, the platform, the pulpit, the school, and university in the city, the State, and the Nation.

The industrialists of the Nation have frequently kept prices high and rigid, have kept wages down, have constantly chiseled on quality, and have run their businesses not for the service of the many but for the profit of the few. In many instances they have sought to involve the country in international conflict with a view of safeguarding their investments abroad (pp. 8, 9).

Dr. Laidler calls for nationalization of our forests, coal mines, oil reserves, railroads, electrical power, communications, et cetera:

Our forests should be brought far more completely than at present under Federal administration * * * (p. 9).

The forests of the country, under private ownership, are, furthermore, cut down faster than they are restored.* * * Public ownership and operation, on the other hand, would guarantee scientific forest management (p. 11).

Bituminous coal mines should be brought under the control of the Federal Government. * ** The condition of the industry under private control has long been chaotic (pp. 11, 12).
Anthracite coal is another resource which, in the interest of the Nation, should be owned and controlled by the Federal Government (p. 13).

The waste in the exploitation of our oil resources likewise necessitates further Federal control (p. 13).

The Federal Government should likewise increase its control over the Nation's power resources * * * Dr. Isador Lubin some years ago suggested the creation of a Federal Power Corporation, which should have ownership not only of water-power, but of coal, oil, and natural gas, with the view of coordinating the efforts on a national scale of all of those industries which generate power (p. 15).

(Dr. Lubin, Commissioner of the Bureau of Labor Statistics from 1933 until 1946, was the United States representative to the U. N. Economic and Social Council from 1946 until March of 1953.)

The case for the nationalization of the railroads is a powerful one. Such ownership, in the first place, would make possible the scientific planning of the transportation industry for the entire country (p. 16).

Only under Government ownership can a sensible plan be worked out. Only under such ownership can a foundation be laid for cooperation between the railroad system and busses, water transportation, airlines, trucks, and other forms of transportation, a cooperation absolutely essential to the health and welfare of the Nation's transportation system (p. 17).

If this means anything at all, it means rigid Government control over all forms of transportation, not just railroads. Note also the wholly unreal assumption of bureaucratic infallibility which underlies the case for continental coordination of transportation.

And to quote from page 18:

Only under Government ownership will it be possible to secure enough cheap capital adequately to modernize the railroad system.

Finally, Government ownership would serve the interests of democracy by taking this vitally necessary industry out of the grip of a mass of holding companies and financial interests intent on profits and placing it in the hands of representatives of the 150 million people in the United States. Surely an industry on which the health of the whole continent system is so dependent should not be the plaything of small groups of railroad magnates and financiers. * * *

Statements to the effect that American railroads are the "plaything" of financiers do not belong to the realm of responsible scholarship.

Mr. HAYS. Mr. Earl, I would like to interrupt you right there and just ask you a question or two about that last editorial statement of yours.

Are you familiar with such characters as "Bet a Million" Gates, Diamond Jim Brady, Commodore Vanderbilt, and a fellow by the name of Grew, and so on, who played around with the railroads for a great many years?

Mr. EARL. I have heard some of their names, yes.

Mr. HAYS. Did you ever hear about the time one of them bundled up $5 million in securities and crossed the river in New Jersey so that the opposition crowd couldn't get hold of the money it was felt belonged to the new board of directors? Did you know that the Erie Railroad only within the last 10 years or so paid off the indebtedness caused by water that was put into its stock by some of these same people? I mean, if you are going to editorialize, I think you ought to perhaps be a little more familiar with your subject.

Mr. EARL. Well, I point out here that I still contend that these are things that these people in a tax-exempt organization shouldn't be indulging in.

Mr. HAYS. Which people? You mean the manipulators shouldn't have indulged?

Mr. EARL. No, I am talking about Mr. Laidler.
Mr. HAYS. All right. That is all. Go ahead.
Mr. EARL. Quoting from page 19:

Similar arguments may be advanced for the public ownership of our electrical power. The experiments by the Federal Government in hydroelectric power in the TVA in Boulder (now Hoover) Dam and Columbia Basin, as I declared before, should be extended and the city, State, and Federal Governments should secure all control over the electrical resources of the Nation.

Public ownership of our electrical industry, as of our railroad industry, would make possible a unified control of the industry throughout the country. It would lay the foundation for a coordination of the power industry in general (p. 19).

Communications, manufacturing, banking and credit are not ignored by Dr. Laidler's proposals for nationalization. (See p. 20) And on page 22 Dr. Laidler calls for a housing bill which stirs the imagination. Dr. Laidler would not nationalize the composition of symphonies or the writing of novels, but his language suggests that "thought control" would follow "industrial control." (See p. 23.)

Dr. Laidler goes on to say:

If public ownership is to be truly democratic, furthermore, each socially owned industry should be administered democratically. That does not mean that the workers in each industry should completely control that industry. *** The final control of a publicly owned industry should be in the hands of society as a whole (p. 24).

Dr. Laidler goes on to admit that:

Of course the exact type of democratic control which should be adopted would have to be worked out on an experimental basis over a long series of years (p. 25).

Answering the charge that socialism will eliminate and frustrate the range of consumer choice, Dr. Laidler replies:

Of course under public ownership consumer choice should be made as free as possible. In ordinary commodities and during ordinary times, the Government should merely try to chart the past trends in the field of consumer demand, and, on the basis of past demands, decide how much of various types of commodities should be produced in the immediate future. In the nature of the case, Government agencies and voluntary groups and individuals should do their part to educate the public regarding the value of certain commodities; to encourage the purchase of socially desirable goods and discourage the purchase of "illth" *** instead of wealth. But all regimentation in this field of activity should be avoided (p. 26.) [Italics added]

It is difficult to reconcile the pious declaration against "regimentation" with the suggestion that Government agencies should "educate" the public to accept "socially desirable" goods. Incidentally, who writes the definitions? Who decides that the times are "ordinary"? For notice that it is only during "ordinary" times that the choice will be as "free as possible." Finally, where is the guaranty that linking future production to "past trends" will benefit the consumer?

In analyzing the propaganda themes of the League for Industrial Democracy, it is instructive to see what prominent members of the league have had to say about communism. And I would like to say first here that I have included these references concerning this subject as a demonstration of socialism's constant search, at least what I think is its constant search, for the silver lining in the Communist cause. Since Marx's manifesto is the foundation of both socialism and communism, socialists feel very badly about seeing their first cousin go astray. And further I have included them because communism is
one of the powerful political issues of our time; that most people are now agreed that communism is an international conspiracy.

Hence, it is interesting to read what certain people have had to say about it. And if you want me to, I shall go through it. It is contained on page 20 through the middle of page 24 of my statement, and contains first the statement of Mr. Alfred Baker Lewis, who was chairman of the LID board in 1943 and 1944. This pamphlet, entitled, "Liberalism and Sovietism," was published in 1946.

This essay represents an attempt by socialist intellectuals to dissociate themselves from the terror and cruelty of Russian communism. An uncautious reader is left with the feeling that, while Russian foreign policy is evil, the economic program of the Soviets is really quite acceptable.

Excerpts from the above pamphlet follow. Mr. Lewis explains to his fellow liberals just how the Bolsheviks came to be unfriendly:

The governments of every capitalist nation, i.e., of every nation in the world but Russia, immediately upon the Bolshevik's seizure of power in that land, turned against the Bolsheviks, or the Union of Socialist Soviet Republics, to use the official title. They did this partly from determination to preserve the right of capitalist ownership of industry, banks, and natural resources.

Since every government was against them * * * the Russians naturally were against every government. They therefore sought to set up out-and-out revolutionary parties in all other countries (pp. 3-4).

Such was the call to revolution. It was not unnatural; in fact, it was largely a defense measure, since all the Russian Government was doing was building backfires against the governments which were conducting either directly or through agents military invasions against it (p. 4). [Italics added.}

Now, let me digress for a moment and say that Mr. Lewis was very rough on the Communists in here for their terror and all of the other things that we know that Russia is doing. But I think this first thing demonstrates in a small way the fact that he was trying somewhere to find a silver lining.

Substantially the same argument was used by Communists to explain the Soviet war against tiny Finland, and the knife thrust into Poland's back. All Russia was doing was protecting herself against Fascist invasion by seizing another broad band of territory across which Nazi armies would have to march. Similarly, subversion today is merely the Kremlin's method of combating the aggressive war plans of American imperialism.

Throughout the booklet, Mr. Lewis shifts the emphasis from the international Communist conspiracy as a threat to world peace and stresses the danger of Russian imperialism. In effect, this kind of argument produces the kind of psychology in, say, America, that might unify the Russian people behind their Communist overlords, in much the same way that the dogma of "unconditional surrender" unified the German people behind the Nazis. Russian "imperialism" is lightly chastized as a modern form of British imperialism. Slave labor, genocide, brain-washing, espionage, kidnaping, political assassination—all the instruments of total and unlimited terror are, by implication, equated with the rule of the English sahib, sipping gin in the Indian sun.

And then to go on, from pages 16, 18, and 19:

Russian imperialism is also evident in Bulgaria (p. 16).

In another part of the world, in Manchuria, the Russians are pursuing the policy of Hitler * * * In addition, directly reversing the policy of the Soviet Government under Lenin when the Russians ceded their imperialist rights in the
Chinese Eastern Railway to the Chinese Government, the Russians got from the Chinese Government an agreement giving them a half interest in the Manchurian port of Dairen (p. 18).

The British Labor Government and the American Government have usually opposed to some extent the extreme demands of Russia. On numerous other minor issues the British and Americans have differed with the Russians. Consequently, the Russians have done all they could to embarrass the British and American Governments, especially the British. For that is simply the psychology of you oppose me and I’ll oppose you (p. 19). [Italic added.]

The “master plan” for world conquest, it would seem to Mr. Lewis, is nothing more than simple retaliation for British and American rudeness.

Mr. Lewis concludes his study with suggestions as to what “real progressives” should do in the fight against communism. He urges them to oppose Communist penetration of liberal groups and, at the same time, to “loyally defend the civil rights of Communists.”

Liberals should not be afraid of being called red-baiters. Strictly speaking, no one is a red-baiter except a person who tries to deny to Communists their civil and political rights. Liberals should and most of them do loyally defend the civil rights of Communists as well as others (p. 25).

You are not a red-baiter because you oppose Communist penetration in the guise of liberals into other organizations or oppose the Communist Party’s influence in its “innocents clubs” or transmission belts or because you oppose Russian imperialism. You will be called such, but do not let that worry you. You would only be a red-baiter if you tried to prevent by law the Communists from establishing their own organizations (p. 25).

After arguing that the way to stop Russian imperialism is by strengthening the United Nations, Mr. Lewis ends on a note of hope. After all, he says, the Communists are not as bad as the Nazis; there is, therefore, “a real possibility of peace.”

There is one important and vital difference between the Russian totalitarian dictatorship and the Nazi one. The Communists never were racialists, even though the Soviet Government refused to admit Jewish refugees from Nazi persecution. Far from being racialists the Communists both in Russia and elsewhere are sturdy opponents of racial discrimination, and active propagandists against race prejudice (p. 28).

Mr. Lewis then advances an ingenious argument to demonstrate that aggression and war are not necessarily part of the Communist plan. (See pp. 28, 29.) The statements of Soviet leaders that the destruction of either the Communist or the capitalist world is inevitable are, apparently, as irrelevant as their acts.

We may reasonably have some hope, therefore, that Russian Communist leaders can be persuaded that the American and Western European democracies want peace and the end of imperialism and of power politics, and oppose Russia only when she is imperialist, not simply because she is Communist. We might at the worst have two worlds yet all competition between them could be kept on a civilized basis of raising higher their respective standards of living, and that would not necessarily lead to war (p. 29).

The Soviet’s original attacks on the governments of the democratic nations through the Communist Parties which it set up and controlled, were defensive measures against attacks actual or expected from those capitalist nations. Russian imperialism today is the result of an act of will on the part of the Russian dictator, Stalin, and not because it is the nature of a Communist dictatorship to practice aggression upon its neighbors (p. 29).

The invasion of Korea, the seizure of Tibet, the use of Chinese Communist arms and cadres in Malaya and Indo-china seem to sing a contrary song.

(Note.—Alfred Baker Lewis, author of above statements, is listed as chairman of the board of the LID for the year 1943-44.)
There seems to be some inner compulsion which prompts even tough-minded liberals, who understand and despise the Soviet police state, to search desperately for the silver lining. Here is Norman Thomas, another chairman of the board of the LID, writing in Democracy Versus Dictatorship, published in 1937.

This pamphlet, entitled "Freedom and the Welfare State," which was published in 1950, still carries "Democracy Versus Dictatorship" as one of their current pamphlets.

This is a quote from page 11:

* * * it is still true that between the Fascist and Communist types of dictatorship there are important differences. Both accept in practice the doctrine of the totalitarian state, under the dictatorship of one party which form of government, and communism as an instrument for achieving the final Communist society in which the coercive state will have become unnecessary. The Fascist dictatorship is bent upon preserving in a large measure the profit system and the class divisions of society. The Communist dictatorship has already practically abolished the profit system and the older class divisions of society. Neither Italian fascism or German nazism has any such record of social achievement in the education and industrialization of a backward people as the U. S. S. R. since 1917. If there is danger in Russia of a new type of class-driven society at least communism, like Christianity, carries along in its own sacred books the dynamite for the overthrow of the hierarchies it may develop.

Mr. Thomas leaves no doubt in the reader's mind that socialism is to be achieved at the polls:

It will be the business of the workers with hand and brain, the lovers of true peace and true democracy, to make the wars and confusions of a bankrupt society, the society of a federation of cooperative commonwealths.

That cannot be done simply by the ballot in a world gone mad. Indeed, under no circumstances can the working class put its trust simply in the political democracy of which the ballot is the symbol.

In another booklet, Russia—Democracy or Dictatorship? published by the LID in 1939, and I think still on their current list, Norman Thomas documents the case against the Soviet slave empire. The piece is a detailed indictment of most, if not all, of the horrors of the Stalinist regime. Nevertheless, the concluding paragraph ends on this somewhat curious note:

One can hope that the Russian revolution, stolen from the masses by a Stalinist bureaucracy, will some day be won by them. One can hope that democracy can be achieved within the Communist Party, and that other parties will win the right to function. One can hope that the material benefits of state ownership will be more equitably shared by the masses, and supplemented with the liberty that Socialists believe to be equally important. One can still hold communism superior to fascism, while rejecting the continuing totalitarian terror that is a common feature of both, and that tends to reduce life under it to a common denominator of serfdom to the state. Above all, one can hope that the western democracies, including the United States, will some day enjoy the blessings of socialism without having first to endure the agony of the transition period, through which Russia has been passing for more than 20 years.

Mrs. Prost. Mr. Earl, if you put in this quote here, why did you not put in the quote that gave the detailed indictment of most, if not all, of the horrors of the Stalinist regime? We will all agree that certainly we would not want to live under his regime, and if you are going to quote the one section, why did you not quote the other, to give us both sides of the picture?

Mr. Earl. I am going to submit for the committee's use all of the pamphlets to which I have referred, so that you will have that material. I mentioned that he had done that, but I put this concluding paragraph in to demonstrate once again this great hunt
for the silver lining that they find in communism; and that they hope that socialism can be achieved here without our having to go through that terrible period that Russia is passing through. Does that answer your question?

Mrs. Pfoest. Yes. I just couldn’t understand, if you were going to give the true picture, why you would put one quote in and leave the other out.

Mr. Earl. I think we all understand what Russia is.

Mrs. Pfoest. Yes.

Mr. Earl. And that it is a dictatorship, and that there are a great many terrors there, and he does a beautiful job of documenting those.

In the preface to this work, the editors state they have tried to publish a work which would contain two viewpoints, one “more sympathetic to the present Soviet Government” than the one offered by Mr. Thomas.

Among those who have been invited to present the other side of this controversial subject are Maxwell Stewart, Corliss Lamont, Robert Dunn, Mary Van Kleeck, Jessica Smith, and Earl Browder (p. 3).

When there were no takers, the LID, after delaying for nearly a year, finally decided to publish the Thomas essay, which is highly critical of the Russian experiment. Apparently, however, the editors could not resist at least one word of explanation in the preface which might soothe the outraged feelings of the pro-Soviets.

The authors will be the first to insist that ideal democracy exists nowhere, and certainly not in the United States, with its unemployment and labor injunctions, its treatment of Negroes and sharecroppers, and its many other problems. They will be the first to admit, likewise, that the U. S. S. R. should be examined and judged, not by American standards, but in the light of Russian history and conditions. It must also be admitted that democracy everywhere is more limited during war than in times of peace, and that the Soviet leaders, living for many years in almost constant fear of attack, had a war psychology long before hostilities began (p. 4).

Mr. Hays. In order to know what that paragraph means, Mr. Earl, could you give us the year when it was published or written?

Mr. Earl. I believe I referred to the year of 1939. Just a second. Yes, December 1939.

A Conference of the League for Industrial Democracy, held at the Hotel McAlpin, New York City, on May 8, 1943, brought together a number of labor leaders, Socialist professors and foreign politicians. They met to emphasize the need for postwar planning if the free world was to be spared mass unemployment and depression. The presence of so many Socialist leaders from abroad emphasized the reality of the world movement against capitalist society, a movement in which allies join hands across national frontiers to combat their own countrymen.

The proceedings of the conference were published in an LID pamphlet entitled “The Third Freedom: Freedom From Want.” A list of outstanding participants, together with significant excerpts from their speeches, follows:

1. The Right Honorable Arthur Greenwood, leader of the British Labor Party in the House of Commons, broadcast a message from England which was rebroadcast during the LID luncheon. (Mr. Greenwood was elected treasurer of the British Labor Party in the summer of 1943; as a Minister in the War Cabinet of 1941, he ap-
pointed Sir William H. Beveridge chairman of the committee which used the Beveridge report on social insurance.) Greeting his friends in the LID, Mr. Greenwood remarked:

The significance and importance of your work will not be limited to the United States. We over here are greatly interested in it, too. The subject you are dealing with vitally concerns people everywhere because it expresses one of the deepest aspirations of the masses of all peoples (p. 3).

It is our duty, according to the British Labor Leader, to make freedom from want—inalienable through the law of nations. To provide freedom from want is one of our chief tasks. It is an urgent problem that concerns the society of nations and national communities, and is not merely one of individual responsibility (p. 4).

It is very clear that Mr. Greenwood, like many of his colleagues, sees the necessity of pressing for socialism at the strategic level (i.e. world cooperation as well as socialism within nations).

A new inspiration and impetus was given to social planning by the declarations of the Atlantic Charter. But important as these individual national preparations and plans may be, it is of the first importance that we should keep constantly in our minds that the indispensable basis of a universal forward movement toward social security and social justice for the peoples is to be found only in the concerted action of the nations working in the closest and most effective cooperation (p. 4).

Mrs. Prost. Mr. Chairman, we have been here now a little over an hour, and we have covered 12 pages, and there have been very little in the way of interruptions. We have 13 1/2 pages yet to go. Do you think it is necessary for us to sit and listen to the material read to us? Couldn't Mr. Earl submit this for the record?

The Chairman. Mr. Earl would have preferred to have spoken offhand, but in order to give the committee members the testimony in advance, it was necessary for him to make a written statement, so as not to fall into the position for which some of the previous witnesses have been criticized. And the mere fact that at the instance of the committee as well as its insistence it became necessary for him to prepare a transcript, I hardly think it is fair to the witness to suggest that there is anything odious about reading a statement.

Now, so far as I am concerned, I have not had opportunity to read this, myself, and it takes no more time for me to listen to it than it would for me to read it myself.

Mrs. Prost. The reason I brought it up was in view of the fact that we did have the material in advance, and I have gone over it, and I was hoping that he might be able to expedite the hearing just that much; because we do have the context of what Mr. Earl is trying to convey to the committee, and in view of the fact that the House is in session, I thought perhaps it would speed us up considerably if we would be able to offer the statement for the record, and that we might question him a little.

The Chairman. Well, he has certain passages marked, I think, to have included in the record, and has included some of them, and is only going to read what he thinks would be of more particular interest.

Mr. Earl. How would it be if we compromise, and I will go through and just refer to some of them. Of course, whatever the committee decides is agreeable with me.

Mrs. Prost. It was my understanding last night that he expected to sort of hop through the testimony, and I for one am appreciative
that we do have this transcript before us and that we have had an opportunity to have a few hours. We didn't get very many hours before your testimony started.

Mr. Earl. I got it to the committee as quickly as I could.

The Chairman. You may proceed.

Mr. Earl. Two. Dr. Carter Goodrich, chairman of the governing body of the International Labor Office and professor of economics at Columbia University, reinforced Mr. Greenwood's thesis:

I wish to argue, first, that attaining freedom from want for our own people, as well as for others, requires international cooperation as well as national action; and, second, that in this cooperation we should make large use of an agency, the International Labor Organization, which is itself, in its structure and way of working, a notable example of industrial democracy (p. 6).

3. Mr. Robert J. Watt, international representative of the American Federation of Labor, produced a typical propaganda assault on capitalist society:

Freedom from want is the No. 1 of the goals toward which civilized man has worked through the centuries. The present paradox of want amid plenty is evidence of negligence, of laziness and leadership, of stupid, unthinking acceptance of an economic fetish from the laissez-faire cult. Democracy cannot survive if it bends its economic life to the taboo of an ancient medicine man (p. 10).

He also poses an economic and political solution to the problem of want:

For freedom from want, workers must be paid such wages as represent their true productivity in order that their purchasing power can sustain the circulation of goods. Wages of capital should go down to the measure of its actual social value (p. 11).

Yes, for freedom of our people from want, the Nation cannot pay too high a price. What we cannot afford is to ignore or be overly timid in preventing such want (p. 12).

Of course, in skipping around here, I don't want any inferences that I am just trying to pick out some juicy parts. I think it is all important, or I wouldn't have written it.

Mr. R. J. Thomas, chairman of the United Automobile Workers, CIO, sent an address, and I am just going to quote the last quote in pages 14 and 15. He tells, first, that after the war he figures that there will be a lot of trouble and depression, et cetera, and then he has this to say:

There is another alternative: That alternative is to insist that our great productive machinery shall be used—as it has never been used before—for the sole purpose of providing abundance for our people. This second alternative must be based on the principle that industry should serve the people, and not merely the chosen few who own industry and operate industry for private profit (pp. 14–15).

While it is perfectly proper in the political arena to assert dogmatically that, unless the opposition is overthrown, there will be chaos and dictatorship, it is quite another matter for a tax-exempt organization to publish this quackery in an educational pamphlet. The postulating of the socialism-or-dictatorship dilemma is, of course, a standard theme in the propaganda schools of the left.

Let's go to the next page, page 27.

Mr. Hays. Let's not go to the next page too soon, because I have a question.

Mr. Earl. Go right ahead.
Mr. HAYS. You mention this Dr. Eveline M. Burns in here, and I don't know whether you are skipping her for any reason. You have put her name in. Who is she?

Mr. EARL. All I know about Dr. Burns is that she is the Director of Research, Security, Work, and Relief Policies of the National Resources Planning Board, and I mentioned her because of what she said.

Mr. HAYS. Do you know anything else about her?

Mr. EARL. No; I do not.

Mr. HAYS. Would you be surprised to know that Mrs. Hobby picked her as one of the members of her Board to make recommendations for the new social-security law which just passed the House?

Mr. EARL. I wouldn't be a bit surprised; no, sir.

Mr. HAYS. Well, I know you are hard to surprise. For the record, it might be interesting also to put in that she is the wife of Dr. Arthur F. Burns, Chairman of the President’s Council of Economic Advisers. I don't mean any leftwing president, either. That doesn't surprise you, does it?

Mr. EARL. I was not aware of it.

Mr. HAYS. And you are not questioning my veracity?

Mr. EARL. No; I am not.

The CHAIRMAN. There is nothing in here characterizing Mrs. Burns in any way, as I see it. It is merely quoting from her speech.

Mr. HAYS. You editorialize about it as you please, Mr. Chairman, but I will tell you if my name were mentioned in this document any place, I would resent it. I would think it was an attempt to show I was a leftwinger.

Mr. EARL. Do you want me to skip around? I don't want to be accused of skipping something.

Mr. HAYS. I just didn't want you to skip Dr. Burns. Now you can skip from here on if you want.

Mr. KOCH. The quotation on page 24 that you mentioned. What does that come from? You quote from the lady and give it as page 24. And I just wanted to find out whether that is page 24 of some LID document.

Mr. EARL. That is page 24 of the document from which we are reading right now, The Third Freedom, Freedom From Want.

Mr. KOCH. And that is an LID publication?

Mr. EARL. That is an LID publication.

Mr. HAYS. When you say she admonishes her colleagues, who are you talking about, her colleagues down from Mrs. Hobby's office, or who?

Mr. EARL. She is speaking here at an LID conference, so I am talking about those people.

On page 27, item 6: Dr. I. S. Falk, Director of Research and Statistics of the Social Security Board, argued that:

A strong system of social insurance is necessary to prevent want in the postwar period, even if full employment is achieved.

Now, again, I am not arguing with social security right now. I am just indicating here that social security is a political subject, and it is one that has current legislation before Congress, and did at that time.

Next I point out some of the subjects that were discussed.

Henrietta C. Epstein, vice president of the American Association for Social Security—-
Mr. Hays. Mr. Earl, I might ask you a question right there? In view of Congress's penchant for investigating practically anything and everything, do you think there is any subject we could discuss that wouldn't have some kind of overtone or implication? If we are going to be that broad, there is no way to get away from it.

Mr. Earl. I think it is much narrower than that, because the law under which these organizations received their tax-exempt status indicated that they received that status provided that no substantial part of their activities were devoted to political purposes, et cetera. It is my thesis that more than a substantial part of the LID's activities have been devoted to attempts to influence legislation and political purposes.

Mr. Goodwin (presiding). The second bell has now sounded for a quorum call.

The committee will stand in recess subject to the call of the Chair, probably for about 15 minutes.

(Short recess.)

The CHAIRMAN. The committee will come to order, please.

You may resume, Mr. Earl.

Mr. Earl. We were speaking about the symposium held in 1943 by the league.

As to the subjects discussed: Henrietta C. Epstein, vice president of the American Association for Social Security, spoke on the subject, Health Insurance Our Next Forward Step; Dr. Arne Skaug, Director, Norwegian Government Disability Services, explained The Norwegian Crusade for Social Security; and Dr. J. Raymond Walsh, director of research and education, CIO, urged that labor "find the media and words to articulate and implement" its aim. (Dr. Walsh's address, published in the Freedom from Want pamphlet, was made before the Washington chapter of the LID on March 5, 1953.)

Then Alfred Baker Lewis, chairman of the board of the League for Industrial Democracy, continued his bit:

To get freedom from want in the postwar world we must be clear that we cannot do so by reestablishing complete freedom of enterprise, the fifth freedom which ex-President Hoover and the National Association of Manufacturers want to add to the four freedoms (p. 53).

Mr. Lewis explained why private enterprise could no longer avert terrible depressions. He indicated that they had gotten us jammed up before, and that they just didn't have the capacity to pull us out of the hole.

Thus the free land in the West acted as a safety valve for unemployment and depression. But by 1930 that free land was no longer available except for mountain tops and deserts. The automatic safety valve upon which we relied comfortably before World War I and which gave rise to the belief in the efficiency of rugged individualism as a cure-all for our economic ills, has gotten jammed and needs to be regulated by careful Government planning and vigorous Government action if we are to avoid an explosion of suffering and unemployment again (p. 54).

George Baldanzi, executive vice president of the Textile Workers Union of America, seemed to feel that Hitler and his Nazi henchmen had little to do with bringing on the war. Nor, presumably, were the Japanese responsible.

Business and industry are looking for a solution to the problem of full employment within the framework of what they call free enterprise. What they mean, of course, is their old freedoms to exploit. But free enterprise is drawing its
last gasp. This very war we are fighting, and the causes of the war, are indications of the breakdown of the economy of free enterprise (p. 57).

Labor believes that special privilege will have to accept a planned economy, that the days of laissez-faire are gone with the winds of war. We believe that production will have to be geared to social need rather than to private profit (p. 57).

History has shown us that full employment is not possible under a system of free enterprise. * * * The free enterprisers are interested in profits, not people (p. 57).

Whether it is established on the basis of democracy or on the basis of monarchy or on the basis of fascism, the system of free enterprise inevitably leads to war. When they dry up at home, entrenched privilege must look for them abroad. War inevitably follows, and another war will follow this war unless the leaders of the United Nations begin to think in terms of changing the economic pattern as well as the political pattern of liberated and conquered nations (p. 58).

Participants in a roundtable discussion on social insurance and full employment included Dr. Oscar Lange, associate professor of economics of the University of Chicago; Donald S. Howard, of the research staff of the Russell Sage Foundation; Dr. Herman A. Gray, chairman of the New York State Unemployment Insurance Advisory Committee; E. J. Coil, director of the National Planning Association; Charles Abrams, a director of the National Public Housing Conference; Ellis Cowling, educational director of the Consumers’ Cooperative Services of New York; and Charles C. Berkley, executive director of the New York Committee on Discrimination in Employment.

The subject, I think, is the important thing here, social insurance and full employment.

The conference also discussed another program under the heading “Mobilizing Our Forces in Behalf of the Third Freedom.”

Nathaniel Minkoff of the ILGWU, who is this year’s president of the LID, called for a new party:

So much for the present. The real test will come immediately after the war, when, what with sudden deflation, demobilization and shrinkage of production, as well as with the inevitable worldwide confusion, our Nation will face the grave danger of economic collapse. Only a courageous, farsighted economic policy, based on long-range social planning, can save us from disaster. It is not my purpose now to discuss what this postwar planning should consist of nor how it should be undertaken. I merely want to stress that it is not merely an economic and social question, least of all a more question of technical expertness. It is primarily a political question, for even the best program in the world must remain a mere scrap of paper unless it is implemented with political power (p. 71).

We must organize independently of old, now meaningless party affiliations into a compact and mobile force able to exert its influence where and how it will do the most good * * * (p. 72).

Above all we must be clear as to our social basis. What we want, I think, is a democratic coalition of all functional groups in the community with organized labor as its backbone and basis. I am not holding out to you any perfect models but, with all its faults, I think the American Labor Party of New York State is something of the sort we have in mind (p. 72).

He, of course, was calling for the formation of a new political party in America, and I question the legitimacy of that for an educational association.

Mr. Samuel Wolchok, president of the Retail, Wholesale, and Department Store Employees of America, CIO, also demanded political action. His address, printed in this same booklet, was made to the Washington Chapter of the LID in March 1943. The tone is scarcely academic.

There is the sharp line of cleavage as to the future of the postwar world, between the idealistic forces of the liberals on the one hand, and the blind, cruel forces of the reactionaries on the other.
The reactionaries are well organized. They have power, the press, the radio, money and ruthlessness on their side. They are well-girded for battle. They are far more interested in controlling the peace than in winning the war and their energies are solely directed to that end (p. 73).

The reactionaries in this country have no program to solve this country's ills and the ills of mankind * * * Their program can only culminate in fascism and dictatorship here, followed by revolution (p. 77).

Mr. Wolchok then adds his voice to the swelling chorus demanding political action:

The solution then lies in a third party * * * a party supported by trade unions and true farmers' unions, by welfare organizations, by civic bodies, and by other social-minded groups and committees * * * (p. 74).

He mentions further that there is already a great nucleus here for the formation of a third party. He refers to the CIO, the A. F. of L., the National Farmers unions, and then suggests that to this could be added the liberal, civic, and welfare organizations spread throughout the country.

Prof. Frank H. Underhill, professor of history, University of Toronto, Canada, pictured the advantage of having a political party to implement liberal and Socialist goals. Then he described the success of the CCF in Canada, and suggested that they have a program there but it works much better when they have a political party with which to carry out that program. He lectured his audience on the advantages of having that political party and the things that they should try to accomplish.

On page 31 of my prepared statement, following the quotation, I mentioned that Mr. Leroy E. Bowman, supervisor, Bureau of Adult Education, New York State, spoke on the subject "Educating for the Abolition of Want," and I would just summarize by saying that his speech, in his speech, he visualized a vast interlocking directorate of labor, consumer, and Government interests in control of the mighty apparatus of adult education. His theme throughout was that we must educate the adults in America to accept this social planning over all of our economic extremes in the country.

Next, Mr. Mark Starr, educational director of the ILGWU, and Dr. John L. Childs, professor of philosophy of education at Teachers College, and a member of the postwar planning commission of the A. F. of L., presided over a roundtable with the title "Mobilizing Our Forces, Economic, Political, Cultural, In Behalf of the New Freedom."

He suggested that all organized groups must be mobilized and used. And to quote 95 and 96, "I wish we had the outlook for a CCF in America. There is no such adequate approach available here."

Another pamphlet published by the LID is entitled "Toward a Farmer-Labor Party," and the author is Harry W. Laidler. It was printed in 1938. However, it is still on the current list of LID publications and I presume has not been repudiated by the league.

To summarize what this pamphlet calls for, I think that it would be rights to say that it calls for the formation of a political party with the labor groups and the farmers as the basis, and that only through such a coalition could they reach the goals that Mr. Laidler would have them reach.
He indicates, as I have said on the bottom of my statement, on page 32, and he is quoting here from another magazine:

To delay the building of a new party of the masses because of the possibility of the probability of the selection of a "liberal" candidate by the Democratic Party, these students of politics contend, "is to repeat the error of past years." "Similar arguments," Oswald Garrison Villard maintains, "have postponed the organization of that third party ever since 1924 * * *. Now once more, progressives are called upon to stay in the party fold. Frankly, it seems to me short sighted reasoning."

And then he goes on to say that he would much rather they formed this new party rather than try to stay within the framework of any of the parties then in existence.

To me agitation for the formation of a new party scarcely qualifies as legitimate project of a tax-exempt organization.

Now, if we can go down to the middle of page 34, just below the middle, speaking of the Forward March of American Labor that was published by the league in a revised printing as recently as 1953. It is supposed to be a history of the American labor movement. The text, however, is embellished by a remarkable series of cartoons which, in the year 1953, strike an impartial reader as a crude effort to discredit today's business with faults that have long since been corrected.

Mr. HAYS. When were those cartoons originally published, approximately?

Mr. EARL. I mention that the pamphlet was originally published a long time ago.

Mr. HAYS. I mean the cartoons.

Mr. EARL. I don't know, sir. I would have to check that and see.

Mr. HAYS. They did just what you are doing. They went back several years and lifted up some cartoons that give a kind of a wrong impression in 1953, much as your quotations of 1932 might give.

Mr. EARL. The point is, though, that they haven't disavowed many of the things that I pointed out in yesterday's testimony concerning their aims and goals stated in the 1930's.

This pamphlet struck me as not particularly setting forth the true picture of the situation as it is now.

On April 25 and April 26, 1951, the LID held another of its annual conferences in New York. The proceedings were published in a pamphlet entitled "World Cooperation and Social Progress." The league presented the citation to Dr. Ralph J. Bunche, Director of the Trusteeship Department of the United Nations, and awarded another citation to President William Green of the A. F. of L. And it gave a John Dewey award for distinguished LID alumni to Senator Paul H. Douglas of Illinois, who "in his graduate days," according to the pamphlet, had been—

leader of the league's chapter at Columbia University, and, since his university days, has done distinguished work in the fields of economics, civic reform, social legislation, and international peace.

Senator Douglas was not present and he accepted the award in absentia, and an address extolling the LID, sent by Senator Douglas, was read at the conference.

Now, I believe that both the gentleman from Ohio and myself would like to refer to that.
Mr. Hays. Yes. I have some photostatic copies here that Senator Douglas made available to me from his files of the letter that he sent up. I think that we ought to just read that, and then have you tell me what is wrong with it. We will give these to the press. He says:

I want to express my heartfelt appreciation to my friends in the LID that they should have honored me with a John Dewey award for contributions to social progress. When I see the slow rate at which we advance toward the social goals of democracy, I sometimes wonder if the making of such awards should be held in abeyance until we have greater achievements to celebrate. The understandable and essential efforts to meet the military and strategic threats to free nations, in World War II, and, now again, as we face an aggressive Communist totalitarianism, have absorbed our attention rather completely. We must turn back the Communist threat of a police state and in the process social progress has, therefore, been accorded a subordinate place, and has been possible ordinarily only when it can be related to defense needs. In some areas, it has suffered serious setbacks.

Where we have made gains, however, as in housing, social security, reduction of racial discrimination in the Armed Forces, resistance to monopoly grabs, sounder fiscal plans that do not destroy essential welfare programs, and foreign economic assistance, they have come as the result of the thinking and planning and working of many persons and many groups. Your award to me, therefore, is fitting, only if today you treat me as merely one representative of that great company of persons, in public office and out, who have tried, however imperfectly, for a better society in a better world.

I want also to pay a brief tribute to the LID for the nearly half century of educational work it has done. It has undertaken research in, and analysis of, many of the basic economic problems of our times. It has stimulated students and statesmen, members and leaders of many groups, to a more thoughtful consideration of democratic objectives. It has brought a much-needed emphasis on extending democratic principles and practices into the economic and industrial phases of American life, lest the power of monopoly or of unrestrained managerial domination, challenge our political democracy and threaten freedom itself. Even when we have not agreed with all of its conclusions or recommendations, we have found the LID a valuable goad, a stimulating source of information, and a place for frank discussion of basic problems. For his writing, his research, his speaking, his editing, and countless other services, I'm sure we would all agree that our good friend Harry Laidler deserves the major credit for this record of LID achievement.

Yet to list the contributions of the past is to remind us of the great tasks that still lie ahead. I'm glad your conference has put these into the international setting in which all issues must now be resolved, for peace, as well as economic and social progress, must be won for the world if we are to enjoy them in our own country. We must recognize that freedom is about the most precious possession mankind can have and that we should determine that the State is made for man and not man for the State.

These jobs ahead are gigantic ones. To halt the pell-mell rush of inflation; to achieve a greater equality of sacrifice and of participation in our defense effort; to advance the elimination of racial and religious discrimination; to check the thrust of special interest for special privilege and power; to keep the public interest central in Government operations; to weed out graft and special privilege; to guard the civil liberties of individuals while maintaining the security of the Nation; to make what increases we are able, in low standards of living here and abroad—these aims must also be kept in view, even as we strive to keep the free world united in effective resistance to Communist aggression. It requires, as you all recognize, the fresh thinking, geared to the needs and conditions of this day, which we associate with John Dewey's approach to issues.

If this occasion can serve to evoke a rededication on the part of us all to these great aims of democracy, I shall feel well compensated for the role in which you have so kindly cast me today.

Is that an accurate reading of the letter?

Mr. Earl. That is an accurate reading.

Now, I presume that you will want to know what I find interesting in that.
Mr. Hays. I would be interested to know what you mean by the word "interesting"?

Mr. Earl. First, I mean this: that it sounds more like a speech at the Democratic convention, or perhaps even the Republican convention, than at an educational luncheon and seminar.

Next, at the bottom of the first page, in the center, where he has this to say, speaking of the LID:

It has undertaken research in, and analysis of, many of the basic economic problems of our times. It has stimulated students and statesmen, members, and leaders of many groups, to a more thoughtful consideration of democratic objectives.

Right there, I was just wondering to myself whether or not when he speaks of "democratic objectives" he is speaking of them in the sense that the LID understands democratic objectives.

You will recall from yesterday's testimony that democratic objectives, as understood by the LID included some things we mentioned today, the nationalization of a great many of our basic industries, and—

Mr. Hays. Senator Douglas points out that he has not agreed about all of its conclusions or recommendations.

Mr. Earl. Yes; he does that at the top of the next page, and he says:

Even when we have not agreed with all of its conclusions or recommendations—

However, I think it is probably common knowledge that he espouses a great many of their common objectives mentioned in both his second paragraph and in his next to the last one.

That is fine, and I don't quarrel with Senator Douglas' privilege or right, or anything else to espouse those.

Mr. Goodwin. I did, however, Mr. Chairman, if I listened correctly, understand that the Senator was looking forward to that depression even then.

Mr. Hays. What are you trying to say? Is it that he was a pretty fair prophet, or what?

We have 20,000 unemployed in my district. And I don't know what you want to call it. You can call it a depression or recession, or whatever it is. But the people are out of work. And they have a lot of names for it, and none of them very complimentary to this administration.

Mr. Goodwin. The reports are that this year of 1954 is the most prosperous in the history of the Republic, with one exception, and that one exception was 1953.

The Chairman. I don't want you to lose your role as defender of this administration.

Mr. Hays. Don't worry about that because I have been just about as critical of the administration as I have been in its defense. I only come to its defense when I think it needs defending from its own party. And then I feel free to criticize it any time I think it is wrong. It casts me in an independent role, one which I find seems to suit me better. Perhaps it is better than endorsing everything in either party.

The Chairman. You may proceed.

Mr. Earl. Luncheon speakers included M. J. Coldwell, member of Parliament and president of the CCF of Canada; H. L. Keenleyside, Director-General, Technical Assistance Administration, United
Nations; Paul R. Porter; and Ralph Wright, Assistant Secretary of Labor.

I think rather than read what they say, it is just more of the political platform and a demonstration of political action.

On the next page, page 36, Stanley H. Ruttenberg, director of the Department of Education and Research of the CIO, observed:

It is not certain that this mobilization program will develop into an all-out undemocratic force, but it presents certain dangers. One of these dangers is the dominance of representatives of big business in key positions *

Mildred Perlman, secretary of the Student LID, called upon labor to finance the socialistic apparatus. According to the editor:

Mrs. Perlman concluded with an appeal to labor which has been closely allied over the years with the struggle for democratic education, to build a war chest in behalf of democratic education on the campus and in the community. In so doing it will ** help train a democratic leadership for the future.

If this is a legitimate undertaking, under the tax-exempt banners of the LID, there seems to be no valid reason why Young Republican Clubs or Young Democrat Clubs should not also solicit contributions which can be deductible from income tax returns. Tax law, in a capitalist and free enterprise society, should not show undue partiality towards those who are trying to abolish that form of economic organization.

The final session of the conference was given over to a "consideration of labor political action." In this case they were concerned with the problem of how they could give increased emphasis to their policies and their program, and how they could implement it through other parties than those that were in effect and in existence at the time.

The president of the CCF of Canada, Mr. Coldwell, gave his Fabian friends some advice about how they could organize this. He mentioned, at the end of this statement that I have chosen from page 36, that during the last 4 or 5 years the Canadian Congress of Labor had designated the CCF as the political arm of that labor organization and that the CCF had a growing support.

Mr. Robert Bendiner, former managing editor of The Nation, argued that, on page 38—

labor should aim at political action that would not be confined to a narrow program of wages and hours, but would be directed to the achievement of public welfare in the broadest sense. Labor should show more and more independence than has been hitherto the case.

Now, the LID's latest annual conference, held April 9, 10, and 11, in New York—since I wrote this I have received a copy of the LID news bulletin covering this conference. The news bulletin was published in June of 1954 and reports this conference.

It indicates that George Meany, president of the A. F. of L., and Senator Wayne Morse, of Oregon, were honored by the LID, and that this 49th annual conference discussed domestic and foreign policy and made certain awards.

In going through this, they had a great number of people there, of course, and a lot of important people. I think that if anyone were to take this and take a look at it, then go back to 1952, to the Democratic National Convention, or the Republican National Conventions in Chicago, and get a report of some of the things that happened there, that
this would turn out to be a minor political convention, so to speak, because of the themes that they discussed.

Now, the theme of the conference's main panel was entitled "How Free Is Free Enterprise." And various speakers took the capitalist system to task and indicated that they wanted more Government intervention in a great many fields.

I am going to submit this to the committee along with the other items that I have already submitted.

Incidentally, the reference I make here to Mr. Mark Starr's press release is included in here, of course, after it had happened, and there would be no need to refer to that.

They indicate that the pamphlet covering this session will not be available until fall.

Mr. Goodwin. What is that?

Mr. Earl. Will not be available in print until fall, that is the report of the various speeches.

In conclusion, Mr. Chairman and members of the committee, let me say that in this presentation I do not quarrel with the right of these many people in the LID, and all of those who have been its recipients of awards or have spoken to it, and I don't quarrel with their people, to say and write the things which we have discussed, though I disagree with many of the things which they advocate.

My thesis is this: If the LID is to continue to fill the air with propaganda concerning socialism; if it is to continue stumping for certain legislative programs; and if it is to continue to malign the free enterprise system under which we operate—then I believe that it should be made to do so with taxed dollars, just as the Democrats and the Republicans are made to campaign with taxed dollars.

Now, rather than burden the text of my statement with further excerpts from a great many other LID pamphlets, I have taken the liberty of preparing a list of those pamphlets in which fruitful reading might be had.

I have listed them on the last page of my statement. I have them here and I would be glad to offer them to the committee for whatever help they may be to the committee.

That concludes my testimony.

The Chairman. Without objection, the pamphlets will be accepted but not all are to be printed with the record. Mr. Earl's statement will be included in full.

Mr. Earl. That is right.

Mr. Hays. Mr. Chairman, before we go any further, I want to correct the record on one statement that I made today. I do so because I don't like to let anything stand that I have said that is wrong when I find out it is wrong and also because I don't want to be put in the position of having our record make anyone seem an adulteress or bigamist.

Going back to Dr. Eveline Burns, I find that in checking her biography in Who's Who that she is the wife of an economist. He is not Dr. Arthur F. Burns. He is Dr. Arthur R. Burns. And in checking the biography of Dr. Arthur R. Burns in Who's Who there are three Dr. Arthur R. Burns. And my staff got the wrong Dr. Burns. I checked his biography and so I had a lady married to someone she is not married to. She is not the wife of the President's economist but the wife of another economist whose middle initial is the only difference in their names. And in saying that let me say that I have checked
further and she was on Mrs. Hobby's committee. But she is not the wife of the President's economist.

Mr. Earl. I wasn't sure of that myself. I had here that she wasn't the wife, but I wasn't certain, and so I didn't know.

The Chairman. Are there any further questions? Do you have any questions?

Mr. Wormser. I have none.

The Chairman. Are there any questions by members of the committee?

Mr. Hays. I have a statement. And if Mr. Earl cares to comment on it, I am sure it would be all right with me. I might say, Mr. Earl, I have more or less patiently listened to you and I have just heard you deliver a valedictorian in which you attempted to summarize what you allege to have proved by your testimony: To say that your thesis is that the LID is to continue to fill the air with propaganda concerning socialism; and continues its stumping for certain legislative programs; and if it is to continue to malign the free enterprise system under which we operate, then you believe that it should be made to do so with taxed dollars.

I would like to analyze now what you have testified about. In the first place, I read yesterday excerpts to you from the testimony of Commissioner Coleman Andrews of the Bureau of Internal Revenue and Mr. Sugarman, his principal assistant, who is charged with the responsibility of these tax-free foundations. And by the way I might just put in there that we have more or less agreed this isn't a foundation. But we are investigating it anyway. It is clear from that testimony the following: First, if one of these foundations receiving tax exemption is found to be subversive, then upon that finding the tax exemption can be removed.

Now we know that this organization, the League for Industrial Democracy was challenged in 1931 in the courts, and I am just trying to bring out the facts, and not to defend this organization, because many of the things, that it apparently espouses, I don't favor. It was challenged in the courts as to its tax-exempt status. And in that case, although the law has been changed, that case still stands and it hasn't been challenged again, and so that that still is part of the law—

Mr. Earl. I would like to see it challenged today. But go ahead.

Mr. Hays. Which is reported in the Federal Reports of the Circuit Court of Appeals, 2d Circuit of New York, following the argument that you made here, found that the contrary as follows—and I am quoting from page 812 of the 48 Federal Second:

The fact that its aims—

meaning the LID—

the fact that its aims may or may not resemble that of a political party does not of itself remove it from the category of an association engaged in educational work.

Now understand, I am not a lawyer; nevertheless, I recall from the testimony of the people from the Bureau of Internal Revenue that this law was changed in 1934. And as I said, but it in no way affected the validity of the ruling of the court that I have just read.

So it is perfectly clear that so far as the Bureau of Internal Revenue is concerned this organization, the League for Industrial Democracy, is not subversive. Otherwise, we have a right to assume that, with the
vigilance of the Internal Revenue, the tax-exempt status of this organization would have long since been denied.

It is further clear that its program in no way has been found to be one affecting legislation in the Congress or else, under the terms of the decision I have read you, the tax-exempt status would have been removed.

Now the third point that we get from the testimony of the people of the Internal Revenue is that, if such organizations are neither subversive nor have they invaded the field of legislation so as to deny their status as educational foundations, then if their advocacy is either to the left or to the right their status is left untouched as it properly should be under any constitutional concept of freedom of speech, freedom of assembly, and propagation of ideas.

Let me summarize what I have told you. Under the law establishing the tax exemption of LID, the regulations of the Bureau of Internal Revenue and the decisions of the court concerning this specific association, it has in no way violated the provisions of either the law nor the regulations and is in all respects entitled to the tax exemption which it now receives. And I will remind you, further, that the people from the Internal Revenue we questioned about this stated unequivocally that they did not want to see the law changed, and stated that in answer to a question by Mr. Goodwin, so as to put them in the position of being censors of the authority or actions of the foundations in this category.

The only thing they were interested in was to prevent tax dollars from going for the purposes of subversion and evasion schemes to be set up under the guise of foundations.

Now, Mr. Earl, I would like to challenge you on one point, and this has been a summary so far. You have taken quite a bit of time to pick out those quotations from the literature of this organization and people who have spoken or written under its auspices to lead this committee to believe that either, one, this association is subversive, which it is not, or that it has gone into the field of legislation under the field of organizing a political party.

I have not had the opportunity of reading all of the literature that has come out of this organization. But I feel that, if it were put into the record, it might well log water down and might miss some of the things you have read. But I am only taking the record you have made.

And now I ask you to show me one iota of proof that the LID at any time has taken legislative action, created a political party, or done anything more than to express its belief in the economic and social aims which they think can be best achieved by the political route.

I admit they have done that. If you cannot establish these facts, I think that your whole summary argument falls. Because it is clear from the law and the regulations of the Internal Revenue and the decisions that the tax-exempt status of this organization in no way can be taken from it simply because it advocates that its ideas have been made through persuasion to become the law of the land.

I hope to God the day will never come when anyone challenges the right freely of organizations and people to do that. Let me recall to you that just prior to our entry into World War II an organization known as America First was established under the sponsorship of Colonel McCormick, General Wood, and many others, which organi-
zation violently opposed our entry into the war against Germany. You may recall that one of the chief spokesmen of that organization was then Col. Charles E. Lindbergh, and I am sure that there must be many Americans today who look back with shame upon the derision they heaped upon that great man's head because his ideas did not happen to conform to theirs.

Thank goodness the Government today has taken steps to remove the onus which was placed upon him during the war, simply because he disagreed with the majority.

Now my recollection is that the America Firsters started as a tax-exempt organization. I want you to understand from me clearly that I am perfectly consistent in my belief that such organizations as that, and I understand the organization is being revived, should receive the same tax-free status as the League for Industrial Democracy.

I only make this statement because I believe in openhandedness and I don't think the Government should favor or take favors away, through its tax-exemption laws, from any organization on either side of the political spectrum so long as that organization is not subversive and does not advocate the violent overthrow of our Government.

The CHAIRMAN. Are there any further questions?

We appreciate very greatly the efforts which you have made to present this presentation. The committee will evaluate in due course your presentation, together with the pamphlets which have been submitted.

In order that the record may be complete, the last pages which you did not read will be inserted here in the record.

(The material referred to follows:)

To people who use one tax-exempt organization for politics and propaganda, there is apparently nothing incongruous in suggesting that "welfare organizations" support a new party.

"There already exists in this country a powerful nucleus for such a third party. One does not need too vivid an imagination to visualize the strength behind a third party backed up by the might of the Congress of Industrial Organizations, the American Federation of Labor, the Railroad Brotherhoods, and the National Farmers Union. Add to this the many liberal, civic, and welfare organizations that are spread throughout the land and we have a force powerful and strong enough to decide elections in every county, State, and even in the Nation" (p. 75).

In defining the third party, Mr. Wolchok again emphasizes the necessity of international collaboration with fellow Socialists:

"The third party's program must be international as well as national in scope. Its program must provide for collaboration with the liberals of other nations

* * * Its program must strive for the liberation of those countries now subject to imperialism, as well as of those conquered countries now under the Nazi, the Fascist, and the Japanese yoke. Its program must provide for assistance to the downtrodden of all nations. It must promise succor to the forgotten man of every land" (p. 76).

Prof. Frank H. Underhill, professor of history, University of Toronto, pictured the advantage of having a political party to implement liberal and Socialist goals. He described the success of the Cooperative Commonwealth Federation (Canada's Fabian party):

"In Canada we have gone further toward building up an effective political party of the left. In 1942 the CCF (Cooperative Commonwealth Federation) celebrated its 10th birthday. In its early years it seemed a rather sickly child, but during the past few years it has been growing rapidly. There are several points about the structure of the CCF which are worth nothing. In the first place it is a definitely Socialist Party, speaking the language of Fabian rather than of Marxian socialism, with a program based on the Canadian situation presented in terms which the Canadian public can understand" (p. 80).

Professor Underhill then explained the facts of political life of his American hosts:
“The value of having an organized Labor Party is shown again today in the different receptions given in Britain and the United States to new schemes for complete social security. The Beveridge report in Britain has aroused widespread discussion among all political groups; the report of the National Resources Planning Board has been received in a conspiracy of silence in this country * * *” (p. 79).

“If there is a general reaction toward the right in the United States in the next few years, the forces of the left have no reserve with which to organize a counterattack. In fact, the left has no army of its own at all, though it seems to have a good supply of willing generals. In Canada the army is in existence and has learnt by 10 years experience how to overcome its own internal differences and to make an effective fighting force out of itself * * *” (p. 80).

Mr. Leroy E. Bowman, supervisor, Bureau of Adult Education, New York State, spoke on the subject, “Educating for the Abolition of Want.” So far, according to Mr. Bowman, this “idea has not been taught in the schools,” partly because “economically successful persons” have accepted the fact that poverty (for others) is “an ineradicable part of existence.”

“* * * the necessities of business operations under present circumstances and the understandable reluctance to see change occur have led to the conclusion by them that want is inevitable. So those who suffer want have been wholly engaged in coping with it, not in eliminating it. And those not suffering from want have had resistance to the idea that it could be done away with” (p. 87).

From Mr. Bowman’s point of view, it would seem that control over consumption, the planning of production, and the use of government to achieve economic welfare for the masses are not “ideological” notions, but part of the external structure of the universe. (See pp. 88 and 89.) Mr. Bowman visualized a vast interlocking directorate of labor, consumer, and government interests in control of a mighty apparatus of adult education (p. 89).

Mr. Mark Starr, educational director of the ILGWU, and Dr. John L. Childs, professor of philosophy of education, Teachers College, Columbia University, and a member of the postwar planning commission of the A. F. of L., presided over a round-table discussion on Mobilizing Our Forces—Economic, Political, Cultural—in Behalf of the New Freedom. Said Dr. Childs:

“1. Freedom from want is related to other objectives. We cannot progress far on that front unless we progress also on other fronts of our domestic economy. * * *

“3. We cannot make progress unless we can create a political situation which will stop attacking liberals in Government, and the baiting of labor. * * * All organized groups must be mobilized and used. I wish we had the outlook for a CCF in America. There is no such adequate approach available here. * * *” (pp. 95–96).

One of the most extraordinary documents published by the LID is Toward a Farmer-Labor Party by Harry W. Laidler. Although the booklet was first distributed in 1938, it is on the current list of the LID pamphlets and cannot, therefore be repudiated by the league. Excerpts which demonstrate the political and propaganda nature of this work follow:

“The reasons for these developments toward a party of workers of hand and brain on the farms, in the factories, mines, shops, and offices are not hard to find. * * * They have witnessed the two-party judiciary handing down decisions which well-nigh paralyzed labor’s efforts to organize. They have observed the officers of the law breaking up their meetings and their picket lines and denying them their elementary constitutional rights. * * * And they have witnessed America, under the political control of the parties of the propertied interests, subjecting the masses of its people to widespread insecurity, poverty, and the threat of war, at a time when the natural resources, machinery, and trained labor of the land could, if fully utilized for the common good, insure a life of abundance and security to all” (p. 5).

Dr. Laidler equates genuine labor and Socialist movements with the dictatorship of the criminal elite in the Kremlin who, by the testimony of a U. N. Commission on Slave Labor, are the most savage exploiters of labor since the Pharaohs of ancient Egypt. It is fair to inquire why such a scholarly institution as the LID if is no longer entertains its pro-Russian view, has not withdrawn this pamphlet and prepared another.

“American labor and farming groups in this country are on the move politically as well as industrially. * * * Representatives of labor are today the premiers in the three Scandinavian countries. * * * Labor and Socialist Parties
now constitute the largest single parties in France, Belgium, Switzerland, and Finland. In Great Britain, the British Labor Party is 'His Majesty's chief opposition.' ** * In far-off New Zealand, labor in 1935 captured 53 percent of the 80 seats in the New Zealand House of Representatives. ** * In Russia, the Communists Party dominates. ** ** (p. 3).

The reforms of the New Deal were not radical enough to suit Dr. Laidler, or those for whom he acts as spokesman:

"There are others who contend that millions of workers in the city and on the farm are rapidly coming to the conclusion that New Deal democracy offers no solution for unemployment or for any of the other grave evils of our economic life but, on the other hand, that it is heading this country toward another war" (p. 6).

Dr. Laidler quotes an article from the Nation which urges no delay in building a "new party of the masses."

"To delay the building of a new party of the masses because of the possibility or probability of the selection of a 'liberal' candidate by the Democratic Party, these students of politics contend, 'is to repeat the error of past years.' 'Similar arguments,' Oswald Garrison Villard maintains, 'have postponed the organization of that third party ever since 1924. ** * Now once more progressives are called upon to stay in the party fold. Frankly, it seems to me shortsighted reasoning. ** * No one can foretell where Franklin Roosevelt will stand in the next 3 years. ** * For one thing the President is steadily undermining democracy by encouraging the growth of militarism in the United States. Wherever you find large armies and navies, there you find enemies of democracy. ** **" (p. 6).

Agitation for the formation of a new party scarcely qualifies as a legitimate project of a tax-exempt foundation. And one may also wonder if the Communist conspiracy should be described as a "working class political movement," as in this paragraph:

"Other working class political movements organized during the present century were the Communist Party, formed in 1919, following a split with the Socialist Party, and a small and temporary Farmer Labor Party, in 1920. ** * Socialists and Communists are still actively at work on the national field, although the combined votes of the Presidential candidates of minority parties in 1936 constituted only from 2 percent to 3 percent of the total.

"The next farmer-labor alignment on the political field of the future, it is hoped, will not only wrest concessions from the old parties in power but will supplant the parties of business with the party of the masses" (pp. 7, 8).

Dr. Laidler offers practical suggestions for political action:

"Everyone interested in the development of a Labor, Farmer-Labor, Socialist, or other political party representing the interest of the masses in his State, should make a survey of present laws and immediately begin educational and agitational work for improvement" (p. 9).

"A second problem confronting the organizers of a new political party is how to insure that the party and its elected officials shall be democratically controlled by those economic groups that obtain their living through their labor of hand or brain and not through ownership of the means of production and distribution" (p. 9).

"Whatever the form chosen for representing the will of the masses in these organizations, the particular organizational structure adopted has usually been developed with the view of keeping control in the hands of the working class and farmer membership or leadership and of preventing the party from becoming a neublous 'liberal or 'progressive' organization with no class basis or from being employed as an instrument to keep in power a few political leaders" (p. 11).

Dr. Laidler discusses tactical procedures which he recommends to Socialist politicians:

"** * frequently, after helping to elevate an old party candidate, through labor's endorsement, to a high political position, the Farmer-Labor Party finds that it has 'built up' a political figure who, as a representative of a capitalist party in subsequent elections, might be in a position greatly to retard the development of a party of the masses. The Farmer-Labor Party, by such political trading, thus tends to perpetuate the 'good-man' concept in politics. Moreover, when a Farmer-Labor Party throws its support to a capitalist party candidate, it is difficult for it in the same campaign to put forward with vigor the main arguments for the existence of, and the imperative need for, a party of labor of hand and brain" (pp. 13, 14).
“An even more important problem facing the new political alinement is that of bringing about a genuine understanding between city and agricultural producers of hand and brain. * * * Both are exploited by those who live primarily by owning and not by working” (p. 14).

The executive director of the LID warns Socialists of the dangers of forming a coalition with the petit bourgeois:

“A problem facing most Farmer-Labor parties, likewise, is the place of the small-business man within its ranks. Some businessmen join with labor political groups because they are convinced that there is no security under a competitive system, and that they must unite with the masses to inaugurate a planned society. * * * Others, on the other hand, ally themselves with labor for the purpose of inducing labor to join with them in a general ‘trust-busting’ campaign, a campaign against big business, in behalf of the restoration of small industry. Intelligents labor, however, realizes that all such efforts in the past have led to futility. * * * Not in trust busting, but in community ownership lies labor’s salvation. Control of labor party policy by the small-merchant class anxious to turn back the wheels of industry leads to nothing but confusion. Merchant groups animated with this purpose constitute a danger to any healthy growth of labor or farmer-labor partyism” (p. 15).

In conclusion, Dr. Laidler says: “At the present moment, the divisions in the ranks of labor and the belief that labor should support the Rooseveltian New Deal against big-business attacks have somewhat retarded developments on a national scale * * * “* * * only a fundamental change in property relations will bring security, economic justice, and a high living standard to the working masses” (pp. 53, 54).

All in all, Toward a Farmer-Labor Party is a field manual for applied Socialist political action.

The Forward March of American Labor was published by the LID in a revised printing as recently as 1953. It is supposed to be a history of the American labor movement. The text, however, is embellished by a remarkable series of cartoons which, in the year 1953 strike an impartial reader as a crude effort to discredit today’s business with faults long since corrected. I refer the committee to the pamphlet for both its text and the cartoons mentioned.

On April 25-26, 1951, the LID held another of its annual conferences at the Hotel Commodore. The proceedings were published in a pamphlet entitled “World Cooperation and Social Progress.” In addition to discussion of international cooperation and how to curb “antidemocratic forces at home,” there was the usual technical consideration of how to produce more effective political action.

The league presented a citation to Dr. Ralph J. Bunche, Director of the Trusteeship Department of the United Nations. It awarded another citation to President William Green, of the American Federation of Labor. It gave a John Dewey award for distinguished LID alumni to Senator Paul H. Douglas, of Illinois, who “in his graduate days,” had been “leader of the league’s chapter at Columbia University, and, since his university days, has done distinguished work in the fields of economics, civic reform, social legislation, and international peace” (pp. 3, 4). Senator Douglas accepted in absentia, and an address extolling the LID, sent by Senator Douglas, was read at the conference. I refer the committee to that address, found on pages 12 and 13, for some interesting reading.

Luncheon speakers included M. J. Coldwell, M. P., president of the CCF of Canada; H. L. Keenleyside, Director General, Technical Assistance Administration, United Nations; Paul R. Porter, Assistant Director, Economic Cooperation Administration; and Ralph Wright, Assistant Secretary of Labor. Following are excerpts:

From Dr. Bunche: “Unfortunately, there are those who attempt to take advantage of the public anxiety caused by the East-West conflict and the worldwide ideological struggle between democracy and communism, to stifle progressive thought and honest criticism, to circumscribe our traditional freedom, and to restrict the enjoyment of our civil rights. We must be ever vigilant against internal as well as external threats to our traditional liberties” (p. 7).

Clarence Senior presided over a panel discussion on Counteracting Antidemocratic Forces in America. President A. J. Hayes, of the International Association of Machinists, lectured his associates on the need for a more aggressive psychological warfare program on the domestic front:
"Radio and television are today unduly controlled by big business. The voice of liberals must be heard and strengthened. When one considers the 15 million trade unionists and their families, labor can be far more influential in the field of public opinion than it now is. One way of increasing that effectiveness is through the publication of a labor daily, especially for the group of active leaders who make all national trade union organizations tick. There are thousands of articulate men and women in this group. Its great need is for rapid, up-to-date information to help them understand the quickly shifting scene. A labor newspaper would not be a substitute for a regular daily press, but a supplement to it" (p. 30).

President Hayes argued that the mobilization defense program was a "glaring example of the undemocratic process":

"I think that you can find some of the antidemocratic forces in America in the atmosphere which set up that program. The security measures, which, in some rational form, are necessary in this peculiar situation, have given the enemies of all progressive measures an ideal opportunity to block and hamstring all progress, and so to smear and attack all progressives that decent people are tending to withdraw from the central liberal cause. As they do so, the victory of the evil forces becomes more sure" (p. 30).

Stanley H. Ruttenberg, director of the department of education and research of the CIO agreed with Hayes. He observed:

"It is not certain that this mobilization program will develop into an all-out undemocratic force, but it presents certain dangers. One of these dangers is the dominance of representatives of big business in key positions ** *" (p. 31).

Mildred Perlman, secretary of the student LID, frankly called upon labor to finance the socialistic apparatus on the campuses. According to the editor, "Mrs. Perlman concluded with an appeal to labor which has been closely allied over the years with the struggle for democratic education, to build a war chest in behalf of democratic education on the campus and in the community. In so doing it will ** * help train a democratic leadership for the future" (p. 33).

If this is a legitimate undertaking, under the tax-exempt banners of the militant LID, there seems to be no valid reason why Young Republican Clubs or Young Democrat Clubs should not also solicit contributions which can be deductible from income tax returns. Tax law, in a capitalist and free enterprise society, should not show undue partiality toward those who are trying to abolish that form of economic organization.

The final session of the conference was given over to a "consideration of labor political action," with Murray Baron in the chairman's seat. The first speaker was Tilford E. Dudley, assistant director of the political action committee of the CIO, who "urged more effective labor political education and increased labor activity in politics" including consideration of a new party (p. 33).

Gus Tyler, director of the political department, ILGWU, A. F. of L., declared that labor should "give increased emphasis to educating the rank and file on political issues, to more effective fund raising, to the registration of voters and to the directing of votes along proper channels. This series of steps, he believed, might lay the foundation for statewide 'third parties' and 'accelerate party realignment and party responsibility.'"

The president of the Cooperative Commonwealth Federation of Canada ("a farmer-labor party with a democratic socialist program"), Mr. M. J. Coldwell, gave his American Fabian friends some practical advice. The editor summarized:

"Mr. Coldwell declared that the remarks of the previous speakers reminded him of political discussions he used to hear in Great Britain in 1906.

"No matter how good the men we elected in Britain in 1906 on the ticket of the Conservative and Liberal Parties, we found that their programs were inevitably controlled by those who appointed the machines. Consequently, in Great Britain and Canada, and, indeed, in most of the countries where we have the same kind of parliamentary institutions, labor and progressive elements were forced to organize their own political movements. He declared that, in Canada, the Canadian Congress of Labor, a counterpart of the CIO, had, during the last 4 or 5 years, designated the CCF as the political arm of that labor organization and that the CCF had a growing support" (p. 36).

Mr. Coldwell then revealed the international linkage of the Socialist movement.

"This afternoon I want to go outside of my own country and outside of the United States, and to say to this group of American Progressives that we are
associated together in a group of Socialist parties which have been meeting continually ever since the war ended. The representatives of these parties are now preparing a modern manifesto of Socialist principles with a view of establishing a common basis of thought and of assisting the backward people of the world in organizing for similar objectives" (p. 37).

Robert Bendiner, former managing editor of the Nation, argued that "labor should aim at political action that would not be confined to a narrow program of wages and hours, but would be directed to the achievement of public welfare in the broadest sense. Labor should show more and more independence than has been hitherto the case" (p. 38).

The LID held its latest annual conference April 10, 11, 1954, at the Hotel Commodore in New York, according to a press release, dated April 9, 1934, one of the sessions at the conference was to deal with the subject How Free Is Free Enterprise? Mr. Mark Starr, educational director of the ILGWU, and a member of the LID, was to lead the discussion. According to the release, Mr. Starr had this to say:

"On the other hand, those believing in more collectivism must work out ways and means of attaining planning plus the Bill of Rights * * *"

In conclusion, let me say that in this presentation I do not quarrel with the right of these many people in the LID to say and write the things which we have discussed, though I disagree with many of the things which they advocate. My thesis is this: If the LID is to continue to fill the air with propaganda concerning socialism; if it is to continue stumping for certain legislative programs; and if it is to continue to malign the free-enterprise system under which we operate—then I believe that it should be made to do so with taxed dollars, just as the Democrats and the Republicans are made to campaign with taxed dollars.

Rather than burden the text of my statement with further excerpts from a great many other similar LID pamphlets, Mr. Chairman, I have taken the liberty of preparing a list of those other pamphlets in which fruitful reading might be had.

The CHAIRMAN. Thank you very kindly indeed.

Mr. EARL. May I now be excused from the subpoena, sir?

The CHAIRMAN. Oh, yes; you are excused.

The committee will meet at 2 o’clock this afternoon in this same room.

(Thereupon, at 12 noon, the special committee recessed, to reconvene at 2 p. m., this day.)
(The hearing was resumed at 2 p. m.)
The Chairman. The committee will come to order.

Who is your first witness, Mr. Koch?

Mr. Koch. Mr. Pendleton Herring, the president of the Social Science Research Council; and the gentleman on his right is Mr. Paul Webbink, the vice president; and the gentleman on his left is Mr. Timothy Pfeiffer, counsel for the association.

The Chairman. We have had the policy of swearing all witnesses. Do you solemnly swear that the testimony you give in this matter shall be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. HERRING. I do.

Mr. Koch. I believe Mr. Herring would like to read a statement which he has prepared, and which has been distributed among the committee.

Is that right, Mr. Herring?

TESTIMONY OF PENDLETON HERRING, PRESIDENT, SOCIAL SCIENCE RESEARCH COUNCIL, ACCOMPANIED BY PAUL WEBBINK, VICE PRESIDENT, SOCIAL SCIENCE RESEARCH COUNCIL, AND TIMOTHY PFEIFFER, ATTORNEY, NEW YORK CITY

Mr. HERRING. Yes.

The Chairman. You may proceed in your own way, and unless someone is moved to do otherwise we will permit you to make your presentation and then be questioned.

Mr. HERRING. Thank you, Mr. Chairman.

Mr. Hays. I think it might be well, in conformity with the procedure we have had, if Dr. Herring might, unless counsel wants to ask him some questions, just give us his general background, and so on, which would keep the thing in conformity with the testimony of the previous witnesses.

Mr. HERRING. Mr. Chairman, I would like first to express my appreciation of the opportunity of being here today. A good deal has been placed before the committee that I find some difficulty with.

Mr. Wormser. I think Mr. Hays made a good suggestion. You might just first qualify yourself with biographical data.

Mr. HERRING. I will go to that immediately, then.

My name is Pendleton Herring. I am the president of the Social Science Research Council, with an office in New York City.

As I started to say, I feel that it might be helpful to the committee if I placed before you a few facts about my previous experience, since I want to be as helpful to you as I possibly can and try to speak directly against the background of my own experience and observation in these fields.

I was born in Baltimore, attended the public schools there, attended Johns Hopkins University, got my A. B. in 1925 and my Ph. D. in 1928.

It might possibly be of interest to the committee if I said that during my college years I went off as a merchant seaman and worked my way to various parts of the world. And I mention that here, because at that rather early stage I got the impression that the world
was a pretty big place and there were a good many different kinds of people in it. I also did some newspaper work for the Baltimore Sun paper. And then I went off to Harvard in 1928 and taught there until 1946, when I went with the Carnegie Corp., from 1946 to 1948, when I took over my present responsibilities with the council.

During those years I wrote a number of books, not quite as many as Mr. Wormser, but a number; and I also served as a consultant for various governmental agencies, the Air Force, the Army——

The Chairman. What were the titles of some of your books?

Mr. Herring. Well, my doctoral dissertation, Mr. Chairman, was on group representation before Congress, and I wrote a book a little later on entitled “Public Administration and the Public Interest.” That was a book that took me to the other end of town, and I visited a good many administrative agencies. A little later on, I wrote a book entitled “Presidential Leadership,” on the relations of the Chief Executive and Congress. I found that rather a complex and fascinating subject. And I wrote a book in this instance considerably, shall I say, in the empirical vein, on our Federal commissioners. I just wanted to know who they were and where they got their education and what their previous experience had been, and I wrote that up in a little book.

And I also wrote a book on the impact of war, that developed the idea that a democratic government, as of this country, has proved its capacity in the past to fight for its principles, and that our system, with its faults, that are as dear to us as other aspects, is yet able to face up to danger when the challenge comes. That book was written on the eve of the last war.

Well, don’t let me go on this way. It is a subject I like to talk about.

Mr. Wormser. Mr. Herring, weren’t you too modest about your teaching career? Will you tell us something more about that?

Mr. Herring. I was in the department of government. In Harvard we call it political science-government. I was in the department of government there. And in 1936, M. Littauer, whom some of the members of the committee may recall, a prominent Member of the Congress for many years, established the Littauer Center of Public Administration. I was the secretary of that school during its first 10 years, and during those 10 years we faced right up to the problem, How do you train them for the public service? We found that was a very complicated problem. There were no easy pat answers. But that school was started by Mr. Littauer and has turned out a number of people who are serving their country in various governmental posts.

Is that adequate on that?

Mr. Wormser. I thought you had professorial status.

Mr. Herring. That is right. I was a member of the faculty.

The Chairman. That is very good. Thank you very much.

Mr. Herring. Now, what I would like to do, Mr. Chairman, if you will permit me, is read this introductory statement to the committee, and then I will say a word or two about other documents, and so forth.

The Chairman. We would be very happy to have you do so.

Mr. Herring. In this introductory statement to the committee, I hope that I may have the opportunity to present my views concerning the general thesis that the staff of the committee and other supporting
witnesses have developed. In the light of my own experience, I would also like to comment briefly on social scientists and their ways of working. But first, may I explore with the committee what common ground we all share in the problems under investigation.

In the investigation, thus far, most of the basic questions raised are within the traditional discourse and debate on public policy. Time and again, in the past, attacks have been leveled at wealth and bigness; debates on such matters are almost traditional. In this present instance, there is, to be sure, a modern twist to suit the times: Big foundations are the target rather than big business. We meet again the recurrent problem of how far to extend Federal regulation. In view of the references to collectivism, I am sure that we share a feeling of caution concerning governmental intervention and control over education and research. However, it is certainly in the public interest to give thoughtful consideration to such matters and also to whatever attitudes may affect the course of foreign policy. All would agree these are proper topics for public discussion, particularly if these broad matters can be reduced to specific terms.

Hence, I hope you will not feel me unduly critical if, at the very outset, I call attention to one disturbing aspect of this investigation that is rather vaguely sketched in Mr. Dodd's opening statement and referred to by other witnesses in indirect and somewhat baffling language. In effect, the committee has been presented with an effort on the part of their staff and supporting witnesses to rewrite American history and to explain what has happened in the United States since the turn of the century in terms of a conspiracy.

To assert that a revolution has occurred without violence and with the full consent of an overwhelming majority of the electorate, and to imply that peaceful change overwhelmingly supported by the voters of the country is the result of a conspiracy, would strike us as a more outrageous error if it were not such a fantastic misreading of what we have all witnessed and experienced.

To imply that an interlock of individuals unknown to the American public is responsible for basic changes in our national life over the last 50 years, is to belie the responsible statesmanship of the Republic, the lawmaking authority of the Congress, and the good sense of the American people. The whole tenor of the ambiguous charges set forth by the staff strike at the very integrity of our system of self-government. These allegations suggest that the American people are dupes and that our elected officials are puppets. To underrate the valiant and thoughtful response of the American people and their Government to two world wars and a great depression, and to imply that the legislative enactments and governmental policies worked out through the process of democratic self-government is the result of a conspiracy operating through American education, is not only a travesty of history but a travesty of the very principles by which we live as a free Nation. This line of innuendo I am confident must be uncongenial to the fundamental principles of all the members of this committee. As experienced lawmakers, you know how public policy emerges through established constitutional forms, and the interplay of politics, and I know that no committee of the Congress will countenance unmaking the facts of history to suit some special purpose.

Hence, the question is promoted as to why such a travesty of American principles and politics is presented at this time. I think the thesis
being developed by the staff is better understood as symptomatic of a troubled state of mind on the part of a few persons than as a logical statement to be refuted literally.

The committee has been reviewing developments in education and the intellectual life of the country, since the turn of the century, and I think we can all agree that during these decades changes of great moment to this Nation have taken place. None of us, of course, can be opposed to change as such. Life is constantly changing. But there are important questions concerning the direction of change, of the forces that may affect change, and what can be done by way of public policy to direct change in the public interest. This latter responsibility is essentially the responsibility of Government, particularly of the Congress, and I would not presume to comment on these matters. It seems to me, however, that some of the disquietude and worries of previous witnesses may be taken as symptoms that may direct constructive thought to underlying problems of general common concern. I can identify two.

The first is the spectacular advance in science and a great increase in educational opportunities throughout the country. The full impact of a great increase in new knowledge, and its dissemination throughout all our society, creates a dynamic force that none of us can fully understand. No nation that I know of has advanced, disseminated, and applied so much knowledge so widely and so rapidly as has the United States since the turn of the century. This has inescapably affected traditional attitudes and ways of doing things. It raises questions of interest to the Congress, to industry, labor unions, churches, and other organizations, as well as to educational institutions. How can progress in knowledge both of natural and human affairs be absorbed, digested, and utilized so as best to advance the general welfare?

There are many, many particular questions that can be brought under this broad one. I gather that this committee is particularly concerned with whether or not certain particular viewpoints have had an undue importance upon our intellectual life. Have we become the victim of special pleaders, advancing their special "isms"? For example, have internationalism, collectivism, or socialism, as bodies of thought, exercised undue weight? I know of no way, in entirely objective terms, of weighing or measuring such influences. I know of no reliable method of analysis for establishing cause and effect relationships between such ideas and what has happened in our recent history. For my part, I find the best safeguard in the maintenance of a free market place of ideas so that truth can prevail in the resultant competition of ideas. If there has been interference with this free interplay, it is well that the country hear about it. The first problem, then, in which we all share a concern is our great national harvest of the tree of knowledge and how the fruits of knowledge may best be used to strengthen and nurture our society.

The second great factor of our generation is the evil force made manifest by international communism and Soviet imperialism. How can we reckon with tyranny of this order of strength and complexity and, at the same time, keep our own institutions free and strong? Here, again, the answer comes not from 1 school of thought or 1 political party, but rather from our united endeavors as responsible citizens of this Republic. Moreover, the essential part that knowledge and reason can play in increasing our national strength and overcom-
ing the communist menace needs wider public support. Finally, we need perhaps to appreciate more fully the fact that the free study and inquiry carried on in our great educational institutions constitutes in itself one of the essential American values that we must protect from the evil forces at large in the world.

I think we can all agree that thoughtful attention should be given to the problems of relating scientific advance to education and that great attention should be given to safeguards against communism. We all want to maintain freedom and pursue truth. We are all concerned with justice and the good life. We are all concerned as citizens with national security.

The problems before this committee are much more specific in character. This investigation is concerned with ways in which foundation officers and trustees and educators and social scientists have discharged their responsibilities.

When I turn from this broad statement of common objectives and basic purposes to much of the testimony that has been offered, and to the statements that have been made with respect to the social sciences, I must confess to a sense of bafflement. The staff has tried to call into question the efforts of the very individuals and institutions who are devoting their resources and energies to the increase and dissemination of knowledge and the protection of the American way of life. The picture that has been presented to the committee does not accord with my own observation and experience. The most charitable explanation that comes to mind is that they speak from ignorance rather than malice. Perhaps I could be most helpful to the committee by sketching very briefly my own sense of reality about the kinds of problems dealt with by the staff and other witnesses. The committee has been presented with statements about an alleged interlock, financed by the foundations and controlled from the top in such a way as to foster educational theories along certain definite lines. We are told, in effect, that a few organizations constitute an efficient integrated whole, tending to work against the public interest. I shall limit my observations to the kinds of individuals, fields, and organizations that I know something about at first hand, and I must say flatly that my experience here contradicts the views that have been suggested by the staff.

My contacts are largely with the social scientists over the country and with the limited number of foundations interested in social sciences and closely related fields. Most of the social scientists with whom I work are on the faculties of our universities and colleges. I come into contact, also, with a smaller number employed in industry and governmental agencies. These individuals are men and women of independent judgment and integrity. They have dedicated their lives to research or teaching, or both. They have an extraordinarily high sense of civic duty and respect for truth. Their primary objective is to attain a greater understanding of human behavior and social relationships and to share this knowledge. They are sensitive to any impairment of freedom of inquiry. They bring sharp critical judgments to bear on the work of their fellow-professionals in various fields. No other country has such professional groups, so highly developed, and so widely concerned with an analytical approach to human problems. While our debt to European scholarship, particularly of the 19th century, is very great, the 20th century development
of the social sciences is widely recognized abroad as a distinctively American contribution. This growth has been large since the turn of the century. While many traditionally minded European scholars remain somewhat skeptical of much that has happened here, there is an increasing interest among the younger university men in other countries about American developments. Just as in the natural sciences, the tide has turned from Europe and scholars from all over the world come to the United States for advanced work in the social sciences.

This development was possible in the United States because of our greater willingness to experiment. Our expanding universities could give opportunity to research men who wished to explore new leads. They were not forced into the conformity set by a ministry of education; they were not trammeled by faculties firmly set in old ways. It was the very absence of control under national educational systems, that provided the conditions favorable to growth and exploration. Hence, the big fact that impresses me is not a system of interlocking cartels, but rather, an extraordinary degree of individual initiative.

The individual social scientists over the last 50 years or so, have organized professional associations for the purpose of sponsoring professional journals and holding annual national conventions. But, here again, the interests of individuals could not be contained in a single professional organization. Many members of these associations also belong to many other associations that have little or nothing to do with their professional concerns. Even within the area of professional interest, regional associations have been formed, and wholly separate societies have been established within each field. The problem has not been that of authoritative control, but rather, of maintaining enough unity of purpose and focus of attention to keep the associations reasonably harmonious.

The social scientists in the United States, in recent decades, have had a wide range of opportunities for their skills. Their work is so much in demand that their problem is essentially one of choice. The demand for the services of outstanding economists, psychologists, demographers, and the rest has been for years far in excess of the supply. For those interested in applied research, there is a wide range of opportunities in government, business, labor unions, and a great variety of organizations concerned with social problems. Students turn with lively interest to those fields that attempt to advance our understanding of human affairs and student interest in these subjects has been so great that our universities and colleges must compete in recruiting able social scientists to their faculties.

Our economy of abundance seems to operate in intellectual matters as it does in other fields. Teaching, applied research, and consultation in various practical fields tend to absorb the energies of social scientists. For the limited number who are carrying on original and costly research, foundation aid is very welcome. Such social scientists need foundation support unless they are to be largely dependent on industry or government. They are not dependent on foundations to provide opportunities for their skills and abilities; they have many alternatives. Even if they desired to, foundations could not possibly control the interests and attention of the social-science professions. However, I know of only 10, or so, foundations with a real interest in social-science research.
I have emphasized the independent of social scientists and I have called attention to their diversity of interest and the broad range of opportunities open to them and their development in the United States, in order to get before the committee a better sense of perspective and proportion about the problems under investigation. In conclusion, I would like to emphasize that it is the men and the women in these fields of learning who are our strongest national resource for advancing the ranges of knowledge that will make us better able to understand our common problems. They command the analytical methods for most effectively getting at such questions in basic and tangible terms. Eternal vigilance is the price of liberty and social-science research is an essential tool for the vigilant.

The social scientists have an essential contribution to make. They don't know all the answers, but they can explore many of the significant problems and offer highly relevant facts on a variety of important questions. But since the committee's staff and other witnesses have brought into question the methods of the social scientists, particularly their use of empirical methods, I would like to clarify what is meant by the empirical approach.

To approach a problem empirically is to say: "Let's have a look at the record." To employ the empirical method is to try to get at the facts. Where feasible, counting and measuring and testing is undertaken. There is nothing necessarily technical about empirical methods and there is no simple distinctive empirical method as such.

Congressional investigating committees normally follow an empirical approach. To imply something immoral about using an empirical method of inquiry is like implying that it is evil to use syntax.

One thought occurs to me. It came to my attention the other day. Our system of self-government is based on the necessity of the apportionment of congressional seats, and you might say at the outset it was necessary to count noses; and our census is built into our congressional structure. You have there a quantitative approach, if you will, that is simply integral to popular self government. You have to know how many people there are, in order to go forward. I just mention that as a thought that might have some pertinence here.

There is another entirely separate question, namely; is fact-finding enough in itself? Obviously not. Logically and necessarily, a position must be taken on a priori grounds as to whether a problem is worth investigating. In strictly research terms, this involves the investigator's assumptions as to what is significant or worth while to study. In terms of applied research, it involves a determination by the responsible decisionmaker, to tell the research man what body of fact he wants investigated and what questions he would like answered, if possible.

Neither the Social Science Research Council nor any responsible research organization that I ever heard of has ever made fact-finding an end in itself. Here fact-finding is obviously open to the charge of aimlessness. On the other hand, the scientific investigator does not work to establish predetermined conclusions. He may follow his hunches. He may go from one experiment to another. His intuitive or rational knowledge of his field helps direct his curiosity toward those avenues of inquiry that seem promising. He guards against wishful thinking. He will not let his hopes of what should be get
in the way of his concern with what actually exists and what can be observed. From his background of work in his particular field, he follows leads concerning what may be most significant to investigate. He seeks to array the facts, and he remains sensitive to the hypotheses that seem to be suggested by the facts and that way point to certain tentative generalizations. Once having gained some sense of direction or relationship from this initial inquiry, he may formulate other hypotheses that suggest meaningful relationships among a wider range of factual data. Out of all this, there may or may not emerge a theoretical formulation. It frequently happens in science that theories are established that can be tested experimentally and where other workers in the same field from their independent work arrive at the same conclusions. When this takes place, theories can be built into larger conceptual schemes, behavior can be predicted, and practical ways of putting the theories to work can be stated.

This method of analysis for many years has been applied to the study of human beings and social interrelationships with varying degrees of success. No responsible witness would predict that all human problems can be scientifically studied, and no responsible-minded social scientist would argue that all human problems can be solved by science. All would agree, however, that knowledge is better than ignorance, and the attempt to analyze in more orderly and systematic fashion the problems that confront man and society is well worth the effort. Some people working in the social sciences are more optimistic than others concerning our present stage of advance and our prospects for the future.

To deny that the social sciences have a contribution to make, or to cast doubt on the capacity of man to guide his destiny by applying thought to human problems, in secular terms at least is to embrace either an obscurantist or anti-intellectual position, or to adhere to a determinist position. The current and most menacing school of thought that denies the fundamental premises of the social sciences is the Marxian philosophy of history. The obvious unreality of their dogma seems to have no effect upon the adherents of communism, despite the fact that it has led to the triumph of statism and the worst tyranny of modern times. The point here is that it denies the validity of empiricism as a relevant method of inquiry because it asserts that the course of history is inevitable and individuals can do nothing to basically affect the outcome.

Mr. HAYS. Dr. Herring, would you mind if I interrupted you right there for a question along that line? Do you have any knowledge of whether the Communists—I am speaking now of the Russian Government—object to empirical research?

Mr. HERRING. Mr. Hays, I have with me some rather interesting data on this point, and if it would meet with the pleasure of the committee, I would like to submit it to you a little later. I can summarize on the point now.

Mr. HAYS. Just very briefly, if you could answer the question.

Mr. HERRING. The gist of it is that they do object to it most violently; that the one thing that anyone believing in this predetermined course of affairs or any one committed to a politically dictated course of policy cannot tolerate is an objective analysis of the facts. And the Russians certainly have a way, in their publications, of coming up with some interesting fulminations.
Mr. HAYS. I do not want to disrupt you too long, but would you
care to just briefly comment on why you think they object to empirical
research? Is it because they are afraid that the findings will not
coincide with what they say is right, with their dogma?

Mr. HERRING. Here you have an authoritative line of policy that is
enunciated by the Kremlin, and whatever is called for by that pre-
determined line is produced, or else. That is one aspect of it, in sort
of practical terms.

The other side is that here is a system of belief, of view, that fits in
with the philosophy of history that makes this kind of free inquiry as
to what is going on something that cannot be entertained by people
who have that cast in mind. But this sort of point can be documented
over and over again by people who have a first hand familiarity
with what has spewed out of Russia.

The Marxian dialectic confuses the issue by asserting a scientific
validity to their doctrine. And it may be just as well to emphasize
this point, because it does confuse matters. This is wholly false and
misleading. It is based on the argument of Marx that his theory of
class struggle was arrived at by reviewing the efforts of the laboring
man through revolution and other means to achieve a relatively
stronger degree of political and economic power.

The social sciences stand four-square in a great tradition of freedom
of inquiry which is integral to American life, to the Anglo Saxon tra-
dition of self-government, and to the concern with the individual
fundamental to both Western civilization and its ancient heritage
stemming back through the Renaissance to the Classic World and
to Judaic-Christian concern with human dignity.

To spell out the full course of historical events that would pro-
vide the empirical evidence for this assertion, would unduly tax the
time of this committee and it is obviously not necessary to argue this
case before a committee of the Congress of the United States.

This is the sort of thing that could be pursued perhaps in a seminar
room.

However, since the issue of empiricism has been raised by other
witnesses, a brief explanation may be helpful. I have been discussing
the empirical method as a tool of analysis and I have indicated that
our American tendency to get at the facts, to have a look at the
record, to separate mere speculation from factfinding, is so embedded
in our habitual ways of doing that that it really needs no defense.

It has been suggested, however, that there has been an overemphasis
on this method and that it may somehow, in a manner unspecified,
lead to undue control, the corruption of moral principle, the confusion
of the public, the domination of education, and the corruption of
ethical principles and spiritual values. It is somewhat difficult to
come to grips with this broad allegation, since it is presented in terms
of inference and innuendo. The charge is not made flatly, but rather
in terms of overemphasis or possible deleterious effects in the future
if an empirical approach is carried too far.

I would agree, as a logical proposition, that extremism in any
subject is, by definition, bad. Hence, the problem, I suggest, is one
of balance and degree. Witnesses have asserted that overemphasis
has been placed upon an empirical approach. This remains a matter
of opinion and I know of no way in which such a charge can be
definitely established one way or the other. In my opinion, there is not
an overemphasis upon empirical research. In my opinion and ex-
erience and observation, quite the reverse is true. I observe a strong
human tendency on the part of a great many of us, as individuals, to
see what we choose to see and to believe what we want to believe. I
observe a readiness to speculate, to guess, to haphazard opinions, and
to come to judgments on the basis of very inadequate evidence. It is
my observation that this is a very human tendency, if not indeed a
common human weakness. This tendency is found in all walks of
life. It becomes a matter of high moment in policy decisions and in
the formation of public opinion.

Social scientists working as economists, historians, statisticians,
sociologists, or what not, are prone to this weakness as individuals, just
like anyone else. In their professional capacity, it is their duty to
 guard as best they can against letting wishful thinking get in the way
of objective analysis. Sometimes they fail, but in my opinion more
often than not they succeed. In their work as scientific investigators,
they operate within an appropriate system of values, to wit: They
cannot be unmindful of the ethical principle of seeking the truth and
of honestly analyzing their evidence. They cannot be oblivious of
spiritual values of freedom, because their work as investigators is de-
pendent upon a full sense of truth and freedom and justice. They are
the first to suffer if their fellow-citizens relinquish a common loyalty
to truth, to freedom, and to justice. The evidence of this is obvious
when we recall that after dictatorships arose in Russia, in Italy, and
in Germany, the freedom of scholars and research men to pursue the
truth as they saw it on matters of public policy, of economics, of his-
 tory, and of the nature of man and society, was immediately curtailed
and ultimately destroyed. It was impossible for them to carry on
empirical work. The facts could not be arrayed in terms designed to
bring out their true meaning. The ends were dictated by the State and
either incompetents or prostitutes in the social science fields were
ordered to produce the results demands by the dictators and to array
evidence in accordance with the principles predetermined by the single
party in power. The social sciences were destroyed before the dicta-
tors began their perversion of the natural sciences, particularly biol-
ogy and genetics, and their erosion of the church and religious beliefs.

I repeat that eternal vigilance is the safeguard of liberty, and recent
history proves that particular vigilance must be exercised if the free-
dom to study human problems is to be maintained. The dangers here
are not simply the obvious threats of totalitarian rule, but likewise
(and more insidious for us in the United States) the dangers of preju-
dice, malice, and wishful thinking. Authoritarianism that denies the
freedom of the individual to study, to question, to inquire, to form his
own opinions on controversial matters, is not always expressed through
conspiratorial parties, concentration camps, and secret police. Author-
itarianism is found in many less obvious ways in the United States
today. It is expressed in Mr. Dodd’s statement in an indirect and
subtle fashion, and is all the more dangerous for that reason. It is in-
sinuated rather than asserted, when he states (on p. 26) “that it may
not have occurred to (foundation) trustees that the power to produce
data in volume might stimulate others to use it in an undisciplined
fashion without first checking it against principles discovered in the
deductive process.” This assertion is so elliptical in character that,
here again, it is hard to bring the charge out into the open. There
is an inference, however, that principles exist which can only be arrived at through the so-called deductive process, and that must serve as an authoritative basis of truth against which truths arrived at through the inductive process should be subordinated. This is not flatly stated but, in my opinion, it is clearly to be inferred.

In philosophic terms, if this statement means anything (and this, of course, is debatable) Mr. Dodd is asserting that one theory concerning the philosophy of knowledge is superior to another theory concerning the philosophy of knowledge. He seems to be saying that deductive thought is somehow superior to inductive thought. He seems to identify inductive thought with the social sciences and thereby suggest that their findings cannot be valid unless substantiated by the principles discovered through the deductive process.

Now, I am not choosing of sides between these two. I am just trying to get the issue before you.

In the first place, this line of reasoning discloses his ignorance of the methods employed by the social scientists. Social scientists do not limit themselves to either inductive or deductive reasoning, as such. They employ deductive principles, for example, when they decide upon the importance of subject matter for study. They tend to follow the inductive method when they analyze their data. They are not, however, victims of any single school of thought, nor are they limited to any single line of reasoning. They use whatever methods of logic they, in their competence as scholars and research men, feel may help with the job in hand. By and large, they tend to limit their inquiries to topics that they regard as researchable: that is to say, they seek questions that they think are susceptible of systematic analysis and of subject matter that preferably can be observed. This leads them to study the behavior of men and of institutions and of the activities of business firms, labor unions, governmental agencies, and individuals, singly or in groups. Some devote their attention to analyzing the beliefs that people hold and the attitudes they take on various issues. Some social scientists are more interested in the theories that men express than in the activities in which they engage. But their general inclination is to try to find out what is going on rather than what should take place. Many students of social phenomena offer their interpretations about desirable alternative courses of action, and some offer their informed individual judgments on the basis of their studies.

By and large, this work in the social sciences tends to go from a consideration of particular facts to the larger interrelationships among these facts and the generalizations that might be offered concerning them. In this sense, it is empirical and comes within a common American habit of mind. At the risk of oversimplification, I would say that the views of Mr. Dodd might be characterized as rationalistic because of his alleged faith in principles deductively arrived at, and the views perhaps of most social scientists tend to be arrived at empirically. I repeat that it is difficult to restate with precision just what Mr. Dodd's position is and that it is also difficult to generalize with any precision about fields of knowledge so varied, so dynamic, and so fluid as the social sciences. The point I wish to make is that, to the extent that the line can be drawn between empiricism and rationalism, empiricism tends to be more in the American tradition than rationalism. To sustain this view, it is necessary to recall that the father of empiricism, as a distinctive field, is John Locke. Its
antecedents, of course, go back to Francis Bacon and can be clearly traced to Aristotle. It was John Locke, however, who stated this school of thought most clearly, and it was John Locke who also set forth the philosophy most widely accepted by the Founding Fathers of this country. Locke found himself in conflict with the philosophers of rationalism in Europe. From the standpoint of the history of thought, Locke's views were in conflict with those of Leibnitz and Spinoza. Were Locke here today, he would probably repeat a comment he made to a friend apropos of some rationalistic speculation of Leibnitz, when he said: "You and I have had enough of this kind of fiddling."

I respect the great contribution to Western thought made by European philosophers, but I know that they likewise would be critical of much of the research that has been carried on in this country over the last hundred years, or so. Descartes, Spinoza, and Leibnitz, among others, championed the ability of the mind to know reality by means of its faculty of reasoning which, for them, was independent of experience. It was John Locke, the philosopher of the glorious revolution of 1688 in Great Britain, who developed the political philosophy so meaningful to the Founding Fathers of the United States who also developed the doctrine that knowledge is derived from experience. This faith that the future is not foreordained, and that man can learn by doing, is the viewpoint that has motivated so much of our history. It was in the Age of the Enlightenment at the end of the 18th century, that men began to nourish the hope that human institutions might be brought within the scope of science. And it is not surprising that this search for a science of society should have been taken up and carried further in the United States than anywhere else in the world. If we had time, it would be very interesting to develop this further. Because if you think back to the attitudes of the Founding Fathers, it was empiricists such as Benjamin Franklin, who went out and flew a kite in order to find out what was going on in the thunderstorm, and it was that kind of "let's get at the facts" attitude that was in the minds of men like Washington and Adams and Jefferson. They were people, in that period, who were enlightened and informed by that attitude. And, as I say, if we had time to go into the history of thought, it is a fascinating story, this contrast between the rationalists on the continent of Europe, the encyclopedists, who found themselves at odds with the government at the time.

Contrast the problem that they faced there with what went on here, where we had a meeting of minds and an understanding on the part of scholars and scientists in this country, and our Statesmen. There was no conflict of mind between the schools of thought. They were in the same tradition. And the interest that George Washington expressed in a national university, for example, and the interest that Alexander Hamilton expressed in subsidies to inventors and to the encouragement of science at that time, the interests of Adams, all go back into this same thing.

One could go on at a great rate about the very interesting historical antecedents. But the point is that here was a new land, untrammeled by old conflicts and ancient grudges, where man was offered an opportunity to realize his destiny. Nature conspired with human intelligence and imagination to realize the potentialities before us as a Nation. Life, liberty and the pursuit of happiness were to be achieved
if the individual but used his good sense and worked with his fellow-
citizens to maintain democracy.

The social sciences, as they have developed in recent decades have
contributed, within the limits of their capacity to the high purposes
set forth in the preamble to the Constitution; namely—

* * * to form a more perfect Union, establish justice, insure domestic tran-
quillity, provide for the common defense, promote the general welfare, and
secure the blessings of liberty to ourselves and our posterity. * * *

Political science, by enabling us to understand the nature of our
Government and laws more clearly, has contributed greatly to good
government and the preservation of representative institutions.
Economics, by adding to our knowledge of the business cycle and
storing up great bodies of statistical and other data, has enabled
industry and government to find ways of achieving a more stable
economy. Industrial relations research has helped find methods for
reducing the conflict between management and labor. Sociology has
provided facts about family life, juvenile delinquency, and race rela-
tions that have time and again substituted reason and knowledge for
bias and prejudice. Demography has provided knowledge of popu-
lation trends of enormous practical importance. Penology has helped
us to deal more reasonably with the control of crime. This list could
be elaborated at great length. The main point is to emphasize the
American habit of saying, "Let's have a look at the record. Let's see,
in a given instance, what is practical and feasible. Let's see what
we can accomplish by taking thought together. Let's have done with
fiddling, with mere speculation, and see what can be done through
commonsense, fortified by whatever orderly array of facts can be
introduced, to find a reasonable solution."

In this endeavor, the principles of truth, freedom, and justice serve
as a guide. In these terms, I can ask no more of this committee than
an empirical approach to this inquiry into the activities of the founda-
tions and related agencies.

Since various references have been made to the social sciences and
specific allegations have been directed at the Social Science Research
Council, I respectfully request an opportunity to present to the com-
mittee statements on these matters, either orally or in writing, and
preferably in both forms. The council is not, in any sense, the formal
spokesman for either the seven associations that designate members
to our board of directors or for the 10,000 individuals engaged in the
social sciences over the country. Our focus is on the advancement of
research. If the committee wishes to pursue its inquiry about the
social sciences in this country, this might best be done by calling upon
leading social scientists to present their views.

I have before me brief statements from annual reports of the council
that describe our aims, organization, and general attitude, and data on
this has been distributed in advance to the committee, as a general
statement from our annual report about the organization. And I
would be glad further to supply whatever specific facts I can concern-
ing council activities that may be of interest to the committee. We
have also prepared a more extensive statement, dealing with certain
allegations that have been made.
This statement to which I refer is entitled supplementary statement A. It was distributed in advance to the committee and takes up and offers specific replies to specific points.

I know you want to conserve your time, and I would not undertake to read this document to you, since you have it.

The Chairman. It may be presented as part of your statement.

Mr. Herring. If I may offer, then, for the record, supplementary statement A and supplementary statement B, I think it would be helpful to the committee.

(The statements referred to are as follows:)

**Supplementary Statement A on Behalf of the Social Science Research Council—Replies to Specific Points**

There are a number of particular criticisms of the social sciences in the report of the research director for the committee on which we offer comments. He states:

"The broad study which called our attention to the activities of these organizations revealed not only their support by foundations, but has disclosed a degree of cooperation between them which they have referred to as 'an interlock,' thus indicating a concentration of influence and power. By this phrase they indicate they are bound by a common interest rather than a dependency upon a single source for capital funds. It is difficult to study their relationship without confirming this. Likewise; it is difficult to avoid the feeling that their common interest has led them to cooperate closely with one another and that this common interest lies in the planning and control of certain aspects of American life through a combination of the Federal Government and education" (stenographic transcript, ibid, p. 47).

If this statement intends to say that the organizations listed in the report are able to exert such power as to bring about a combination of the Federal Government and education so as to permit the organizations to plan and control some aspect of American life, then the statement is absurd. Education is controlled by local school boards and by departments of education in the 48 States, and the Federal Government is controlled by a large number of competing interests among which the influence of the organizations mentioned is certainly not great. With respect to the specific objectives or effects attributed to the interlock the council has had no part, or inclination, in bringing about such alleged changes through education.

The council is concerned primarily with improving the quality of research in the social sciences—that is, with the reliability, rigor, objectivity, and honesty of social-science research. Necessarily related to this objective is a concern with improving the quality of the research workers in these fields, with studying the conditions under which research is carried on, and with intelligent discussion and understanding of what research can and cannot do. The council is not engaged in developing or in advocating public policies or political programs, or in directing or shaping educational objectives and policies.

The Social Science Research Council has not cooperated with similar agencies in other fields of research for the purpose of planning or controlling certain aspects of American life. It has not sought, nor does it seek, control over any aspect of American life, including research in the social sciences. The council has participated in encouraging various types of planning in research, particularly with the intention of making research more productive. This has been done through the preparation of publications which help to summarize the existing accomplishments of research in a given field, and through efforts to help research men find the most promising lines of future research on which they might concentrate their attention.

The Social Science Research Council accepts grants from several foundations for the administration of fellowships and for other forms of financial support for research in the social sciences. However, foundations make grants for similar purposes to other organizations concerned with research in the social sciences, such as universities and research institutes of many kinds, and foundations also administer fellowship programs of their own. In addition, individual research men in universities are frequently financed by university committees from en-
dowment funds, and research institutes also are financed by funds from private
sources, such as business firms concerned with market research problems, and
also by the Federal and State government. (See, for example, the Directory of
Social Sciences Research Organizations in Universities and Colleges, published
by the Social Science Research Council in 1950.)

There is the allegation in the report that the staff's study of the foundations
and the organizations mentioned "seems to warrant the inference that they con-
stitute a highly efficient, functioning whole. Its development and production
seems to have been largely the work of these organizations engaged in research,
such as the Social Science Research Council and the National Research Council"
(ibid., p. 47). This charge as worded here is a vague one. The inference that
such a "highly efficient, functioning whole" exists is not warranted. We admit
that in our operations we do seek to be efficient. The nature of this "whole" and
the extent of the "interlock," however, need some rigorous examination
if the committee is to have a fair and accurate view of just what does and what
does not exist.

There is first of all the statement in the staff report that the council "acts as
spokesman for seven constituent member associations." The fact is that the
council has never been designated as a spokesman by the seven associations which
elect part of the council's board of directors, that the council has never sought to
arrogate to itself the role of spokesman for these associations or for social science
as a whole, or for anyone except itself, and that actually save for an occasional
individual member of one or another of the associations no one has ever seriously
proposed that we or anyone else act as spokesman for them.

The suggestion that the council is such a spokesman rests upon a very funda-
mental misunderstanding of the way in which learned associations function as
well as of the entire academic population. It is only on very limited matters that
the associations try to act as spokesmen for their members as a whole. The pro-
grams of their annual meetings, the contents of their journals, or the nature and
substance of any other activities which they carry on are not cleared with the
council or conducted in accordance with policies discussed with the council or
influenced by the council as such in any other single way. Consultation does
occur occasionally in matters of mutual research interest but these occasions
have arisen with any particular association not more than about once in 3 or 4
years.

The one continuing relationship between the seven associations and the council
consists of the designation by each of them each year of a member of the council's
board of directors for the subsequent 3 years. The origins of this relationship are
very simple if one understands the situation in the social sciences at the begin-
ing of the twenties. There were then seven well-established associations some
of whose members wanted to see the establishment of an agency more actively
engaged in fostering better research. The associations themselves could not well
undertake this because they were not organized to carry on from month to month
and from year to year the tasks to be undertaken by the council, because of a
view that a single agency concerned with all seven fields was desirable, and be-
cause actually research always has been and must be only one of the concerns of
the associations many of whose members are interested primarily or solely in

Leaving then the "spokesman" angle of this allegation as the committee may
reasonably be concerned with the extent to which the council and the other organ-
izations called to its attention cooperate. Ten years ago the conviction arose that
the councils (the American Council on Education, the American Council of
Learned Societies, the National Research Council, and the Social Science Re-
search Council) ought not to work in total isolation from each other and that
they ought occasionally to talk over ideas and activities which might be of
interest simultaneously to two or more of them. This led to the creation of the
Conference Board of Associated Research Councils, a body to which some prior
reference has I think been made in these hearings. Over its entire life it has
held on an average of three meetings a year—sometimes a day in length, sometimes half a
day—a year. The conference board has no staff beyond the volunteer services
provided by the councils themselves. It is therefore certainly far short of a tight
"interlock." Some measure of criticism may well be justified and might better
be directed against the limited communication and cooperation which has oc-
curred between the councils. Close and more frequent consultation might assist
in making contributions of national benefit. So far, however, we have not found
a highly efficient way of achieving this close working together, and certainly no
funds for providing the conference board with even minimal staff resources.
The four councils do cooperate under a contract with the Department of State in the preliminary selection of postdoctoral lecturers and research scholars to receive awards under the Fulbright Act. This process of selection is made from among persons who apply in an open competition, publicly announced throughout the United States. The committee of selection consists of 12 members, usually university professors, appointed by the board, and 4 members of the staffs of the councils, all of whom serve without compensation other than expenses. The final selection of Fulbright grantees, however, is made by the Board of Foreign Scholarships, the members of which are appointed by the President of the United States.

The conference board has sponsored the Commission on Human Resources and Advanced Training which has for the past 5 years been studying problems of the supply of and demand for American professional persons over a wide range of fields of learning. There are also other ways in which the four councils work together. There have been over the past 15 years a number of joint committees between 2 or more of the councils as such, and some 5 or 6 conferences sponsored by 2 or more of them. For example, we and the National Research Council some years ago set up a joint committee to try to foster more accurate ways of measuring attitudes and consumer wants. A few months ago the Social Science Research Council and the National Research Council jointly sponsored a small conference to discuss whether significant studies of twins could perhaps be worked out. Other examples are the formation by the National Research Council and the Social Science Research Council of a temporary committee to make arrangements for a conference on research in contemporary Africa, held in October 1953, to which were invited some 50 specialists in biology, geography, anthropology, sociology, economics, and political science.

With the American Council of Learned Societies we have had joint committees which tried to improve communication between scholars engaged on studies of Latin America to ascertain whether something could be done to increase the number of Americans with competent knowledge of India and its neighboring countries, and to aid American scholars in critically analyzing such materials as can be drawn out from behind the Iron Curtain. These joint committees represented a recognition that there are problems on which humanists and social scientists, or social scientists and natural scientists ought to have something to contribute to each other. At the same time, however, the joint committees have always been very minor elements in the current work of any one of the councils concerned.

With the other organizations mentioned in the report, aside from the other three councils, and the American Historical Association, which is one of its affiliated societies, the Social Science Research Council has had almost no formal contact, and little informal contact.

Another allegation in the report of the research director is given in these terms:

“In what appears from our studies to have been zeal for a radically new social order in the United States, many of these social science specialists apparently gave little thought to either the opinions or the warnings of those who were convinced that a wholesale acceptance of knowledge acquired almost entirely by empirical methods would result in a deterioration of moral standards and a disrespect for principles. Even past experience which indicated that such an approach to the problems of society could lead to tyranny appears to have been disregarded” (ibid. p. 48).

This statement contains a number of suggestions and charges which involve questions of extended scope. What is the “radically new social order” suggested? Has there been a wholesale acceptance of empirical knowledge which has resulted in a deterioration of moral standards and a disrespect for principles? In the experience of which countries has an empirical approach to social problems led to tyranny? These questions raise broad and vague issues, and the present report of the research staff provides an insufficient basis for their analysis. However, there is a tone of accusatory implication in these statements which may be noted at this time. It might be inferred by a casual or predisposed reader of the paragraph quoted above that radical social scientists, undeterred by criticism of their use of empirical methods, were responsible for an alleged deterioration of moral standards, and disrespect for principles, and might become responsible for a tyrannical regime in the United States.

Implications of this kind can only be met by positive statements, in order to present the issues in their clearest light. For example, it may well be noted that certainly very few social scientists have shown zeal for a radically
new social order in the United States. A second statement which may be made to move the discussion to a plane more productive of a sharp definition of real questions, is that, if there has been a deterioration of moral standards and a disrespect for principles, and this statement should by no means be conceded, social scientists have no greater share in such a development than have the members of many other groups in society. Furthermore many persons with deteriorated moral standards and a disrespect for principles have been totally oblivious of knowledge acquired by empirical methods or by any other methods. Finally, social scientists wish neither to be controlled by governmental restrictions on their freedom of inquiry, nor to exercise control over other human beings. They wish, rather, to widen the area of free choice open to human beings, by the discovery of knowledge. It is no accident that it is in the United States that the social sciences have flourished more than in any other country in the world; it is in the freest of societies that the study of man can be most freely made. Only where knowledge may be sought for its own sake, spurred by curiosity and enthusiasm of individuals, can research most fully contribute to the widening of human horizons and the realization of man’s best self.

It has been alleged that the foundations and the “accessory agencies” have “directed education toward a new international frame of reference.” I have been unable to find in the hearings just what this new international frame of reference is supposed to be. The council has not sought to direct education, since this is not within its scope of operations, and its effectiveness in doing so would certainly be limited if it mistakenly undertook such a mission. The council has several times tried to find ways of encouraging more systematic and more searching inquiry into problems relating to the economic and political position of the United States and better knowledge of other areas of the world. We shall undoubtedly make new attempts in this direction if and as constructive ideas arise. The council’s attempts to study the research which has gone on and to figure out ways of doing better research have, however, had no relation which I can discern to any particular “international frame of reference”—new or old. The choice of this country’s international frame of reference has been made and will we are sure continue to be made by its legislative and executive policymakers and by its citizens through established constitutional procedures. Of course, the council will continue its interest in working out better and more significant research plans relating to problems of international relations—not to any particular international frame of reference—in view of the obviously increasing importance of these relations to the security and welfare of the United States.

Here, for example, is a current council undertaking. Foundation officers became concerned with problems of foreign students at American universities. As a means of learning more about these problems, and how improved methods of dealing with them might be found, three foundations have made grants to the Social Science Research Council. A grant of this type is made to the council for several reasons. The council has experience in the administration of funds; it has knowledge of individual scholars engaged in various fields of research; it has their confidence, and is therefore able to enlist their collaboration in the carrying out of research projects. The result of the council’s development of this research project will be several publications useful, we hope, to foreign student advisers in universities, to Government officials planning exchange of persons programs, and to teachers and others who have contacts with foreign students. These publications will be primarily descriptive in nature; they will summarize the results of observation, of interviews and of different types of psychological and other tests. They will also include some comments of a summary character, which it is hoped may assist those responsible for policy in choosing among alternate courses of action. The use of these findings will of course depend on the judgment of those who have responsibility for policies and activities directly connected with foreign students.

Nowhere in the report is the statement made flatly that social scientists, by themselves or with others, are engaged in a concerted political movement to modify the American way of life. Nevertheless, there are suggestions, some of which have been quoted above, which when taken as a whole give the impression that Mr. Dodd feels that social scientists as a group exert a sinister influence on American social life and institutions. An additional hint of this order is found in the following paragraph:

“We wish to stress the importance of questioning change only when it might involve developments detrimental to the interests of the American people, or when it is promoted by a relatively small and tightly knit group backed by a
disproportionately large amount of money which could threaten the American ideal of competition" (ibid., p. 47).

In this and other parts of the staff report, a case is sought to be made against the social sciences, and against organizations in other fields, in terms of innuendos, or suspicions that social scientists may be desirous of exercising control over some aspects of American life. Social scientists reject such an attack on their work and on their motives.

The paragraphs which follow are offered in order to indicate to the committee the nature of the fellowship program of the Social Science Research Council, in view of the comments made by Dr. A. H. Hobbs, assistant professor of sociology at the University of Pennsylvania, in his testimony at the hearings on May 20-21, 1954.

Before answering these allegations, which reflect Mr. Hobbs' personal opinion and not detailed knowledge of the purposes and operation of the council's fellowship program, it may be well to state that the council is only one of a great number of organizations, many supported by foundations, which offer fellowships for training and research in social science. Therefore, the trends in types of training and methods of research, if any, that may appear in the projects of council fellows do not necessarily attest to the general character of training and research in the social sciences.

Throughout its career the council has been concerned with developing more rigorous methods, among which statistical procedures can be numbered. Few scholars would deny that the social sciences have benefited greatly by the use of quantitative methods. The council has been and will continue to be interested in their development, as it would in the fostering of any productive approach. Whether the council has overemphasized the quantitative approach is, and must remain, a matter of opinion. To some reputable social scientists any use of numbers is abhorrent; to others, of an opposite persuasion, work without a quantitative basis seems of little value. It must be strongly emphasized, however, in spite of misconceptions prevalent in some places, that the council has never been concerned exclusively with the development and promotion of only one methodology, statistical or otherwise.

Even a casual reading of the appointments made in the council’s programs of faculty research fellowships and research training fellowships during the past 2 years would reveal that projects of many kinds have been supported, entailing a wide variety of research techniques. They range from problems utilizing refined statistical analysis to inquiries of a theoretical or descriptive nature in which quantification would be inappropriate. It is, in fact, exceedingly difficult to determine the extent to which statistical methods will be involved in any particular research. As one tool among many, the statistical approach is used by scientists when they feel it will yield significant information about the question under consideration. It is, on the other hand, scrupulously avoided by scholars when the area of interest calls for other research methods. Ordinarily, even the most devoted exponent of quantitative techniques finds that certain aspects of his problem call for other strategy, for library research, or interviewing or observation. Particularly in new areas of research interest scientists often find that less rigorous methods are essential to describe the problem and explore its implications, perhaps using statistics at a later stage of the research to pin down the more important features of the situation.

Although the research projects supported by the council embrace a wide range of interests and methods, one can distinguish varying degrees of adherence to a quantitative approach. The following classification represents the distribution of projects in the faculty research fellowship program since 1950, and in the research training fellowship program for 1953 and 1954, according to their use of statistical techniques:

<table>
<thead>
<tr>
<th>Methodology</th>
<th>Faculty research fellowship</th>
<th>Research training fellowship</th>

<tbody>
<tr>
<td>Primarily quantitative</td>
<td>5</td>
<td>13</td>
</tr>
<tr>
<td>Mixed</td>
<td>14</td>
<td>27</td>
</tr>
<tr>
<td>Primarily nonquantitative</td>
<td>27</td>
<td>27</td>
</tr>
</tbody>
</table>

Mr. Hobbs' principal allegation is that the council, in its fellowship program, but especially in its announcement of awards for 1953 from which he quoted, has
overemphasized empiricism, specifically statistical computation (transcript, ibid., pp. 169-170). He further states that a social scientist reading the announce-
ment "would interpret it to mean that probably, almost certainly, what they (SSRC) are interested in is only statistical computations."

The statement that "fellows will be selected on the basis of their actual and prospective accomplishments in formulating and testing hypotheses concerning social behavior by empirical and, if possible, quantitative methods" applied in the 1953 announcement, from which Mr. Hobbs quoted, to only one type of fellow-
ship, the faculty research fellowships. From Mr. Hobbs' statement one might
easily gain the impression that all of the five programs of the council described in
the 1953 circular are qualified by this emphasis on a quantitative approach. Not-
withstanding this stated preference for projects utilizing quantitative methods, a
number of appointments to faculty research fellowships, as already noted were
made for work of a nonstatistical nature. In selecting the recipients of fellow-
ships and grants primary importance has never been attached to the methods
to be employed, but rather to the intellectual promise or achievements of the
applicant.

The audience of professional social scientists and advanced students to whom
the announcement quoted is addressed certainly does not construe the term
"research" to mean "only statistical computation." This is demonstrated by the
variety of applications received and by the diversity of projects and methods for
which fellowships have been awarded. It should also be noted that Mr. Hobbs
himself was the recipient in 1946 of a council fellowship, a demobilization
award for the purpose of making a study of the "trend of emphasis in sociological
teaching: 1932-41." Presumably he would approve the subject of his own study
for which he sought and gained support from the council as well as the methods he
employed.

In one place in his testimony (transcript, ibid., p. 168) Mr. Hobbs states
that graduate students "are encouraged through the situation (the giving of
large foundation grants) to embark upon study projects which are extremely
narrow.*** He also states (p. 169), "furthermore, these projects aid these
students to a disproportionate degree. Other students who, through differing
interests, through a broader viewpoint of society and behavior, who do their
work and who don't have such assistance, are handicapped in comparison with
the ones who receive the aid through foundation grants."

The council's research training fellowships, to quote the 1953 announcement
from which Mr. Hobbs also quoted, are intended precisely to afford persons an
opportunity "to obtain more advanced research training than that which is
provided in the usual Ph. D. program." We have been mindful of a tendency
at times to use graduate students essentially as clerical assistants on large
research projects. We have made our concern explicit in letters which accom-
panied many thousands of announcements mailed to social science colleagues in
recent years.

The following quotation is from one of these letters written by Elbridge Sibley
and dated November 1, 1951:

"We often fail to get in touch at the right time with extremely able graduate
students and young Ph. D.'s who might profit greatly by a year's fellowship.
With distressing frequency we hear from academic friends that the best students
in their departments are not among the applicants for fellowships because they
are already employed in doing things which someone else wants to have done.
It is ironic that the ablest individuals seem to run the greatest risk of being
prematurely diverted from training for research by offers of employment which,
although attractively remunerative, do not foster the optimum development of
their research talents. A timely suggestion from you might well lead such a
person to take advantage of an opportunity for further training which would
in the long run greatly enhance his preparation for a more effective career."

The same point was made in a similar letter circulated the following year:

"To repeat what has been said in similar letters in past years, it is too often
ture that the very persons whom we are seeking tend, precisely because they
are unusually able and hard working, to be diverted from achieving their own
maximum development or productivity as research scientists. If you can en-
courage one or more of these to become candidates for fellowships or grants,
you may be doing a significant service both to the individuals concerned and to
social science."

In brief, the research training fellowships are designed to give students a
broader type of training in methodology. Furthermore, the stipends are paid
directly to the fellow who is responsible himself for the conduct of his research
or study program.
In the first printed report of the Social Science Research Council, we find this excellent statement about how the council came into being:

"For those unfamiliar with the Social Science Research Council, the following statement of its genesis, aims, and organization is set down:

"As man's study of his physical and institutional surroundings has become more intensive, the comfortable wholeness of his earlier world has disintegrated. We no longer have 'natural philosophers' who 'take all human knowledge as their province.' They have given place to troops of 'specialists,' whose achievements are unquestioned, but who are painfully aware of how small a fraction any individual knows of what mankind has learned. Men 'who know more and more about less and less' are pushing forward the refined researches of today at every point along the deploying line of scientific advance. But even as a device for gaining more knowledge, specialization is acknowledged to have its drawbacks. We are in danger of distorting our vision when we wrench a section of the world loose from its context to facilitate its intensive scrutiny. We risk waste effort when we use our narrowly limited individual resources in attacking problems which might yield to joint endeavors. The mathematical, physical, and biological sciences were first in this country to organize in an effort to see their problems whole and to facilitate cooperation among specialists concerned with clusters of problems. But shortly after the National Research Council was formed, several representatives of political science, economics, sociology, and statistics came together for a similar purpose. Out of this informal beginning the Social Science Research Council developed in 1923. It was presently strengthened and broadened by the accession of psychologists, anthropologists, and historians."

WESLEY C. MITCHELL, Chairman.

The following statement is reproduced from the 1952–53 annual report of the Social Science Research Council:

"The council is organized as a private corporation, and governed by a board of directors. The board meets twice a year to review all operations of the council and related matters. The members of the board are drawn from among outstanding representatives of the various social sciences and closely related fields. The content of the program of the council reflects their informed and responsible judgment. The actual process of selecting topics and determining procedures is carried on with the aid of a small professional staff, cooperating with committees and consulting directly with many research workers. The suggestions and recommendations from council committees or from less formalized sources of advice are examined and discussed by the council's committee on problems and policy. This committee meets about six times in the course of the year to consider the current work of the council and to develop further, with the aid of the staff, proposed new projects, programs, and preliminary explorations.

"Most members of the council are active on 1 or more of the 30 or so committees described in subsequent pages of this report. As the committee lists demonstrate, the membership is drawn from a wide variety of institutions and disciplines and in recent years has involved services annually by some 200 members of 50 or more university and college faculties and of the staffs of scientific, business, and governmental organizations. Committees concerned with the planning and appraisal of research in different fields are appointed by the committee on problems and policy, while administrative committees are elected by the board of directors. Participation is based upon competence of individuals in their fields, known interest in the subject at hand, and willingness to give time and attention to cooperating with fellow scientists. Committees serve without compensation, except for actual expenses in attending meetings. The appointments are on an annual basis, and are usually reviewed and revised each autumn.

"The initial leads from which the council's research planning activities evolve from the ideas and research goals of the research workers who identify themselves with the objectives of the council, irrespective of whether they are at the moment members of it, or of its committees. Research planning would be artificial and sterile if it were not directly related to the motivation of research workers to carry their own inquiries forward. The council endeavors to fulfill its basic purpose through the process of selecting ideas and individuals and providing opportunities for the development of whatever cooperative relationship will advance research in specific areas. In a sense, this process has an
architectural quality in that the council seeks to relate the skills and objectives of the individual specialist to building a structure of ideas and knowledge of more general significance.

"The foundations supporting the council over the years have recognized the value and utility of an organization that can bring together the initiative and judgment of social scientists on problems of research development directly related to their own concerns. Fruitful leads for scholarly inquiry and constructive suggestions for strengthening research personnel and improving their training most appropriately come from the responsible academic leaders who are devoting their lives to these problems in the universities and colleges. The council provides a means of ready communication among scholars in different institutions who, because of the very fact of their specialized research interests, often work in relative isolation among their immediate colleagues and hence welcome an opportunity to discuss their problems with persons developing similar interests at other institutions. Education in the United States is not organized under a unified national ministry of education; rather, there are a considerable number of national organizations, each dealing with distinctive facets of education and research. The Social Science Research Council is one of perhaps a dozen or so such organizations. Its distinctive contribution rests in its concern with the advancement of research in the social sciences.

"The grants made directly to the council by foundations are usually for specified purposes. Hence, the council is not in a position to consider many requests for financial assistance that a foundation might find appropriate. The council's concern is with ideas for research and with preliminary aspects of research which may or may not lead to well-planned projects worthy of support. Many of the council's appraisal and planning efforts are focused not on the development of specific research projects but on calling attention to needed work. The publications of the council resulting from these efforts are fertile sources of suggestions for research. In other cases, relatively precise plans for research may be outlined. If specific research projects are developed and funds are needed, the individual or group prepared and qualified to execute the plan may seek funds directly from a foundation, and the funds, if made available, go directly to the applicant or his own institution.

"Only in exceptional instances does the council accept funds for the direct support or supervision of research. It sees its functions as those of planning, stimulating, and initiating research rather than conducting projects than can be done more appropriately by other organizations.

"At the September 1953 meeting of the board of directors, particular consideration was given to the present status of the social sciences in the light of the current demands upon them and prevailing methods of support. There was no disposition on the part of the board to attempt to modify the objectives for which the council was founded; it reaffirmed its continued concern with basic research and development of the social sciences.

"The trend of the times is toward increasing recognition that the social sciences afford means for better understanding and analysis of many complex social, political, and economic problems. The economists, the psychologists, the statisticians, and members of all the other social disciplines are the specialists whose aid is sought, because theirs is the relevant training. Many organizations offer opportunities for social scientists to work on pressing current problems that call for study by trained personnel. In attacking such problems, at the behest of philanthropic, business, or other organizations, specialists from many fields apply their knowledge and the techniques and theories of analysis that are now available in social science. But all will agree that valuable though such inquiries are—and indeed essential for bringing available thought and information to bear—the complexity of the problems involved does not permit anything more than a partial analysis.

"It is the council's primary function to provide for the development of better methods of research, more effective means of gathering necessary data, and more adequate theoretical formulations. Unless research men are encouraged and stimulated to give some portion of their time and energies to these purposes, the agencies that seek quick 'answers,' facile solutions, or practical judgments may tend to crowd more fundamental problems from the forefront of consideration.

"The council has long been concerned with improving the training of social science research personnel; but not enough attention is given to their opportunities for lifetime careers and to the frequent lack of research continuity in such careers. As research institutes attain more financial stability they can offer
competent staff employees continuous careers in research, but most social science research organizations in universities today lead a hand-to-mouth existence. Moreover, well-qualified social scientists often follow a seemingly erratic career line as they are attracted from one brief research opportunity to another at different institutions.

"As the September discussion revealed, the increase in contract funds for research has led to undue emphasis on developing special projects as distinct from continued basic work. Basic research can be encouraged only by providing an environment for research scholars conducive to continuity in their work. There should be clearer recognition by the universities that research is just as much a part of the professor's career as is teaching, and that provision of opportunities and funds for research is just as important as for teaching. In order to obtain university funds for research at the present time, there is too much emphasis on shaping a project that has 'appeal.'"

"The best working conditions for social scientists generally are to be found in a university setting, and maintaining that setting with its original advantages is of first importance. University personnel should not be dependent on funds from contracts with outside agencies to sustain their research interests. Short-term support for particular or limited research jobs results in the abuses that have been described as 'projectitis.'"

"The council's concern with basic scientific research and with matters of paramount interest to research workers, in accordance with the purpose for which the council was incorporated, means that questions of public policy must be left to other organizations. Of course, social scientists in their teaching and writing pursue a variety of interests and concern themselves with a wide range of problems. But within the council our common purpose is the advancement of research in the social sciences."

"The decision taken 20 years ago with respect to current public problems still holds: 'The council determined not to avoid current issues by reason of their generally controversial character, but rather to give weight to the promise of particular research to contribute to an understanding of contemporary questions. This decision involved no intention of abandoning more remote and fundamental research in favor of that applied wholly to immediate ends. It simply recognized that in research, as in so much human activity, a measure of value is benefit to mankind.'"

"In these terms, perhaps no greater benefit to mankind can be envisaged than advance in our capacity to understand ourselves, our society, and the other cultures and nations of the world. Such a capacity, we believe, rests significantly in better methods of analysis. Recognizing the difficulties created by power conflicts and irreconcilable goals of human societies, still the challenge of improving the means and methods of social science analysis offers wide and constructive scope for continued research effort. Facts are to be preferred to guesses, and knowledge to ignorance. More systematic ways of ordering knowledge about human affairs are better than speculation or special pleading. It is upon such obvious common assumptions that the structure of the social sciences is erected. Technicalities and refinements sometimes make these fields appear confusing to the layman. Misunderstandings now and then occur. But the social sciences, as fields of knowledge, point to no particular form of society as ultimate, or any prior set of public policies. These sciences are premised on the faith that logical thought, established facts, and various forms of analysis can contribute to a clearer understanding of human problems. The social sciences provide no complete answers to any practical problem, but they offer relevant facts and ideas to all who would prefer to see human affairs worked out through reason, through faith in their fellow men, and through methods of persuasion."

"There are various schools of thought within different social science disciplines. There is disagreement and competition in these fields, just as in other walks of life. There are no authoritative groups to say with complete finality: This is economically sound or that is socially valid. But there are more, and less, rigorous methods of analysis and better—and less well-qualified analysts. Some research workers are more objective than others. By keeping the competition keen and free, some win the hard-earned recognition of having achieved a scientific approach to the study of human behavior and social relations."

"The problems of the individual research worker remain of constant concern to the council. No research team is better than its individual members, and no research plan has much meaning beyond the capacity of individuals to carry it through."

"The council has not produced a generalized blueprint for the overall development of the social sciences, nor does it think that it would be desirable to do so,
Rather, it seeks to stimulate inquiries into new fields of knowledge; to discover and encourage social scientists who wish to try to apply new methods to traditional studies; to grasp and further opportunities provided when competent people in widely separated places have similar research interests and the effectiveness of their work may be enhanced through pooling of ideas and experiences. The strategic employment of small funds in such circumstances may be productive of research that otherwise might emerge only at a much later time, or not at all. The council thus serves mainly as a cooperative agency through which individual social scientists voluntarily collaborate to advance the progress of research. The council does not seek to impose upon them a program of its own but seeks to bring into focus and develop their interests and judgments. If the council is defined in terms of its work, its effort is concentrated not in its offices in New York and Washington but in the colleges and universities where a new generation of social scientists is being trained and where persons associated with council committees and other activities of the council engage in research.

Mr. HERRING. I think if it suits your pleasure, the most helpful thing I could do perhaps would be to say something about the council and try to get some factual material before you that would give a clear understanding of what it is we are doing.

The CHAIRMAN. Mr. Koch, did you have some questions?

Mr. KOCH. You just continue making whatever oral statements you wish.

Mr. HERRING. Mr. Chairman, I will go right ahead, but let me say that I would be very happy indeed if any member of the committee or of counsel would like to ask any questions. Because what I have here are just rough notes. So I will go ahead, and if there is any point you would like elaborated, or any question you would like to ask, I hope you will do so.

Well, I assume that you have read or browsed through this statement about the nature and purposes of the Social Science Research Council. I don't want to repeat material. But I have identified a few points that I would like to bring to your attention.

In preparing for this hearing, I read somewhat more of our past records that I had, and I came across a very interesting statement by Wesley Mitchell in the first council printed report. It is just a paragraph, and I would like to read it, because I think it is illuminating. In this first printed report, the following statement is made:

For those unfamiliar with the Social Science Research Council the following statement of its genesis, aims, and organization is set down. As man's study of his physical and institutional surroundings has become more intensive, the comfortable wholeness of his earlier world has distegrated. We no longer have natural philosophers who take all human knowledge as their province. They have given place to troops of specialists, whose achievements are unquestioned, but who are painfully aware of how small a fraction any individual knows of what mankind has learned. Men who know more and more about less and less are pushing forward to refined researches of today at every point along the deploying line of scientific advance. But even as a device for gaining more knowledge, specialization is acknowledged to have its drawbacks. We are in danger of distorting our vision, when we wrench a section of the world loose from its context to facilitate its intensive scrutiny. We risk waste effort when we use our narrowly limited individual resources in attacking problems that might yield to joint endeavors. The mathematical, physical, and biological sciences were first in this country to organize in an effort to see their problems whole and to facilitate an organization among specialists concerned with clusters of problems. But shortly after the National Research Council was formed—that is, for the natural sciences, several representatives of political science, economics, sociology, and statistics came together for a similar purpose. Out of this informal beginning, the Social Science Research Council developed in 1923. It was presently strengthened and broadened by the accession of psychologists, anthropologists, and historians.
The interesting thing that I want to emphasize here is that this objective that I have just read, this statement of objective, reflects the initiative of a group of leading social scientists. They had a sense of need, this high specialization developing. There are things that we share. We need some way of getting away and talking shop. How can we get a better grasp of these problems? Here is a man working as a specialist on a university faculty. The specialist who would know most about his field might be 100 miles or 500 miles across the continent. Isn't there some way in which we can get together and talk about the common problems we share as specialists in these fields? Well, it was that sense of need that brought this organization into existence.

The first point, then, that I want to emphasize, is that that is where the initiative came from.

The second point I want to emphasize is the consistent attention that the council has maintained to its objective.

Now, a little documentary quote on that is found in our decennial report. In 1933, we published a somewhat smaller report on the completion of the first 10 years. And the director, in that report, repeats:

The council is confident of the validity of its objectives of better and more broadly trained personnel, the improvement of research materials, of the development of research methods over the social field as an integrated whole.

This consistent interest in better training, helping able people to develop, better data, a lot of technical problems there of how to get at the facts, better methods, what to do with the facts after you get them—it is that kind of thing; and I can certainly sympathize with perhaps the difficulty in the great array of organizations over the country, of knowing, "Well, now, just what is this organization concerned with?"

It has a unique interest in the advancement of research in these particular fields. And there are a great many technical problems there, of how to get at this subject matter more adequately.

Well, that is one point. Another point I would like to emphasize about the organization is that in an organization of this character you need to try to maintain, be aware of the importance of, continuity, stability, on the one hand, and rotation of membership on the other. How can you be sure that the organization is pursuing its ends? Well, you can only be sensitive to the problem.

But some of the questions that were raised as a result of this investigation prompted me to look at the record a bit here and see just what the story is so far as the membership of our board of directors is concerned.

Over the last 30 years, we have had about 160 members or 159 members on the board of directors, and at the present time only 4 members of the board have served more than 6 years and only 11 more than 3 years. But if you work out a little chart—1 term, 2 terms, 3 terms or more of this membership—you will find that about half of them served for 1 term and about 40 out of the 160 served for 2 terms, and about 20 served for 3 terms. I just mention that to indicate the problem of rotation and the problem of continuity of attention.

Well, now, I can go on with further exposition about the organization. If you would like to have me present to you information about the selection of this board, I can do so.
Mr. Koch. Why don't you do that? And also name the constituent members, will you please?

Mr. Herring. Well, the board of the council is composed of 30 individuals. We have seven associations that designate, from panels that we submit to them, their selection for membership on our board, and those associations are the American Anthropological Association, the American Economic Association, the American Historical Association, the American Political Science Association, the American Psychological Association, the American Sociological Society, the American Statistical Association. And then we have 8 members at large, and I am a member of the board, so that brings it up to 30 individuals. These members from the associations are appointed or designated for terms of 3 years, so that we have a new designation or reappointment each year.

Mr. Koch. When you said a panel—how many names are on the panel?

Mr. Herring. There have to be three names, under our bylaws, and our practice is always to discuss this matter, and frequently there is quite a roster of names.

The important thing to keep in mind here is that here is an organization that is meaningful if you have people serving on the board who are interested in what we are doing, and who are interested in the advancement of research and who are working on research rather than other things. And therefore we have on these panels the names of people any one of whom would have an interest in the sort of thing we are trying to do. It is pretty obvious that you would not want to put on the panel the names of people who were interested in something else. And this system has been in effect now since 1935, and until some questions were raised here about it we never gave it a second thought. It is a system that has proved quite workable and satisfactory to all concerned.

Mr. Wormser. Why don't you permit the societies, the constituent societies, to determine their own representatives? Aren't they aware of what the special purposes of your organization are?

Mr. Herring. Well, that is a perfectly reasonable question, Mr. Wormser. There are all sorts of ways in which this thing could be done. I gather from some of the men who were around at the time that it was suggested a good many years ago that this organization ought to handle its members on some other basis.

Mr. Wormser. It was suggested that a panel would be named from which you could get the particular type of representative wanted.

Mr. Herring. We want the type who can give some time and thought to the sort of work we are doing, and who has research interests rather than interests of some other kind. And every now and then somebody may serve on the board who is more interested in other things.

Mr. Wormser. Well, the suggestion has been made specifically that you are interested particularly in not getting professors, let us say, who might be more of the rational school than the empirical.

Mr. Herring. Well, you present that as a problem. It has not been a problem, in my experience. I have not been aware of that as a problem. And there is the freest interchange of opinion and discussion about these matters.

Well, I think one way of getting before the committee fairly graphically, perhaps, the sort of thing we do would be to say to you first
that this board of directors meets twice a year. They review the program. We have discussion on research problems. And our day-to-day work is conducted through committees. We have about 30 committees that are quite active, and these committees are set up to consider problems where we think there is some research significance.

Mr. Hays. What sort of questions do these committees consider?

Mr. Herring. I have here before me types of questions considered by my committees, because I thought that would be the most down-to-earth way of getting at it. I will just sample this and offer for the record a fuller statement, so that you can get the thing in that fashion.

Let us take, for example, agricultural economics. We have a committee on agricultural economics. And the membership of this committee is made up of agricultural economists in this instance over the country, who are interested in doing a better job in that particular field. The common practice in the organization is that whatever member of our board is interested in whatever committee would determine whether or not he would serve on it.

Agricultural economics, then, was in response to the opinion expressed over the country, particularly in our land-grant colleges and other institutions where good work in agricultural economics is going forward, that there be an opportunity provided for reexamining some of the assumptions underlying research in the agricultural field, and for critically restudying the research methods used by agricultural economists. So we brought together 20 of the younger outstanding men in the field for a 2-day conference last January. They talked shop for 2 days, and on the basis of their recommendations we set up a committee which is currently concerned with two jobs: a critical, fresh look at past research on low-income farms and farming areas—its report is still in preparation—and an attempt was made also to bring together the thinking of a larger number of experts on the usefulness of various types of research, with particular emphasis on finding the advantages of relatively simple methods over more intricate ones for the analysis of agricultural problems.

What I am trying to emphasize here is that these men were approaching the problem essentially as technicians, and they wanted to see how they could improve the methods of analysis. I do not know whether I need to emphasize that greatly, but we are not interested in talking about: what should agricultural policy be? This group is talking about how to use better methods for doing further research, knowing what has already been done.

Mr. Hays. In other words, they would not be very helpful to Mr. Benson in his present dilemma.

Mr. Herring. That is right.

Mr. Goodwin. What do you mean, "dilemma"?

Mr. Hays. Mr. Goodwin, the only thing I think I could say charitably is that if you had some farmers in your district you would know what his dilemma is. I am very keenly aware of it. His dilemma is either finding a reasonable solution to the farm problem, or finding a new job.

Mr. Goodwin. I am sorry I started it.

Mr. Herring. I will offer you one or two other illustrations. Here is a committee. I sat in on a few of its meetings. It is a committee on economic growth. This committee brings together several economists, sociologists, and anthropologists to find how and under what
conditions economic systems grow. These include not only what are thought of as purely economic factors, but also the customs and traditions and attitudes of people. We know that some parts of the world have grown more rapidly economically than others, and this group is interested in the questions: Why? Why is that? What is economic growth? Can you measure it? Can you identify it, even? What are we talking about?

One of the first problems is really to figure out how you can talk about some of these matters.

Now, in the case of economic growth, there are not only the economic factors of capital and so on, and credit, and whatnot, but there are problems that involve motivation. Some peoples in some parts of the world just seem to like to work harder than other peoples in other parts of the world. Is there any way of better understanding these motivational factors? In some parts of the world people put their money in a hole in the ground. In others, they put it in the stock market. What can you find out about the readiness of people to invest? What do they do with their savings? That may suggest, in a very crude way, the kind of concerns this group is interested in. And I will say this, that where they can find any statistical data on this, they have a hard look at it, a very hard look. Because the statisticians on that committee want to know whether these statistics are any good or not. And if you want criticism of statistics, I can refer you to some statisticians who are the most critical minded people when it comes to the quantitative approach.

Mr. HAYS. I might ask you, right at that point: Is the council interested in the individual, the so-called lone-wolf type of research, that we have heard referred to here?

Mr. HERRING. Well, we are very much interested in that. And if I have given you an adequate enough indication of the kinds of questions, I will just offer you this memo of illustrative questions.

Mr. GOODWIN (presiding). In the absence of objection, it will be admitted.

The Chair hears no objection.

(The material referred to is as follows:)

**Types of Questions Considered by SSRC Committees**

**Agricultural economics.**—For 2 or 3 years various agricultural economists at State colleges and elsewhere urged that the council provide an opportunity for reexamining some of the assumptions underlying research in the agricultural field and for critically restudying the research methods commonly used by agricultural economists. We brought together about 20 of the younger outstanding men in the field for a 2-day conference a year ago last January. On the basis of their recommendations we set up a committee which is currently concerned with two jobs:

(a) A critical fresh look at past research on low-income farms and farming areas. Its report is still in preparation but it will, we understand, for instance, question whether a failure to study closely enough the existing statistics of agriculture and of income has not exaggerated the extent to which low-income farms really exist.

(b) An attempt to draw together the thinking of a large number of experts on the usefulness of this or that type of research of a variety of research methods, with a particular interest in pointing out wherever possible the advantages of relatively simple methods over more intricate ones.

**Business enterprise research.**—Because psychologists and sociologists as well as economists are turning to what they view as a more realistic view of the business enterprise as an integral and essential part of the American system, it seemed useful just a year ago to bring together a number of those most interested
for a preliminary conference. On the basis of that conference's discussion, we
set up a committee which is now in process of a critical stocktaking of the work
heretofore done by economists and others on the business enterprise, in the hope
that more significant and constructive directions for future work can be suggested.
(It should be unnecessary to point this out, but the committee's discussions have
involved neither Marxism nor economic determinism, and instead are concerned
with promoting a better general understanding of the nature of and contributions
of American business enterprises.)

ECONOMIC GROWTH

This committee brings together several economists, a sociologist, and an anthro-
pologist in an effort to devise ways of better understanding how, and under what
conditions, economic systems grow. These conditions include not only what are
usually thought of as purely economic factors such as capital, raw materials,
and the like, but also the customs, traditions, and attitudes of the people. The
American tradition of free enterprise developed and flourished under conditions
of rapid economic growth. If it is to continue to flourish, or if economic progress
is to be fostered in so-called underdeveloped places, there is need for more ade-
quate knowledge of the complex factors which produce growth in some situations
and stagnation or decline in others, and for understanding of the reasons why
industrialization has taken root readily in some environments and failed to do so
in others. There is even need for an acceptable method of measuring economic
growth, whereby meaningful comparisons can be made between different econ-
omies. The committee, needless to say, does not presume that it will finally solve
these problems; it serves to focus the interests and pool the experience of scholars
in many places who are working on these problems.

Historiography.—This is a committee of historians who believe that their
profession may be able to sharpen its insights and to make more significant in-
terpretations of historical events by drawing upon the skills and knowledge de-
veloped by other social disciplines. It is engaged in preparing a book for his-
torians, describing possible applications of the methods and data of such
disciplines as economics, political science, and sociology.

Identification of talent.—In view of the large sums devoted to scholarships
and fellowships for the education of youths who may become leaders of future
generations, it would be obviously desirable to be able to identify more confidently
than is now possible those boys and girls who possess in undeveloped form the
talents requisite for high-grade leadership. Already much progress has been
made in developing tests of intelligence which indicate with considerable relia-
bility a pupil's capacity for higher academic study, but it is a matter of common
knowledge that leadership in business, government, and civic affairs calls for
traits of personality other than the ability to make high grades in school. The
committee on identification of talent is sponsoring several research projects
on particular aspects of the broader problem of identifying at, say, high-school
age, boys or girls who may be capable, with suitable education, of becoming
business leaders or statesmen. It is characteristic of the scientific approach
to such a problem that the problem must first be analyzed into smaller under-
lying problems which can be effectively studied by scientific methods. A head-
long attack on the problem as a whole would be premature at this stage. Thus,
for example, one investigator sponsored by the committee is making intensive
studies of high-school boys of equal scholastic standing but from different
social backgrounds, in an effort to discern why some of them aspire to higher
goals than others; another investigator is attempting, by observing the behavior
of participants in a community organization, to define more precisely a trait
of leadership which he calls social sensitivity—the ability of a leader, so to
speak, to sense the unspoken feelings of members of his group. Out of the
results of such limited but carefully controlled observations it is to be hoped
that gradually a more adequate solution of the complex practical question of
identifying undeveloped talent can be achieved.

Mathematical training of social scientists.—The field of interest of this com-
mittee is clearly indicated by its name. Its major projects thus far have been a
seminar in which a group of mathematicians and social scientists devoted the
summer of 1952 to preparation of teaching materials adapted to use in courses
for social-science students, and a summer institute in 1953, at which about 40
social-science teachers and graduate students received intensive instruction in
certain mathematical subjects. Not all branches of social science make use of
mathematical principles and methods, but their use is steadily growing, and there
is consequently an increasing need for mathematical instruction by which social
scientists can gain useful competence in specific areas of mathematics without devoting years to curricula which are traditionally prescribed for professional mathematicians.

Measurement of opinion, attitudes, and consumer wants.—This committee exemplifies the council's role as a meeting place for research workers who have common interests and problems but are separated geographically or by their different vocations and educational backgrounds. The committee, when it was organized in 1945, brought together for the first time leaders in the use of opinion and attitude surveys (polls, as they are popularly known) in governmental, commercial, and academic organizations. While interested in different kinds of subject matter, the members of the committee recognized many common problems of method. All were interested in methods whereby the opinions and attitudes of groups of people can be efficiently and economically ascertained, and how to avoid the pitfalls which beset early ventures in public opinion polling. Three major research projects were sponsored, touching on such matters as the reliability of data obtained by questioning small samples of individuals, and the kinds of bias which may be introduced by the interviewer who asks the questions. When the final reports of all of these studies are completed and reviewed, it is expected that the committee will be discharged in accordance with the council's usual policy of maintaining each research planning committee only so long as it appears to provide the most effective means of advancing research. The frontiers of research are continually shifting, and each new forward thrust calls for some special combination of skills, interests, and experience. When the Committee on Measurement of Opinion was established, it was almost alone in the field; subsequently, two major professional associations have come into being, which can be expected to serve on a wider scale many of the purposes for which the council's group was set up.

Migration differentials.—About 15 years ago, the council issued a bulletin on research on the migration of population. The present committee was established in 1950 to review again the status of research on this subject, which is of great timely importance in view of the tremendous volume of migration during and following World War II. The committee, following a typical pattern of council activity, is preparing a volume which will not only review and assess the significance of previous studies of migration but also point to gaps in existing knowledge of the subject which need to be filled if the causes and effects of movement of people from place to place are to be understood. The committee is interesting itself not merely in how many people have moved whence and whither, but also in the factors which prompt people to move, the kinds of persons who move as compared with those who reside permanently in one place, and the social and economic consequences of this continual reassortment of people in different communities. Do people, for instance, move from their homes because business is poor where they are, or simply because they hope to achieve greater satisfactions elsewhere? Is the average migrant a restlessly energetic person, or a ne'er-do-well who drifts about in the vain hope of finding easy success somewhere?

Labor market research.—This committee in the past 2 or 3 years has conducted a highly significant research experiment in carrying through a major study of labor mobility in 6 cities through the entirely voluntary cooperation of research men and institutes in 7 different universities. It has, at the same time, sponsored an entirely independent and critical study of the research which its members and others have done on labor mobility, to ascertain what has and what has not been proven, to raise questions about the research methods used, and to suggest recommendations about future more efficient work in this field. The results of this appraisal are being published this summer as a typical number in the council's series of research bulletins, and the results of the first project are also currently being made available.

Scaling theory and methods.—This committee addresses itself to the highly technical problem of devising methods by which the statements which people make in everyday language about their opinions and attitudes can be translated in quantitative terms. For example, if a number of persons are asked to state their opinions on some public issue, their responses may range all the way from strong approval, through indifference, to strong disapproval. In an election, the voters may be required simply to vote "yes" or "no," but a social scientist seeking to understand their attitudes needs some means of comparing the infinitely variable degrees or shades of opinion which lie between these extremes. "Scaling" is the term applied to what might loosely be called "measuring" such differences. It involves the use of various methods which are still in an experimental
stage. The committee, like many other council committees in other fields, is critically reviewing the results thus far obtained, and endeavoring to encourage research workers to make needed improvements in the "tools" which they use.

Mr. HERRING. I am delighted to turn to some discussion of our concern with the individual and what we have done to encourage individual research. It is a topic that I find particularly congenial.

Mr. Kocx. Mr. Herring, unless you were coming to it later, maybe it is more curiosity on my part, but could you tell us from whom you get your money, and roughly how much that is? Could you show what other organizations support you? In other words, you get moneys not only presumably from the seven constituent members, but also from some of the foundations. If you were going into that later, that is all right.

Mr. HERRING. I will come to that. I would like to answer the Congressman's question first.

I think it would be most informing perhaps if I could give you a picture of what our activities were and then talk about the logistics.

Mr. Kocx. All right.

Mr. HERRING. Well, the aid to the individual through the fellowship program, I suppose, is the most direct thing, the one that first comes to mind. For many years, we have had grants from foundations in order to appoint people to fellowships.

Mrs. PfoST. Right there, Dr. Herring: What procedure do you follow in granting fellowships?

Mr. HERRING. Well, in the first place, these programs are national competitions, and therefore it is exceedingly important to get the word around that there are fellowships available.

So over the years we have developed ways of bringing the announcement to the attention of possible candidates over the country. We have bulletins that we send out and put on the bulletin boards of the universities and colleges, and we send leaflets by mail. In 1953 about 4,600 copies were distributed in the initial mailing and many hundreds more were later sent in response to inquiries. The initial mailing list includes the heads of all accredited universities and 4-year colleges in the United States and leading institutions in colleges, graduate school deans, heads of social science research organizations, some fifteen hundred or more individual scholars believed to be interested. That is a mail distribution of announcements. Then we send a covering letter that urges the recipients of the letter to call the offerings to the attention of their colleagues and students. An announcement is published in the council's quarterly publication, that has a circulation of 5,100 copies among our educational institutions. And an advance release of the announcement is sent to the interested professional societies, suggesting that it be published in their journals. So that is a way of bringing it to the attention of at least 40,000 people with especial interest in this field.

The persons apparently eligible to file applications are furnished appropriate forms. The applicants give the names of references. We carry on extensive correspondence with professors and others who know these people. And then members of our staff travel over the country and interview as many of the applicants as they possibly can.

So we go into this very systematically, very carefully, and for each fellowship program that we have—and the ones that we have vary over the years—we have special committees set up. These committees are
composed of people from the universities and colleges, and we try to get in the committee the array of knowledge that would enable the members of the committee to pass on the qualifications of the scores of applicants that they have to consider.

Mr. Hays. So you do, then, pay considerable attention to the individual or lone-wolf type?

Mr. Herring. As for our interest, we have at the present time, I am happy to say, a fellowship program that enables us to give some attention to some men in their undergraduate work, and then we have predoctoral, postdoctoral, and we have our faculty award fellowship program. That is designed for a few people further along.

Now, I think it is important to get before you again some sense of proportion about all this. This is a big country, and there are hundreds and hundreds of educational institutions. We appoint something under 150 people, counting all of our fellowship programs at the present time, and we have more annually, and we have about five fellowship programs at the present time. In other words, under 1 of these programs we would appoint 30 people. You can imagine, then, that the competition is keen.

Mr. Koch. On that point, Mr. Herring, do they have a uniform examination, or does each one present a thesis, or something? Just what does the committee have before it in making their selection? Just how hard is it to weed them down to those 30? That is what I want to know.

Mr. Herring. If the committee would be interested, I can file with you the forms that we use. We have them here, and you can look at them. But essentially what we are getting at is the man’s academic record. We give particular attention to his plan for study. We want to know what he would like to do under this program. We get a very good line on his ability and his record from the people with whom he has been working. I would say that the question would be what the stage of the man is, what training would be most helpful. If it is predoctoral, then he has completed the preliminary requirements for the doctorate. What additional training would be helpful there? The criteria are broad and flexible. We are trying to find people of promise and ability, men who have some imagination and have an idea that they want to pursue. We were interested essentially in finding able people who have a dedicated interest in carrying forward their research.

Mr. Koch. What I am getting at is: Do they submit any essay from which you determine that they have imagination, or is it more from their background record?

Mr. Herring. No, whatever their publication record may be, or some manuscript they might want to offer.

Mr. Koch. There is no uniform material that you distribute among all of the applicants, is there?

Mr. Herring. It is a very uniform picture. We get all the tangible evidence we can and the committees read the writings and so on.

Mr. Hays. Dr. Herring, there has been frequent complaint from previous witnesses, and apparently it is a complaint that a good deal of cognizance has been taken of by those reporting on these hearings, that these previous witnesses have made this complaint over and over
again. In fact, there was even an editorial in the June 11 edition of the Chicago Daily News, in which they say, and I quote:

Frequent complaint against the foundations is that they have been more generous to the liberal viewpoint than to the conservative.

If you have followed these hearings or have read any of the transcripts, you will know that that has been made here. Would you care to comment on that at all?

Mr. Herrng. Well, my comment would be that what we are interested in is the man's ability, his growth potential, his training in his field; and what his personal political views are or whether he is to the left or the right is just something that isn't relevant to this sort of consideration.

Mr. Hays. Well, the editorial goes on and gives their solution, which I wish were original with me. I love this phrase, but I have to give credit where credit is due. I wish I thought it up. They say: "Perhaps the only way the foundations could overcome conservative objections to this would be to label such studies as research into 'psychoceramics'; in simpler English, the study of crackpots." They feel there are specimens in both camps.

You don't have to comment on that. I really don't think it needs any. It sums up my feeling. In other words, as I see it, the kind of people you are looking for are people who are going forward into new fields, not reworking fields that have already been plowed.

Mr. Herrng. And in the fields of their professional competence and development. It is within the context of their professional growth and development that we approach these things.

I don't want to forget Mrs. Pfost's question, and if I may, I will offer for the record a 2½-page description of the procedure followed in the administration of these fellowships, which might be useful.

(The material referred to is as follows:)

The following procedures are involved in the administration of fellowships and grants-in-aid of research by the Social Science Research Council.

1. In the early autumn of each year offerings of awards for the ensuing year are publicly announced through several channels. The published announcement briefly describes each type of award and the eligibility requirements for candidates, and sets a closing date (early in January) for acceptance of applications. It is explained that later applications will be considered only if time permits after prior attention is given to those filed on time.

(a) Leaflets are widely distributed by mail. In 1953 about 4,600 copies were distributed in the initial mailing, and many hundreds more were later sent in response to inquiries. The initial mailing list includes the heads of all accredited universities and 4-year colleges in the United States and leading institutions in Canada; chairman of social science departments in the larger institutions; graduate school deans; heads of social science research organizations and institutes; and some 1,500 or more individual scholars believed to be interested.

A covering letter urges recipients to call the offerings to the attention of their colleagues and students.

(b) An announcement is published in the council's quarterly publication, Social Science Research Council Items, which has a circulation at present of about 5,100 copies.

(c) An advance release of the announcement is sent to the interested professional societies suggesting that it be published in their journals.

2. Persons apparently eligible to file applications under the announced terms of the fellowship and grant programs are furnished appropriate application blanks at their request. The council staff routinely declines to furnish blanks to persons who clearly do not meet the announced objective requirements with respect to age, previous education, permanent residence in the United States or Canada, and the nature of the project or study for which aid is sought; but the
staff does not refuse to accept applications from candidates who are technically eligible, even though they appear to be unlikely to receive awards.

3. Applicants are invited to name sponsors from whom letters of recommendation can be had (three in the case of most types of awards). In addition, the council staff frequently solicits written reports from other scholars whom it believes to be qualified to offer informed and honest judgment. The form used for references on fellowship applicants includes questions concerning both the applicant's character and his qualifications as a social scientist.

4. Between the closing date for filing applications and the time of meetings of the selection committees in March, an effort is made to arrange an interview with a member of the council staff with each candidate for a research training or faculty research fellowship who is not so obviously unqualified that favorable committee action is out of the question, or so far away that the time and expense required would be prohibitive.

In 1954 about 90 percent of all applicants for these 2 types of awards were interviewed. Applicants for undergraduate research stipends or for grants-in-aid of research (both of which involve much smaller sums than the fellowships) are not routinely interviewed by the staff, but the procedures are similar in other respects. When traveling throughout the country to interview candidates, staff members endeavor also to secure from teachers and associates of the applicants such additional insight as can be gained into their qualifications and personal characteristics. It is our experience that more incisive appraisals are often made in these conversations than in written communications. Long-distance telephone calls to mutually acquainted scholars of known insight and judgment often add significantly to our information about candidates.

5. In the case of applicants who have not completed their formal education, official transcripts of college and university records are required. Under the faculty fellowship and grant-in-aid programs, candidates are routinely asked to submit specimens of their publications or writings for scrutiny by the committees; the same is done under the other programs in individual cases in which such further evidence seems desirable.

6. About 2 weeks before the meeting of each fellowship or grant committee copies of applications and letters of reference are sent to each committee member for study. When large numbers of applications must be acted upon by a single committee, it has been our practice to distribute in advance copies of clearly inferior applications to 1 or 2 committee members rather than to all. This is done in such a way, however, that the member or members receiving such applications are not aware that they are the only readers and are therefore not prejudiced by the staff's action. Unless the committee member or members reading these applications immediately recommend their rejection, copies are made available for review by the whole committee.

7. Each committee meets for 1 or 2 days, depending on the volume of work to be done. Each application is taken up and voted upon after as much discussion as appears necessary. Usually a substantial proportion of applications are quickly rejected by unanimous consent on a first reading of the names in alphabetical order.

Members of the council staff who have interviewed candidates attend the committee meetings and are called upon to supplement by their comments the documentary materials. (In a minority of cases someone other than a member of the Washington office staff of the council interviews candidates in remote parts of the country but cannot attend the committee meetings. His comments are submitted in written form.) It can be said that committee members have, almost without exception, conscientiously studied the documents before coming to meetings; and that proceedings of the committees are in no sense a perfunctory ratification of selections made by the staff. In fact, it is a well established and frequently reiterated policy that the staff shall not attempt to prejudge the committee's decisions.

8. As quickly as possible after each committee meeting each candidate is notified by mail of the action taken. If an award has been recommended, the conditions governing tenure are enclosed, and must be agreed to in writing before the award may become effective.

9. Shortly after each meeting minutes are circulated to all committee members and to the president of the council.

Mr. Wormser. You do, then, consider the project offered by the applicant without regard to the man himself. In other words, you
might find an exceptionally able candidate and yet turn him down because of the project which he suggests.

Mr. HERRING. I wouldn't say that at all, no.

Mr. WORMSER. No, I am asking you that.

Mr. HERRING. Well, we are interested in the man and his promise and the way he goes about his planning of his own research, and I would say that his plan for study is a very important indication of his competence as a potential research man, as to what is researchable and what further training he needs. But I would not use the term "projects" in this context, because this is not the financing of projects. It is the financing of men and women, individuals.

Mr. WORMSER. Mr. Herring, I don't mean to be obscure in any of my questions, and my reason for asking that is again the criticism that has been made, that has various facets, that an organization of your kind does to a certain extent exercise control over the direction of research. Now, if you had an exceptionally able man, would you turn him down merely because you did not like the nature of the project which he suggested? Or would you perhaps try to turn him to another type of program?

Mr. HERRING. As I say, the judgment is on the man and his development. And if you want a pointblank answer to the question, "Would we turn a man down because we don't like his project?" I would say "No." The answer isn't a particular project. The only way I can answer your question responsively, Mr. Wormser, is to say we are interested in the individual and his growth and his training and how he can become a better worker in his professional field.

Mr. WORMSER. He suggests the subject for research. And you may think that is an entirely inadequate or impossible or useless piece of investigation. What do you do in a case like that, where he is an awfully good man?

Mr. HERRING. Well, in a case of that sort, you see, there is really an internal contradiction there. If he is an awfully good man and has an awfully bad subject, I don't see how he could be an awfully good man.

Mr. WORMSER. You may think it is awfully bad.

Mr. HAYS. Well, Mr. Wormser, we are getting back to thought control there, aren't we? You cannot sit here and pick out any witness's thoughts as to good or bad. There has to be some standard.

The CHAIRMAN. As I understand it, Mr. Wormser, if you will permit me to clarify the question, from the brief time that I have had an opportunity to assimilate it, we have a very good man, recognized as capable. He comes up with a project. There might be a difference of opinion about the project. He thinks it is good. Another good man, Mr. Herring, would not think it a good project. There is a difference of opinion. Does Mr. Herring's view with reference to the desirability of the research project prevail, or that of the man who initiated it?

Mr. WORMSER. Merely to pinpoint what I meant: Is the emphasis upon the man or upon the subject?

Mr. HAYS. Of course. But you are getting into a field where I don't think anyone can give you a specific answer to a general question. Suppose someone came up with a project to do research into the fertility of ostrich eggs.
Mr. Koch. But you may exercise thought control by refusing to let him go ahead with it.

Mr. Hays. You can tell him to go ahead with it if he can find somebody to finance it, but you do not happen to feel you should. I think you have to have some responsibility as to how you hand out this money. Or else if you want us to pass a law saying you have to give the money to the first 150 applicants who come in, that is about the only other way you could do it.

Mr. Wormser. I want to explain my question. I am just interested in the methods you used. I am not trying to attach any significance to them.

Mr. Herring. I would like to spend all the time on this that you will permit, because I think it is important to clarify it. We are talking now about fellowships. And in the administration of fellowships, we have committees of men drawn from universities who are competent to deal with the fields under consideration. So it is a committee judgment. That is one thing.

Secondly, we are thinking of young men and women in their professional training. We are not thinking of projects. So we want to know what the previous academic record has been, what further training is needed, and what research interests the man has. So that we are not passing judgment on whether this project or another is good in the abstract. We are looking at the man's interest, and we want to see what will help him most.

Now, I will tell you one proposal of a candidate that rather attracted my attention. As I say, I don't sit on these committees, but I was rather interested in this, as a human interest facet. We heard of a young chap at the University of Texas who had thumbed his way to the eastern seaboard because he wanted to look at some of the records that Charles Beard had looked at when he wrote his Economic Interpretation of the Constitution. And we were interested in this young man as a research man. He got a fellowship. But what impressed me there was the eagerness and the zest and the energy of this chap, who was thumbing his way to archives. I have heard of people thumbing their way to various people, but the picture of a young fellow thumbing his way to the archives in order to have a look at the record, I thought was a rather interesting picture.

Well, now, may I go back to this interest in the individual? Because fellowship is one thing, and it is a long story. We have directory of fellowships that we can offer as an exhibit, giving you the record of the over 1,200 people over the years who have had these fellowships, but mark you, that is a 30-year period. So that keeping the sense of proportion again, this organization is dealing with a very small number. I could not give you the total number of graduate students in the United States in these fields. I tried to get it, but we are not sufficiently organized here from the national standpoint even to have figures of that sort.

But there are other ways of helping the individual. For many years we have had a very modest grant-in-aid program, $25,000; up to date, that has been the size of that sum, and we have a little bit more for next year.

Grants-in-aid to help people complete some work engaged in are allocated by a committee, again, of competent scholars, and they do the best they can in dividing up $25,000 in $500 or $1,000 grants.
So you can see how far that money goes. We really need more money for that sort of thing; and we have a bit more money for next year, and I hope I can scratch around, and I hope we can find some more foundations for this grant-in-aid, because it is very helpful indeed to get that few hundred dollars to do the final typing or consult the documents or get the manuscript ready for publication.

Now, within the last few years we have had summer seminars. The idea there is to find out whether there are a number of people, younger men again, who have some common research interests. They want to improve some method, or they want to discuss some theory in their field. What normally happens?

Well, the summer recess, as the traditional period when the scholar could do further study and catch up on his reading, and so on, is fading. Economic necessity, balancing the family budget, comes into it, so that more and more you find professors teaching in summer school. Well, now, we have a little grant that enables us to offer to research men who participate in these seminars the equivalent of what they might otherwise get if they taught summer school, a few hundred dollars, and that enables them to work together through the summer and talk through some problem.

Mrs. Pfost. Dr. Herring, why don't the foundations just divide up their money among the universities and colleges of the country and let them spend it, instead of setting about it in this way?

Mr. HERRING. I guess the quick answer to that would be that there isn't enough money. If you took all the colleges and universities, you would have about 1,700 institutions, and it is awfully hard to say with precision just how much foundation money goes into the social sciences, but the best figure I can arrive at by consulting annual reports, and so on, would be: somewhere in the neighborhood of $12 million.

Mr. Koch. Annually?

Mr. HERRING. Annually, yes. And you would divide $12 million, let us say, by 1,700 institutions, and you would come out at about $7,000 per institution. In other words, you could divide and dissipate. You could escape responsibility. You could say, "Well, we will just leave it to the other fellow and spread it thin." Or you can face up to the difficult decision of saying, "Well, this institution is doing better work, in our judgment, than the other institution."

The Chairman. But, Doctor, if the idea of working through the established universities, as raised in the question by Mrs. Pfost, should be favorably considered by the foundations, do you think it is logical to conclude that they should adopt purely an empirical attitude and divide it evenly among the 1,700 colleges of the United States? That would not be the method by which they would go about it; would they?

Mr. HAYS. Would you permit me to interject there? If they did not, that would be about the only way in the world they could keep from being investigated at some time in the future by somebody who said they were not dividing it up the way it ought to be. The people who did not get it would be the people complaining; would they not?

The Chairman. They have made substantial grants for buildings and for the general funds of educational institutions.

Mr. HAYS. But $7,000 a year would not build a Chic Sale for them at today's prices.
The CHAIRMAN. But, in the first place, when they make a grant to a college or university, that institution has to meet certain requirements, as I understand it, that show that it is in a position to utilize the money advantageously.

Mr. HERRING. Mr. Chairman, that is where the money goes. It goes to universities and colleges. But some foundations have to make responsible decisions as to which ones.

The CHAIRMAN. But do you not think the suggestion is not quite fair, that they would be put in a position where they would have to divide the money between the 1,700 colleges of the United States?

Mr. HERRING. I confess I just offered that by way of emphasis. I concede you would not want to see them do that.

Mr. WORMSER. Do you think your organization is more capable of selecting these desirable fellows than their own universities?

Mr. HERRING. I think the first point to emphasize there, Mr. Wormser, is that, as I recall my days at Harvard, there were more fellowships at one institution there—you know. They had scores of fellowships. I wish we had it here with us. There are so many scholarships and fellowships available through so many organizations and so many requests and endowments over the years that it is a book about that thick. In other words, we have to get this thing in perspective again. There are just scores and scores of ways for able young men to get fellowship and scholarship support; and most of it is through our colleges and universities.

Mr. HAYS. Dr. Herring, right there: The point is that you do not handle all of the fellowships or any major part of them in the social science field; is that not true?

Mr. HERRING. That is right.

Mr. HAYS. You handle a very minute number, and various colleges and universities have some of their own, and the foundations perhaps make some directly. I don’t know.

Mr. HERRING. That is right. The foundations would make a grant to an institution, perhaps four fellowships. The institutions have an array of scholarships and fellowships. The point I would like to emphasize, that I think might be helpful here, is that our programs in fellowships offer opportunities perhaps to people who are not at some of the institutions that may have larger funds. It is a national competition, whereas the fact is that most young people get their fellowship support from the colleges and universities. And we have a total of around 150 appointees a year for the whole United States.

Now, just put that little corporal’s guard in the perspective of the phalanxes of American students, and you can see that it is a very limited thing. I wish we had substantially more. I think it is very important that we do have greater fellowship resources. I think it is rather wasteful when we have twice as many qualified people applying as we can take care of.

The CHAIRMAN. Do you have any other questions?

Mr. KOCH. You were going to continue, Mr. Herring.

Mr. HERRING. I am still hammering away at helping the individual through fellowships.

Mr. GOODWIN. Do you ever have to meet the criticism that favoritism is shown? If some bright young fellow gets an award, and somebody discovers that he is a nephew of Dr. Black at Ivy College,
who holds down the Chair of Sociology, and somebody says, "Uncle William may have put in a word for him"?

Mr. HERRING. No, sir, I can't think of any such cases.

Mr. GOODWIN. You keep very clear of that, do you?

Mr. HERRING. You see, it is kind of competitive. In this spirit of competition, you have these self-correcting things, you see. You have people on the different committees from these different institutions, and there is a good deal of competition among our various colleges and universities. So you can imagine that Professor Y from Siwash keeps an eye on the situation, and there is a certain competitive element there that is a protection against the kind of dangers you refer to.

Well, there is still another one of these summer programs we are getting under way. That is to present to groups of people who share some interest an opportunity to get a little better research training. We had an experience that was encouraging along that line, in the field of mathematical training, not statistical training but mathematical training. And we had a seminar, a training institute, if you will, that brought together 40 or more people. And the summer was spent in getting a very intensive training in mathematics, so that men could apply that in their work as they saw fit later on.

Now, there may be some other training methods that we can work out, and offer this opportunity for men to spend the summer recess at that sort of thing.

Mrs. PROSTR. Dr. Herring, do you concentrate on the so-called empirical research, or the quantitative, to the exclusion of the other kinds?

Mr. HERRING. I could perhaps indicate the range of topics. The answer is "No." We do not. But I would like to develop that thought a bit by giving you some illustrations of the varieties of topics.

And I will say, Mr. Wormser, that here we are talking not about fellowships and the training of the young man as he goes forward, but we are talking about this grant-in-aid program, where people are further along. And it might be of interest to the committee if I just gave you some illustrations of the sorts of things.

Mr. WORMSER. Does your answer "no" apply only to the grants-in-aid, or all these fellowship grants? You said "no," that you do not specialize in empiricism.

Mr. HERRING. That is right. I want to come to this facility research fellowship that has been mentioned. I think you might be interested in some further light on that.

Here is a man at Mount Holyoke: Study of the Influences in Roman Life and Law. Here is a professor at the University of Toledo: Study of the Latin American Philosophy of Law. A man at Northwestern: Preparation of a Revised Edition of a Guide to the Study of Medieval History. Here is a man at Louisiana State University: History of Political Ideas.

Here is a professor of sociology at the University of Notre Dame: Theoretical Study of Ethnic Groups. Another man, at Wells College, Research on the Organization of Medieval Trade. A man at Oglethorpe: Study of the Conditions of Political Freedom. And so on.
Now, in our annual report each year, we have a list of the topics and names of individuals. It is all spread in the record here, and if I may offer as an exhibit, Mr. Chairman, copies of our annual report, you would find this spelled out in the variety of institutions and so on indicated.

The CHAIRMAN. It will be accepted.

(The Social Science Research Council Annual Report, 1952–53, was filed for the information of the committee.)

Mr. HERRING. Another way the individual is helped is through the conferences that we sponsor from time to time. We had quite an interesting conference at Princeton, a meeting place for some 60 or more people over the country who had some kind of special interest in Africa as an area. And that brought together people who could sit around a big table and say “All right. This is what I am interested in.” And they could exchange views that, it seems to me, would fall in this same category of encouragement of the interests of individuals. We have a study Mr. Sibley did of Aid to Individuals. We made a study of the problems there, of getting financial support, and if you would like to have that as an exhibit, that also could be offered for the record.

I have just a seven-line statement that I rather like as expressing the spirit of this thing. It was written back in 1926, but I think it reflects the spirit we try to adhere to.

Nothing is more certain that that individual insight, flash of genius, brilliant statement of a problem, a patient pursuit of an obscure trail to a great truth, will be an indispensable part of the development of the social sciences if they are to attain the goal toward which we all look. The whole purpose of the council will be lost if we cannot aid those creative spirits, if we cannot provide for them better facilities, if we cannot help them in the discovery and solution of problems.

I just offer that, going back many years, as a statement of the faith that we have that if you can help the individual develop, you have come a long, long way.

Mrs. PFosT. Dr. Herring, right there: How many social scientists would you say there are today? And could you tell us where they are employed?

Mr. HERRING. Well, I could offer you an estimate. If you take the membership of the associations in these fields, it adds up to around 40,000. Now, that figure may err on the large side, because there are some duplications. Some people belong to more than one association. Our chairman belongs to two of the associations, for example, so he would be counted twice in this figure of 40,000. And there are some that belong to the associations but are not actively engaged in the work, though well disposed toward the field, you see, and holding membership.

So with those qualifications, I would say roughly there are probably about 40,000. There are some people, of course, that are active in these fields but don’t belong to the association; however, I think that would probably be the exception.

Mr. Goodwin. At this point, what does social science embrace? I assume it is sociology, philosophy—

Mr. HERRING. Some aspects.

Mr. Goodwin. Economics—

Mr. HERRING. Economics, yes.
Mr. Goodwin. Political economy.

Mr. Herring. That is right. Anthropology, statistics. We feel that the seven associations that I mentioned before are those that are most directly concerned, and then there are others, so that would be economics and political science and anthropology and statistics and psychology and history.

Mr. Goodwin. I would think history would be more of an exact science. History is a statement of facts, things that happen. On the 16th day of June, the gentleman from Tennessee presided over a hearing of the Banking and Currency Committee. Certain things happened on a certain day. I am curious to know why that comes to sociologists.

Mr. Hays. It comes in this way, if you will permit me to interject.

Mr. Goodwin. I would just as soon have your opinion as the doctor's.

Mr. Hays. I am not trying to be facetious, either.

Mr. Goodwin. Neither am I.

Mr. Hays. Ten people witnessed a hearing of the House of Representatives, and all 10 of them write down to the best of their ability what they saw. You might get considerable variation in the historical account of it. And that is why history, although apparently it would be in some phases—I am speaking as one who has done research in it—is not an exact science. You cannot tie down specific dates, everything about it, because some of the individuals who observed or wrote about it saw it one way, and others another way, so there are certain areas that you have to evaluate.

Mr. Goodwin. I am a little at a loss, here. My few associates have had experience in the teaching field. And if Mrs. Pfost has not, she should have had.

Mr. Hays. I did not mean to take the answer away from you, Doctor. I would just be interested to see whether you agree generally.

Mr. Herring. That indicates that it is a subject that not only here but elsewhere one can discuss. As far as we are concerned in the Council, we include history as one of the social sciences, but it also is included as one of the humanities, and I do not think you can draw any precise line. There are historians and historians. Some would be concerned more with the chronicle of dates, and some would be concerned more with efforts of interpretation. But we feel that the time factor is terribly important and the sense of perspective that you get through approaching matters historically. And over the years there have always been historians who have found it congenial to work with their colleagues in other fields. So that we do not treat it as a matter that you settle in either/or fashion. The historian may take up economic history as a special field. Some historians go at matters more in terms of a literary approach, an artistic approach.

Mr. Goodwin. That brings up one question I had, another one perhaps to expose my ignorance or the fact that I may not have followed closely the prior hearings. But you mentioned in your statement the empirical approach and the rational. Now, you say that the empiricist says, "Look at the record." Now, I can grasp that. I know what that means. Can you put into easy English and into a phrase equally succinct a definition of the rationalist?

Mr. Herring. Well, Mr. Goodwin, I will try, but I didn't bring the rationalistic approach into this, so I don't think I can qualify too well.
But what I think we are talking about: If you are going back to the rationalistic school of philosophy, and that is how this got in, that was a school of thought that emphasized the capacity of the human reason to grasp reality directly, through ratiocination rather than through sensation. It is a little bit mystical, perhaps, but there was an important school of thought. So most of us sort of compromise on saying, “Experience has been quite a teacher, and we will be as rational as we can, but we won’t worry ourselves about a philosophy of knowledge that gets into these intricacies.”

Now, that is really something for the seminar room rather than for this hearing room, I suppose.

Mr. Wormser. Could I interject something there? Because this may help Mr. Goodwin. In the sense that empiricism has been used here, we have been using it in relation to research.

Is it not essentially and plainly the inductive method as against the deductive method? And before you answer, I want to make one statement in regard to your statement, in which I think you rather gave the impression that the staff or Mr. Dodd or someone connected with the committee meant to derogate empiricism as a method of inquiry. I want to assure you that the staff is fully aware that empiricism is not only desirable but a necessary component of scientific research. We quite realize that. Our only concern in that area is whether there has been an excess, in the sense that empirical studies which did not take into account what you might speak of as some of the premises in a sound syllogism. But to illuminate Mr. Goodwin further, aren’t we talking about primarily research methods? And there, isn’t it induction against deduction?

Mr. Herring. I tried to develop that in my statement. I don’t think I would agree with that. I tried to spell it out in the statement. I think that would be an oversimplification.

Mr. Wormser. An oversimplification?

Mr. Herring. Well, I don’t see quite, Mr. Chairman—pardon my saying so, but there is a question that Mrs. Pfost raised some time ago, and I haven’t gotten through with it. We are getting over to philosophy of knowledge, and she was saying, “Where are these people living?”

You remember, she said, “Where are these social scientists, and where are they employed?”

So, if I may go back to that original question, I would like to do so. Well, they are employed in our universities and colleges in teaching, and we may think of that first. But I want to emphasize that while you cannot say with precision just what percentage are employed outside of our universities, I think it would be reasonably accurate to say about 40 percent of these people are engaged in activities where they apply their training as social scientists not in the classroom but in the market place. They are employed by business, in market analysis. They are employed by Government, and a whole host of agencies where economic analysis and other forms of analyses are necessary. So I do not want you to think of this group as strictly a professional group. They are engaged in many businesses and public agencies.

The Chairman. If I might interject, with reference to procedure, it is now 4 o’clock, and some members of the committee have some engagements, and some work has to be done in the offices.
Mr. Koch. I think Mr. Herring is willing to be here tomorrow. As far as we are concerned, we recognize that we have a real expert as a witness today, and also he is a very agreeable witness to deal with, and we feel that if we go into these various criticisms with him thoroughly, maybe the examination of succeeding foundations may not be so long. And we would like very much to get the benefit of all of the education that he can give us on this. All of which adds up to this: that I would like to examine him for a couple of hours tomorrow at least. That is why we can't finish with him tonight.

The Chairman. It is convenient for you to be here tomorrow?

Mr. Herring. Quite convenient. And if it is as pleasant an experience as today, I would be delighted.

Mr. Hays. Then you have 2 hours of questioning?

Mr. Koch. Yes.

Mr. Hays. We had better plan on being here all day, then.

The Chairman. I think you have made a very splendid presentation. I know you are a man of very great ability, with a splendid background and training.

There was just one sentence in your statement that I thought was out of cast, Doctor.

Mr. Herring. I would appreciate knowing what it is.

The Chairman. You have made an analytical study of the statement that was presented by a member of the staff. One is impressed by it. But what appeared to me to be out of cast in your statement was your characterization of the individual.

For example, beginning with the last sentence on page 5:

The most charitable explanation that comes to mind is that they speak from ignorance rather than malice.

That is not like you.

And the other is on page 3, referring to the work of the staff as—

symptomatic of a troubled state of mind on the part of a few persons • • •

I do not think that is characteristic of a man of your position and great capacity. Because you are interested in analyzing what was presented, and not analyzing the individuals who presented it. And I rather regret that you permitted those two sentences to creep into your statement.

As you grow older you become more understanding of people who differ, and I seldom take exception to people differing with me.

The committee will meet in this same room tomorrow morning at 10 o'clock.

Mr. Hays. May I make a minute statement about Dr. Herring's statement?

I would just like to compliment you on your statement, Doctor, and say that I was especially pleased to see that you took a positive approach to this problem rather than a negative approach; that you did not spend a lot of time quoting a lot of paragraphs in answer to a lot of allegations that have been made about the foundations. And I do not really refer so much to the staff's reports as I do to some of the witnesses who have made some fantastic charges, which have failed to stand on their own feet, because of the absence of any fact. I am very happy that you did not waste any time refuting those things, which had already fallen flat on their face, but that you did take a positive approach.
Now, I am sure that from what little I know about you and have been able to find out, you did not mean to hurt anybody's feelings by any statement that you made, and as far as saying something about someone's troubled state of mind, I do not feel there is any implication involved there. As a matter of fact, I was rather amazed to notice that one of the great dailies picked up a phrase that I had more or less pulled out of thin air. I called some of this testimony "a plot psychosis," in which some people apparently could see a great plot on the part of some of these foundations to reorient the whole social-science field. And I certainly meant no implication by that. It was just an effort on my part to try to describe the situation as I saw it. And I am certainly not trying to put words in your mouth. And I feel, for the benefit of the staff, Mr. Reece, Mr. Goodwin, or anyone else, that the words "troubled state of mind" were simply an attempt on your part to describe the picture as you saw it, and that you certainly did not mean any implication or bad connotation or unfavorable impression to be left.

The CHAIRMAN. I would not take exception to being said to have "a troubled state of mind." A man who does not have a troubled state of mind in these days is abnormal, I think.

The committee stands adjourned until tomorrow morning at 10 a.m. (Whereupon, at 4:10 p.m., the hearing was adjourned until 10 a.m., Thursday, June 17, 1954.)
TAX-EXEMPT FOUNDATIONS

THURSDAY, JUNE 17, 1954

HOUSE OF REPRESENTATIVES,
SPECIAL COMMITTEE TO INVESTIGATE
TAX-EXEMPT FOUNDATIONS,
WASHINGTON, D. C.

The special committee met at 10 a.m., pursuant to adjournment, in room 1301, New House Office Building, Hon. B. Carroll Reece, chairman of the special committee, presiding.

Present: Representatives Reece, Goodwin, Hays, and Pfost.

Also present: Rene A. Wormser, general counsel; Arnold T. Koch, associate counsel; Norman Dodd, research director; Kathryn Casey, legal analyst; John Marshall, chief clerk.

The CHAIRMAN. The committee will come to order, please.
You may proceed, Mr. Herring.

TESTIMONY OF PENDLETON HERRING, PRESIDENT, SOCIAL SCIENCE RESEARCH COUNCIL, ACCOMPANIED BY PAUL WEBBINK, VICE PRESIDENT, SOCIAL SCIENCE RESEARCH COUNCIL, AND TIMOTHY PFEIFFER, ATTORNEY, NEW YORK, N. Y.—Resumed

Mr. HERRING. I am very happy indeed that I can go forward, calling to the committee’s attention the facts and principles that seem to me relevant and that I hope will be helpful in this inquiry.

There were one or two points raised by members of the committee yesterday that I would like to go back to, because there was insufficient time to develop the interesting points that were mentioned.

The first point relates to Congressman Hays’ inquiry about the Soviets and their attitudes toward the social sciences and the foundations, and the second point relates to the interesting line of comment opened by Congressman Goodwin in his references to history. So if it is your pleasure, I would like to take up those two points and proceed.

I have before me, and I have copies that I would like to place in the hands of the committee, a brief memo that was prepared by a Russian specialist, a man who spends his time reading all that we can get out from behind the Iron Curtain about what the Russians are doing. He wrote this memo, and there are a few paragraphs that I think are interesting and relevant, and you have the whole thing before you. So I will just read 2 or 3 paragraphs.

This memorandum is meant to implement any suggestion to you that the Reece committee might be interested in learning something of how the general problem it has under investigation is treated and viewed behind the Iron Curtain.
In drawing up this memorandum I have not undertaken a systematic survey, but have merely drawn on my notes and on items which were easily recalled by me or my colleagues. A systematic survey of Soviet sources would yield an enormous number of violent attacks on the foundations and the accessory agencies in Communist sources.

FOUNDATIONS AND ACCESSORY AGENCIES BEHIND THE IRON CURTAIN

By way of background the committee may be interested to know that in Communist-controlled countries the existence of organizations like the great American foundations and the accessory agencies is unthinkable. Where they existed at the time of the Communist seizure of power they were always among the first institutions to be broken up and to have their funds confiscated by the Communist dictatorship. This is because the Communists recognize that such funds and agencies are sources for centers of free thought and opinion which is always inimical to Communist rule. In the Soviet Union, for example, professors, scientists, and other scholars are not permitted to organize associations like the American Historical Association. They may belong only to trade unions and to officially sponsored governmentally organized institutions such as the Academy of Pedagogical Sciences.

Not only does the Communist world look askance at the existence of foundations and agencies of the accessory type in its own domain, but it also takes a very hostile view to those which exist in the free world and particularly those which operate in the United States.

Then I skip to the next paragraph, on page 2.

The rule of the foundations on the American scene is not too well understood by Communist propagandists, however, and they concentrate most of their fire on what the Reece committee has defined as the "accessory agencies." Our great educational associations, for example, are constantly attacked in Soviet educational journals as instruments of capitalism, spreading its ideology, teaching hostility toward the Soviet Union and toward communism, and misleading our youth by "reactionary" teaching methods. To cite another example, from odd notes at hand which could be matched many times over through a careful survey, we might consider the American Economic Association.

In a book entitled "Ideologists of the Imperialist Bourgeoisie," published by the Academy of Sciences of the U. S. S. R. in 100,000 copies, the American Economic Association is attacked for allegedly fomenting propaganda designed to incite a new world war against the Soviet Union. The members of the association are described therein as "bourgeois economists (who are) in the service of monopolistic capital" and whose theories are designed solely for the purpose of defending the American business interests of their "capitalist masters."

Then there is further data in the following paragraph, but perhaps we could skip to the middle of page 3.

SOCIAL SCIENCE IN THE SOVIET UNION

Since the Reece committee appears to be particularly interested in the support given by the foundations to social science in the United States, they may wish to know that in the eyes of Communist leaders social science is regarded as one of the worst and most dangerous enemies of Communist ideology and Communist expansion. Indeed, so strong is the feeling against sociology that it is not permitted to teach it as a subject in the Soviet Union. Sociology is defined there as a strictly "bourgeois" and "capitalist" science of society and is regarded by the Soviets as directly opposed to and contradicting Marxism. Consequently they forbid the teaching of sociology in Soviet Russia and have substituted Marxism-Leninism instead as the only "true" science of society. Communist hostility to sociology is reflected in the fact that the Soviet press has in recent years been full of attacks on American sociology, and in addition at least two special books on the subject have been put out by official Soviet publishing houses. One of these, issued in 1951 by the State Political Publishing House of the U. S. S. R. in 100,000 copies, bears the title "American Bourgeois Philosophy and Sociology in the Service of Imperialism"; the other, was issued in 1952 by the Academy of Sciences of the U. S. S. R. in 10,000 copies under the title "Contemporary American Bourgeois Sociology in the Service of Expansionism."

This latter is apparently a revised edition of a book by the same author published under a slightly different title in 1949, and at the time severely criticized.
in a review in Culture and Life (Kultura i Zhizm), the official publication of the Department of Propaganda of the Soviet Communist Party. The criticism held that the author was "too easy" on American sociologists and failed to expose the full degree to which American sociologists play "the odious role of servants and lackeys to the imperialist *** capitalists of the United States." You may rest assured that on the second time around this author did not fail to drive home the point.

The individual American social scientists brought under attack in these polemical Soviet writings read like a Who's Who of American sociology and social science in general. Among them are many men who were prominent in the councils of the foundations and the accessory agencies or who have received support from them.

But I think we can skip the names of individuals, however, since one name has already been brought into the discussion, and we might turn to page 5, where at the beginning of the second paragraph, I read:

Since the name of Stuart Chase has or will probably come before the committee his name might serve for one last illustration. In one of the Soviet books cited above Chase is violently attacked as a long time spreader of "reactionary" ideas, even in the time when he was regarded as a liberal in the thirties. It is charged by the Communist press that after the recent World War he openly joined the "shrill chorus of American atom-bombists" in their "openly Fascist" attacks on world peace. Specifically, he is accused of "fulfilling the orders of monopolistic bosses" by preaching the saving of capitalism through resort if necessary to war and atomic destruction.

Since the report by the staff to the Reece committee seems concerned about the possibility that the foundations and the accessory agencies have fostered changes in the basic American way of life, it might be appropriate to conclude that this is hardly the Soviet view. On the contrary, they see American social scientists as "propagandizing the antiscientific idea of America's uniqueness" and of spreading the "false" idea that under American capitalism there are such things as "enduring prosperity" and "a harmony of interests between labor and capital."

Mr. Wormser. May I interrupt you just to say that in this memorandum, it is stated that the Soviet Union has a hostile attitude toward United States foundations. I suppose you are aware of the fact that in the Cox committee hearings it was brought out rather conclusively that the Communists had by direct order from the Kremlin determined to infiltrate American foundations for their own purposes, and there is evidence that to some extent they had been successful. That doesn't look like a hostile attitude in that sense, does it? They are very ready to use the American foundations when they can for their purposes.

Mr. Hays. Well, I would say that doesn't indicate any friendly attitude. They don't have a friendly attitude toward a lot of American institutions that they would like to infiltrate.

Mr. Herring. It has been charged that they have been trying to infiltrate the American Government. I wouldn't interpret the American Government as friendly.

Mr. Hays. If you wanted to use that type of logic, you could probably arrive at the conclusion that because at the same day the staff attacked the Kinsey report, the Soviets attacked it, and the same day the Communists attacked empirical research, the staff attacked empirical research, that the Communists and the staff are against empirical research, and if you wanted to arrive at some kind of an analogy you could say there was some sort of a liaison between the staff and the Communists.

The Chairman. I think the gentleman is in error when he says the staff attacked the Kinsey report. As one member of the committee,
I don't have much interest in the Kinsey report. Any interest that
the committee might have in the Kinsey report arises out of whether
that was a desirable undertaking for a foundation, which is quite a
different matter. In my observation, if I may make one, with reference
to the attitude of Soviet Russia toward foundations, I am not in any-
wise surprised, myself, because Soviet Russia is against private
enterprise of all types. Everything is centered in the government
there, both major industrial activities, and, of course, as we have
learned, to our great regret, practically all research and ideological
forces are directed by the government. So it is quite understandable
that the government of Soviet Russia would not permit the establish-
ment of great foundations which would be free of government
influence.

Would you mind identifying for the record Alex Inkeles?

Mr. HERRING. Alex Inkeles is on the staff of the Russian Research
Center at Harvard University. He has published studies of Russian
problems, and he is recognized as a leading specialist in the field of
Russian studies.

The CHAIRMAN. But with reference to the question raised by Mr.
Wormser, the mere fact that Soviet Russia is against private founda-
tions, as it is against all other types of private enterprise does not
mean that Soviet Russia might not be desirous of utilizing any forces
in America or elsewhere which might exist, to their advantage, if it
was possible to do so—without indicating that they are able to do so,
that would be an illogical conclusion.

Mr. HAYS. That raises an interesting question in view of what Mr.
Wormser said. Does the staff have any evidence that they have in-
filtrated in these foundations?

The CHAIRMAN. His question was based altogether on the findings
and report of the committee with which Mr. Goodwin and I worked.

Mr. HAYS. But there have been charges made again and again in the
presence and otherwise and even in the Congressional Record that
there are Communists in these foundations. But I haven't yet seen the
staff bring out any evidence of it. I think it is time that the staff either
said they are there and are going to bring them out, or else they say
they are not there. We have these insinuations and allegations with-
out any proof.

Mr. WORMSER. I am not insinuating or alleging anything. I am
referring only to the Cox committee report which showed conclusively
that there had been Communist penetration in the foundations. In
fact, two substantial foundations have lost their tax exemption, be-
cause they had been sufficiently penetrated.

Mr. HAYS. Then they are not foundations anymore. But the ones
I am talking about are the ones still in existence. Charges were made
as to the Ford Foundation. Have you any evidence that there are
Communists—

The CHAIRMAN. I assume you are referring to my speech. I made
no such allegations myself. I made allegations that undesirable in-
fluences were to be found in the foundations, but not that there were
Communists there; or that at least is as I recall my speech.

But that doesn't help us get along with the hearings.

Mr. HERRING. Mr. Chairman, I think I could be most helpful by
commenting on some of the things I know something about, and I
have just brought this in to sharpen our sense of contrast between our
great free institutions here and the way they go about things.

The CHAIRMAN. I think that is a very fine expression you are mak-
ing. There are no free institutions in Russia of any type, character,
or description, whether educational, whether philanthropic, or whether
industrial, financial, or any other way. There all power is vested in
the Government when it desires to exercise it.

Mr. HERRING. I just wanted to nail that point down.

The CHAIRMAN. So there is nothing unusual, as I see it, in Russia
taking the attitude it does toward foundations within the borders of
Russia.

Mr. HERRING. Now, may I follow up with just one additional point?
And then I would like to come back to the good old United States of
America, if I may. But just one other point on this Russian side.

I have here an article that appeared in Culture and Life, this same
Soviet Russian publication, the 21st of June 1949, by M. Rubenstein.
The article is entitled "Science in the U. S. A. in the Service of Monop-
olies and Militarists." And there are just a few sentences from this
article that I think are of particular interest. This is a Russian speak-
ing now, and I am quoting:

The American press has currently been giving a great deal of lip service to the
"independence" and "impartiality" of science in the United States, which allegedly
is outside the realm of politics. But one needs only to become familiar with the
incontrovertible facts of reality to dispel this myth of the impartiality and inde-
pendence of American science and to make it more than apparent that science in
the United States serves as an obedient instrument of the forces of reaction and
the capitalist monopolies that are militarizing it—putting it at the service of its
aggressive aims.

Then he goes on to say:

A considerable role in the American, scientific-research network is played by
universities and colleges which prepare cadres for all scientific institutions and
which at the same time are centers of theoretical research.

Due either to a profound fallacy or by conscious design, a widespread concep-
tion is being circulated in America that science in the universities as distinct
from research work done in the laboratories of the industrial corporation is
"independent" of the policies of the monopolies.

It will suffice to mention that 200 of the largest United States corporations
control the governing board literally: academic councils of almost all the Ameri-
can universities, which, in consequence, are controlled directly by Wall Street.

And this Soviet author continues:

The monopolies' influence on the social science is displayed with cynical candor.
Not only do the monopolies object to the professors' dealing with current
problems; on the contrary, they demand that this be done—but on the condition
that their studies and all written and oral statements must clearly be aimed at
defending the interests and policies of the monopolies. Anyone disagreeing with
this policy is ruthlessly driven out and, in effect, blackballed.

And just one final sentence. I can't stand much more of this
myself.

Long ago Lenin has shown that there can be no "impartial" social science
in a society torn by class struggle, that in one way or another, bourgeois science
always defends wage slavery.

And, quoting Lenin's work—and mark you, I suppose a reputable
Russian author has to work in a quote from Lenin. So he has one,
to make it legal.

To expect science to be impartial in a wage-slave society is as silly and naive
as to expect impartiality from manufacturers on the question of whether work-
ers' wages should be increased by decreasing the profits of capital.
That is from Lenin’s Works, volume 19, page 3.

At present, when the United States has become the primary force in the imperialist camp, the social sciences in America have been placed completely in the service of imperialist expansion.

If anyone wants to have this, they are welcome to it.

The Chairman. Would you like to put it in the record as a part of your remarks?

Mr. Herring. We would like to do so.

The Chairman. Without objection.

(The document referred to is as follows:)

**SCIENCE IN THE U. S. A. IN THE SERVICE OF MONOPOLIES AND MILITARISTS**

(By Mr. Rubinshtein in Kul’tura i zhizn’, Culture and Life, June 21, 1949, p. 4)

The American press has currently been giving a great deal of lip service to the “independence” and “ impartiality” of science in the United States, which allegedly is outside the realm of politics. But one needs only to become familiar with the incontrovertible facts of reality to dispel this myth of the impartiality and independence of American science and to make it more than apparent that science in the United States serves as an obedient instrument of the forces of reaction and the capitalist monopolies that are militarizing it, putting it at the service of its aggressive aims.

Despite the extreme diversity and chaotic state of the scientific-research network in the United States, one can delineate three basic and definitive groups: Scientific-research laboratories operated by industrial corporations, the universities, and scientific institutions run by the government. Each of these groups of scientific-research institutions is completely dependent on the capitalist monopolies, and on the policies of finance capital prevailing in the United States.

Clearly, it would be laughable to expect scientists who are directly subservient to the monopolies to be impartial toward and independent of the policies of these monopolies. It should be noted that even in the most specialized areas of research these scientists do not have the right to publish their own works unless permitted and censored by the appropriate corporation.

A considerable role in the American scientific-research network is played by universities and colleges which prepare cadres for all scientific institutions and which at the same time are centers of theoretical research.

Due either to a profound fallacy or by conscious design, a widespread conception is being circulated in America that science in the universities as distinct from research work done in the laboratories of the industrial corporations is independent of the policies of the monopolies.

It will suffice to mention that 200 of the largest United States corporations control the governing boards literally: academic councils of almost all the American universities, which, in consequence, are controlled directly by Wall Street.

The monopolies’ influence on the social sciences is displayed with cynical candor. Not only do the monopolies not object to the professors’ dealing with current problems; on the contrary, they demand that this be done—but on the condition that their studies, and all written and oral statements must clearly be aimed at defending the interests and policies of the monopolies. Anyone disagreeing with this policy is ruthlessly driven out and in effect, blackballed.

In carrying out the instructions of their masters, university presidents make reactionary speeches on burning political and economic issues—and then these speeches are widely circulated by the press and radio, which are in the hands of these same monopolies.

Long ago Lenin has shown that there can be no “impartial” social science in a society torn by class struggle, that in one way or another, bourgeois science always defends wage slavery. “To expect science to be impartial in a wage-society is as silly and naive as to expect impartiality from manufacturers on the question of whether workers’ wages should be increased by decreasing the profits of capital” (V. I. Lenin, Soch., vol. 19, p. 3).

At present, when the United States has become the primary force in the imperialist camp, the social sciences in America have been placed completely in the service of imperialist expansion.
In many American universities special centers for "research" have been formed which have become veritable hornets' nests of scholarly instigators of a new war. Such, for example, is the Institute of International Studies at Yale University, which has become one of the centers for American geopoliticians who propagate the idea that the whole world must become a Lebensraum for American monopolies, and who glorify the "absolute weapon" of atomic and bacteriological warfare.

American economists, who, for the most part, are in the immediate service of the capitalist trusts, are coming out more and more frequently with odious and mendacious "theories" concerning the inevitability and even the desirability of a new world war as the sole means of saving American capitalism from crises and unemployment. These economists are striving to convince the American people. In response to the demand of the monopolies, that the growth in expenditures for armaments is "stimulating a rise in business activity" and that the Marshall plan expenditures enable "unemployment to be exported" beyond the borders of the United States of America. America's bourgeois historians brazenly distort the history of the United States as well as the history of international relations in an attempt to portray American imperialists as "benefactors" of humanity.

American scholars—ethnographers and sociologists—are outdoing themselves in their efforts to repaint the Hitlerite racial theory in American colors, to poison the consciousness of the masses with this odious form of the Fascist ideology. They propagate the demented ideas of a "chosen" Anglo-Saxon race elected to rule the world, call for intensified racial discrimination, and factually justify the lynching of Negroes, annihilation of Indians, and the ruthless exploitation of colonial peoples. This dissemination of the poison of nationality differences, beneficial to the monopolies, is aided in every way by many American biologists who base themselves on the unscientific theses of the Welsmann-Morgan school of genetics.

Mr. HAYS. Dr. Herring, do you have any knowledge of Prof. Raymond Bauer at Harvard? He is also in the Russian field.

Mr. HERRING. I have met him; yes.

Mr. HAYS. He has a book called, The New Man in Soviet Psychology.

Mr. HERRING. I have browsed through that book.

Mr. HAYS. I would just like to read a couple of paragraphs which he has written, which continue to prove the thesis we are on here of the antagonism of the Soviets toward American-type independent research. He says:

It is particularly striking that certain criticisms made before this committee—this is a letter from Dr. Bauer—

exhibit the same fear of findings of empirical social research that prompted the Bolsheviks to repress, so much of the work of Soviet psychologists. You will find an account of this in chapter 7.

That is of his book, which I have read, and which is outlined in great detail.

Here you will see that the findings of psychologists were criticized and the work ultimately stopped, because their conclusions did not please the Bolshevik politicians.

He said:

I would recommend to you also chapter 8, which deals with one of the most drastic instances of Soviet political interference in education and psychology.

And I have also read that.

It is ironic that progressive education in this country should have been labeled "communistic" by its critics, when, as this chapter and other sections of the book show, all traces of progressive education were violently rejected by the Communists in the period between 1931 and 1936. Finally, if you have the time and patience certain portions of the last chapter may prove rewarding, particularly pages 186 and 189—
and I am citing these in case anyone who reads this record would be interested—
and pages 191 and 196. Here—
says the author—

I have tried as objectively as possible to draw the distinctions between our own and the Soviet political systems as regards the role the social sciences play in the two societies.

And this whole book of his is an indictment of the Soviet system, because they have repressed all free and independent research of any kind.

The CHAIRMAN. Will the gentleman yield?

Mr. HAYS. Yes.

The CHAIRMAN. Any interest, as I see it, which has been expressed here since the study began has been toward maintaining free and independent research, independent both from government and any other great sources of power. And one of the things, as I understand, that the staff is desirous of the committee studying is whether there is too great concentration of power that directs research, so as to keep it from being free and independent, just as the learned doctor states from whom the gentleman from Ohio quotes. If there is great concentration of power, it doesn't make a great deal of difference whether it is in the government or whether it is in some outside agency. So that is one of the very questions that the committee desires to explore. And in exploring, there is not an indication of any unfriendliness whatever, but simply a disposition to learn and develop the facts.

Mr. HAYS. Mr. Chairman, I think that calls for a statement. I might say that your statement is a very heartening and encouraging thing to me.

The CHAIRMAN. That has been the very key, as I understand it, of practically all the questions have been raised by the staff, Mr. Hays. And I am not unaware of the fact, as Mr. Herring has observed in the press, that various implications have been put on the work of the committee. But that is the very key or one of the principal keys to the purpose of the work that has gone on so far.

Mr. HAYS. Mr. Chairman, as I said, that is a very heartening thing, to hear you say that, and I am glad to hear you say it. But putting your statement up against the very bare words of the reports of the staff, the two just don't correspond. Anyone who can read Mr. McNiece's report or Mr. Dodd's report and say they are in any way friendly toward the foundations, or who can say their reports are not a very damming indictment didn't understand English the way I do. Maybe there is something wrong with the way I do understand it.

The CHAIRMAN. I regret very much that we should have to monopolize the time of the committee, including Mrs. Pfost and the very able gentleman from Massachusetts, who is a member of the Ways and Means Committee, which may ultimately have responsibility concerning legislation as to the tax-exempt status of foundations, but I don't want the wrong impression to go in the record with reference to any statement the staff of the committee has made. The whole purpose of the chart that Mr. McNiece displayed to the committee was to raise the question with reference to the concentration of power in a few places, which had over-all supervision over research.
Now, he was not stating that as a fact but simply raising the question for the exploration of the committee. And, as chairman, I would like to leave Russia and get back to the United States and proceed with our hearing.

Mr. Goodwin. I think that is most desirable, Mr. Chairman. We have a very eminent gentleman here who is a witness. It may be that he is very much interested in discussions from the rostrum here, which I think might very well be confined to executive session. If he should be, and desires to take from his valuable time some portion of it to listen to discussions here, very well, but it seems to me that we should go on with the hearing and listen to the witness here.

Mr. Hays. Well, Mr. Goodwin, I am in general agreement with you, but I don’t think you can let any blanket statement go unchallenged, from my point of view, and I don’t intend to. I am not going to let these rather peculiar statements of the staff go into the record, and then, as to any criticisms I have to make of them, make them in executive session, where nobody knows I made them.

Now, the chairman desires to end this colloquy, but he always keeps bringing in new material. Now, he brought in this chart. And I am impelled to say something about that chart, because I think that chart came about as near being nothing as anything that anybody could have spent much time on, and I am going to tell you why. It is a lot of nice, little pretty boxes with a lot of nice black lines running here and there, and according to its author it was supposed to show some sort of an interlock. Now, suppose I went over to the blackboard and made a chart—and said, “That is the White House,” or “the State Department.” I will put in the White House, and then I will put the State Department underneath it and run a line down.

Then I will make another box, and it says, “The Kremlin,” and I run a line from the State Department to the Kremlin. We have an Ambassador there. And another one says, “The Ambassador to Poland.” And we run a line there, where there is a Communist government. And another to the Government of Czechoslovakia. And then I could say, “Look, we have lines running out to all these places, so there must be some kind of an interlock between our Government and these Communist governments.” It is just about that factual.

The CHAIRMAN. Do you have any other statements you wish to make before we proceed?

Mr. Hays. None right now.

The CHAIRMAN. Were you proceeding with your questioning?

Mr. Koch. Well, Mr. Herring had a few more remarks. Or I won’t even restrict him to a few. He wanted to complete his oral presentation before we started questioning.

Mr. Herring. I thought Congressman Goodwin made an interesting point yesterday that we didn’t have time to develop, and if I may pick up there, I think it may add something to the problems we have under consideration.

He pointed, I thought with real discernment, to the importance of historical fact, what is historically so. And it brought to mind a little piece of American history that I think is quite relevant.

Let’s go back to the Franklin Institute in Philadelphia in 1832. In those early years, with steamboats getting under way, unfortunately a good many boilers burst. Bursting steam boilers were a problem. And the Franklin Institute, in its empirical, pragmatic, down-to-
earth way, said, "What can we do about bursting steam boilers?" So they turned to a professor at the University of Pennsylvania, a professor of chemistry and moral philosophy, old Professor Bates. He was the grandson of Benjamin Franklin. And they said, "Will you try to find out why steam boilers burst?"

So he got a grant from the Government. The Secretary of the Treasury got hold of $1,500—probably the first money used for scientific inquiry. And in American fashion: "If steam boilers burst, let's get some explanation." So they set up a little group to investigate, and they went into all the scientific aspects. And when they got through, I must confess to you that this group of scientists did come up with a recommendation for action. They did say that "maybe if we had some way of inspecting steam boilers, we might protect the public from bursting steam boilers."

So the Steamboat Inspection Service, as a result of this empirical investigation, was established in 1836, and it was the first Government regulatory agency. And I submit to you that the reason for the Government getting into regulation was not socialism. It wasn't any bursting Socialist with his ideas. It was the down-to-earth fact that sometimes steam boilers burst, and we want to know why.

So the grandson of old Ben Franklin went in there, and he found out the reason, and he said, "One of the reasons, that goes beyond the sheer chemical side, is that maybe there is a little carelessness in stoking the fire." In other words, you have got to get the human factor in there. You have to keep an eye on the people who are running the steamboats. And we have the Steamboat Inspection Service as the first regulatory agency.

And I think, Mr. Goodwin, there is an illustration where if you go back to the record, if you look at American history, if you say, "What causes these things?"—now, suppose that group had gone at it in this rationalistic fashion. The first thing you do is get an armchair, and you sit down and say, "Let's speculate about this. Why do these boilers burst?" And you go about it through doing a lot of abstract reasoning.

The steam boilers, I submit, will still be bursting. But when you look at them and you say, "How can we stop this?" and if it takes a little Federal regulation to protect the public from bursting steam boilers, the American way to do it is to get at the actual situation. And I don't want to overemphasize this thing, but I must speak with a bit of emphasis, because I think, as you say, sir, if you look at the historical development of things, you often find the reasons.

The CHAIRMAN. You intended for this memorandum from Mr. Inkeles to go in the record as part of your statement, although you only read portions of it?

Mr. HERRING. Yes, please.

(The document referred to is as follows :) From: Alex Inkeles.
To: Pendleton Herring.

This memorandum is meant to implement my suggestion to you that the Recce committee might be interested in learning something of how the general problem it has under investigation is treated and viewed behind the Iron Curtain. In drawing up this memorandum I have not undertaken a systematic survey, but have merely drawn on my notes and on items which were easily recalled by me or my colleagues. A systematic survey of Soviet sources would yield an enormous number of violent attacks on the foundations and the accessory agencies in Communist sources.
By way of background the committee may be interested to know that in Communist-controlled countries the existence of organizations like the great American foundations and the accessory agencies is unthinkable. Where they existed at the time of the Communist seizure of power they were always among the first institutions to be broken up and to have their funds confiscated by the Communist dictatorship. This is because the Communists recognize that such funds and agencies are sources for centers of free thought and opinion, which is always inimical to Communist rule. In the Soviet Union, for example, professors, scientists, and other scholars are not permitted to organize associations like the American Historical Association. They may belong only to trade unions and to officially sponsored governmentally organized institutions such as the Academy of Pedagogical Sciences.

Not only does the Communist world look askance at the existence of foundations and agencies of the accessory type in its own domain, but it also takes a very hostile view to these which exist in the free world and particularly those which operate in the United States. Unfortunately I have not maintained a file of the attacks on the foundations as such, but I recall from time to time having seen violent attacks on them in the press of the Iron Curtain countries. The general line has been that the American foundations are simply thinly disguised devices whereby the "monopoly capitalists" of the United States hide behind the disguise of charity and the pretense of advancing the public interest, whereas in fact they are pursuing the goals of spreading the ideology of capitalism, continuing to oppress the workers, and "buying out" the services of American scholars, scientists, teachers, etc.

The role of the foundations on the American scene is not too well understood by Communist propagandists, however, and they concentrate most of their fire on what the Reece committee has defined as the "accessory agencies." Our great educational associations, for example, are constantly attacked in Soviet educational journals as instruments of capitalism, spreading its ideology, teaching hostility toward the Soviet Union and toward communism, and misleading our youth by "reactionary" teaching methods. To cite another example, from odd notes at hand which could be matched many times over through a careful survey, we might consider the American Economic Association. In a book entitled "Ideologists of the Imperialist Bourgeoisie," published by the Academy of Sciences of the U. S. S. R. in 100,000 copies, the American Economic Association is attacked for allegedly fomenting propaganda designed to incite a new world war against the Soviet Union. The members of the association are described therein as "bourgeois economists [who are] in the service of monopolistic capital" and whose theories are designed solely for the purpose of defending the American business interests of their "capitalist masters."

The American Philosophical Association is repeatedly attacked in much the same terms. An example that is typical comes from the June 1949 issue of the official Soviet Journal, Problems of Philosophy (Vopres Filosofii). The American Psychological Association has also often been treated in much the same way. I find in my notes, for example, that the American Journals Psychological Abstracts, the Journal of Social Psychology, and the Journal of Genetic Psychology are described in the 1951 official Soviet Literary Gazette (issue 106) as being merely "screens behind which lies hidden a reactionary antiscientific and antipopular propaganda. These journals, one of which is published by the Psychological Association, are further charged by the Communist propagandists with containing not science but only pseudoscience which seeks to justify "the merciless exploitation of the workers, the advent of Fascist regimes, colonial brigandage, and aggressive wars" for which the Communists hold capitalist society responsible.

Since the Reece committee appears to be particularly interested in the support given by the foundations to social science in the United States, they may wish to know that in the eyes of Communist leaders social science is regarded as one of the worst and most dangerous enemies of Communist ideology and Communist expansion. Indeed, so strong is the feeling against sociology that it is not permitted to teach it as a subject in the Soviet Union. Sociology is defined there as a strictly bourgeois and capitalist science of society and is regarded by the Soviets as directly opposed to and contradicting Marxism. Consequently they forbid the teaching of sociology in Soviet Russia and have substituted Marxism-Leninism instead as the only true science of society.
Communist hostility to sociology is reflected in the fact that the Soviet press has in recent years been full of attacks on American sociology, and in addition at least two special books on the subject have been put out by official Soviet publishing houses. One of these, issued in 1951 by the State Political Publishing House of the U. S. S. R., in 100,000 copies, bears the title “American Bourgeois Philosophy and Sociology in the Service of Imperialism”; the other was issued in 1952 by the Academy of Sciences of the U. S. S. R., in 10,000 copies, under the title “Contemporary American Bourgeois Sociology in the Service of Expansionism.” This latter is apparently a revised edition of a book by the same author published under a slightly different title in 1949, and at the time severely criticized in a review in Culture and Life (Kultura i Zhizn), the official publication of the Department of Propaganda of the Soviet Communist Party. The criticism held that the author was too easy on American sociologists and failed to expose the full degree to which American sociologists play “the odious role of servants and lackeys to the imperialist * * *” capitalists of the United States. You may rest assured that on the second time around this author did not fail to drive home the point.

The individual American social scientists brought under attack in these polemical Soviet writings read like a Who’s Who of American sociology and social science in general. Among them are many men who were prominent in the councils of the foundations and the accessory agencies or who have received support from them. Amongst those of an earlier or older generation Ross, Bernard, and Bogardus and Ogburn are prominently named by the Soviet hatchetmen as “tools of monopoly capital.” Bernard is violently attacked for allegedly having held up Henry Ford and John D. Rockefeller as being true representatives of progress. Ogburn is repeatedly castigated as the “sociologist of the atom bomb,” and despite minor differences, all are held to be “apologists for imperialism”; Blumer, Reuter, Becker are a few among many others on a list of names which could be spelled out almost indefinitely. Pravda (July 17, 1952), for example, held Otto Klineberg, Talcott Parsons, David Reisman, and others to be agents of the American military engaged in psychological warfare against the Soviet Union and acting as learned servants of American imperialists, capitalists, and monopolists. In the same issue Harold Lasswell is described as having been “a hardened intelligence agent since the times of World War.”

In the journal October directed to Soviet intellectuals, F. Lundberg and Weininger have been charged with an attempt “to carry out the order of their masters, the Wall Street magnates, by shamelessly slandering the women’s democratic movement * * *” Lewis Mumford is also numbered among the evil sociologists of the United States, as, indeed, is former Senator Bilbo, of Mississippi, the former being accused of being a “mercenary servant of the warmongers.”

Since the name of Stuart Chase has or will probably come before the committee, his name might serve for one last illustration. In one of the Soviet books cited above Chase is violently attacked as a longtime spreader of reactionary ideas, even in the time when he was regarded as a liberal in the thirties. It is charged by the Communist press that after the recent World War he openly joined the “shrill chorus of American atom bombists” in their openly Fascist attacks on world peace. Specifically, he is accused of “fulfilling the orders of monopolistic bosses” by preaching the saving of capitalism through resort, if necessary, to war and atomic destruction.

Since the report by the staff to the Rees Committee seems concerned about the possibility that the foundations and the accessory agencies have fostered changes in the basic American way of life, it might be appropriate to conclude that this is hardly the Soviet view. On the contrary, they see American social scientists as “propagandizing the antiscientific idea of America’s uniqueness” and of spreading the false idea that under American capitalism there are such things as enduring the prosperity and a harmony of interests between labor and capital.

Mr. HERRING. I would like to come down to the present time, because Congressman Goodwin’s point as to this phraseology, “new and inexact sciences,” came back to mind. And I would just like to comment on that one. And I could comment at some length on it, but I will try to restrain myself to one rather symmetrical little illustration here.

I have before me a statement that Wesley Mitchell made 35 years ago. Wesley Mitchell was one of the founders of the Social Science Research Council, and he was the man who developed the National
Bureau of Economic Research. And his successor in the National Bureau of Economic Research is now the author, Burns, that was referred to yesterday, who is the President's adviser on the Economic Council.

Thirty-five years ago, Wesley Mitchell said:

While I think that the development of the social sciences offers more hope for solving our social problems than any other line of endeavor, I do not claim that these sciences in their present state are very serviceable. They are immature, speculative, filled with controversies. Nor have we any certain assurance that they will ever grow into robust manhood, no matter what care we lavish upon them. Those of us who are concerned with the social sciences are engaged in an uncertain enterprise. Perhaps we shall win no great treasures from mankind, but certainly it is our task to work out this lead with all the intelligence and energy we possess until its richness or sterility is demonstrated.

That was 35 years ago. Let's turn from that to a current editorial in the New York Times dated June 7, 1954.

And I will just read two brief paragraphs from it. It is entitled "Economic Geiger Counters," and the editorial says:

In the field of economics, the Geiger counters—we all know what Geiger counters are—are the statistics of production, income, inventories, and the like, on which economists, businessmen, and public officials depend for signals on the health of the economy. If our economic data are sound we can gage whether we are going uphill or downhill, whether the business prognosis is good or bad. If our economic data are bad we can be lulled into complacency when action is needed or be stampeded into needless Government intervention which may do more harm than good.

Against this background it is disturbing to learn that top officials of our Government feel that many of our key economic indexes have better reputations than they deserve. Even worse studies have shown that some data in the inventories and profits field have been so far wrong at times in the postwar period that they have shown movements contrary to the actual change. Only a few months ago the wide discrepancy between two Government efforts to measure unemployment excited wide attention.

A joint congressional committee is apparently planning to look into this situation in an effort to learn what improvements are needed. On the basis of information already available, it is likely that the committee will find that much of the fault can be laid at the door of a false economy which has prevented adequate resources from being devoted to keeping our statistical Geiger counters in good shape. Economic statistics are not the dull, lifeless, unimportant ciphers too many laymen believe them to be. They are the indispensable tools for understanding the operation of our complex economy. Any congressional action to improve these tools would repay our people a hundredfold.

And I think it is interesting to note that one member of this committee is very directly concerned with the Joint Committee on the Economic Report, and maybe he is so busy working on it today that he is not here with us. But here the point I want to make is that we have developed within a generation from a time when a leading authority in the field can say, "These are premature; we don't know whether it is going to work out or not," to 35 years later, when we sit here today and see that by directing attention to an empirical study of the business cycle and going at it statistically and getting out of armchairs and getting the facts together, it has become an integral part of our Government. So that we have the Council of Economic Advisers continuing from one administration to another as a function, as a way of using this Geiger counter in determining the economic health of the Nation.
Well, if I may continue, I would like to go right ahead, then.

Keeping in mind Mr. Goodwin's point and the historical approach to this thing, it has been suggested that this stuff is new and inexact. Well, as I say, it is a big subject. It seems to me that as we look at science, science should be new, and often must be inexact. The point is that you try to go from the inexact toward the exact. It is the process that is important. And the newness is important. We don't want old sciences. We want science to ever renew itself. If you turn to cancer research, that is new, and that is inexact, and it is no less important because it is. It is the newness, it is the growth, it is the ever-changing character of science that preserves its vitality and strength.

Well, you can get scientists in different fields to hold forth on this one, but I would like to come back to the historical record again.

I have before me a foreword by the President of the United States prepared for Recent Social Trends in the United States—the report of the President's Research Committee on Social Trends. And the President to whom I refer is Herbert Hoover. I would like to read his brief letter for the record.

Hoover writes:

In the autumn of 1929 I asked a group of eminent scientists to examine into the feasibility of a national survey of social trends in the United States, and in December of that year I named the present committee under the chairmanship of Dr. Wesley C. Mitchell to undertake the researches and make a report. The survey is entirely the work of the committee and its experts, as it was my desire to have a complete, impartial examination of the facts. The committee's own report, which is the first section of the published work and is signed by members, reflects their collective judgment of the material and sets forth matters of opinion as well as of strict scientific determination.

Since the task assigned to the committee was to inquire into changing trends, the result is emphasis on elements of instability rather than stability in our social structure.

This study is the latest and most comprehensive of a series, some of them governmental and others privately sponsored, beginning in 1921 with the report on waste in industry under my chairmanship. It should serve to help all of us to see where social stresses are occurring and where major efforts should be undertaken to deal with them constructively.

It is rather interesting, from a historical standpoint, and to give some sense of proportion about our present problems at midcentury, to go back, as I did the other day, to these volumes and browse through them a bit. And you will find there, in these volumes, some references to the fact that there were problems back there in the thirties, too. And many of those problems are still with us.

I don't want to take your time to read a whole list of the problems of the 1930's, because we have got our hands full at the present time. But they had their problems. And—

even a casual glance—

we read, in this foreword to the social trend study—

at some of these points of tension in our national life reveals a wide range of puzzling questions. Imperialism, peace or war, international relations, urbanism, trusts and mergers, crime and its prevention, taxation, social security, the plight of agriculture, foreign and domestic commerce, governmental regulations of industry, shifting moral standards, new leadership in Government and business, and the stanch status of womankind, labor, child training, mental hygiene, the future of democracy and capitalism, et cetera.
But one last sentence here:

Democrats, statesmen, and servants and propagandists have attacked these problems, but usually from the point of view of some limited interest. Records and information have been and still are incomplete and often inconclusive.

But Herbert Hoover, that great social engineer, was a man who said, "Let's have a look at the record." And these volumes were prepared under his sponsorship. And Congressman Goodwin, I submit to you, that having a little historical sense about the past and about the continuity in these things is a way of—well, it helps one's blood pressure a bit perhaps.

Mr. Goodwin. That is very, very interesting, and I think very illustrative, too, sir.

Mr. Herring. Well, now, Mr. Chairman, there are a variety of things I could turn to. I want to keep constantly in mind, if I may say so, the fundamental point that the chairman raised a few minutes ago. I would leave this room satisfied indeed if I could help to clarify that problem, because if it is a serious problem in your minds, let's have a look at the facts and see if we can develop it. Maybe a few minutes on that would be helpful testimony.

Let's start with the fact that in this great country of ours we have 1,700 colleges and universities spread across the breadth of the Nation. We know how they came into being. Some of them are great State institutions. I needn't rehearse the story there. The churches started great private benefactions. But you see the story, all over the country, of these institutions. They weren't developed from a Paris or a Berlin in accordance with a ministry of education in a national system. They grew up like the wheat on the prairies. They grew up out of our native soil. They grew up because—well, you could start with Harvard, if you like. I keep William and Mary in mind, too. There was the importance of training the clergy in the old days, getting an enlightened clergy. There was a practical need. And our great land-grant colleges were started. This is a subject I fear I get a little eloquent on, because it is such a dramatic and beautiful piece of American history, I feel.

The Chairman. Would you permit a little interruption there? I want to associate myself in my very feeble way with your eloquence and deep feeling about these colleges and universities. And there is no apprehension on anyone's part so long as the colleges and universities are used as the medium for the research. There will be no dangerous concentration then. It is when the generating force is centered in other agencies, which haven't risen up in the same way that the colleges and the universities have, and use intermediary agencies as the channel that gives rise to apprehension; if you will just permit that, in order to keep the direction clear.

Mr. Herring. I just wanted to start with the grassroots and take a historical direction in this, so that we could see the broad sweep of American life.

Mr. Hays. Right there, Doctor, isn't it true that the colleges and universities are always the generating force in any research, or always at least the propelling force, and that the most that any foundation has done has been to simply provide the fuel, the gasoline, for the engine, you might say, the money, which in this case is the fuel, to see
that these fellowships could be granted and that the colleges and universities could have the funds available to have people to do research? Isn't that the way it has been handled?

Mr. Herring. That is right. We start with this magnificent development in our country.

Now, within those institutions, you have the professors. And let me mention a point that we sometimes forget.

We have a system in American education, of tenure. When a man has proved his capacity, he is given an appointment with tenure. That means you can't fire him. He has a job that is a secure job. It is at a modest salary, but he has independence. And I don't know any group of citizens that have the same degree of independence, because they have this economic support. They are secure in their jobs, and they are expected to express their opinions and to develop their thoughts and to teach their students to the best of their ability. And our great tradition is: Leave them alone to do that job.

So the tenure on the economic side is shored up with the great principle of academic freedom.

So here again, in our practical way, we have both the practice of tenure and the principle of academic freedom. So that means you have, then, men who have, in a sense, these privileges to exercise their thoughts and to contribute to the education of the youth of the country and to the furtherance of knowledge.

Now, these men have their own interests. The chemists get together with the chemists and the sociologists with the sociologists.

As I indicated in my opening statement, they often get together regionally. We are a great people for getting together. And they get together on their professional matters, just as in all other walks of life, in chambers of commerce and Rotary clubs and so on, congenial people get together.

All right. Let's build up from that. In the fields with which I am familiar you have these associations of historians and economists. They get together in the sense that once a year they meet here in Washington or somewhere else where there are appropriate hotel accommodations, and they read papers and talk, and some of the younger men look for jobs, and they renew old friendships, and they have their annual conventions. And the other thing they do together is to sponsor and publish a learned journal, where the articles can be published and the books in the field reviewed.

Now, this is a part of the great associational activity of the United States. D'Toqueville, when he came here in the middle of the 19th century, looked around, and he saw this rich associational life—no monolithic state. The problem was to give the Government enough leeway at times to do some of the minimal jobs. The problem here of the associational life of the country was of the essence of freedom.

Well, the same pattern holds for industry and labor, and so on, this freedom to associate and to share common interests.

Well, now, without going into a long history of the foundations, we know that as wealth accumulated, around the turn of the century, a great industrialist such as Andrew Carnegie faced the problem of what to do with his wealth, whether to follow the European pattern of just willing it all to his descendants. That, obviously, is in the feudal tradition. But over here this peculiar, unique American phenome-
non, the foundation, started off most dramatically, most importantly, with Carnegie, and a few years later with the Rockefeller Foundation.

The point that is so important here is to see that you have a large and diverse group of people, with great independence of mind, and with their own interests; and the foundations want to advance some aspect of social welfare.

Now, in our great foundations, the terms under which they operate are very broad. The advancement and dissemination of knowledge, or the welfare of mankind. The problem is: How do you move from that broad mandate into something tangible, something particular? Who is going to do what? And the problem of the foundation officer and the problem of the foundation trustees is to go from these broad objectives of human welfare down to something particular, specific, defensible, understandable, something that will advance the broader purposes.

Now, the foundations have a problem, in exercising judgment, and in deciding, with their limited resources, which of the various opportunities for investing some of this money in good ideas and social purpose can be selected. So that you have on the one hand people who have various things they want to do in their own research and their teaching, and on the other hand you have quite limited foundation resources.

As I was saying, I think one of the important points brought out in the inquiry thus far is that there are a great many foundations in the United States, some six or seven thousand, I believe. I was scarcely aware there were that many. But here again, I want to talk out of my own experience. And over the years of the council's life, we have received support, grants, from about a dozen or so foundations. In other words, the number of foundations with an interest in the social sciences is a very limited number of foundations.

So let's get that sense of perspective into the picture.

Mr. Koch. Could you at this time name the principal ones? I was going to that later, but why don't we get it now? The principal contributors to your organization.

Mr. Herring. Well, I filed that with you, and you have a list of all the money we have gotten from all the sources.

Mr. Koch. I do not have a list here.

Mr. Herring. Yes. Well, I have it before me. I have before me: "Summary of disbursements under appropriation, by donors, from June 1924 through April 30, 1954," and that goes back to the beginning of the organization. I have 24 items on this list. If I pick out the principal ones, which are the ones you wanted——

Mr. Koch. And would you mind then offering the list as part of the record? Mine doesn't go up beyond 1951.

Mr. Hays. I suggest, Mr. Chairman, that the witness offer the list and make it part of the record, and if there are any specific questions, they can be asked, but I don't think we want to take the time to read all these statistics.

Mr. Koch. No; we don't. I agree with you. I just thought he could mention a few of the important foundations, and not go into dollars and cents.

Mr. Hays. I think it would be well to have the entire list incorporated into the record at this point, and then the witness can make any comments he desires.
Mr. Koch. All right. You offer the entire list, and then just mention the top five that you can think of that have contributed.

Mr. Herring. In looking over this list, I see the Laura Spelman Rockefeller Memorial, the Rockefeller Foundation, the Carnegie Corporation, the Julius Rosenwald Fund, the General Education Board, the Ford Foundation. Does that suffice?

Mr. Koch. That is all right.

Mr. Herring. So we herewith offer the list for the record.

Mr. Goodwin (presiding). It may be admitted.

(The list referred to is as follows:)

Summary of disbursements under appropriation, by donors, through Apr. 30, 1954

<table>

Mr. Herring. The picture I am trying to get before you then in terms of my own experience is the fact that there are a limited number of these foundations with an interest in these social-science fields. And let me survey briefly for you this problem of the relations between an organization such as the council and the foundations.

In the first place, the foundations make substantial grants directly to universities.

A point that I want to emphasize, in order again to get some sense of proportion into this thing is this: Our best estimate is that probably about $12 million from foundation sources goes annually to social-science research, broadly construed. The Council has funds that amount to about one-tenth of that. Now, I wish Mr. Reece were here, because I think this relates to a problem on his mind. We are one of many organizations. We are a part of this great associational life of the United States. And we have a special focus on the advancement of research. There are many other organizations dealing with many other problems. We have our problem, our interest, our focus, and we have these resources.

Now, I would like to offer this as an exhibit. I wouldn't want to burden the record with this, but we could pass it up to you. Here is
A Directory of Social Science Research Organizations in Universities and Colleges, prepared by the committee on organization for research, Social Science Research Council, June 1950; and in this publication you will find listed the names and addresses of 281 organizations conducting or financing research in the social sciences in 104 universities and colleges. And here are their names and addresses. And I think this a fairly concrete illustration of the fact that we are dealing with a great many organizations, and here are the ones in the universities that are concerned with this field.

Mr. Goodwin. You are not offering these for the record, but just by reference?

Mr. Herring. Yes; just as an exhibit, Mr. Chairman.

(The document referred to was filed for the information of the committee.)

Mr. Herring. The Social Science Research Council has demonstrated its capacity over a 30-year period as a highly responsible group to consider the leads, the ideas that individuals have, and their research ability, their possible significance for the advancement of the field. The council provides an opportunity for specialists, working at the growing edges of knowledge, to identify new leads, to appraise existing state of knowledge, to work out concrete next steps, to evaluate research holding out the most promise. That is where we focus our attention.

Maybe one way to get the matter before you more vividly would be to offer an illustration. Let's take the history of an idea and how it goes through our procedures.

A few years ago, one member of the council, a member of our board of directors, who was trained both in psychiatry and in anthropology, came to me, and he said, "I am very much interested in"

Mr. Goodwin. We will recess at this point and will resume, subject to the call of the Chair, I should say in about 8 or 10 minutes.

(Short recess.)

The Chairman. The committee will resume.

If you will permit a diversion before you proceed with your testimony, Mr. Adams, who had expected to be called in this morning, has prepared a statement, which has been given to the press. If there is no objection, that statement will be admitted into the record to appear at the conclusion of the statement and questioning of Mr. Herring; and then Mr. Adams will appear and take up from there.

Mr. Koch. Could we ask Dr. Adams whether that is agreeable to him?

The Chairman. I had so understood. That is agreeable with Dr. Adams.

Mr. Adams. Mr. Chairman, I am at your disposal, sir.

The Chairman. Without objection, it is so ordered.

Mr. Herring. Mr. Chairman, when we broke for the recess, I was about to embark on a description by way of illustration of how an idea that is brought up by an individual research ban is discussed and developed, and so forth. But I think rather than pursuing that, I would just like to say that with reference to this general point we were discussing, namely, the problem of whether there is control of research, the problem is rather one of recognizing a good idea when you see it, deciding whether to encourage a man with one idea or not.
It is not a matter of control. It is a matter of recognizing and assisting.

So that I think, since the time goes by so rapidly here, it might be better for me to pause at this stage, because I could go on for quite a while, and say to you that if there are questions the counsel would like to raise, or anybody else, it might be better, and then if I have further ideas I could bring them in. But I would like to complete my visit with you today, so that if there are questions you want to raise, I want to be sure we allow ample time for any questions.

The CHAIRMAN. You may proceed, Mr. Koch.

Mr. KOCH. Mr. Herring, first let me point out what my problem and Mr. Wormser's problem is; that is, to get the benefit of your points of view—and, of course, we have already covered a lot of it—as to these criticisms or suggestions that have been raised by previous witnesses.

I want you to know that there was no intention on our part to make any charges. Frankly, I don't think we have a right to. We have a right to bring before the committee, who are the judges, such criticism or arguments as have been made, and we now welcome your help in helping us try to appraise whether some have merit or whether they have not.

Now, in that connection, I would like to review the particular points that we are concentrating on, so that when we ask you questions: and I am going over your statement—you will have those in mind and can give me whatever you like.

For instance, we have, as you have heard before, the possible concentration of power caused by united or concerted action on the part of the larger foundations, thus tending toward conformity or a threat to a free interplay of ideas. Always listen to the "possible" part, because that has been mentioned by people who come as professors of eminent universities. It has been raised, and there is the possibility, as far as I am concerned—and certainly until all the facts are in I wouldn't attempt to appraise the matter as to whether that is on the road to control or it isn't.

Then the possible creation of an elite group of social scientists who are called upon from time to time to advise the Government on problems of importance in their field. And then, of course, whether certain types of social-science investigations are not the proper subject of grants; that is, the results might be too questionable, or the particular thing is too hard to appraise or too hard to control. You will recall that that type of criticism has come before the committee.

Then, of course, and you mentioned it before, but I will come to it later, the presence of an interlock of directors and administrative heads among the various foundations, which might lead to uniformity and ideas or concerted motion in favor of certain types of action.

And finally, even if nothing has been done by the foundations in the past which was detrimental to the public, is there a latent power in the foundation setup which, falling into hands less respectable than those of yourself and the many others we have identified as the heads of the foundations today, if that power gets into bad hands, would be of danger to the public? And if so, is there anything we can do to protect ourselves?

Mr. HAYS. Are you asking those questions en bloc?

Mr. KOCH. No, Mr. Hays. I wanted to point out the particular specific questions I am going into in an attempt to cover those points.
I am certainly not asking him now to give us an answer on that. But these are the questions I feel he can be very helpful to us on, and those are the things I feel eventually the committee will have to appraise.

So with that in mind, I will go into your statements, and certain of the questions won't follow the order of these general propositions.

Now, I am referring to your introductory statement, Mr. Herring. Near the bottom of the first page there is this sentence:

In view of the references to collectivism, I am sure that we share a feeling of caution concerning governmental intervention and control over education and research.

Now, if that control might be something other than governmental, but still control, we would likewise be concerned about that, wouldn't we, Mr. Herring?

Mr. HERRING. That is right. There is no question about that.

Mr. KocH. Now, let's skip to page 4. A little bit more than half way down on page 4:

I know of no reliable method of analysis for establishing cause and effect relationships between such ideas and what has happened in our recent history.

Now, for my help, do you believe that as a general statement we cannot establish a clear causal relationship between an idea and what has happened?

Mr. HERRING. Well, I think problems of historical causality are exceedingly difficult ideas to work with. I recall we had a committee on historiography, and one of the problems discussed by that committee was the problem of causality. What causes what? This group of eminent historians went into that at some length, and just made the point that we tend often to be much too superficial in attributing causal relationships. You can offer interpretations. It goes back to Congressman Goodwin's point again, that there are certain historical facts. You can say a certain thing happened on a certain date. But as Congressman Hays pointed out when they discussed this matter: How do you get at any one definitive final causal statement? There are these matters of interpretation.

Mr. HAYS. Well, you might ask this question. Back in the 1930's, I very well remember that there were farmers with pitchforks out threatening tax collectors, and notably in the very conservative State of Ohio. Do you know whether there is any way you can figure out whether any idea caused them to go out there, or the economic conditions of the time?

Mr. HERRING. That is right. I get my sensitivity by associating with historians, who are even more sensitive about it. But how can you get at these sweeping generalizations? It is said, for example, that a decline in the production of wheat would cause certain political repercussions. That is a sweeping assertion that is made. The historian has to go to the place of wheat at a certain place at a certain point in time and see whether it was that price of wheat at that point in time that bore some relationship to this hypothesis as to cause.

The CHAIRMAN. Insofar as we members of the committee can restrain ourselves, I am inclined to think that it would make for expedition and orderly procedure if we were to let the counsel conclude his questions, and then we will have ample opportunity to raise any questions that we want to raise. That does not mean that we should not interrupt, but I am just throwing out a caution in that respect.
Mr. Hays. I will try to abide by your wishes, Mr. Chairman, but I fear that it is going to be very difficult for me at times to restrain myself.

The Chairman. But the depression and pitchforks against tax collectors is not now particularly pertinent.

Mr. Hays. It is very pertinent, if you will read from the portion on page 4, as to whether or not you have any—

reliable method of analysis for establishing cause and effect relationship between such ideas and what has happened in our recent history.

Now, if you can think of a more pertinent example, Mr. Chairman, I would be glad to have it.

There may be one coming up in November, if you want to go out and be a prophet, about the price of wheat, as somebody has mentioned, and what may happen next November. There might be a very interesting possibility for some research there.

Mr. Goodwin. You will have some others under strong temptation to make speeches here if you continue.

Mr. Hays. My best political advice, Mr. Goodwin—and I wouldn't care to offer it to you, but to anyone coming from a district in New England, where there isn't much wheat raised—would be just to stay out of that wheat argument and try to get elected on some other ground.

Mr. Koch. Now, Mr. Herring, isn't it part of the claim of the social scientists, particularly those that specialize in the empirical research, that by observing the behavior of man and what is going on in society, one can establish such a cause-and-effect relationship?

Mr. Herring. I am very glad you raised that question, Mr. Koch, because it gives me a chance to explain a point.

Mr. Hays. Right there, would you mind repeating the question? I didn't hear the first part of it.

Mr. Koch. Yes. Isn't it a part of the claim of the social scientists, especially those that are specializing in the empirical research, that by observing the behavior of man and what is going on in society, one can establish such cause-and-effect relationship?

Mr. Herring. Thank you.

Mr. Koch. Now, will you help us out?

Mr. Herring. Take your own language, Mr. Koch: Observing the behavior of man and what goes on in society. Social scientists do not attempt to observe the behavior of man. "Man" is an abstract. You can observe the behavior of Mr. Koch.

Mr. Koch. I would rather you would not. But go ahead.

Mr. Herring. You can analyze the words he uses. You can observe his gestures. You can give him certain tests. You can measure his I.Q. with a fair amount of certainty. In college, if you take scholastic aptitude tests, you would find over the years that those tests would indicate pretty clearly whether you are going to be a pretty good student or not.

The important thing to nail down here is that this empirical work doesn't operate at this range of generality about man and society. It deals with men that you can observe, doing things that you can observe, and then figuring out if there is some way, in this particular instance, with respect to the particularities, under which hypothesis can be adumbrated with reference to the observed behavior. It is not man in the abstract.
Mr. Koch. Isn't it possible then for the social scientist to know as well whether I am going to explode, as whether Mr. Franklin's boiler is going to explode? Those scientists have a much easier job to check on the social effects, don't they, in the physical sciences?

Mr. Herring. I am much impressed with advances that have been made in fields dealing with human tensions and mental illness. It is one of the most important problems before us at the present time. As a matter of fact, it was the illustration I was going to offer earlier, because I think it is so important.

We have in our hospital beds in this country about half a million mentally disturbed patients, and the problem of what to do with that great burden of the mentally ill is not only a problem of a human sort. It is a terrific tax problem. It is one of the great drains on our resources.

Mr. Hays. Yes, but, Dr. Herring, I am trying to be helpful, and I don't think you are quite specifically getting at the question Mr. Koch asked. I will rephrase it in my own words as I see it. Maybe I am not, either. What he is saying, I think, is that you can put a pressure gage on a steam boiler that will tell you within a few degrees of the probability that that thing will explode if it goes beyond a certain range, but you can't put any gage up to a human brain to tell you at what point it is going to be so overtaxed that it becomes necessary for the possessor of it to become a patient in one of these beds.

Mr. Koch. That is right. And by merely counting the number of patients in the hospitals and also finding out that so many came from the slums and so many came from the union of first cousins, that still won't tell you the whole story. I mean, you may have to go into their religious background, the background of the patients, and what not. And so that is the problem. How accurate can they be in the social sciences?

Mr. Herring. Well, you haven't even started to ask the questions that have to be gone into. You haven't even scratched the surface. If you want to get involved in psychoanalysis, there is just no end to the matter of what you go into. But the point that I would defend here and try to explain to the committee is that when you are faced with a problem such as mental illness, you want to use every device that you can think of for understanding the character of the mental disorder. But obviously you haven't gotten very far if you have just counted the number of sick people you have. But you want to understand all you possibly can about their personalities and their development as individuals and their family relations and the whole history. And you want to go beyond those superficial matters and get some understanding at a deeper level of them as human beings. And what I wanted to say was that I think that a very encouraging amount of work is going forward in trying to penetrate further and further into the nature of human personality.

Mr. Koch. Now, on page 5, Mr. Herring, at the bottom, with respect to this sentence:

The staff has tried to call into question the efforts of the very individuals and institutions who are devoting their resources and energies to the increase and dissemination of knowledge and the protection of the American way of life. The picture that has been presented to the committee does not accord with my own observation and experience.
Well, now, you wouldn’t claim, however, that the social scientists have a monopoly on the dissemination of knowledge and the protection of the American way of life?

Mr. HERRING. Not for a moment.

Mr. KOCH. I imagine to a very minor extent the lawyers may have their ideas, the ministers theirs, and you don’t claim that you have a monopoly on the part of your social scientists?

Mr. HERRING. Not for a minute.

Mr. KOCH. Page 6:

We are told, in effect, that a few organizations constitute an efficient integrated whole, tending to work against the public interest.

Would you agree with me that if we were to find that there are a few organizations who constitute an efficient integrated whole, and further find that they are harmless, or even beneficial—do you, as a political scientist agree it is against public policy in the United States to let such an efficient integrated group become too powerful?

Mr. HERRING. Well, as a political scientist, if you want to drape that cloak around me, which I haven’t had the privilege of wearing professionally and actively, I would, going back, be very hesitant indeed to offer any unconsidered horseback judgments on a highly hypothetical question. So don’t rouse my professional instincts here with that kind of a question.

If you phrase it, perhaps, in more down-to-earth terms, and say, “As a man in the street, what do you think of,” whatever it is, I will try to give you a horseback judgment.

Mr. KOCH. You go around with a lot of people who have probably voiced their opinions on matters of this sort. If you have no opinion whatsoever, we, of course, will skip it. But if you have, it is a problem that interests me, and if you have an opinion, I would respect it, even though you don’t.

Mr. HERRING. Well, now, let’s get it clear. “A few organizations constitute an efficient integrated whole.” Well, I don’t know what they are and never heard of them, and if you can name them to me, I can respond. But I can’t give any answers in general about unnamed organizations. So you name them, and I will respond.

Mr. KOCH. No. The theme is this: And as I say, whether the facts support it, I am a long way off from deciding. But there evidently is this fear expressed that through the social-science group we may be creating an elite group of social scientists, who are very capable men and are very honorable men, but they are so capable that when we have problems in government, the Government, being busy as it is, the Congressman, et cetera, would naturally run to the experts.

Now, if it is only one group, without a competing group, and that one group isn’t elected by the people, isn’t removed by the people, isn’t appointed by governors or presidents, would you say, and I am speaking merely as a matter of good government, that that might be an unwholesome situation?

Mr. HERRING. In the first place, I don’t know who the “we” is; whether you are using an editorial “we” or speaking for the staff or the committee, or these disgruntled people. So, first, tell me the “we.”

But in the second place, who are these few, this elite? I don’t get it.

Mr. KOCH. I said “if there were.”

Mr. HERRING. Well, if your question is “If there is a bad elite, and they get power and handle it badly, would that be bad”——
Mr. Koch. No. My question is: If there is a good elite, and it gives excellent advice, is it still a matter of good government to have those people give advice which is eagerly sought, though they are not elected by the people?

Mr. Herring. I didn't know that we carried our history back to Plato.

Mr. Koch. I didn't know I was talking on that subject.

Well, what would Plato say if you didn't seem to want to say it?

Mr. Herring. Plato came out in favor of guardian kings, but he hedged around it with a lot of philosophical safeguards so that it worked out pretty well.

If what you are trying to ask me is if I would approve of the Government in the United States of America by some unnamed elite of intelligent, well-meaning people, I would say: I prefer the Congress of the United States.

Mr. Koch. Well, Plato might not agree with you, but I do.

Mr. Herring. The more I have studied the Congress over the years and observed them, the more impressed I am that it is a great country.

And I don't share a good many of the animadversions that go around.

Now, as to these few organizations, I don't know what few organizations you are talking about here.

Mr. Hays. Are you disagreeing with this praise of the Congress, Mr. Koch?

Mr. Koch. That is not a charge that has been made by the staff in their report, that there was a bad Congress.

Mr. Herring. I don't know whether you are agreeing with Plato.

Mr. Koch. I would never take him out of context.

Mr. Hays. I don't believe I have quoted from the Bible today, and at this time I think it would be a good place to quote from the Bible, the Book of Job, chapter 15, verse 2: "Should a wise man utter vain knowledge, and fill his belly with the east wind?"

The Chairman. I think that has but little place here, but we are very glad to have it in the record, to indicate the gentleman's wide expanse of knowledge.

Mr. Hays. I will admit I can't quote the Bible verse by verse, but I am sure that verse had a very distinct application to the particular hypothetical question in mind. And I would recommend to the chairman of the committee that he might be able to take the Book of Job and recall some more applicable verses in it.

The Chairman. When I quote from the Book of Job, I quote on the basis of my own reading of it.

Mr. Hays. Perhaps if the gentleman is insinuating that I got the verse from someone else, I might go further with that insinuation and say: Is he trying then to make some excuse for the fact that he hasn't participated very much in the questioning so far?

You have a staff of 16. They ought to be able to furnish some questions.

I want you to understand one thing. With the exception of one staff member, any help I get, Mr. Reece, is purely voluntary. Somebody furnished me with about 30 editorials, very critical of you and this committee, from some of the most prominent papers in the United States. I can't afford a clipping service. I don't have a staff to clip them. But somebody, thank God, volunteered to send them to me. I expect to use them from time to time.
The Chairman. In answer to the implications that you have many times made, the Chairman doesn’t consider the staff as his staff. They have given him no questions. He has asked for no questions. He has asked for no personal service from the staff, and I am sure Mr. Goodwin hasn’t. The only member of the committee that has a member of the staff assigned to him personally is the gentleman from Ohio, and I am glad that the committee is in a position to do that. I think it is all right. But at times I do have some question whether the committee rostrum up here ought to be made a clearinghouse for people who have personal interests involved in the audience, to have their views transmitted to the record, and take up the time of the witnesses that might be appearing.

Mr. Hays. Mr. Reece, you can question it all you please, but this committee rostrum will be a clearinghouse at any time I feel like making it one to get at the truth or to make any pertinent observations I want to make. And I want to say to you right here and now that it is going to be a little difficult without that to get at the truth, because if there was ever a loaded staff report, the ones we have had from this staff have definitely been loaded. And it is significant to me that out of 30 editorials I have in my possession, starting with the New York Times and going down to one editorial that was requoted in numerous papers, from Twin Falls, Idaho, to Lima, Ohio, and Attleboro, Mass., there hasn’t been one single editorial in any newspaper that I have come across that hasn’t been critical of the staff report. Now, maybe the staff is right and everybody else in the United States is wrong, including me, Mr. Reece, but I am willing to take my chances.

The Chairman. As the chairman said initially, he is undertaking and I am satisfied the majority of the committee is undertaking to make an objective study. I am satisfied that the staff has no other purpose in mind except to help the committee make an objective study. But influences outside of the committee do not have the responsibility for the work of the committee. While we are very glad to have the views of the editors of the various papers, they are not matters of great concern so far as determining the direction of the study is concerned.

Mr. Hays. It is very indicative, however, of how far the gentleman has been able to impress the reliable editors of the country with his objectivity. And without burdening the record with any more at this point, I might just quote from the Denver Post of May 7. The lead editorial says:

We must keep an eye on Mr. Reece.

Mr. Goodwin. Mr. Chairman, might I inquire if anybody knows where we were at the detour?

Mr. Koch. With the wind from the east.

The Chairman. By all means, I think we should continue. I am satisfied that the witness who is now appearing before us does not feel that he has been harassed, as have some witnesses with whom the gentleman from Ohio has disagreed. He is not going to be harassed. He is not going to be unduly burdened, I am satisfied, by anyone. And I join in the wish of the gentleman from Massachusetts that we might proceed without unlimited interruptions.

Mr. Hays. Well, I will have to make a little statement before that. Of course, the gentleman isn’t going to be harassed, and of course he isn’t going to be picked on, because he is the first witness who has
come before this committee who had a sensible statement. And you can't pick any flaws in it, or any very significant ones, and if you could, you would be undertaking to do it. Now, let's face the facts. That isn't the reason he isn't going to be harassed much. In other words, in plain down-to-earth language, he isn't dealing in that little phrase that I like so much, psychoceramics. That is high-class English for "crackpots."

The CHAIRMAN. Before we deal with the facts, they will have to be presented, and the gentleman from Ohio is not presenting the facts. The witness is dealing with factual matters.

Mr. HAYS. He certainly is. That is what I am trying to say, that he is the first witness who has dealt with factual matters. I agree with you, Mr. Chairman, on that.

The CHAIRMAN. The gentleman from Ohio is not the only one interested in facts, and I will put the reputations of the other members of the committee up with that of the gentleman from Ohio.

Mr. HAYS. You don't have to come to the defense of the other members of the committee. Let them speak for themselves. I am sure they are interested in the facts, some of them. The gentleman from Massachusetts has indicated that he is interested in getting at the facts, and I wouldn't even say but what the chairman may have had a change of heart.

The CHAIRMAN. He has not had a change of heart, he has been interested in getting the facts all the time. The gentleman from Ohio is just incapable of visualizing and analyzing a situation when he sees it.

Mr. HAYS. Oh, I am capable of analyzing the kind of people that you have gone out and dragged up and dredged up. And, Mr. Reece, you must have had to dredge to find Mr. Sargent, and I could mention 1 or 2 more. You really had to dredge. You went way down with your dredge to get them. They are not reliable, responsive. [The chairman used the gavel.] Go ahead and hammer. I will keep right on talking when you get through.

Mr. GOODWIN. Now, Mr. Chairman, if the gentleman from Ohio indicates that he is not going to respect the gavel, as he just indicated, I am going to bring up here the question of whether or not these hearings are being conducted according to the rules of the House of Representatives, which are the rules of this committee.

Mr. HAYS. Well, I have brought that question up before and been overruled.

Mr. GOODWIN. I am rather tired of this. We have an eminent witness, who must, I suspect, or he may in his innermost consciousness, be coming to the realization that he spoke a little too early in his praise of Congress, if this is an example of the way congressional hearings are conducted.

Mr. HAYS. I heard you say you are getting tired. Do you know what I am getting tired of? I am tired of you taking one position in public with pious speeches and then running to me in secret and saying, "You know whose side my sympathies are on." Why don't you act like a man?

Mr. GOODWIN. Now, Mr. Chairman, I am going to ask for the rules of the House, and I am going to say that the gentleman from Ohio is out of order. He is impugning the motives of the chairman and the members of this committee.
Mr. HAYS. You wouldn't say I am not telling the truth, would you?
The CHAIRMAN. The gentleman is out of order. He has impugned the integrity of every man about whom he has talked.
Mr. HAYS. No, Mr. Chairman, don't make the statement that I have impugned the integrity of every man I have talked about.
The CHAIRMAN. The other members of the committee.
Mr. HAYS. No, not the other members of the committee.
In the first place, I haven't talked about any other members of the committee than two.
The CHAIRMAN. Whether you impugn my motives is immaterial.
Mr. HAYS. I wouldn't try to impugn your motives. Your motives have been clear from the beginning. Anybody who read your diatribe in the committee would know what your motives are.
The CHAIRMAN. The committee will proceed. Or, if not, we will have a motion to proceed.
Mr. HAYS. I suggest that we recess for lunch. It is past 12 o'clock. Maybe by 2:30, or so, we can get our motives straightened out.
The CHAIRMAN. I would regret to have the impression go out that the committee was incapable of orderly procedure, and if the gentleman from Ohio wants to create a situation which brings about such a course of action, of course, it is his responsibility and not that of the committee.
Mr. HAYS. Well, now, Mr. Chairman. What are you getting at now? Do you want to proceed for another 20 minutes, or do you want to adjourn now, or do you want to try to impugn my motives?
Just let me state that I wasn't the one who dreamed up the idea of spending $150,000 of the taxpayers' money for an Alice in Wonderland investigation which came out with the verdict before it heard the evidence. You did that.
The CHAIRMAN. Well, it is generally known that I was the author of the resolution. If you think there ought to be a witness brought in to establish the fact that I authored the resolution in the House, I would be very glad to have a witness called to that effect. But it is my responsibility, and I am pleased to admit it without its being brought into evidence.
You may proceed.
Mr. Kocn. We had been talking about the unknown elite, and then you said something with respect to the unknown social scientists.
They have dedicated their lives to research or teaching, or both. They have an extraordinarily high sense of civic duty and respect for truth.
Are you putting them up a little higher than the others in your statement there?
Mr. HERRING. There is my statement, Mr. Koch.
Mr. Kocn. It wasn't your intention, then, to set them up above anyone else?
Mr. HERRING. Clearly not.
Mr. Kocn. All right. On page 7, the first sentence of the first full paragraph:
This development was possible in the United States—comparing it with Europe—because of our greater willingness to experiment. Our expanding universities could give opportunity to research men who wished to explore new leads.
Well, of course, in addition to that is the fact that in America the magnetic power of money made experimenting and research more possible here than in some of our starving European governments; isn't that true? I mean, the fact that there was a lot of money available here might have provided some cause for that greater research over on this side.

Mr. Herring. You certainly can't build a cyclotron without money; and research is costly.

The Chairman. Some of the members have noon engagements. If there is no objection otherwise, the chairman will recess the hearing until 2 o'clock to meet in this same room.

(Whereupon, at 12:10 p.m., a recess was taken until 2 p.m.)

AFTERNOON SESSION

(The hearing was resumed at 2:15 p.m.)

The Chairman. The committee will come to order.

The chairman wishes to make a statement.

The chairman feels very deeply the responsibility which he has to protect the witnesses who appear before the committee, the employees of the committee, and the members of the committee, and to maintain the dignity of the committee, the dignity of the House, and to uphold the rules of procedure of the House and of the committees which operate under the procedures of the House. In view of the very unfortunate incident that happened this morning, following similar incidents, coupled with the fact that Mr. Goodwin cannot be here at this time due to another very important engagement which has developed, and also to give time to reflect upon this very serious situation that confronts the committee, the committee will stand in recess until 10 o'clock Tuesday morning.

(Whereupon, at 2:15 p.m., the hearing was recessed until 10 a.m., Tuesday, June 22, 1954.)

Note.—On Friday, June 18, 1954, the chairman notified the members of the committee that matters requiring his absence from the city had arisen, and the hearings scheduled for Tuesday, June 22, 1954, was postponed until Thursday, June 24, 1954. At the request of Mr. Wayne Hoys, a member of the official delegation leaving June 24 to accompany the body of Mr. Farrington to Hawaii, the chairman again postponed the hearings until a later date.
TAX-EXEMPT FOUNDATIONS

FRIDAY, JULY 2, 1954

HOUSE OF REPRESENTATIVES,
SPECIAL COMMITTEE TO INVESTIGATE TAX-EXEMPT FOUNDATIONS,
Washington, D. C.

The special committee met in executive session, pursuant to call of the chairman, Hon. Carroll Reece, and the following resolution was passed:

Now be it resolved that in lieu of further public hearings and in order to expedite the investigation and to develop the facts in an orderly and impartial manner, those foundations and others whose testimony the committee had expected to hear orally be requested to submit to the committee through its counsel within 15 days sworn written statements of pertinence and reasonable length for introduction into the record—such statements to be made available to the press—and that the committee proceed with the collection of further evidence and information through means other than public hearings.
TAX-EXEMPT FOUNDATIONS

FRIDAY, JULY 9, 1954

HOUSE OF REPRESENTATIVES,
SPECIAL COMMITTEE TO INVESTIGATE
TAX-EXEMPT FOUNDATIONS,
Washington, D. C.

Pursuant to resolution of the committee on July 2, 1954, at the instruction of the chairman, the balance of the staff report prepared by Kathryn Casey, legal analyst, on the Carnegie and Rockefeller Foundations, was incorporated in the record of proceedings.

(The report follows:)

SUMMARY OF ACTIVITIES OF CARNEGIE CORP. OF NEW YORK, CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE, THE ROCKEFELLER FOUNDATION

PREFACE

Comments made following presentation of the first part of this summary of the activities of the Carnegie and Rockefeller philanthropic trusts indicate a rather widespread misconception among foundation executives both as to the purpose of chronicling their activities in certain fields, and also as to the requirements of House Resolution 217—under which this and all other staff reports have been prepared.

While varying somewhat in phraseology and manner of presentation, the theme of these comments was essentially the same, namely: Why has the staff disregarded the many "good things attributable to the foundations?

The best—and the only answer—is that the work of the staff, including both research and the preparation of reports, has been carried out in the light of the language in the enabling resolution by which the committee

* * * authorized and directed to conduct a full and complete study of educational and philanthropic foundations * * * to determine if (they) are using their resources for purposes other than (those) * * * for which they were established, and especially * * * for un-American and subversive activities; for political purposes; propaganda, or attempts to influence legislation.

There is no distinction here as between so-called good or bad activities of the foundations—nor is there a direction to scrutinize the activities of foundations generally and report on them—only an admonition pinpointed toward specified types of activities.

It has been with that in mind that reports and statements of the Carnegie and Rockefeller organizations have been carefully studied, as well as books written about them.
II

At the same time that Carnegie and Rockefeller agencies were concentrating on the "chaotic condition" of education in the United States (discussed in I), organizations bearing the same family names were focusing attention on other types of conditions which in the opinion of the trustees required improvement. While these so-called problems covered such varied fields as public health, malaria in Africa, and exchange of professors and students of international law, there was an indirect relationship between them, and also between them and education: namely, all of them were on the periphery—if not directly in the center—of international relations and governmental activities.

That both the foundation and the endowment did carry on activities which would directly or indirectly affect legislation is borne out by their own statements, as found in their annual reports.

That they both engaged in propaganda—as that word is defined in the dictionary, without regard to whether it is for good or bad ends—is also confirmed by the same source.

That both had as a project forming public opinion and supplying information to the United States Government to achieve certain objectives, including an internationalist point of view, there can be no doubt.

None of these results is inherent in the purposes of either of these organizations.

Attached to this are abstracts from the yearly reports of both organizations (identified as Exhibit—Carnegie Endowment for International Peace and Exhibit—Rockefeller Foundation and arranged chronologically), to which reference will be made from time to time in support of statements as to the type of activity carried out by the endowment, and occasionally short material of this nature will be incorporated into the summary. This method has been chosen because it will materially shorten the text of the summary itself, and still give the members of the committee the benefit of having before them statements made by both the endowment and the foundation.

As in part I, this portion of the summary of activities is concerned only with stating what was done by the Carnegie and Rockefeller agencies, the time of such activity, and the results, if any.

Purposes

The endowment by its charter was created to:

* * * promote the advancement and diffusion of knowledge and understanding among the people of the United States; to advance the cause of peace among nations; to hasten the renunciation of war as an instrument of national policy; to encourage and promote methods for the peaceful settlement of international differences and for the increase of international understanding and concord; and to aid in the development of international law, and the acceptance of all nations of the principles underlying such law.

To accomplish its objectives the endowment had three divisions, each having distinct fields of activity, particularly when originally established, but as will be seen some of their operations have become somewhat interwoven.

The primary objective of the division of international law was the development of it, a general agreement—accepted by all nations—as
to its rules, accompanied by establishment of better understanding of international rights and duties, and a better sense of international justice.

The division of economics and history had its program outlined at a conference at Berne which laid out a plan of investigation to reveal the causes and results of war. Many of the topics bear a rather close resemblance to effects now found in the national life.

The purposes for which the division of intercourse and education was instituted were the diffusion of information, and education of public opinion regarding, not only the causes, nature, cultivation of friendly feelings between people of different countries and effects of war, but also means for its prevention; maintenance, promotion, and assistance of organizations considered to be necessary or useful for such purposes. It was first referred to as the division of propaganda 1—a name changed at the time it was formally established.

This division from the beginning expended much more money than did the other two divisions, or the office of the secretary.

Compared with the activities of the other two divisions in these early years those of the division of economics and history were fairly routine, although with the outbreak of the First World War it was to start on what developed into some 30 volumes of the economic history of that war. While some of the economic measures which were covered in that history and in other phases of the divisions were significant in the light of the types of controls which were established in this country during the Second World War, it is really with the work of the other two divisions that this summary will primarily concern itself, since their activities were more often in the international relations, propaganda, political, and government relations areas.

The Rockefeller Foundation has a much more general and more inclusive purpose: "To promote the well-being of mankind throughout the world." There is scarcely any lawful activity which would not come within that classification, and undoubtedly some proscribed by various statutes in this country might conceivably still be construed as for the "well-being of mankind" elsewhere.

Before 1929, as mentioned in the earlier portion of this summary, the Rockefeller Foundation confined its activities primarily to the fields of medical education and public health, with some attention being given to agriculture. Except in the sense that activities in each of these fields were carried on outside of the United States, they had relatively nothing to do with "international relations," but in the light of later activities of the foundation in connection with "one-world" theories of government and planning on a global scale there seems little doubt that there is at least a causative connection.

The activities of the foundation are now (and have been for some time) carried on by four divisions: Division of medicine and public health, division of natural sciences and agriculture, division of social sciences (including a section entitled international relations), and division of humanities.

It is impossible to discuss the activities of the endowment and the foundation entirely by subject headings, because one merges into the other, and therefore they will be discussed in relation to the following: International relations, governmental relations, political activities, and propaganda.

1 Finch History.
As mentioned earlier, the primary interests of these organizations were in divergent areas, but from 1929 the activities of both the endowment and the foundation were along more or less parallel lines—although again the descriptive phraseology of the endowment is usually much more direct than that of the foundation as will be seen by quotations from annual reports of each organization.

Because of the characteristic similarity, graphically illustrated by the chart at the end of this summary, the activities of both organizations from 1929 on will be discussed together. However, since the endowment’s program began prior to that time, details of it will be included first.

*Endowment activities—1911–29*

The endowment was dedicated to achieving world peace and in doing that it utilized every method it deemed appropriate and effective. One method chosen was international law—and it immediately set about to establish a coordinated national system of instruction throughout the country in that subject. The 1930 yearbook, page 108, refers to a meeting of international law and international relations professors who met “in conference in order to discuss and to agree upon the best methods to reach and educate the youth—primarily of the United States—in the principles of international law and the basis of foreign relations.”

In addition to international law, another method selected by the endowment as a means of achieving international amity, was what throughout the years is referred to in such terms as “education of public opinion,” “development of the international mind,” “enlightenment of public opinion,” and “stimulation of public education.” This last phrase it may be noted was used by Alger Hiss in his Recommendations of the President, pages 16 and 17 of the 1947 yearbook, in which he also recommended “most earnestly” that the endowment’s program for the period ahead be constructed “primarily for the support and assistance of the United Nations.” At times these phrases were coupled with “diffusing information” or “dissemination of information” but more frequently they were not. This part of the endowment’s work was not confined to the United States—it also selected material to be distributed abroad through various means, and circulated foreign pamphlets on various subjects in this country.

There is little doubt that the endowment regarded its work as educational and as fostering world peace—and there is equally little doubt that the work was in the international relations field, and consistently of a propaganda nature. For example, as far back as June 1917 it cooperated with the Academy of Political Science on a National Conference on Foreign Relations of the United States, the stated purpose being “to organize a campaign of education among the people of the United States on the international situation then existing.”

Again in 1926 the endowment sponsored a conference on international problems and relations—the aim being to “create and diffuse in the United States a wider knowledge of the facts and a broader and more sympathetic interest in international problems and relations.” Several of the topics assume significance in the light of later events—“International cooperation in public health and social welfare” and “Economic adjustments.”
Viewed in the light of what the endowment did then and later in its campaign of education, and "to create and diffuse * * * a wider knowledge" as well as the agencies it chose to carry them out, these early ventures seem rather significant.

Throughout the years the reports cover such subjects as international relations clubs, international mind alcoves, international relations centers, international economic cooperation, exchange professors, international visits, and the like. Its relationship with the American Association of International Conciliation continued until 1924 when its activities were merged with those of the division. According to Dr. Finch that organization was selected by Dr. Butler as "the chief propaganda agency of the division" (p. 446 of Finch History).

The endowment was really just getting started when the First World War raised serious obstacles to its work abroad. However, before that event it had selected as "agencies of propaganda" (a name later discarded) various of the peace societies, in which Mr. Carnegie had been intensely interested.

However, some projects of importance were underway. The division of international law had surveyed the situation existing with regard to the teaching of that subject in colleges and universities in the United States, and by the time war broke out in 1914 compiled a tabulation showing the professors, instructors, and lecturers on international law and related subjects during the collegiate year 1911-12.

The immediate result of this was placing the subject of fostering "the study of international law" on the agenda of the American Society of International Law in 1914, at the request of the endowment.

From that beginning grew the great influence of the endowment in this field's increased facilities for the study of international law, uniform instruction differentiation between undergraduate and graduate instructions, and inclusion of a host of "related" subjects. According to the Carnegie Endowment History by Dr. Finch, a check by the division on the effects of its efforts showed the material increase both in number of hours and the enlargement of classes which he estimates as 45 percent from 1911 to 1922, and a still further increase by 1928. He also mentioned that in 1928 there were six former holders of the endowment's international law fellowships teaching in foreign universities (p. 319 of the Finch History).

**Fellowships in international law**

At the recommendation of the American Society of International Law (made December 1916) the endowment established fellowships for the study of international law and related subjects. There were 5 awarded annually to graduate students holding the equivalent of a bachelor's degree and 5 to teachers of international law or related subjects with 1 year of previous teaching experience.

A total of 212 fellowships were awarded from 1917 to 1936 (about one-sixth being renewals), of which 128 were to students and 84 to teachers. Dr. Finch states that while complete records are not available, information in the files and in Who's Who as well as personal contacts show that two-thirds entered the teaching profession and he then continues (pp. 323 et seq.):

As the years went by, most of these teachers improved their positions. Some became senior professors or heads of departments. Three became university
presidents: Colgate W. Darden, Jr., is president of the University of Virginia; Norman A. M. MacKenzie became president of the University of New Brunswick and later of the University of British Columbia; Henry M. Wriston, after serving as president of Lawrence College, is now president of Brown University; Bessie C. Randolph became president of Hollins College, Virginia, and Bernice Brown (Cronkhite) is dean of Radcliffe College. Frederick S. Dunn, of Johns Hopkins University, is now director of the Yale Institute of International Studies. Two former fellows were elected to the United States Congress, Charles West, of Ohio, and Colgate W. Darden, of Virginia. Mr. Darden then served as Governor of Virginia before he accepted the presidency of the university of his State.

Leadership has been assumed by former international law fellows in the organization and direction of community and regional centers in different areas of the country for the promotion of international understanding and cooperation in international organization. Keener C. Frazer, professor of political science of the University of North Carolina, became director of the Southern Council on International Relations. J. Eugene Harley, professor of political science at the University of Southern California, became director for the Center for International Understanding at Los Angeles, and chairman of the Commission to Study the Organization of Peace in the southern California region; Charles E. Martin, professor of international law and head of the department of political science of the University of Washington, is chairman of the Institute of Public Affairs of Seattle, and of the Northwest Commission to Study the Organization of Peace. Brooks Emeny, of Cleveland, Ohio, was director of foreign affairs council of that city, and then became president of the Foreign Policy Association in New York. Another former endowment fellow, Vera Micheles (Dean) is the director of research of the same organization.

Some 16 former fellows are now in the service of the Department of State occupying positions of varying responsibilities. The most outstanding of this group is Philip C. Jessup, now Ambassador-at-Large, and representing the Government of the United States in the United Nations and other important international conferences attempting to restore peace to the world. At least two former endowment fellows who entered the military service were appointed to responsible positions requiring a knowledge of international law. Hardy C. Dillard, of the University of Virginia, was director of studies of the United States Army's School of Military Government located at that university, and later occupied the same position at the National War College in Washington. Charles Fairman, of Stanford University, was Chief of the International Law Division of the Office of Theater Judge Advocate in the European Theater of Operations. Several former endowment fellows were selected by the Government to go on cultural and educational missions to the occupied areas, and two of them served as consultants to General MacArthur in Tokyo (Claude A. Buss of the University of Southern California, and Kenneth W. Colegrove of Northwestern University). A former endowment fellow, Francis O. Wilcox, is chief of staff of the Senate Committee on Foreign Relations, assisted by another former fellow Thorsten Kalijarvi.

Of special interest is the career of John H. Spencer, of Harvard, after studying under a fellowship. He was appointed legal adviser to Emperor Hailie Selassie, of Ethiopia before World War II. He returned to the United States and served in the State Department and United States Navy while the Italian Army occupied that country, and then returned to his former post in Addis Ababa at the urgent request of the Emperor, supported by the Department of State. John R. Humphrey, an international law fellow from McGill University, Montreal, became Director of the Division on Human Rights of the United Nations Secretariat.

He concludes with this statement:

The immediate objective, namely, to provide an adequate number of teachers competent to give instruction in international law and related subjects, and thus to aid colleges and universities in extending and improving the teaching of these subjects, was demonstrably achieved. From this selective educational group have emerged leaders of opinion as well as of action in the conduct of international relations directed toward the goal for which the endowment was founded.

---

2 Dr. Wriston was elected a trustee of the Carnegie Endowment for International Peace in 1943. He is also a trustee of the Carnegie Foundation for the Advancement of Teaching and of the World Peace Foundation. He holds membership in several learned societies, is a former president of the Association of American Colleges and president of the Association of American Universities.
At the same time, the division of intercourse and education was setting out on a policy stated by Dr. Butler to be:

To lay little stress upon those aspects of peace propaganda that are primarily rhetorical and feeling in character, but rather to organize throughout the world centers of influence and constructive policy that may be used in the years to come as the foundation upon which to erect a superstructure of international confidence and good will and therefore of peace.

In view of the division's activities later in behalf of the League of Nations and the United Nations, this has a somewhat prophetic ring. Compared with the activities of the other divisions, the activities of the division of intercourse and education were much more varied, and the yearbooks contain innumerable references to its activities which indicate that they were more concentrated in the fields covered by this summary.

One of the very first actions of the division in 1911 was the appointment of special correspondents throughout the world to report on conditions in their respective countries and on public opinion here regarding international problems between their governments and other nations. When, in the opinion of the division, it was proper, extracts were given to the American press. The decision of which to give and which to withhold was entirely within the discretion of the division, and that undoubtedly meant Dr. Butler. In view of his intense desire to achieve peace, and his equally firm conviction that an international organization could best accomplish that, it is entirely conceivable that his judgment as to the material to be released might be influenced by his own convictions and desires—and this would be equally true in the case of any human being.

The correspondents also made the endowment's work known in their countries through the press, interviews and speeches, and officially represented it at undertakings of international cooperation and understanding.

This system was discontinued in 1930 because by that time the division had established—such a network of worldwide connections involving continuous correspondence as to make it no longer necessary to employ the services of special correspondents.

Just after the war started in 1914, the division engaged prominent persons to lecture before colleges, chambers of commerce, clubs, and similar audiences on the subject of past and present history as it related to current international problems. Among the speakers were David Starr Jordan, Hamilton Wright Mabie, and George W. Kirchwey. Dr. Butler instructions as to the endowment's purpose in sponsoring these lectures were:

This work is to educate and enlighten public opinion and not to carry on a special propaganda in reference to the unhappy conditions which now prevail throughout a large part of the world. It is highly important that purely contentious questions be avoided so far as possible and that attention be fixed on those underlying principles of international conduct, of international law, and of international organization which must be agreed upon and enforced if peaceful civilization is to continue (letter to Dean Frederick P. Keppel, May 28, 1915–16 yearbook, p. 67).

International mind alcoves

These were described in the yearbook of the endowment and typical references are given in the exhibit. Following the entry of the United States into World War I a systematic purchase and distribution of books and pamphlets dealing with international relations generally
and the causes and effects of war, as well as the possible terms of peace, was begun by the division of intercourse and education. Dr. Butler is generally credited with coining the phrase "international mind" and from the time the distribution to libraries was begun they were known as "international mind alcoves" and so referred to in the annual reports.

The endowment has described the books selected and distributed by it as "authoritative and unbiased books of a type suitable to interest the general reader dealing with the daily life, customs and history of other countries." In that connection, among the books distributed to these alcoves and to the international relations clubs (and international relations centers) are those referred to in a memorandum which forms an exhibit to this summary, and is entitled "Exhibit—Carnegie, Books Distributed." The endowment has contributed $804,000 to this activity. Dr. Colegrove's comments on some of these volumes indicate there was only one viewpoint presented—that of the one world internationalist—and books written from a strictly nationalist point of view were not included.

**International relations clubs and conferences**

These clubs in the United States were in part, an outgrowth of groups of European students organized by the World Peace Foundation, and known as Corda Fratres. The endowment at the request of the World Peace Foundation contributed to the Eighth International Congress of Students, and the following year (1914) the division of intercourse and education began to actively organize what it described as International Polity Clubs in colleges and universities throughout the country, for the purpose of stimulation of interest in international problems in the United States. The name was changed in 1919 to International Relations Clubs, and while interest diminished for a few years after World War I, the clubs began a steady annual increase before too long, which has been sustained to the present time.

About 1924 the first conference was organized of a federation of clubs in the Southern States, which became known as the Southeast International Relations Clubs Conference. The idea quickly spread and a dozen such regional centers were formed. (From 1921 until 1946 the endowment contributed $450,425 toward this program.)

Here again the purpose of the endowment is stated (International Relations Club Handbook, 1926) to be:

> to educate and enlighten public opinion. It is not to support any single view as to how best to treat the conditions which now prevail throughout the world, but to fix the attention of students on those underlying principles of international conduct, of international law, and of international organization which must be agreed upon and applied if peaceful civilization is to continue.

However, mere statement of purpose as frequently pointed out by the Bureau of Internal Revenue is not sufficient—the activities must follow the purpose; and those of the endowment do not bear out its statement "not to support any single view." Throughout its reports, by the books it has distributed, by the agencies it has used for various projects, by the endowment graduates which have found their places in Government—the endowment has put forward only one side of the question, that of an international organization for peace. It has not sponsored projects advocating other means.
The endowment's evaluation of these clubs is contained in frequent references in its reports, only one of which is included in the Exhibit—Carnegie, that from the yearbook for 1943, pages 37–38. Dr. Johnson in response to a letter requesting information as to the formation and activities of these clubs, wrote the committee on April 29, 1954, and both the request and the reply are included in Exhibit—Carnegie.

These clubs were formed in 1914 and have operated for 40 years in colleges, universities, and high schools. In 1938 according to Dr. Johnson there were 1,103 clubs: 265 in high schools and 685 in colleges and universities throughout the United States; with 11 scattered in the Philippines, Hawaii, Alaska, Canal Zone, and Puerto Rico; 24 in the United Kingdom, 34 in 14 Latin American countries, 22 in China, 9 in Japan, 2 in Korea; and the remaining 51 in Canada, Egypt, Greece, Iran, Iraq, Siam, New Zealand, Australia, South Africa, Syria, and India.

Dr. Johnson's concluding statement that "a contribution was made to a better understanding of the responsibilities which our country now bears as a world power" is quite understandable under the circumstances. Some of the other aspects of these clubs will be discussed in connection with the Foreign Policy Association.

Visiting Carnegie professors

In addition to the exchange professors of the division of international law the division of intercourse and education in 1927 initiated its own plan of exchange professors. It was inaugurated by sending abroad the directors of the other two divisions as visiting professors that year, Dr. James Scott Brown going to lecture at universities in Latin America and Spain, and Dr. James T. Shotwell being sent to Berlin. The other prominent Americans closely identified with this field who went abroad to represent the endowment were Dr. David P. Barrows, former president of the University of California, and an elected trustee of the endowment in 1931; and Dr. Henry Suzzalli, former president of the University of Washington at Seattle and chairman of the board of the Carnegie Foundation for the Advancement of Teaching. The exchange professors were not restricted to international law and political science, but included professors of public law, history, and other subjects.

The endowment also arranged for European tours for newspaper editors, and a reciprocal tour of the United States for a group from Europe.

Political activities

In addition to these projects already described, the endowment quite early in its career (1913–14) had a brush with the United States Senate regarding Senator Root's statements on the floor of the Senate during the controversy over exemption of American coastwise vessels from payment of Panama Canal tolls.

The Senate Committee on Judiciary was directed to investigate the charge that "a lobby is maintained to influence legislation pending in the Senate." (Pt. 62, March 13, 1914, pp. 4770–4808.) Apparently, there had been some question as to whether the exceedingly widespread distribution of the Senator's speeches by the endowment had been at
Government expense. In his history, Dr. Finch discussing the incident says:

There was little real need for any outside investigation of the work of the endowment. From the beginning the trustees regarded themselves as the administrators of a quasi-public trust fund. Complete accounts of all activities and of expenditures detailed as much as practicable within reasonable printed limits, were published annually in the yearbook beginning with 1911. In it were given the names of the trustees, officers and membership of committees, and the full texts of the reports of the executive committee, the Secretary, the treasurer, and of the directors of the three divisions. Summaries were published in the yearbook of the meetings of the board of trustees, with the texts of their resolutions and the amount and general purposes of their appropriations. Lists with bibliographical data were added of all endowment publications up to that time. The yearbook was obtainable free of charge upon application. It had a regular mailing list of 5,000 to 10,000 addresses, which included all the important newspaper offices in the United States and many in foreign countries.

The endowment also actively advocated passage of the reciprocal trade agreements legislation, adherence to the Anglo-American agreements and carried on various other activities of a political nature, as the extracts from their annual reports confirm.

After World War I the endowment’s trustees seemed to have been divided in their ideas on how best to begin anew their efforts to build a peaceful world. Some members of the board were still of the opinion that international law, arbitration treaties and the like offered the greatest hope, while others looked to an “international organization” of nations, as the best means to accomplish this objective.

The matter was resolved, officially at least, by the endowment putting its strength behind the League of Nations or failing that, adherence to the World Court. Here again, the attitude and activities of the endowment can be readily ascertained by reference to the exhibit in which only a few of the many such statements have been included.

Early in its career the endowment began the close working arrangements with the Federal Government which have continued down to the present time. Immediately after the United States entered World War I the trustees passed a resolution offering to the Government “the services of its division of international law, its personnel and equipment for dealing with the pressure of international business incident to the war.”

The Secretary of State first asked that the division translate and publish the complete text of the proceedings of the two Hague Conferences and preliminary copies were made available to the American Commission to Negotiate Peace at Paris in 1918. The division also aided in the preparatory work for the peace conference, and the material for the use of the American delegation was selected (at a cost of $30,000 paid by the endowment) by a committee of three appointed by the Secretary of State—the director of the division of international law, the Solicitor of the Department, Lester H. Woolsey, and a special assistant in the Department, David Hunter Miller. Much of the material was the work of regular division personnel and all manuscripts were edited by it.

The director of the division of international law was one of the two principal legal advisers of the American Commission to Negotiate Peace, the assistant director, Dr. Finch, was assistant legal adviser, as were the chief division assistant, Henry G. Crocker, and Prof. Amos S. Hershey (who was added to the professional staff to aid in the work
for the State Department); and George D. Gregory accompanied the American group as secretarial-assistant translator.

The endowment also took part in the conference on the limitation of armament and pacific relations in 1921–22, Elihu Root then president of the endowment being one of the official United States delegates and James Brown Scott, director of the division of international law, one of the legal advisers.

Here again, the endowment offered the Secretary of State its cooperation, which was accepted and a few weeks later Secretary of State Hughes suggested that the endowment issue a series of pamphlets on the principal problems coming before the Conference.

President Root reporting to the board on April 21, 1922 said:

I really do not know how the far-eastern work of the late Conference Upon the Limitation of Armament could have been done without McMurray’s book which had just a few months before been published by the endowment. The whole process of ranging the nine nations represented in the Conference upon a basis of agreement for the treatment of Chinese questions so as to facilitate the heroic efforts of the Chinese people to develop an effective and stable self-government would have been exceedingly difficult, if not impossible, if we had not had those two big volumes published by the endowment upon our tables for access at any moment. We were continually referring to them and the members could turn to such a page and find such a treaty and such an agreement and have the real facts readily accessible.

When the Rockefeller Foundation turned to the social sciences and the humanities as the means to advance the “well-being” of humanity, the section entitled “Social Sciences” in the annual report was set up under the following headings, which remained unchanged until 1935:

General Social Science Projects: Cooperative Undertakings.
Research in Fundamental Disciplines.
Interracial and International Studies.
Current Social Studies.
Research in the Field of Public Administration.
Fundamental Research and Promotion of Certain Types of Organization.
Fellowships in the Social Sciences.

The report states that the arrangement was for the purpose of “simplification and in order to emphasize the purpose for which appropriations have been made.”

In the decade 1929–38 the foundation’s grants to social-science projects amounted to $31.4 millions and grants were made to such agencies as the Brookings Institution, the Social Science Research Council, the National Research Council, the Foreign Policy Association, the Council on Foreign Relations, and the Institute of Pacific Relations in this country as well as a dozen or more in other countries, and the Fiscal Committee of the League of Nations.

The original plunge of the foundation into the field of social science was at the instigation of Beardsley Ruml, according to Raymond Fosdick (The Story of the Rockefeller Foundation, p. 194), who in 1922 was appointed director of the Laura Spelman Rockefeller Memorial when consolidation of that organization with the foundation was already being considered. During the 7 years, 1922–29 the memorial operated under Ruml’s guidance it concentrated on the field of social sciences and spent $41 million. Referring to the work of the memorial Dr. Fosdick writes:

He (Ruml) always insisted that his job was with social scientists, rather than with social science. The sums which, under his leadership, were used to stimulate
scientific investigation were perhaps not large in comparison with aggregate expenditures for social sciences, but they represented a new margin of resources, and they were employed dramatically at a strategic moment. Chancellor Hutchins of the University of Chicago, speaking in 1929, summed up the verdict in words which a longer perspective will probably not overrule: "The Laura Spelman Rockefeller Memorial, in its brief but brilliant career, did more than any other agency to promote the social sciences in the United States."

Dr. Ruml was the head of the memorial for all but the first 4 years of its existence.

Since the foundation absorbed the memorial's program and carries on all its activities relating to government and international relations under the heading of social sciences, these comments by Dr. Fosdick and Dr. Hutchins have equal applicability to the work of the foundation in these fields.

There is ample evidence from the foundation's yearbooks that it carried on activities in the field of government of a political and propaganda nature, as well as in the field of international relations, and examples of this will be found in the "Exhibit—Rockefeller." Included in that exhibit also are the statement of Mr. Chester I. Barnard in the Cox committee hearings, page 563, speaking of his work as "the consultant of the State Department * * * on different things from time to time," and quotations from Dr. Fosdick's book on the foundation.

In 1935 the foundation's activities again were reorganized, and that year the section "Social Sciences" begins: "In 1935 the foundation program in the social sciences were reorganized along new lines with emphasis upon certain definite fields of interest."

Major changes were termination of financial aid to general institutional research in the social sciences here and abroad, elimination of grants for "the promotion of basic economic research," for community organization and planning (unless within the scope of one of the new fields of interest), cultural anthropology, and schools of social work.

From then on the foundation was to concentrate on three areas of study: Social security, international relations, and public administration.

Subsequent statements made by the foundation concerning its work in each of these fields will be discussed in the concluding portions of this summary.

The same year that the foundation publicly announced that its activities in the field of social science would be confined to international relations and relations with government, the endowment was engaged in a project related to both which exemplifies the methods frequently used by the endowment in attempting to achieve world peace. This project was the calling of an unofficial conference in March of 1935 to consider possible steps to promote trade and reduction of unemployment, stabilization of national monetary systems, and better organization of the family of nations to give security and strengthen the foundations on which international peace must rest.

From this grew the reorganization of the National Peace Conference, composed of 32 newly organized city and State peace councils, with its committees of experts appointed to supply factual data and analyses of international affairs. Among the commissions were ones on economics and peace, national defense, the world community, and the Far East.
Of particular interest is the fact that the director of the League of Nations Association, Clark M. Eichelberger, later to occupy the same position with the Association for the United Nations, was placed in charge of the endowment's educational program. Dr. Finch's comment on this indicates the extensive nature of Dr. Eichelberger's contacts through this assignment.

He traveled extensively throughout the United States developing contacts which resulted in the adoption of programs within numerous organizations, some not hitherto reached by the endowment. Among them were: United States Department of Agriculture Extension Service through its county and home-demonstration agents and discussion specialists in the field; extension services of State agricultural colleges; American Farm Bureau Federation and Associated Women of the Federation; National Farmers Educational and Cooperative Union of America; Junior Farmers Union; 4-H Clubs; National Grange; informal community forums and Federal forums sponsored by the United States Bureau of Education; classes and forums conducted by the Works Progress Administration; adult education; workers' education and labor unions; churches, women's clubs, university groups, Rotary, and other service clubs. Leadership-training conferences were established for the training of organizational representatives from which the best qualified were selected for discussion leaders. Literature was prepared by the division and supplied for use in discussion programs. Basic pamphlet material of the Department of State was also used. The radio played an important part. Local stations were supplied with electrical transcriptions of addresses on world economic problems.

Dr. Finch has another comment as to the methods used in carrying on this "educational program":

The educational program did not necessarily start with the subject of international relations as such, but with topics which would help the membership of these groups to recognize and analyze the economic, social, and educational problems within their own organizations and communities, and to understand the factors, local, national, and international which create these problems; to discover to what extent each economic group could contribute toward the solution of their common problems, and to what extent solutions of local problems were dependent upon national and international relations; to know and use the sources of information on public and international problems.

The National Peace Conference extended this "educational" work in 1938 by undertaking "an educational campaign for world economic cooperation," using Peaceful Change—Alternative to War, published by the Foreign Policy Association, as the basic handbook. According to Dr. Nicholas Murray Butler (1938 yearbook, p. 48) this campaign was undertaken to emphasize the importance of putting into effect the recommendations of the joint committee of the endowment and the International Chamber of Commerce, and had two phases. The first, from September 1937 to March 1938, was on education in the fundamentals of world economic cooperation followed by a nationwide conference scheduled for March 1938 in Washington, D. C., to appraise the campaign up to that time, "to consider recommendations of practical policy prepared by a committee of experts under the direction of Prof. Eugene Staley, and to formulate conclusions on specific Government policies." The second phase was another campaign of education from March 1938 to January 1939.

It is apparent merely from reading the Rockefeller Foundation's list of its "fields of interest" that in all probability it would frequently contribute to the identical project and the identical organization, receiving contributions from the endowment. This is exactly what happened, and while in the amount of time available it is not possible to itemize the projects, it is possible to select typical examples from the agencies to which it contributed.
As a matter of fact, the endowment and the foundation concentrated their grants among the same agencies in practically every case. Moreover, as it will become apparent, at times a joint activity (in the sense that both contributed funds to a particular project or organization) was related to both Government and to international relations. Several of such organizations aided by both organizations will be discussed separately because they are particularly pertinent to the relations of the foundations to both Government and international relations.

**Institute of International Education**

This was one of the first agencies to receive contributions from the foundation when it enlarged its sphere of activity to include the social sciences, and it has continued to make grants every year since then.

The institution was authorized by the executive committee of the endowment at Dr. Butler's instigation in 1919, as an integral part of the Division of Intercourse and Education for the

purpose of fostering and promoting closer international relations and understanding between the people of the United States and other countries, to act as a clearinghouse of information and advice on such matters and to systematize the exchange of visits of teachers and students between colleges and universities of the United States and those of foreign countries.

It arranged itineraries and lecture tours for visiting professors and circulated the visiting professors among the colleges and universities of the United States, including visits to the International Relations Clubs.

In Department of State publication 2137, page 9, entitled "The Cultural Cooperation Program, 1938–43," there is the following statement as to the place the institute came to occupy in international education:

The Institute of International Education in New York, a private organization, began after the First World War to persuade universities in the United States and in Europe to offer full scholarships (tuition, board, and lodging) for exchange students. More than 100 universities in the United States and a similar number in Europe cooperated. The institute reported that during the period 1920–38 approximately 2,500 foreign students were brought to the United States under this plan, and 2,357 American students were placed in foreign universities. The cash value of scholarships given by American universities to this group of foreign students was $1,970,000, and the scholarships to American students abroad were valued at $917,000. This plan is especially significant because it won support from so large a number of private institutions, each of which was willing to invest its own funds in the exchange of students.

The endowment also continued its contributions to this institute—funds from both organizations amounting to approximately $5 million.

**Foreign Policy Association**

This organization received grants from the endowment, and, in addition, many of its pamphlets were distributed to the International Mind Alcoves and the International Relations Clubs.

In that connection, one of the persons whose books were distributed by the endowment was Vera Michele Dean, who is referred to later in this summary. Mrs. Dean was given an international law scholarship by the endowment in 1925–26.
The Rockefeller Foundation between 1934 and 1945 (when it made a tapering grant of $200,000) contributed $625,000 to the research, publication and educational activities of the Foreign Policy Association. In 1950, when it terminated aid to the association, the foundation in its annual report indicated that its reason for doing so was that it was operating largely on a stable and self-supporting basis. However, in 1952 the Adult Education Fund of the Ford Foundation gave $335,000 to the association.

The Rockefeller Foundation in addition to contributing funds to the Foreign Policy Association has referred to the Headline Series in its annual reports, and, while not fulsome in praise, there is no doubt that the foundation approved of them—the 1950 annual report (exhibit—Rockefeller) refers to these books as the “popular Headline Books,” with details on problems of importance to Americans and to the world.

Dr. Johnson, after describing the International Relations Clubs (exhibit—Carnegie) adds that these clubs have now become associated with the Foreign Policy Association. In that connection, the McCarran committee hearings contain frequent references to the interlocking association of that organization with the Institute of Pacific Relations, and includes, among other exhibits, No. 1247, which discussed the Headline book, Russia at War, and refers to the good job performed by the Foreign Policy Association of promoting Mrs. Dean’s pamphlet, through the regular channels.

Time has not permitted extensive inspection of the volumes published by the Foreign Policy Association, but Vera Michele Dean who was the research director of the Foreign Policy Association and editor of its research publications is referred to frequently in the McCarran committee reports on the Institute of Pacific Relations. She is the author of Russia—Menace or Promise? one of the Headline Series, as well as the United States and Russia (1948).

While the Association refers to itself as a nonprofit American organization founded to carry on research and educational activities to aid in the understanding and constructive development of American foreign policy which does not seek to promote any one point of view toward international affairs, this statement is somewhat equivocal both in view of the nature of its publications, and also because in those reviewed little attention was paid to the possibility of a nationalist point of view as opposed to an internationalist one.

Another of the Headline Series, World of Great Powers, by Max Lerner (1947), contains the following language:

There are undoubtedly valuable elements in the capitalist economic organizations. The economic techniques of the future are likely to be an amalgam of the techniques of American business management with those of Government ownership, control, and regulation. For the peoples of the world, whatever their philosophies, are moving toward similar methods of making their economic system work.

If democracy is to survive, it too must move toward socialism—a socialism guarded by the political controls of a State that maintains the tradition of intellectual consent and the freedom of political opposition. And the imperatives of survival are stronger than the winds of capitalist doctrine.

This is an arduous road for democracy to travel, and it may not succeed. But it is the only principle that can organize the restless energies of the world’s peoples. * * *
Mr. Lerner's attitude insofar as Russia is concerned is indicated by this language on pages 34 and 35, after stating that both Russia and the United States merely want world peace and security:

The successive layers of fear and suspicion on both sides can be stripped away only when both show a creativeness in approaching each other halfway. This would mean, for America, reopening the question of granting Russia a loan or credits for the purchasing of machines and machine tools. These the Soviet Union sorely needs for peacetime production and for lifting the terribly low standards of living of the Russian people. For Russia it would mean a commitment to return to the world economic and trade councils from which it withdrew after Bretton Woods.

Moving from the economic to the political level, it would mean a willingness on America's part to grant greater United Nations control of Japan and the former Japanese island bases in the Pacific, and on Russia's part to be less truculent about her sphere of influence in eastern Europe. Given such economic and political agreements, a meeting of minds would become possible on the international control of atomic energy, which is the central question both of disarmament and peace.

One further illustration of the internationalist trend of the Foreign Policy Association will be found in another Headline Series volume, Freedom's Charter, The Universal Declaration of Human Rights, by Dr. O. Frederick Nolde, which deals with the covenants on human rights without referring to the criticisms made of their possible effects on the Constitution and its Bill of Rights, and the entire tone of the pamphlet is one of praise for the universal declaration. By a technique frequently found in pamphlets which are pro-United Nations and its activities, Dr. Nolde obliquely places those who disagree with the universal declaration—for whatever reason—in a category with the Soviet Union who also object to certain phases, for example: "Soviet emphasis on state sovereignty appeared in other contexts, also. Many delegates contended that the universal protection of man's rights will require a measurable yielding of national sovereignty. As previously pointed out, the U. S. S. R. took radical exception to this contention."

Up to the time this summary was written no book or pamphlet of a contrary point of view (published by the association) has been found—which raises the question of a comparison between the theory expressed by the association not to seek to promote any one point of view and of the type of books and pamphlets it sponsors and publishes.

Council on Foreign Relations

Here again the two organizations—the Carnegie Endowment for International Peace and the Rockefeller Foundation—have been substantial contributors to the work of an agency in the international field. And again, as in the case of the Foreign Policy Association, it is evident from the publications of the council that its approach is not an unbiased one.

The Council has published studies by the following:

Public Opinion and Foreign Policy—Lester Markel and others.

Dr. Langer was later selected by the Council and the foundation to prepare a history of American foreign policy from 1933 to 1946, which has been stated to be a one-sided interpretation rather than an objec-
TAX-EXEMPT FOUNDATIONS

Tive history of American foreign policy. No grants have since been made (so far as can be ascertained from their records) by either the Council or the foundation for preparation of a contrary evaluation of this subject—and neither organization supported the volume by Professor Tansill published a year or so ago, which gives the other side of the picture.

It is interesting to note that shortly after World War II exploded in September 1939, representatives of the Council visited the Department of State to offer its assistance on the problems the conflict had created and offered to undertake work in certain fields, without formal assignment of responsibility on one side or restriction of independent action on the other. A tentative outline was prepared for four groups of experts to undertake research on: Security and Armaments Problems, Economic and Financial Problems, Political Problems, and Territorial Problems. These came to be known as the War and Peace Studies, and were financed by the Rockefeller Foundation under the Council's committee on studies.

About February 1941, the informal character of the relationship between the State Department and the Council ceased. The Department established a Division of Special Research composed of Economic, Political, Territorial, and Security Sections, and engaged the secretaries who had been serving with the Council groups to participate in the work of the new Division.

Following that, in 1942, a fifth group was added to the War and Peace Studies, called the Peace Aims Group. This group had been carrying on discussions regarding the claims of different European nations, the relation of such claims to each other as well as to the current foreign policy of the United States, and their relationship to eventual postwar settlements. The State Department particularly commended the work of this last group. That same year the relationship between the council and the Department became even more close—the Department appointed Isaiah Bowman and James T. Shotwell as members of its newly organized "Advisory Committee on Postwar Foreign Policies." In addition to their association with the Council of Foreign Relations both had also been associated with Carnegie organizations.

Particular interest attaches to this activity on the part of the council. First of all, the action of the council in offering its services closely parallels the action of the Carnegie endowment in both the First and Second World Wars, and in view of Mr. Shotwell's background it seems likely that it was somewhat a case of taking a leaf from the same book.

The second reason is because the research secretaries of the War and Peace studies of the council progressed to other work related to the organization of peace and the settlement of postwar problems:

Philip E. Mosely, research secretary of the Territorial group, accompanied Secretary Hull to Moscow in 1943, when representatives of Great Britain, the United States, the Soviet Union, and China issued the Moscow Declaration, the text of which had been prepared previously in the Committee on Postwar Foreign Policies. Mr. Mosely later became political adviser to the American member of the

* The endowment had conducted a similar study before World War I.
European Advisory Commission in London, and more recently has been with the Russian Institute of Columbia University.

Walter R. Sharp, research secretary of the Political group, served as Secretary General of the United Nations Food Conference at Quebec in 1945.

Grayson Kirk, research secretary of the Security group, was among the experts at the Dumbarton Oaks Conference and was executive officer of commission III at the San Francisco Conference.

Dwight E. Lee, research secretary of the Peace Aims group, was assistant secretary of committee I, commission III at the San Francisco Conference.

The outside experts also reappeared in other work:

Dr. Isaiah Bowman was a member of the United States delegation at the Dumbarton Oaks Conference, special adviser to the Secretary of State, member of the Department's Policy Committee, and adviser to the American delegation at the San Francisco Conference.

Hamilton Fish Armstrong served as adviser to the American Ambassador in London in 1944, with the personal rank of minister, also as special adviser to the Secretary of State, and as adviser to the American delegation at the San Francisco Conference.

Walter H. Mallory, secretary of the Steering Committee which directed the War and Peace Studies, was a member of the Allied Mission to Observe the Elections in Greece, with the personal rank of minister, a mission which grew out of the Yalta agreement to assist liberated countries to achieve democratic regimes responsive to the wishes of their people.

This does not include any of the several dozen members of these council groups who were called into the Government in wartime capacities not connected with formulation of postwar policies. Nor is any implication intended that pressure was brought to secure placement of any of these individuals in particular posts. It is self-evident, however, that the research secretaries as well as the others referred to later attained positions of influence in relation to the foreign policy of the United States, and were instrumental in formulation of the United Nations Organization.

During its operations the War and Peace Studies project held 362 meetings and prepared and sent to the State Department close to 700 documents, which were distributed to all appropriate officers, and also reached other departments and agencies of the Government, since representatives of many such agencies were informal members of council groups. With a few exceptions these documents are now in the council library and available for study.

The endowment also had direct association during this period with the State Department, in addition to its association through the work of the council just described, through its Division of International Law. This association arose following Pearl Harbor in 1941, when the endowment offered and the Department accepted the services of that Division, thus again establishing an informal basis of cooperation.

At that time Philip Jessup, who was director of the division of international law from 1940 to 1943, resigned to devote his entire time to Government service.

Following several exploratory conferences to determine what could be learned from the experience of the League of Nations, the division
"established relations with many highly qualified and experienced experts making it possible to plan and arrange for the preparation of * * * series of studies on international organization and administration. * * *

The first was International Law of the Future, Postulates, Principles, and Proposals. It was followed by:

International Tribunals, Past and Future
The International Secretariat: A Great Experiment in International Administration
Guide to the Practice of International Conferences
League of Nations and National Minorities
The Economic and Financial Organization of the League of Nations
Immunities and Privileges of International Officials
International Drug Control
Mandates, Dependencies, and Trusteeship
The Customs Union Issue

The 1944 yearbook, pages 67-70 of the report of the director of the division of international law, in a section devoted to the work program of the division, refers to this statement of the International Law of the Future, a second part containing "Principles," and a third part containing "Proposals," and in the extract from this yearbook (complete text is included in "Exhibit—Carnegie") there are these statements:

* * * In line with the Moscow Declaration, the Postulates envisage a "general international organization for the maintenance of international peace and security." The principles are offered as a draft of a declaration which might be officially promulgated as the basis of the international law of the future. The proposals for international organization are not offered as a draft of a treaty but as suggestions for implementing the principles.

The following year, 1945, the yearbook has the following statement, page 84:

It is apparent from a reading of the proposals for the establishment of a general international organization adopted at Dumbarton Oaks that their drafting was influenced to some extent by the contents of the Statement of the International Law of the Future which was published and given widespread distribution on March 27, 1944.

(Moreover, while the endowment makes no reference to them, there is great similarity also to the proposals for international cooperation drafted many years earlier, in which the endowment participated both financially and through its personnel.)

According to Dr. Finch these documents were published "having in mind" the objectives Mr. Churchill expressed in February 1945, namely, that the former League of Nations would be replaced by a far stronger body but which—

will embody much of the structure and the characteristics of its predecessor. All the work that was done in the past, all the experience that has been gathered by the working of the League of Nations, will not be cast away.

Dr. Finch's further comments (p. 435) are:

Advance copies of all but the last of the studies were made available to officials of the United States and other governments in Washington. They were in constant use at the conference of jurists held in Washington to revise the statute of the International Court of Justice, at the United Nations Conference on International Organization in San Francisco, the United Nations Relief and Rehabilitation Administration Conference, the Interim Commission of the United Nations Conference on Food and Agriculture, the United Nations Monetary and Financial Conference and at the series of meetings held by the United Nations in London, including the Preparatory Commission, the General Assembly, and the Security Council, as well as the meeting of foreign ministers held in the same city. The limited advance editions printed for these purposes were inade-
quate to meet the demand. The division also prepared special memoranda under
great pressure for use in connection with some of the foregoing conferences.

The portions of Dr. Finch’s History quoted earlier on pages 9, 10,
and 11, tell the story of former fellowship holders who have entered
various fields, including Government service, but there were others
who went from the endowment to places in public life:

James T. Shotwell, who was director of the division of economics
and history for many years, was also chairman of the international
research committee of the American council, Institute of Pacific Re-
lations; and while attending a conference of the institute in 1929 de-
ivered a number of addresses on American foreign policy and prob-
lems in international organizations. In 1930 he became director of
research in international affairs of the social science research council
and many of the publications in which his division took an interest
originated in research in Europe arranged for him by that organiza-
tion. Among these were:

International Organization in European Air Transport—Lawrence C. Tomb
Maritime Trade of Western United States—Elliott G. Mears
Turkey at the Straits—Dr. Shotwell and Francis Deak
Poland and Russia—Dr. Shotwell and Max M. Laserson

Dr. Shotwell was chairman of an unofficial national commission of
the United States to cooperate with the Committee of the League of
Nations on Intellectual Cooperation, and he later accepted member-
ship on the State Department’s Advisory Committee on Cultural Re-
lations (1942-44).

Dr. Finch, referring to the invitation extended to Dr. Shotwell to
serve on the Advisory Committee on Postwar Policy, goes on:

* * * He was later appointed by the endowment its consultant to the Ameri-
can delegation to the United Nations Conference on International Organization
at San Francisco, April 25 to June 26, 1945. These official duties placed Dr.
Shotwell in a position of advantage from which to formulate the changing pro-
gram and direct with the greatest effectiveness the operations of the commis-
sion to study the organization of peace.

The associate consultant was Dr. Finch himself, then director of
the division of international law.

Professor John B. Condliffe, associate director of the division of economics
and history (Berkeley branch office) edited a series of pamphlets dealing with
tariffs and agriculture. They covered, in addition to a general study of pro-
tection for farm products, cotton, dairy products, wheat, corn, the hog industry,
and sugar; and were circulated to all county agricultural agents through-
country and were officially supplied by the Department of Agriculture to
every director of agricultural extension work in the United States.

Ben M. Cherrington, who was elected trustee of the endowment in
1943, was the first Chief of the Division of Cultural Relations of the
State Department, serving until 1940. Before that he was director
of the Social Science Research Council and professor of international
relations at the University of Denver.

Upon leaving the State Department he became chancellor of the
university where he remained until 1946, when he became a member of
the national committee of the United States for the United Nations
Scientific and Cultural Organization. Dr. Cherrington was an associ-
ate consultant of the United States delegation to the United Nations
Conference in San Francisco.

Philip C. Jessup was another endowment contribution to the field of
public service. His first assignment was in the Department of State,
as Assistant Solicitor in 1924–25, followed by his service as legal assistant to Elihu Root, in 1929 at the Committee of Jurists on the Revision of the Court Statutes, called by the League of Nations Council. Dr. Jessup was assistant professor of international law at Columbia University and later became Mr. Root’s biographer. He was elected a trustee of the endowment in 1937, succeeded Dr. James Brown Scott as director of the division of international law in 1940 and 1943 resigned because of the pressure of Government work during the war.

He was Assistant Secretary General of UNRRA and attached to the Bretton Woods Conference in 1943–44; assistant on judicial organizations at the United Nations Conference in San Francisco, where he helped to revise the statutes of the Permanent Court of International Justice to the present form in the United Nations Charter. He was also secretary of a national world court committee, organized in New York, of which two trustees of the endowment were also members.

The list of such individuals is long—and to include all the names would merely lengthen this summary to no particular purpose. Henry Wriston, Eugene Staley, Isaiah Bowman, John W. Davis, Quincy Wright, John Foster Dulles, Robert A. Taft, and others—either during their association with the endowment or at some other time—also were in the public service.

United Nations

Both the Carnegie Endowment for International Peace and the Rockefeller Foundation aided this cause. In the case of the endowment it was a natural outgrowth of its deep interest in the League of Nations and the World Court, and its disappointment when the United States failed to join the League, intensified its activities in connection with the United Nations.

The close association between the endowment and the State Department, even before World War II actually enveloped this country, has been discussed, and it is apparent that the idea of achieving peace through a world government arrangement was still the goal of the endowment as indicated by the character of its representatives and the nature of their activities.

While Dr. Jessup was director of the division of international law, it undertook an investigation of the numerous inter-American subsidiary congresses and commissions which are part of the pan-American system and as a result amassed a considerable amount of incidental and extraneous information of a technical and administrative character concerning the composition and functioning of permanent international bureaus and commissions. In collaboration with the public administration committee of the Social Science Research Council, Dr. Jessup began a study of this subject and the project later broadened to include not only official administrations and agencies established by American governments, but private international organizations operating in specialized fields, special emphasis being given to the structural and administrative aspects of these organizations.

The work covered approximately 114 organizations, supplied the names and addresses of each organization along with a brief account of its history, purpose, internal administrative structure, membership, finance, publications, and activities, and was intended primarily to
serve government officials and officers of international administration, students, teachers, and finally the public.

At this point it is appropriate to say something about the Commission To Study the Organization of the Peace, which while not a part of the endowment's direct program was treated as work through another agency to which the endowment was willing to grant financial support. The policy of the endowment in such instances is discussed in the concluding portion of this summary.

The commission in actuality was merely a continuation of the National Peace Conference referred to on pages 880 and 881. It came into being under that name in 1939, under the aegis of Dr. Shotwell and Clark M. Eichelberger—guiding lights of the peace conference—and immediately began organization of regional commissions and monthly discussion meetings.

It too had an "educational program," carried to rural communities, and furnished to press services, editors, educational writers, columnists, and commentators.

On June 6, 1941, the commission issued a document entitled "Statement of American Proposals for a New World Order."

In February 1942, this was augmented by "The Transitional Period."

A year later, 1943, the commission followed these with a statement dealing with steps that should be taken during the war to organize for the transition period.

Between then and 1944 these were added:
- General Statement and Fundamentals
- Part I—Security and World Organization
- Part II—The Economic Organization of Welfare
- Part III—The International Safeguard of Human Rights

A recapitulation of the principles laid down was issued after Dumbarton Oaks, entitled: "The General International Organization—Its Framework and Functions."

According to Dr. Finch (p. 248):

During the following Dumbarton Oaks Conference the commission kept the work of the conference before the public, and organized an educational program in behalf of its proposals. It also directed its studies to subjects inadequately covered by or omitted from the proposals, such as human rights, trusteeship, and economic and social cooperation. Separate committees were set up on each of these subjects and their studies and conclusions were later published.

At the San Francisco Conference the commission was able to promote its objectives through many of its officers and members who were connected with the Conference in an official or consultant capacity. Following the signature and ratification of the charter and the establishment of the United Nations, the Commission To Study the Organization of Peace planned its studies and educational program with two purposes in view: Making the United Nations more effective by implementation and interpretation, and making it the foundation of the foreign policy of the United States.

The commission became the research affiliate for the American Association for the United Nations, with joint offices and interlocking officers in New York. It is estimated by Dr. Shotwell in his annual report of March 27, 1945, to the endowment that over 600,000 copies of the commission's reports had been distributed and distribution of over 31/4 million pieces of its popular material numbers.

In "Exhibit—Carnegie" statements taken from the endowment's yearbooks trace the steps taken by the endowment to advance the cause of the United Nations. The 1944 volume tells of the conferences attended by former officials of the League of Nations, as well as by government officials, and says the third "will be of interest to a much wider group, including not only officials but educators and others.
deeply concerned with the need of adequate training for the staffs of many international agencies which are either in process of formation or are contemplated for the postwar period.” The first of these conferences was held in August 1942—less than 9 months after Pearl Harbor—and the last was held in August 1943—2 years before the San Francisco Conference.

That same yearbook describes the activities of the endowment as having placed it "* * * in a peculiarly strategic position to cooperate with official agencies preparing to undertake international functions" and states that while the Office of Foreign Relief and Rehabilitation Operations was engaged in preparing for the organizing conference of UNRRA it "* * * frequently called upon the division to assist by various means in these preparations."

The endowment supplied special memoranda to the conference, as well as copies of its various publications relating to international organization and administration. The special memoranda covered such subjects as International Conferences and Their Technique, Precedents for Relations Between International Organizations and Nonmember States, and the like.

The following year, 1945, the work of the Commission To Study the Organization of the Peace was again referred to (pp. 112-114) and a quotation concerning it has been included in “Exhibit—Carnegie.” The endowment had two other projects which fall into the international field—the International Economic Handbook and Commercial and Tariff History and Research in International Economics by Federal Agencies. The latter disclosed the extent to which the Government of the United States engaged in the study of economic questions and the resources of economic information at its disposal.

It also cooperated with the International Chamber of Commerce and Thomas J. Watson, a trustee of the endowment, was chairman of a committee established in 1939 by the chamber called a committee for international economic reconstruction. Dr. Finch described one of the first projects of the committee (p. 243) as "a program of public adult education in this country.” Later the committee was renamed the committee on international economic policy and set about enlisting 54 leaders of national, business, industrial, education, and religious groups. These included Mr. Winthrop W. Aldrich, President Nicholas Murray Butler, Mr. Thomas J. Watson, Mr. Leon Fraser, Mr. Clark H. Minor, Mr. Robert L. Gulick, Jr., Eric A. Johnston, Robert M. Gaylord, Paul G. Hoffman, Eliot Wadsworth, A. L. M. Wiggins, J. Clifford Folger, E. P. Thomas, and Fred I. Kent.

According to the yearbook, a public-relations committee was organized and professional news services were employed to reach American grassroots, in order to secure the widest possible distribution of the pamphlets produced by the committee, among which were:

World Trade and Employment, by the advisory committee on economics to the committee on international economic policy.
The International Economic Outlook, by J. B. Condliffe, associate director, division of economics and history, Carnegie Endowment for International Peace.
Industrial Property in Europe, by Antonin Basch, department of economics, Columbia University.
Price Control in the Postwar Period, by Norman S. Buchanan, professor of economics, University of California.

International Double Taxation, by Paul Deperon, secretary of the Fiscal Committee, League of Nations.

Discriminations and Preferences in International Trade, by Howard P. Whidden, economist, Chamber of Commerce of the State of New York.

International Commodity Agreements, by Joseph S. Davis, director of the food research institute, Stanford University.

World Production and Consumption of Food, by Karl Brandt, Stanford University.

International Cartels, by A. Basch.

The Relation Between International Commercial Policy and High Level Employment, by Sumner H. Slichter, Harvard University.

Thousands of copies of the committee's pamphlets on international economic problems were distributed to business executives, agricultural leaders, diplomatic representatives, students, Government officials, servicemen, Members of Congress, and to congressional committees. A special project in this field was the work done at the time the reciprocal trade-agreements program came before Congress for renewal, when special literature in support of the program was prepared and distributed by the endowment.

The Rockefeller Foundation was working shoulder to shoulder with the Carnegie Endowment for International Peace in furthering "agencies devoted to studies, to teaching, to service to government and to public and expert education" on the assumption that while "it is not possible to guaranty peace * * * the way to work toward it is to strengthen the 'infinity of threads that bind peace together.'" It selected many of the same agencies which had been chosen by the endowment for studies and related activities. In the international-relations field grants went to agencies which conduct research and education designed to strengthen the foundations for a more enlightened public opinion and more consistent public policies (1946 annual report).

This same foundation report (p. 40) mentions the appropriation to the Institute of Pacific Relations of $233,000, much of whose work "is related to the training of personnel, the stimulation of language study, and the conduct of research on problems of the Far East. It is part of the pattern by which, from many different directions and points of view, efforts are being made to bring the West and East into closer understanding."

Two years earlier, the 1944 report of the foundation said: "China is the oldest interest of the Rockefeller Foundation," and it has spent more money in that country than in any other country except the United States. In addition to direct grants to China and Chinese projects of various sorts, the foundation also contributed to the Institute of Pacific Relations, including the American Institute.

In that connection, it is interesting to note that 7 years before (1937 report, pp. 57-58) the foundation deplored the events of the previous year in China which "have virtually destroyed this proud ambition, in which the foundation was participating." The report praised the work accomplished up to that time by the Chinese National Government in their attempts "to make over a medieval society in terms of modern knowledge" but was somewhat pessimistic as to the oppor-
From 1937 until 1950 the grants of the foundation to the Institute of Pacific Relations were $945,000, compared with $793,800 during the years prior to that (from 1929 to 1936, inclusive).

The Institute of Pacific Relations has been the subject of exhaustive hearings by other congressional committees, and mention is made of this particular comment only because as recently as 1952 (if financial contributions are one criterion) the foundation apparently considered the institute an agency "designed to strengthen the foundations for a more enlightened public opinion and more consistent public policies."

A section entitled "Conference on American Foreign Policy" in the 1916 endowment yearbook (pp. 24-25) begins: "To assist in informing public opinion concerning the foreign policy of the United States, the endowment sponsored a conference at Washington * * *")

Some 80 national organizations sent 125 representatives to hear from James F. Byrnes, then Secretary of State; Clair Wilcox, Director of the Office of International Trade Policy; Gov. Herbert Lehman; Dean Acheson, Under Secretary of State; Alger Hiss, Secretary General of the United Nations Conference at San Francisco; and William Benton, Assistant Secretary of State in Charge of Public Affairs.

From then on the endowment bent every effort to "reach public opinion" and particularly people not reached by any organization "since they have not been interested to join, and who do not realize that they too constitute public opinion and have to assume their responsibilities as citizens not only of the United States but of the world." This phraseology is strikingly similar to that found in the Handbook on International Understanding of the National Education Association.

It does not appear whether the foundation contributed to the Commission to Study the Organization of the Peace, but the annual reports refer to studies carried on by Brookings Institution, the Russian institute of Columbia University's School of International Affairs, the Institute of International Studies at Yale, all "aimed at the single target of world peace" (Dr. Fosdick's Story of the Rockefeller Foundation, p. 219).

In 1945 it aided in the publication of the reports and discussions of the various committees of the San Francisco United Nations Conference because "with respect to many crucial issues the really significant material is not the formal language of the articles of the charter, but the interpretation contained in the reports and discussions * * *"

This, the final part of the summary of activities of Carnegie and Rockefeller agencies, has been devoted to substantiating the statements made in its opening paragraphs; namely, that the Carnegie Endowment for International Peace and the Rockefeller Foundation had—

Admittedly engaged in activities which would "directly or indirectly" affect legislation;
Admittedly engaged in "propaganda" in the sense defined by Mr. Dodd in his preliminary report.

Admittedly engaged in activities designed to "form public opinion" and "supply information" to the United States Government, calculated to achieve a certain objective, as for example, "an international viewpoint."

Quotations on each of these points, taken from the yearbooks of the Carnegie Endowment for International Peace and from the annual reports of the Rockefeller Foundation, as well as from other sources, have been referred to and are attached in separate exhibits.

Because of the method of reporting used by the endowment, it is frequently difficult to distinguish specific projects and organizations in its financial statements—disbursements in most instances being reported merely by divisions. In addition, the corporation worked closely with the endowment on certain types of projects, and also made lump-sum grants to the endowment.

An analysis of grants by these two Carnegie agencies and by the Rockefeller Foundation is shown below.

Because it is frequently stated by these foundations as well as others that the purpose of their grants is to serve as a catalytic force in getting a project underway, or provide support to an organization until it is well established, the period during which the foundation contributed funds to a particular organization is shown under the grants made.

* International relations clubs, regional centers, etc.
The projects for which these grants were made—in addition to those made for general support—covered such projects as:

A Handbook for Latin American Studies
Developing a training center for far eastern studies at the Congressional Library (both by the American Council of Learned Societies)
Study of major aspects of Government finance for defense (by the National Bureau of Economic Research)
Study of problems relating to training of leaders among free peoples (by the Council on Foreign Relations)
Research on American foreign policy
Foreign relations
Political implications of the economic development of industrialized areas (all by the Council on Foreign Relations)
Support of experimental educational program, publicizing the conflicting issues of economic nationalism and Internationalism.
Program for development of community centers of International education (Foreign Policy Association)

Another statement frequently made by foundations, including both the endowment and the foundation—particularly when the actions of benefiting organizations or individuals arouse criticism—is that as a matter of policy no attempt is or should be made to supervise, direct or control organizations or individuals to whom these tax-exempt funds are given, because to do so would restrict the productivity of the grantees, and (it is inferred) be an attack on academic freedom. This attitude of objectivity, however, is at variance with other statements also found in the records of both the endowment and foundation.

In describing the administration of his division (Intercourse and Education) Dr. Butler's report in the 1928 year book (p. 38) states that, in addition to other work—

a large part of the activity of the division is devoted to the carrying out of specific, definite, and well-considered projects of demonstrated timeliness ** * those in which the work is directed and supervised from the headquarters of the division and those which are carried out by the organizations or individuals to whom allotments are made from time to time. ** * It is not the policy of the division to grant subventions continuing from year to year to organizations or undertakings not directly responsible to the administration of the division itself. ** * [Italics supplied.]

This statement—included in its entirety in the exhibit of quotations from endowment records—is susceptible to only one interpretation: Unless a project, whether carried on by a particular organization or by a particular individual or group of individuals is under the direct supervision of the Division of Intercourse and Education, and reports thereon are satisfactory to that division, continued support will not be forthcoming from the endowment.

As mentioned earlier, the foundation does not use quite as dogmatic language in its reports, yet from its statements the same contradictory attitude is discerned, particularly when related to the activities and organizations to which it has continuously granted funds.

There is nothing ambiguous about the warning on page 9 of the 1941 annual report of the foundation:

If we are to have a durable peace after the war, if out of the wreckage of the present a new kind of cooperative life is to be built on a global scale, the part that science and advancing knowledge will play must not be overlooked.
This statement appears in the report for the 12-month period ending December 31, 1941—not quite 4 weeks after Pearl Harbor—yet there can be no doubt that, as far as the foundation was concerned, only "a cooperative life * * * on a global scale" could insure a "durable peace."

In the light of this attitude some of the individuals and organizations benefiting from foundation funds in the years since 1941 may seem a trifle unusual to say the least, particularly when a few pages further on, page 12, the report follows up this warning with:

A score of inviting areas for this kind of cooperation deserve exploration. Means must be found by which the boundless abundance of the world can be translated into a more equitable standard of living. Minimum standards of food, clothing, and shelter should be established. The new science of nutrition, slowly coming to maturity, should be expanded on a worldwide scale.

It is only natural to wonder about the agencies selected to work in these inviting areas to build "a cooperative life on a global scale."

Among those to which the foundation gave funds were agencies also selected by the endowment to be directly responsible to the administration of its divisions, and some of these are sketched briefly now in relation to these declared policies.

The Public Administration Clearinghouse, the creation and financing of which Dr. Fosdick (page 206) calls "the great contribution of the Spelman Fund," is also a grantee of the foundation.

Composed of 21 organizations of public officials representing functional operations of Government (such as welfare, finance, public works, and personnel) the clearinghouse is designed to keep public officials in touch with "the results of administrative experience and research in their respective fields" which he describes as having resulted in "wide consequences" which "have influenced the upgrading of Government services at many technical points—in the improvement of budgetary and personnel systems, for example, and the reform of State and local tax structures."

The National Bureau of Economic Research, again quoting from Dr. Fosdick's book, page 233, has brought within reach—

* * * basic, articulated, quantitative information concerning the entire economy of the Nation. This information has influenced public policy at a dozen points. It was one of the chief tools in planning our war production programs in the Second World War and in determining what weights our economy could sustain. It underlies our analyses of Federal budgeting and tax proposals and projects like the Marshall plan. This same type of research has now spread to other countries, so that international comparison of the total net product and distribution of the economy of individual nations is increasingly possible.

After stating with some pride that the books and other publications of this organization "influence to an increasing degree the policies and decisions of governmental and business bodies"—page 213—Dr. Fosdick in the following chapter—page 232 stresses that its—

* * * publications do not gather dust on library shelves. Its findings are cited in scientific and professional journals, treatises, and official documents. They are used by businessmen, legislators, labor specialists, and academic economists. They have been mentioned in Supreme Court decisions. They are constantly employed in Government agencies like the Department of Commerce and the Bureau of the Census. Increasing use is being made of them by practicing economists in business, by editorial writers in the daily press, and by economic journalists in this country and abroad. Practically all of the current textbooks in either general economics or dealing with specific economic problems draw a great deal of their material from the publications of the Bureau or from data available in its files. It can be truly said that without the National Bureau
our society would not be nearly so well equipped as it is for dealing with the leading economic issues of our times.

The Institute of Pacific Relations has been the subject of exhaustive hearings by other congressional committees in which its subversive character has been thoroughly demonstrated.

The Foreign Policy Association has been discussed at length in the narrative portions of this report and reference has been made to Mrs. Vera Michele Dean's citation in appendix IX. Also active in this association have been: Roscoe Pound, Stephen P. Duggan, Maxwell Stewart and his wife, Marguerite Ann Stewart (educational secretary in the association's department of popular education), Lawrence K. Rosinger, writer for the headline series, Stuart Chase, Alexander W. Allport (membership secretary of the association); Anna Lord Strauss, Philip E. Mosely, and Brooks Emery (members of the editorial advisory committee), and Blaire Bolles and Delia Goetz, director and assistant director of the Washington bureau of the association.

The Council on Foreign Relations has also been discussed in detail, and while additional information could be included on specific activities it would be merely cumulative.

Two brief excerpts from the 1936 annual report of the foundation are, however, of particular pertinence in relation to the question of influencing governmental activity:

The program in social security has two central interests: (1) The improvement of the statistical record of structural and cyclical change and sharper identification of the causal factors involved; and (2) the analysis and adaptation of social measures designed to mitigate individual suffering due to unemployment which may be a result of economic change, or due to illness, accident, and old age, which are ordinary hazards of human life. The underlying assumption of this twofold program is that economic and social changes are to an appreciable extent manmade and hence controllable, and that, pending adequate understanding of the causes of disruptive change, the individual must be protected in the interest of political and social stability. * * * The ameliorative aspect of the program is at present concerned with questions centering upon the social insurances and relief in the United States.

The program in public administration is designed to bridge the gap that exists between practical administrators in the Government service and scholars in the universities in the field of the social sciences. Aid had been given to the Social Science Research Council's committee on public administration, which itself sponsors research upon key problems of public administration. * * * The foundation supports a number of such research enterprises together with a variety of projects designed to recruit and train a higher type of personnel for career service in the Government.

The objectives of the program in international relations are the promotion of understanding of, and greater intelligence in regard to, world problems among larger sections of the public, and the creation of more competent technical staffs attached to official or nonofficial organizations dealing with international affairs. The greater part of foundation interest is in enterprises concerned with the study of international problems for the purpose of informing and guiding public opinion. Three types of organizations are receiving foundation support: (1) Those like Chatham House in England and the Foreign Policy Association in the United States, which carry on the two functions of study and dissemination with almost equal emphasis; (2) those concerned primarily with research and the creation of personnel for technical and advisory service in connection with international problems; and, (3) those which focus upon coordinated research undertakings and periodic conferences with international representation, as the Institute of Pacific Relations and the International Studies Conference. (Pp. 230, 231, 282.)

* The foundation's twofold program in social security.
The Social Science Research Council, which sponsored the 4-volume Study of the American Soldier, as well as a project entitled "Study of American Public Library." This actually deals with the public library inquiry, a project relating to educational films and their distribution that has been received with considerable criticism.

Moreover, the council's committee on government (through a special committee on civil rights) was selected to "encourage and aid competent scholars to record and analyze the management of civil liberties during the war and immediate postwar period" (Foundation Annual Report for 1944, p. 202). Prof. Robert E. Cushman of Cornell was chairman of the special committee, and in the 1948 annual report his assignment is referred to as a "factual examination of the civil-liberties issues" caused by "the actions taken to eliminate subversive individuals from Government service." "Rigid loyalty requirements" and "the work of the House Committee on Un-American Activities" are among the problems to be studied "to reconcile, if possible, the claims of national security and civil liberty." Practically the first official act of Dr. Cushman as chairman was to place Dr. Walter Gellhorn in charge of the project for all practical purposes.

Based on their own records the Carnegie Corporation, the Carnegie Endowment for International Peace, and the Rockefeller Foundation, have—

1. Contributed substantial sums of money to some or all of the organizations described in this and other portions of this summary.

2. Have or should have been aware that the stated purpose of many of the projects of these organizations has been to achieve certain objectives in the fields of international relations, foreign policy, and government.

There has been a singular lack of objectivity and a decided bias toward a socialized welfare state in the proposals of these organizations, and every effort has been made by them to advance the philosophy of "one world" to the complete disregard of comparable effort on behalf of a more nationalistic viewpoint.

3. Not only made grants to these organizations for general support, but have made specific grants for projects described in the preceding numbered paragraph.

The foundation has contributed $83,415,478 since 1929 to projects which it classifies as in the field of social science, while grants it considers as in the field of the humanities total $33,292,842 during the same period.5

The endowment, since it was organized, has expended approximately $20 million, divided as follows: Division of intercourse and education, $12.1 million; division of international law, $4.8 million; division of economics and history, $3.1 million.

Certainly, in justice to the endowment and the foundation it would be unfair to say that the amount of money so expended by them during the period described did not have some effect—at some point—on some matters. To accept the statement that there were no effects—or only coincidental ones—from such expenditures would indicate mental astigmatism at the very least, and would in a sense seem to accuse these foundations and their trustees of a somewhat careless, if not actually wasteful, attitude toward the funds entrusted to their care,

5 Through 1952.
when (as is undeniable) the foundations continued to select the same or similar organizations, continued to make grants for the same or similar projects presented by such organizations, and continued to make grants to the same or similar individuals.

In addition, the reports of both the endowment and the foundation contain statements indicating both felt there were definite results from their activities as well as the activities of organizations to whom grants were made.

The 1934 yearbook of the endowment has one of these on page 22:

* * * A review of the activities of the endowment since the World War, carried on separately through three main divisions, but operating as a unit in behalf of the great ideal of its founder, seems to justify the observation that the endowment is becoming an unofficial instrument of international policy, taking up here and there the ends and threads of international problems and questions which the Governments find it difficult to handle, and through private initiative reaching conclusions which are not of a formal nature but which unofficially find their way into the policies of governments.

Similar sentiments are expressed a decade later in the 1945 yearbook, page 28:

A reading of this report will make it plain that every part of the United States and every element of its population have been reached by the endowment's work. The result may be seen in the recorded attitude of public opinion which makes it certain that the American Government will be strongly supported in the accomplishment of its effort to offer guidance and commanding influence to the establishment of a world organization for protection of international peace and preservation of resultant prosperity.

The foundation, when it reorganized in 1929 to extend its work to include the social sciences, apparently anticipated some recognizable results (p. 258 of its annual report):

From research in the social sciences there should result modifications in governmental organization, in business practices, in social activities of all kinds which may further general well-being. As numerous functions of great significance are being assumed by governmental bodies through Federal, State, county, and municipal organization, the development of effective techniques becomes a necessity. Research which is closely tied up with practical activities is expected to furnish the basis of sound governmental policy.

There is no indication of a change of opinion in 1940, when describing its support of the National Institute of Public Affairs' "experimental program of recruiting and training personnel for the Federal services," the foundation reports (pp. 273-274 of annual report), "the program has involved the annual placement of approximately 50 graduate students preparing for public-service careers, in agencies of the Federal Government for a year of practical apprenticeship" and adds with evident satisfaction that "60 percent of its 'interns' are now in the Federal service; several are in State and local or other government services, and a number are continuing graduate study."

Two years later the section dealing with the public administration committee begins:

The agencies through which society will seek to meet its diverse problems are multiform, and total effort, whether for defense or for the postwar world, will receive its primary direction through the agency of government * * *.

Referring to its support of this committee during the preceding 7 years, the report gives the major studies of the committee, and ends with this paragraph:

* Entire extract included in exhibit.
† Entire extract included in exhibit.
More recently the committee has focused its resources and attention mainly on planning and stimulating rather than on executing research. A broadening of the program to include the field of government, with public administration as one sector, is now contemplated. Such a program would deal less with the mechanics of administration than with the development of sound bases for policy determination and more effective relations in the expanding governmental structure.

It is only commonsense, moreover, to conclude that, since the endowment and the foundation as a means of accomplishing their purposes had deliberately chosen certain organizations consistently as "agents," the trustees of those foundations would be entirely aware of the activities of the organizations selected, as well as the views expressed by their executives. Assuming such awareness—no contrary attitude being demonstrated—it could be concluded further that the results of such activities—whatever their nature—were not only acceptable in themselves to the trustees but were regarded by them as the proper means to accomplish the declared purposes of the foundations.

It is appropriate, therefore, to examine some of the results, among which have been:

The Headline Books of the Foreign Policy Association

Many were written by persons cited to be of Communist or Communist front affiliation and are questionable in content. They have been distributed widely and are used as reference works throughout the educational system of this country.

The Cornell studies

This project is under the direction of two individuals (described further on) who can scarcely be considered sufficiently impartial to insure a "factual examination" or an "objective finding."

Development of a "post-war policy"

The means selected was an extragovernmental committee, many of whose members later held posts in governmental agencies concerned with economic and other problems, as well as those concerned with foreign policy.

The sponsorship of individuals who by their writings are of a Socialist, if not Communist philosophy, dedicated to the idea of world government.

Among the individuals sponsored have been:

Eugene Staley

He is the author of War and the Private Investor, in which he recommended a "World Investment Commission" which along other suggestions presented bears a striking resemblance to the World Bank and present monetary policies of the world, including the United States.

He is also the author of World Economy in Transition, a report prepared under the auspices of the American Co-Ordinating Committee for International Studies, under the sponsorship of the Council on Foreign Relations, and financed by a Carnegie grant. The book expounds the theory that modern technology requires its materials from an international market, makes use of internationally discovered scientific information, and itself is international in viewpoint. According to Mr. Staley, we have a "planetary economy," and to reach the goal

---

Mrs. Dean was a member of this committee at the time.
of international social welfare, the international division of labor requires a free flow of goods.

Vera Michele Dean

Reference has already been made to Mrs. Dean who, according to the New York Times a few years ago, made a “plea for socialism” to 600 alumnae at Vassar College, saying our quarrel with communism must not be over its ends but over its methods, and urging a foreign policy backing Socialist programs.

Speaking of her book Europe and the U. S. in the book review section of the New York Herald Tribune of May 7, 1950, Harry Baehr, an editorial writer for that paper, wrote: “In other words, she considers it possible that the world may not be divided on sharp ideological lines but that there may yet be at least economic exchanges which will temper the world struggle and by reducing the disparity in standards of living between Eastern and Western Europe gradually abolish the conditions which foster communism and maintain it as a dangerous inhumane tyranny in those nations which now profess the Stalinist creed.”

Mr. and Mrs. Maxwell Stewart (Marguerite Ann Stewart)

According to the 1947 California Report (p. 314) both of these people taught at the Moscow Institute in Russia. He praised “Soviet marriage and morals,” and has been connected with tourist parties to the U. S. S. R., under Soviet auspices. He urged recognition of the Soviet Union, was a member of the editorial board of Soviet Russia Today, and endorsed the Hitler-Stalin pact.

Lawrence K. Rosinger

He declined to answer when asked by the McCarran committee whether he had ever been a member of the Communist Party, after being named as a party member by a witness before that committee. He was a writer of the Headline Series of the Foreign Policy Association, among his contributions being “Forging a New China,” “The Occupation of Japan,” and “The Philippines—Problems of Independence.” In February 1952—after he had refused to answer the question of the McCarran committee—he joined the staff of the Rhodes School.

Dr. Robert Cushman

Chairman of the special committee on civil rights of the Social Science Research Council’s committee on government, Dr. Cushman’s career before his association with the Cornell studies would indicate a rather one-sided viewpoint on civil rights. Prior to 1944, when the first Rockefeller Foundation grant was made to this project, Dr. Cushman had written occasional pamphlets (edited by Maxwell S. Stewart) for the public affairs committee, for example—

One written in 1936 suggested constitutional amendments to limit the powers of the Supreme Court (following its adverse decision on the New York minimum wage law), or else a delegation of specific powers to Congress to obtain passage of New Deal legislation;

One written in 1942 favored the “modernization” at that time achieved by the “new” Court after Roosevelt’s appointees had been added;
A third written in 1940 recommended the writings of George Seldes and Arthur Garfield Hays, as well as publications of the American Civil Liberties Union.

Between 1944 and 1947 when the second grant was made by the foundation, Dr. Cushman wrote another pamphlet for the public affairs committee (in 1946), which was along the line of views expressed by the Commission on the Freedom of the Press.

In 1948, the year the foundation made a grant of $110,000 to the project, Dr. Cushman again contributed a public affairs committee pamphlet, New Threats to American Freedom, specifically concerned with the anti-Communist drive. Because the abridgment of the civil liberties of any group (apparently even those of Communists in his opinion) endangers all civil liberties, Dr. Cushman argued, patriotic and loyal Americans cannot permit such a thing to happen, particularly since the difficulty of defining “communism” menaces the civil liberties of all liberals and progressives. He pilloried the House Un-American Activities Committee, and labeled the Mundt-Nixon bill and the Smith Act as threats to civil liberty.

In January 1947, in a paper presented to the American Academy of Political Science, Dr. Cushman characterized as “nonsense” the theory of guilt by association (“good boys may associate with bad boys to do good”). Also nonsense, according to Dr. Cushman, is designating as a fellow traveler, one who—

- Joined organizations in which “there turn out to be some Communists,”
- Signed petitions supporting policies “also supported by Communists,”
- Sympathized with the Spanish Republicans, “some of whom were Communists,”
- Professed a strong admiration of Russian culture and achievements.

More than a year later, in October 1948, he presented a dissertation on the repercussions of foreign affairs on the American tradition of civil liberties, included in the proceedings of the American Philosophical Society. There is little difference between this and the preceding paper, except that he used the technique of presenting supposedly the opinions of others, always unnamed. He repeated that “critics of the program” believe loyalty tests violate due process; requiring clearances for atomic scientists, “he has been told,” impairs the quality of their work and leads to resignations; “many have said” that the House Un-American Activities Committee is politically minded—treats cases in the press—fails to define “un-American” and “subversive.”

Concluding, he stated as his own belief that there is need for “an objective study” to avoid “heavy inroads” into traditional civil liberty. As mentioned, this was the year the foundation gave the largest grant—$110,000.

In the 1951 annals of the American Academy of Political Science, Dr. Cushman referred to the work of congressional investigating committees as similar to a “bill of attainder,” and again unhesitatingly defined a “Communist front” as an “organization in which there turn out to be some Communists.” He “found” that social and humanitarian causes are weakened by guilt by association theories, because
people fear to support such causes lest later Communists also be found supporting them; national security also is weakened because the “ordinary citizen” is confused by the idea of guilt by association. Non-governmental antisubversive measures were also criticized—he referred particularly to the dismissal of Jean Muir by General Foods—and in Dr. Cushman’s opinion, “it is hard to find any evidence that loyalty oaths of any kind serve any useful purpose beyond the purging of the emotions of those who set them up.”

Walter Gellhorn, of Columbia University

A second collaborator in the Cornell studies, Walter Gellhorn, is apparently actually their director, and the author of a major volume in the studies, Security, Loyalty, and Science.

Dr. Walter Gellhorn is listed in appendix IX, page 471, as a “conscious propagandist and fellow traveler,” and is in a group including Fields, Barnes, Jerome Davis, and Maxwell S. Stewart. He was a leading member of some 11 Communist fronts. He was a national committeeman of the International Juridical Association, whose constitution declares:

Present-day America offers the example of a country discarding the traditions of liberty and freedom, and substituting legislative, administrative, and judicial tyranny.

The American section’s purpose is—

To help establish in this country and throughout the world social and legislative justice.

He is cited as an “active leader” of the National Lawyers Guild. Appearing before the House committee in 1943, he denied the International Juridical Association and several other fronts with which he had been associated were communistic, had extreme difficulty remembering just what documents he might have signed, including a declaration of the National Lawyers Guild and a cablegram protesting Brazil’s detention of an agent of the Communist international, a man named Ewert.

Dr. Gellhorn (Harvard Law Review of October 1947) prepared a Report on a Report of the House Committee on Un-American Activities, specifically defending the Southern Conference for Human Welfare, exposed as a Communist organization, and violently attacking the House committee. His book for the Cornell studies indicates Dr. Gellhorn had not changed his opinion either of the southern conference or the House committee.

The Daily Worker, March 13, 1948, under a heading “Gellhorn Raps ‘Un-American,’” quoted from an article by Dr. Gellhorn (American Scholar—Spring 1948), in which he likened the House Un-American Activities Committee to a “thought control” program, and declared, “More important than any procedural reform, however, is conscious opposition to the House committee’s bullying.”

Dr. Gellhorn begins Security, Loyalty and Science, by expressing his fear that strict security regulations “would immobilize our own scientific resources to such an extent that future development might be stifled while more alert nations overtook and surpassed us.” In spite of a lack of reciprocity on the part of others, Dr. Gellhorn believes that the fruit of our work should be fully published and not restricted, even if, as he offhandedly puts it, there is “no neat balance between the
outgoing of our information and intake * * *" which in his opinion may "* * * be entirely irrelevant."

His theme is that security regulations and loyalty programs are useless and dangerous. He cites particularly category B of the Atomic Energy Commission, covering "undesirables"—those having sympathetic interests or associations with subversive ideas, friends, relatives, or organizations. Like Dr. Cushman, Dr. Gellhorn found it even "more alarming" that nongovernmental agencies are increasingly requiring clearances; he dismissed the House Un-American Activities Committee as indulging in repetition and exaggeration and added that they are responsible for scientists refusing to work for the Government. He belittled the Attorney General's list, its designations to him to have no pattern, and he questioned the reliability of the confidential information frequently used.

He concluded that the loyalty program originated in anti-New Deal politics (beginning with the Dies committee in 1938), that it is ineffective against "the furtive, the corrupt, the conspiratorial," and "the country will be stronger for discovering that the restraints of the present loyalty program exceed the needs of national preservation."

Denial of AEC fellowships to Communists is unwarranted, in Dr. Gellhorn's opinion, and he quoted approvingly statements of others that deplored the atmosphere of distrust and suspicion; thought loyalty checking brought into being a "police state" and the use of methods "far more dangerous than the small risk of having an occasional Communist on the fellowship rolls."

As evidence that security files are misleading anyway, Dr. Gellhorn cited the fact that the Army in 1949 classified as "unemployable" Gordon R. Clapp of TVA, Professor Counts, and Roger Baldwin.

Dr. Gellhorn is also responsible for other books in this project. He is coauthor of a study on States and subversion (with William B. Prendergast, assistant professor of government at the Naval Academy), and of a study on the Tenney committee (with Edward Barrett, Jr., professor of law, University of California, who stated, "I am particularly grateful to Walter Gellhorn of Columbia University for his constant advice and suggestions and for his careful reading of the manuscript in two of its preliminary versions").

These statements of Dr. Cushman and Dr. Gellhorn both prior to and after their association with the Cornell studies cannot be considered as those of "unbiased" and "objective" individuals. Dr. Gellhorn's appearance before the House Committee on Un-American Activities in 1943 was a matter of record. It is difficult if not far-fetched to believe that no inkling of these matters reached either the Social Science Research Council or the Rockefeller Foundation—before or after the grants were made by the foundation. Yet as far as can be ascertained neither organization has had anything but praise for the studies, and the personnel associated with it.

These then are some of the organizations selected by the Carnegie Corporation of New York, the Carnegie Foundation for International Peace, and the Rockefeller Foundation:

To promote the advancement and diffusion of knowledge and understanding among the people of the United States and the British Dominions.

To promote the advancement and diffusion of knowledge and understanding among the people of the United States; to advance the cause of peace among nations; to hasten the renunciation of war as an instrument of national policy; to encourage and promote methods for the peaceful settlement of international
TAX-EXEMPT FOUNDATIONS

EXHIBIT—PART II. CARNEGIE

EXCERPTS FROM THE YEARBOOKS OF THE CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE AND MATERIAL TAKEN FROM OTHER SOURCES FROM 1911-1952

JULY 1, 1954.

KATHRYN CASEY,
Legal Analyst.

No indication appears in the annual reports of these tax-exempt organizations—certainly not in those made available to the public—that the Carnegie Corporation of New York, the Carnegie Endowment for International Peace, or the Rockefeller Foundation has disavowed the individuals, the organizations, or the results thereof, except in a few isolated instances reported in the Cox committee hearings.

Nor is there any indication that any one of these tax-exempt organizations has taken any measures—either before or after the Cox committee hearings—to insure that organizations as well as individuals receiving their funds in the future will use such funds to make studies which are in fact objective, not only with regard to the material considered, but also as to personnel; studies which will faithfully present facts on both sides of the issue or theory—particularly when it is of a controversial character. Nor have any measures been taken to prevent two equally improper uses of tax-exempt funds: first, under the guise of "informing public opinion"—propagandizing for a particular political philosophy or viewpoint; and second, again under the cloak of "supplying information to the Government"—presenting only information upholding a particular philosophy, or viewpoint, and which if accepted will tend to influence Government officials more and more toward socialistic solutions of current problems.

If any such precautions have been taken then discussion and decision as to them does not appear in the published reports, nor has any publicity been given to the fact.

The publications of the endowment may be divided generally into two classes: first, those of a propagandist nature, which the general public is not expected to purchase but which the endowment desires to have widely read.

There are several other phases of the subject of the proper distribution of the endowment's publications which the Secretary believes should receive further consideration.
"The proposed charter of the endowment places upon an equal footing with its scientific work the education of public opinion and the dissemination of information. This is the proper light in which to view this branch of the work; unless the results of its efforts are read, appreciated, and utilized, the time, energy, funds of the endowment will be wasted. The problem therefore is deserving of the same serious thought as the problems of scientific work, which have heretofore received the chief consideration, but which now appear to be fairly solved. "In speaking generally of educating public opinion and diffusing information, the trustees no doubt had in mind two distinct classes of people:

"(1) Those who are already of their own accord interested in the subjects which come within the scope of the endowment;

"(2) Those not now interested but who may be and should be made to take an interest in the work."

EDUCATIONAL WORK IN THE UNITED STATES

Page 71: "That very important portion of the educational work carried on in the United States, which is conducted through the American Association for International Conciliation, has already been described. In addition to this the Division of Intercourse and Education has directly conducted work of an educational character of three kinds—publicity through the newspaper press, lectures, and preparation and distribution of material for use in schools and by writers of school textbooks.

Publicity

"With a view to spreading an interest in international affairs and a new knowledge of them among the people of the United States, articles on subjects of international interest based on interviews with men of prominence in public and business life have been prepared and offered to a large list of newspapers throughout the country on a business basis. The opinion has been expressed by a number of editors and conductors of newspapers that these articles have been of the highest value and have exerted a large influence on public opinion."

(Source: Carnegie Endowment for International Peace, 1917 Yearbook.)

DIVISION OF INTERCOURSE AND EDUCATION

Page 53: "The continuance of the world war which broke out on August 1, 1914, has caused the Division of Intercourse and Education to confine its activities to two fields. The first includes the information and education of public opinion in the United States as to those underlying principles of national policy and national conduct that are most likely to promote an international peace which rests upon a foundation of justice and human liberty. The second includes those activities which have as their purpose the bringing of the peoples of the several American republics more closely together in thought and in feeling. * * *"

EDUCATIONAL WORK IN THE UNITED STATES

Page 72: "In addition to the highly important educational work conducted for the division by the American Association for International Conciliation, two methods of reaching and instructing public opinion in the United States have been followed: publicity on international affairs through newspapers, and the preparation and distribution of material for schools and writers of school textbooks.

Publicity

"Syndicated articles mainly consisting of interviews with leaders of opinion in both American and European countries have been furnished to the newspapers on a commercial basis. These articles have not always been directly concerned with questions of international peace, but have furnished unusually valuable information on the public opinion, the political life, and the intellectual development of many nations. Their main object has been to increase in the United
States the amount and accuracy of knowledge of other countries and of their peoples. It is believed that the best foundation for international friendship and international justice is to be found in a thorough knowledge of our neighbors and a true appreciation of their institutions and their life.

CONCLUSION

Page 82: "It is probable that the greatest war in all history is approaching its end. At this moment no one can predict just when or how this end will come, but there are plain signs to indicate that a crisis has been reached beyond which human power and human resources cannot long hold out. It will be the special privilege and the unexampled opportunity of the Carnegie Endowment for International Peace to take active part in the work of international organization which must closely follow on the conclusion of the war. For that task this division is making itself ready by study, by conferences, and by persistent effort to prepare public opinion to give support to those far-reaching projects based on sound principle which if carried into effect will do all that present human power can to prevent a recurrence of the present unprecedented calamity."

(Source: Carnegie Endowment for International Peace, 1918 Yearbook, p. 65)

DIVISION OF INTERCOURSE AND EDUCATION

“The instruction of public opinion in this and other countries, the sympathetic cooperation with established effective agencies for the spread of accurate knowledge of international relations and international policies, and the cementing of those personal and national friendships which the war with all its separations has so greatly multiplied, have solely occupied the attention of the division. To these purposes its resources have been exclusively devoted.”

EDUCATIONAL WORK

“A wide distribution of books, pamphlets, and periodicals has been made from the offices of the division, with the definite aim of informing public opinion on questions of international significance, and the educational activity of the policy clubs, together with the limited but important work in summer schools, have proved an effective means of developing the international mind.”

(Source: Carnegie Endowment for International Peace, 1923 Yearbook, p. 58, division of intercourse and education)

“It is the established policy of the division to try to keep important personalities in various lands informed as to influential expressions of opinion on foreign affairs made in this country. With this end in view a list of the names and addresses of over 500 persons eminent in their own countries is maintained at the division headquarters. This year the list has been extended to include representatives of Germany and Austria. Among the expressions of American opinion circulated by the division during the period under review were: Shall Our Government Cancel the War Loans to the Allies? by Justice John H. Clarke; The State of Our National Finances, by Edwin R. A. Seligman; Intelligence and Politics, by James T. Shotwell; Toward Higher Ground, by Nicholas Murray Butler; and What of Germany, France, and England? by Herbert Bayard Swope. That such pamphlets are carefully read and discussed in this country, it is the judgment of the division that it is of sufficient importance to be brought to the attention of representative personalities in other lands to be read and discussed by them. The division assumes no responsibility for the contents of any books or articles so circulated save such as appear authoritatively over its own name.”
In respect of the general problem of international peace, public opinion is now almost everywhere persistently in advance of the action of governments. Only in rare cases do existing governments fully represent and reflect either the noblest ambitions or the highest interests of their own people in the discussions which are going forward throughout the world.

Few proposals could be more futile than that merely to outlaw war. Such outlawry would only last until human passion broke down its fragile barrier. The neutrality of Belgium was amply protected by international law, and the invasion of the territory of that country on August 4, 1914, was definitely and distinctly outlawed. Nevertheless it took place. Precisely the same thing will happen in the future, no matter what the provisions of international law may be, if the springs of personal and national conduct remain unchanged. Forms do not control facts. Laws must reflect, but cannot compel public opinion.

If such laws are to be truly effective, they must be neither enforced nor obeyed. They are only obeyed, and they only will be obeyed, when they reflect the overwhelming public opinion of those whom they directly affect. Once more, therefore, the path of progress leads to the door of conduct, both personal and national.

It is beyond the limits of practical education or practical statesmanship to convince public opinion that there is not, and never can be, any cause for which men should be ready to lay down their lives if need be. The history of human liberty and the story of the making of free governments offer too many illustrations to the contrary. What is practicable is so to instruct, to guide, and to form public opinion that it will insist upon such national conduct and such public expressions on the part of representatives of governments as will promote international understanding and international cooperation, as well as reduce to a minimum those incidents, those policies, and those outgivings, whether on the platform, on the floor of parliaments, or in the press, that constantly erect such effective and distressing obstacles to the progress of international concord and cooperation.

Underneath and behind all these undertakings there remains the task to instruct and to enlighten public opinion so that it may not only guide but compel the action of governments and public officers in the direction of constructive progress. There must be present the moral conviction that a peace which rests upon liberty and justice is an ideal so lofty that no effort and no sacrifice may properly be spared in the task of securing its accomplishment. When this stage is reached it will not be necessary formally to limit armaments; they will atrophy from neglect and disuse.

It is from precisely this point of view that the work of the division of intercourse and education has, from the beginning, dealt with the problem of international peace. The division has studiously refrained from mere sentimental expressions, and from participation in those futile acts which repel much more than they attract the support of right-minded men and women. The division has devoted itself for 15 years, and it will continue to devote itself, to the development among men and nations of the international mind. The international mind is nothing else than that habit of thinking of foreign relations and business, and that habit of dealing with them, which regard the several nations of the civilized world as friendly and cooperating equals in aiding the progress of civilization, in developing commerce and industry, and in spreading enlightenment and culture throughout the world. [Italic supplied.]

Administration of the division in the United States

In addition to this stated work a large part of the activity of the division is devoted to the carrying out of specific, definite, and well-considered projects of demonstrated timeliness, such as those to be described in the following pages. These projects might be subdivided to include, on the one hand, those in which the work is directed and supervised from the headquarters of the division and those which are carried out by the organizations or individuals to whom allotments are made from time to time. For instance, not only was the European trip of editorial writers planned by and details arranged from the division offices, but two members of the staff, the assistant to the director, and the division assistant accompanied the party for the entire trip and were in charge of all administrative
details. The correspondence and careful arrangements necessary in connection
with the work of the visiting Carnegie professors of international relations are
also done from the division offices. On the other hand, when an allotment is
made by the executive committee to such organizations as the Interparliamentary
Union, the Institute of Pacific Relations, or Dunford House Association, the
work is administered by these organizations who report to the division upon the
work when completed. As has already been said, these allotments are always
made in support of definite projects. It is not the policy of the division to grant
subventions continuing from year to year to organizations or undertakings not
directly responsible to the administration of the division itself. ** * *” [Italic
supplied.]

(Carnegie Endowment for International Peace, 1930 Yearbook, p. 108 :)”

“* * * But it is not enough to have academies of this kind. The youth of each
country should be instructed in international duties as well as in international
rights in the colleges and universities of the nations at large. Therefore it is
that the professors of international law and of international relations in the
colleges and universities of the United States have met in conference in order
to discuss and to agree upon the best methods to reach and to educate the youth—
primarily of the United States—in the principles of international law and the
bases of foreign relations. There have been four meetings: The first in 1914,
the second in 1925, the third in 1928, and the fourth in 1929.”

(Source: Carnegie Endowment for International Peace, Yearbook, 1934 :)

Page 22: “* * * The attitude of the endowment toward applications from
other organizations was fully explained in the secretary's report 2 years ago;
where it was stated that 'The attitude of the endowment with reference to its
support of other organizations in the same field presented a difficult question
during the first half of the endowment's existence, but its experience has resulted
in the definite policy of applying the revenue at its disposal to work carried on
with the approval of its trustees and under the direct supervision of its own
officers or agents.' What could not be undertaken during the earlier years of
the endowment's existence, because of the war and its aftermath, so soon as
the echoes of the war had died away was vigorously undertaken. A worldwide
organization has been built up at a minimum of administrative cost, through
which the endowment is in contact with the public opinion of nearly every land.
The endowment is consequently not a money-granting, but an operating, body,
and it operates through its own agencies either directly or through those which
become substantially its own through their spirit and method of cooperation.”

Page 22: A review of the activities of the endowment since the world
war, carried on separately through three main divisions, but operating as a unit
in behalf of the great ideal of its founder, seems to justify the observation that
the endowment is becoming an unofficial instrument of international policy,
taking up here and there the ends and threads of international problems and
questions which the governments find it difficult to handle, and through private
initiative reaching conclusions which are not of a formal nature but which
 unofficially find their way into the policies of governments.”

Page 44: “* * * If the world is to return, and without delay, to the path of
progress, it must be given leadership which is not only national but international.
It must find minds and voices which can see the whole world and its problems,
and not merely those of one neighborhood since important problems which are
purely national have almost ceased to exist.”

Page 47: “The work of the division during the year shows definite progress
along the path of constructive work for the education of public opinion through-
out the world. This advance could not have been accomplished had it not been
for the efficient and well ordered work of the central office where cost of over-
head is reduced to a minimum and where the staff, in full conformity with the
NRA regulations, is faithfully carrying on its tasks."

Page 53: "While in the broadest sense all the work of the division is educa-
tional there are certain items which fall definitely under this head in making
a report on the year's work. They have all been carried on with a view to the
general enlightenment of public opinion and to encourage further study along
international lines rather than as definite and continuing projects, such as
those to be described later, which are an integral part of the work of the
division."

Page 96: "It is plain from what has been written that the year has been one
of constant study and vigorous work despite the fact that the world atmosphere
has been distinctly discouraging. That economic nationalism which is still
running riot and which is the greatest obstacle to the reestablishment of pros-
perity and genuine peace has been at its height during the past 12 months. If
it now shows signs of growing weaker it is because its huge cost is beginning to
be understood. It is only by such education of public opinion as that in which
the division of intercourse and education is so largely engaged that this violently
reactionary movement can be checked and there be substituted for it such inter-
national understanding, international cooperation, and international action as
the needs and ideals of this present-day world so imperatively demand."

(Source: Carnegie Endowment for International Peace, 1937 Yearbook)

Page 180: "* * * The major portion of the present work of the division of inter-
course and education is devoted to educating public opinion in the significance of
this forward-facing and constructive program for international cooperation.

"What I want to point out to the newer trustees is that what has been going
on for 18 years is the result of most careful study and reflection, a result of
consultation with leaders of opinion in every land, and is justifying itself not
in any quick action by governments, but in the very obvious growth of public
opinion."

Page 182: "As to the work of the division of international law, that is a
business of instruction, a business of education, a business not to make all
members of a democracy international lawyers, but to put everywhere possible
the material by means of which the leaders of opinion in all communities may
know what are the real rights and duties of their country, so that it may be
possible for the people who do not study and are not competent to understand,
to get a source of intelligent and dispassionate information. And that process
has been going on steadily.

"We had one very important illustration of the advantage of it during the
past year. I really do not know how the Far-Eastern work of the late Con-
ference upon the Limitation of Armament could have been done without Mac-
Murray's book which had just a few months before been published by the
endowment. The whole process of ranging the nine nations represented in
the conference upon a basis of agreement for the treatment of Chinese ques-
tions so as to facilitate the heroic efforts of the Chinese people to develop
an effective and stable self-government would have been exceedingly difficult,
if not impossible, if we had not had those two big volumes published by the
endowment upon our tables for access at any moment. We were continually
referring to them and the members could turn to such a page and find such
a treaty and such an agreement and have the real facts readily accessible. If
the tentative arrangement towards helping the Chinese in their struggle works
out, as I think it will, the publication of those books, at the time when they
were published, will be worth to the world all the money that has been spent
on the division of international law from the beginning. There were a dozen
other books to which we continually referred."

of the Division of Economics and History, p. 117: )

"* * * All history shows, however, that these appeals to man's higher nature
have had no permanent effect except where substitutes for war have been found
which could be used effectively in the settlement of disputes. The peace movement of the twentieth century owed whatever real strength it might have possessed to the fact that for the first time it concentrated upon this constructive aspect of the problem. Unfortunately, however, this method of approach was too new to be fully understood, with the resultant failures culminating in the present war. The events of the last 5 years, since Japan tested the peace machinery in the Far East, and then Italy and Germany followed its example in Africa and Europe, have clearly shown that if civilization is to survive somehow or other the peace machinery must be brought back into operation. The problem which confronted the makers of the League of Nations has again become a vital issue. The increasing awareness of this fact, not only here but in Great Britain and in the Dominions of the Commonwealth, is evidenced by the growth of a considerable number of bodies for research and discussion. Of one of these, the Commission to Study the Organization of Peace, the Director of this division was chairman, although in a purely personal capacity. Mention is made here of this effort because of the light which it throws upon the nature of the problem itself. It would be hard to find a greater contrast than between the background of the thinking of today and that of the vague and uncertain beginnings of similar discussions in 1917. The experiences of the League of Nations has after all taught us much, its failures equally with its successes. The most surprising feature, however, is the record of the International Labor Organization in the field of social welfare, a unique and wholly new experiment in international legislation. It is this kind of planning for a new world order on a cooperative basis which furnishes the constructive program of the peace movement at the present time. It is therefore important to ensure the preparation of careful and thoughtful monographs in the various fields covered by these surveys in order to prevent a recurrence of the superficiality which marked so much of the peace movement of the 1920’s. It is here that the division of economics and history continues to offer the contribution of specific objectives and definite studies such as those indicated below.” [Italics supplied.]

(Source: Carnegie Endowment for International Peace, 1942 Yearbook:)

**DIVISION OF INTERCOURSE AND EDUCATION**

Page 27: “The aims which the division pursues and which it urges constantly and steadily upon public opinion in the United States, in the Latin American democracies and in the British Commonwealth of Nations are definite and authoritative. They are three in number.

“The first is the formal proposal for world organization to promote peace made by the Government of the United States in 1910. This was contained in the joint resolution passed by the Congress without a dissenting vote in either the Senate or the House of Representatives and signed by President Taft on June 25, 1910.”

Page 28: “The second is the statement of principles adopted by the international conference held in London at Chatham House on March 5–7, 1935. This conference, called by the Carnegie Endowment, remains the outstanding international conference of recent years.”

Page 29: “The third is the important Atlantic Charter as declared by the President of the United States and the Prime Minister of the Government of Great Britain on August 14, 1941, which may be regarded as an endorsement of, and a supplement to, the principles proposed by the conference held at Chatham House.”

Page 30: “It is these three declarations of policies and aims which are the subject of the worldwide work of the division of intercourse and education. They are the outgrowth of war conditions and of the threat of war. They are constructive, simply stated and easy to understand. As rapidly as other nations are set free to receive instruction and information in support of this threefold program, that instruction and information will be forthcoming. The war may last for an indefinite time or it may, through economic exhaustion, come to
an end earlier than many anticipate. In either case, the division of intercourse and education is prepared to carry on in the spirit of Mr. Carnegie's ideal and of his specific counsel."

Page 91: "The division likewise cooperates with various Government offices and with international organizations. Thus during the past year it has aided the Department of State in editing the many papers submitted to the ninth section (on international law, public law, and jurisprudence) of the Eighth American Scientific Congress. Such cooperation is appropriate because officers of the division served as chairman and secretary, respectively, of section IX, and the division's staff acted as the section's secretariat. Cooperative relations are also maintained with the Office of the Coordinator of Inter-American Affairs and with other Government agencies. Of a somewhat similar nature are the relations maintained with such international organizations as the Pan American Union and the Inter-American Bar Association. The assistance thus rendered to organizations official and unofficial, often requires the expenditure of much time, but it should be added that the relationship is not infrequently of mutual benefit since the division is often in a position, as a result thereof to obtain data which might not otherwise be readily accessible to it."

(Source: Carnegie Endowment for International Peace, 1943 Yearbook.)

Pages 29-30: "The policies which were put in operation a quarter of a century ago, with the approval of more than 200 of the leading statesmen and intellectual leaders of the whole world, have proved to be most satisfactory and most important. Literally millions of human beings have been led to read together and to discuss the facts and the forces which constitute international relations and which make for peace of the country. Thousands of groups in the United States and hundreds of groups in other lands regularly to discuss the books that are provided by the endowment and to hear the lectures which are offered by visiting Carnegie professors.

"The work of the division has carefully avoided the merely sentimental or sensational propaganda for peace which is all too common. It has based its work, and will continue to do so, upon the intellectual forces which alone can guide the world in the establishment of new and constructive policies of international cooperation to make another war such as now rages practically impossible."

Page 36: "Preparation of Programs for Secondary Schools: Special inquiry into the needs of secondary schools in the field of international relations study, under the direction of Professor Erling M. Hunt, of Teachers College, Columbia University, was carried on in cooperation with the Commission to Study the Organization of Peace. A group of New York City high school teachers took part in a summer working conference for a week. They planned and drafted an 80-page booklet which included reading and study suggestions for the use of senior high school students entitled Toward Greater Freedom: Problems of War and Peace. This has been published and distributed by the Commission to Study the Organization of Peace.

"The School of Education of Stanford University, California, was assisted by the division in bringing together, in July, a group of high school teachers and administrators from schools in the Pacific Coast and Mountain States. The group devoted 2 weeks to intensive analysis of war issues and postwar problems as they affect the curriculum and the individual teacher. As a result a report, Education for War and Peace, embodying the findings of the groups and intended as a pamphlet for immediate use in schools, has been published by the Stanford University Press." [Italics supplied.]

Page 37-38: "Any doubts which might have been entertained as to the value of the International Relations Club work in colleges and universities, during the long years in which the endowment has been operating, must have been completely dispelled by the magnificent response that has come from both faculty advisers and students during this period of disruption and confusion caused by the present worldwide catastrophe. Each of the 12 regional conferences was carried through during the calendar year 1942. This is the more remarkable since difficulties have increased rather than lessened as the war progresses. Almost every letter
received at the opening of the academic year announced that faculty advisors were leaving their respective campuses to serve in the armed forces or to support in advisory capacity Government defense projects, but even when called away summarily these faculty members have found time to appoint successors and to write a heartening letter as to the importance of carrying on. The drain upon the student body through induction into the Army has been overwhelming. In many of the colleges students are using their spare time in local war industries or in defense work if they have not actually left college, and most of the studies have been directed along engineering and other lines closely connected with the war effort. But even the boys who know that within a few weeks they will be in a military camp have tried to learn the deeper causes of the war through continued attendance at the club meetings, and at many of the conferences uniforms have been in evidence, worn by ex-club members who have been granted permission to attend. In fact, the clubs have continued with more enthusiasm and vigor than ever before.

(Source: Carnegie Endowment for International Peace, 1944 Yearbook, pp. 70-74.)

"Many problems of international organization and administration are confronting the United Nations authorities, and problems of that nature will assume far greater importance as the war draws to an end and postwar activities undergo the large-scale development now anticipated. Foreseeing such a trend, the division has given much attention to this field during the past 2 years.

"There is, of course, no international civil service to evolve formal rules, practices, and precedents for future guidance in international administration; and although there has been encouraging progress in methods of international organization, those methods are not as yet beyond the trial-and-error stage. Moreover, the literature in these fields is extremely inadequate. Yet valuable experience has been acquired in both administration and organization, especially by the Secretariat of the League of Nations, the International Labor Office, and other international agencies, some of which have functioned successfully over a considerable period of years. This experience however, is contained partly in unpublished records and, to an even greater extent, in the memories of those who have served in the organizations in question; and it is therefore not available for the guidance of the many officials and agencies now actively concerned in planning and setting up the machinery for future international cooperation.

"With a view to making available the most important features of such experience, the division has held a series of conferences which have been attended by officials and former officials of the League of Nations and of other international bodies, and in some instances by government officials and others especially interested in the fields of the conferences. The first of these meetings, held in New York on August 30, 1942, was of an exploratory nature, its chief purpose being to determine what particular aspects of the experience of the League of Nations Secretariat might be further studied and recorded in usable form. At the end of the following January a second conference was held at Washington, which was devoted specifically to a survey of experience in international administration. And some 6 months later, on August 21-22 of last year, a third conference was held in Washington to discuss the problem of training for international administration. The proceedings of the first two conferences were issued in confidential mimeographed editions and given a restricted distribution, chiefly among government agencies and their personnel. The proceedings of the third conference, however, will be of interest to a much wider group, including not only officials but educators and others deeply concerned with the need of adequate training for the staffs of many international agencies which are either in process of formation or are contemplated for the postwar period. For this reason, the proceedings of the third conference have been carefully edited and supplemented with documentary materials, and printed for a wider distribution."

"As a result of the conferences and related activities, as well as of the studies made by its staff, the division has established useful relations with many highly qualified and experienced experts, and this in turn has made it possible to plan and arrange for the preparation of a series of studies by a number of these experts on international organization and administration. The studies, more fully described below, record both experience and precedents in the fields in question and constitute a rich source of information which, in the main, has hitherto been inaccessible."
"These activities of the division have placed it in a peculiarly strategic position to cooperate with official agencies preparing to undertake important international functions. At the outset, such agencies are, of course, confronted with problems of organization and administration, and it is a matter of urgent necessity for them to obtain materials which will assist them in meeting these problems. It is a source of great satisfaction to the director that the division has been in a position to supply such materials. Without attempting to list these instances of cooperation in detail, mention should be made here of a few examples by way of illustration.

"For some months, the Office of Foreign Relief and Rehabilitation Operations (OFRRO) was engaged in preparations for the organizing conference of the United Nations Relief and Rehabilitation Administration (UNRRA) held at Atlantic City, November 10 to December 1, and it frequently called upon the division to assist by various means in these preparations. Thus, in August, the division was able to arrange to have several officials of the League of Nations come to Washington to take part in discussions of plans for the administrative budget of the new organizations. In a letter to the endowment former Gov. Herbert H. Lehman, then director of OFRRO and recently chosen director of UNRRA, wrote expressing his 'great appreciation for the very real contribution which you and the Carnegie endowment made to our preparations for a United Nations Relief and Rehabilitation Organization.'

"Members of the staff of OFRRO were early supplied by the division with the materials assembled as the result of the several conferences on international organization and administration above mentioned. As the date of the conference in Atlantic City approached, the division received numerous additional and more urgent requests for assistance from OFRRO. In compliance with these requests, several special memoranda were prepared under great pressure for use in connection with the UNRRA conference. These dealt with the following subjects:

"International Conferences and Their Technique
"Precedents for Relations Between International Organizations and Nonmember States
"Status of Observers at International Conferences
"Seconding by International Organizations and from National Services to International Agencies
"The Creation, Composition, and Functioning of Standing Committees of UNRRA

"The appreciation with which these contributions from the division were received can hardly be overstated. As an illustration, mention may be made of a personal note of November 17 received by the director from Dr. Philip C. Jessup, a member of the endowment's board of trustees, and then serving as Assistant Chief of the Secretariat of UNRRA. After describing one of the documents as having proved 'most helpful in the solution of some troublesome problems'; and expressing amazement that it had been possible to supply 'so thoughtful and so complete a document under such enormous pressure of time,' Dr. Jessup referred to other materials supplied by the division as being 'also very much appreciated,' and added: 'I think the endowment is certainly entitled to congratulate itself upon the contribution it has made to the smooth functioning of international organizations which, to a large extent, must be the mechanical means of developing international peace.'

"It should be added that, in addition to these special memoranda, the division supplied several copies of its various publications relating to international organization and administration to the library of the conference at Atlantic City. Shortly after the conference met, an urgent request was received from the American delegation at Atlantic City for additional copies of these publications, to be sent to the conference by special courier. The division was, of course, glad to meet this request. Of a somewhat different nature were the numerous urgent inquiries for specific information received from officials connected with the conference. These inquiries dealt with such topics as relations of former enemy governments after the last war with the American Relief Commission, diplomatic immunities of members of international organizations, and staff regulations of such organizations. In each instance, the division was able either to supply the information requested, or to indicate the best source from which it could be obtained.

"Similarly, though to a somewhat lesser degree, the division has cooperated with the recently created Interim Commission of the United Nations Conference on Food and Agriculture. Copies of the endowment's publications on international organization and administration were supplied to the Commission; the
director and other members of the division staff have conferred with the executive secretary of the Commission on problems relating to the constitution, organization, and staffing of the newly created body; and the division has supplied the Secretariat with data on inter-American agencies dealing with problems in the fields of food and agriculture.

"In addition to such special inquiries, the division receives from day to day, often by telephone, requests for information from government offices on technical subjects in the international field. Although these are too numerous to list here, it may be said that they are answered as fully as possible and as promptly as is consistent with scrupulous accuracy. The assistance rendered by the division has not been limited, however, to American and international agencies. It maintains cordial and often mutually helpful relations with the diplomatic missions in Washington and frequently supplies them with published materials and other data.

"These studies, mentioned on a previous page, are in fact competently written monographs. Because of the urgent demand for such materials, they are being issued in preliminary form in small mimeographed editions. It is the Director's belief, however, that they have much more than a transitory value, and that as soon as is practicable some of them should be published in revised and permanent form. The following list comprises the studies already issued in mimeographed form:

"Memorandum on the Composition, Procedure, and Functions of the Committees of the League of Nations
"International Conferences and Their Technique—a handbook
"International Drug Control, a Study of International Administration by and through the League of Nations
"The League of Nations and National Minorities, an Experiment
"The following studies are now being prepared and will be published during the coming year:
"The Situs of International Organization
"Diplomatic Immunities and Privileges of Agents and Staff Members of the International Organization
"Relations Between International Organizations and Nonmember States
"The Participation of Observers in International Conferences
"The Economic and Financial Organization of the League of Nations
"The League of Nations' Mandates System
"The League of Nations' Secretariat
"Financing of International Administration
"The names of the authors of these studies are being withheld for the present. They are all, however, present or former officials competent from actual experience to deal with the subjects involved." [Italics supplied.]

(Source: Carnegie Endowment for International Peace, 1945 Yearbook.)

THE LIBRARY AND INFORMATION BUREAU

Page 25: "The work of the library has continued along the same general lines described in previous reports. In accordance with the policy adopted in 1942, governmental agencies were given precedence in the use of the library's materials. In addition, its resources have been used by numerous foreign embassies and legations and by the participants of such international meetings as those at Dumbarton Oaks. Scholars, press representatives, professors, and international, national, and local organizations have also been served.

"The ever-increasing discussion of the peace to follow the present war has brought renewed demands for information on the subject. The endowment's library is known in Washington for its wealth of material on peace and international organization and for its services in making these materials available. As a result, library staff members have spent an increasingly large proportion of their time in reference work with visitors. At the same time, due to the accelerated publication program in the Division of International Law, reference work for the endowment staff has been tremendously increased."

Page 30: "The proposals of statesmen and of public leaders for United Nations organization and the formation of general opinion on these plans have been the basis of growing action during the past year in the extension of the division's work. Both by continuous contact with central groups operating programs of study in the main regions of the country and by collaboration with local institutes and councils, this important interest has been pursued. The announce-
ment of the Dumbarton Oaks proposals heightened its significance in the last quarter of the year and gave immediate political reality to it as an issue facing our people.

The development of centers in many part of the country, for organizations associated with the endowment, has been described in preceding reports. The brief summary of their expanding activities which can be given here demonstrates that, although the programs and methods of the various centers differ, there is agreement as to their fundamental purpose: to educate public opinion in regard to the underlying principles essential to security after the war and to welfare throughout the world.

Page 103: "As this report goes to press, the interest of the civilized world centers upon the United Nations Conference on International Organization meeting at San Francisco on April 25. As this event promises to be the culmination of much in the program of planning and policy advocated repeatedly in the annual reports of this division and in its work and that of its director in affiliated organizations, it is fitting to comment upon it and the nature of the peace settlement at the end of the Second World War, of which it is so important a part. Therefore, without in any way attempting to anticipate what may or may not be done at the San Francisco Conference, it seems not only valid but necessary to link it up with the outlook and activities of the Endowment.

"During the past 5 years, both within the program of the division itself and in connection with the research work for the International Chamber of Commerce and the Commission To Study the Organization of Peace, the director has been engaged upon a comprehensive series of studies dealing with postwar economic policies and international organization **.

Pages 105-106: "The provision of the Dumbarton Oaks proposals for the erection of an Economic and Social Council under the Assembly, a provision unfortunately absent from the Covenant of the League of Nations, has not yet received anything like the attention which it deserves. Naturally the provisions for security take the precedence in all discussions of the plan for world organization, but in the long run the provision for the economic organization is more important, if the security organization succeeds in the establishment of peace for even a generation. The advancement of science will ultimately outlaw war, if it has not already done so, but creates vast new problems in the field of economic relationships.

"This inescapable conclusion is now widely shaded by thoughtful people, but its application in practical politics is by no means assured in the most enlightened countries. Here, therefore, is the area of international relations in which the Carnegie Endowment for International Peace should continue to concentrate. The affiliation with the International Chamber of Commerce should be strengthened through the Committee on International Economic Policy, and at the same time the interplay of all these forces making for peace and international understanding is translated into concrete form by the Commission to Study the Organization of Peace with which this division of the endowment has also been closely associated.

"It is, however, fitting and proper now to record the fact that the director of the division was consultant in the State Department for a year and a half during all of the earlier phases of the planning of the General International Organization agreed upon at the Moscow Conference and finally developed in the Dumbarton Oaks proposals. The plans of the small subcommittee on postwar organization, meeting under the chairmanship of the Under Secretary, Mr. Sumner Wells, of which the director was a member, have remained basic throughout the period of negotiation. The director was also a member of the Security Committee, the agenda of which covered, among other things, the problem of armaments, and the Legal Committee, concerned with American participation in an International Court of Justice, and other problems of international law. More important, from the standpoint of practical politics was the political committee in which some members of the technical committees sat in conference with some of the leading Senators and Congressmen under the chairmanship of the Secretary of State. These formal discussions, which were held almost every week for several months, have borne good results in strengthening the relations between the executive and legislative branches of the Government with reference to the postwar settlement. It goes without saying that Secretary Hull, aware from long experience of the need of cooperation between the State Department and Congress, did not
by any means limit his contacts to these formal meetings. Nevertheless, they were of real importance in the clarification of policy.

"In the field of cultural relations, the director resigned his chairmanship of the National Committee on International Intellectual Cooperation, an office which he had held by virtue of his membership of the Organization of International Intellectual Cooperation of the League of Nations. At a conference of representatives of the various national committees of the Latin-American countries held in Washington, he was elected member of a small international committee created to give effect to the resolution of the Havana Conference of 1941. Progress of the war, however, has interrupted this development and the organizing committee is happily faced with a new and much more developed plan for post-war organization in cultural relations under the auspices of the State Department, than the advisory committee of which the director was a member until its dissolution."

* * * * * * * * * *

Page 112: "* * * General International Organization: This is a statement prepared by the Commission To Study the Organization of Peace which summarized the conclusions of past reports and recast them with reference to the plans then under consideration for the Dumbarton Oaks Conference. It is gratifying to note the many points of this statement which parallel the proposals of that conference. Upon the conclusion of the conference, the commission issued a statement to the press which was commented upon in a letter to the director by Edward R. Stettinius, Jr., then Under Secretary of State, as follows: The statement is another indication of the notable service in working for an objective and scientific approach to the problems of international organization which has marked the publications of the Commission To Study the Organization of Peace in the past."

* * * * * * * * * *

Page 114: "When the Dumbarton Oaks proposals were made public, the commission called together the heads of 75 national organizations to discuss a widespread educational program to bring the proposals before the American public. These groups have been meeting regularly in New York City, discussing both publications and education techniques. Representatives from the Department of State have been attending the meetings.

"The commission has cooperated also in the regional conferences at which representatives of the State Department have met with organizational leaders in off-the-record discussion of the proposals. Meetings were held in Portland, Salt Lake City, Detroit, Salina, Dallas, St. Paul, and Atlanta. Large public conferences on the proposals were held in New York City and other key centers, the meetings being arranged by the commission's regional offices. In addition, the commission continued its regular educational program, working with other national organizations, schools and colleges, labor, farm, and business groups, and concentrating considerable attention on rural areas and small towns.

"Special Institute meetings were held in cooperation with the World Alliance for International Friendship Through the Churches in Dallas, Tex.; LaFayette College, Pa.; Miami and Winter Park, Fla.; Chicago, Ill. The regional commissions have held other public conferences and institutes throughout the year."

"The series of lectures which the commission has been sponsoring at the New School for Social Research has now covered a considerable number of problems of postwar international organization, dealing with labor, cultural relations, mandates, plebiscites, the World Court, public health, minorities, moving of populations, human rights, international education, and an analysis of the Dumbarton Oaks proposals. The lecturers included Clark M. Eichelberger, Prof. Carter Goodrich, Dr. Walter Kotschnig, Prof. Oscar I. Janowsky, Prof. Quincy Wright, Dr. C. E. A. Winslow, Dr. Frank L. Lorimer, Mr. Beryl Harold Levy, Dr. Hans Simons, Dr. Sarah Wambaugh, Dean Virginia C. Gildersleeve, and the director of the division."

Over 600,000 copies of the commission's reports have been distributed and the distribution of its popular material numbers 3 1/4 million pieces. A number of basic pamphlets were published in 1944, including a guide to community activity and discussion entitled, "The Peace We Want"; a third revision of a high-school pamphlet, Toward Greater Freedom; a revised edition of a farm pamphlet, Win-
ning the War on the Spiritual Front; a picture book of full-page illustrations by the artist, Harry Sternberg, of the commission's statement of fundamentals, a project undertaken with the cooperation of the Committee on Art in American Education and Society; an analysis and comment on the Dumbarton Oaks proposals, prepared by Clark M. Eichelberger. In 3 months 50,000 copies of this pamphlet were distributed, it being used by many groups as a basic text. A third printing is now being made.

Pages 24-25:

UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATIONS

"The endowment was invited by the Secretary of State to send representatives to serve as consultants to the American delegation at the United Nations Conference on International Organizations held at San Francisco, April 25-June 26, 1945, at which the charter of the United Nations was drafted and signed. In response to this invitation, the endowment was represented at the conference by Dr. James T. Shotwell, director of the division of economics and history, who served as a consultant, and Mr. George A. Finch, secretary of the endowment and director of its division of international law, who served as associate consultant. A number of other trustees were present at the conference in an official or consultative capacity. Mr. John Foster Dulles was an official adviser to the American delegation, and Mr. Philip C. Jessup was a technical expert on judicial organization. Endowment trustees representing other organizations were Messrs. David P. Barrows, W. W. Chapin, Ben M. Cherrington, and Harper Sibley. Mr. Malcolm W. Davis, associate director of the division of intercourse and education, was the executive officer of the first commission of the conference."

CONFERENCE ON AMERICAN FOREIGN POLICY

"To assist in informing public opinion concerning the foreign policy of the United States, the endowment sponsored a conference at Washington on November 26-27, 1945, of representatives of national organizations who took part in a discussion program with officers of the Department of State concerning America's Commitments for Peace. The secretary of the endowment acted as its representative in carrying out the details of the conference. Eighty national organizations accepted the endowment's invitation and were represented by its 125 delegates. The conference was greeted in person by Secretary of State James F. Byrnes. There were four sessions. The first was devoted to World Trade and Peace. The official statement on the subject was made by Mr. Clair Wilcox, director of the Office of International Trade Policy. The second session dealt with Relief and Rehabilitation. Governor Herbert H. Lehman, Director General of UNRRA, laid the facts of the situation before the conference.

"At the third session, Hon. Dean Acheson, Under Secretary of State, explained the official policies toward Germany and Japan. At the concluding session, Mr. Alger Hiss, Secretary General of the United Nations Conference at San Francisco, made a progress report of the United Nations Organization. Following the presentation of the leading address or paper at each session, a panel of experts from the Government offices chiefly concerned answered questions propounded by the assembled representatives of the national organizations. At a luncheon tendered by the endowment at the close of the conference, Hon. William Benton, Assistant Secretary of State in charge of public affairs, explained the International Information Program of the Department of State. Letters of commendation have been received from many of the national representatives who were in attendance, and a letter expressing appreciation of the cooperation of the endowment was sent by Secretary of State Byrnes to President Butler under date of December 7." [Italics supplied.]

Page 45: "As a result of the continued educational program which the Minnesota United Nations Committee at St. Paul has conducted for the division throughout the year, there is reason to believe that public sentiment in Minnesota is favorably inclined toward the United Nations Organization and other
forms of international cooperation. This is shown by an inspection of editorial comment in the State."

SURVEY OF PROGRAMS OF THE UNITED NATIONS

Pages 38-39: "Following the ratification of the United Nations Charter by the number of nations required to put it into effect, and in furtherance of a suggestion originally made by a trustee of the endowment for a survey of peace organizations as to their functions and effectiveness in reaching public opinion in the United States, the division sent out inquiries to national organizations as to what they were doing to bring to the attention of their members the commitment of the United States to the United Nations. Peace organizations as such form only part of the program for reaching public opinion in the United States. A questionnaire was forwarded to 150 organizations in October, of which 29 were 'peace' organizations, and the division was gratified to receive answers from 100 of them.

"The report, compiled from this survey by Miss Cathrine Borger, of the division staff, showed that practically every organization engaged in popular education of various types, regardless of particular field—scholastic education, citizenship education, religious, service clubs, women's organizations, youth, business, farm, labor, specialized interests—is devoting some part of its programs to making its membership aware of the commitment of the United States to the United Nations.

"Among the suggestions received as to methods which should be emphasized in developing popular knowledge of international organization were the need of preparing single illustrated booklets, more use of motion pictures and radio, forums and discussion groups, as well as development of suitable publications for schools and colleges. Education of young people was mentioned by a number of organizations. Six organizations maintained that personal contacts and leadership provided the most effective method, and another stressed the need for dividing efforts between raising the general level of 'where people are' and working with interested groups willing to join in concerted activities. Of major importance were those stressing the necessity of developing material showing what the United Nations Organization cannot do as well as what it can do, and of full publicity for every activity of the United Nations, and more especially for the activities of the United States and its delegates.

"The greatest lack in public education with regard to the American commitment concerns people who are not reached by any organization, since they have not been interested to join, and do not realize that they too constitute public opinion and have to assume their responsibilities as citizens not only of the United States but of the world. The Carnegie Endowment, as an institution seeking neither members nor maintenance by dues and contributions, is in a position both to work with other organizations and also to respond to this need of primary education."

Pages 50-52:

WORK THROUGH RADIO AND MOTION PICTURES

"During the past year Beyond Victory has been presented each week under the combined auspices of the World Wide Broadcasting Foundation and the endowment, over nearly a hundred stations in all parts of the United States and Canada. This nationally known series of programs, now well into its third year, has established itself with an audience of discriminating listeners throughout the country as offering interest and authoritative comment or many phases of postwar adjustment.

"In the spring of 1945 a special group of programs centered around the San Francisco Conference of the United Nations. Two members of the American delegation, Dean Virginia C. Gildersleeve and the former Governor of Minnesota, Harold E. Stassen, spoke of the general issues which the conference faced. Dr. James T. Shotwell and Dr. Raymond Fosdick contrasted the San Francisco conference with the Paris Conference of 1919. The problem of security was discussed by Dr. Quincy Wright, and colonial issues by Dr. Arthur W. Holcombe and others. The Charter of the United Nations was discussed by the executive officers of the four commissions at San Francisco: Mr. Malcolm W. Davis, executive officer of the First Commission, spoke on the People Write a
World Charter; Mr. Huntington Gilchrist, executive officer of the Second Commission, on The Charter—Jobs for All; Prof. Grayson Kirk, executive officer of the Third Commission, on The Security Council—How It Works; and Prof. Norman J. Pabelford, executive officer of the Fourth Commission, on The Charter and International Justice. The essential purpose in this group of programs was to clarify the development of the charter in the conference at San Francisco and to explain the functions and powers provided by its sections, for security and welfare.

* * * * * *

"During the past year many libraries in the United States have asked to be put on a special list to receive copies of Beyond Victory scripts every week. About 50 libraries in all parts of the country are now receiving this weekly service, and many have applied for its renewal for another year. Occasional Beyond Victory scripts appear on the reading tables of nearly a hundred additional libraries which request them from time to time. They are also sent to several leading universities and a substantial number of secondary schools in the United States. In addition, shipments of transcriptions of Beyond Victory broadcasts were forwarded to Army camps and hospitals in the United States, averaging from 10 to 12 in each shipment, and to the Marianas, Saipan, and the Guadalcanal commands and the European theater. Many letters of appreciation have been received from officers telling how these records were used in orientation programs and convalescent wards, and describing the favorable reaction and resulting value. A letter from the Finney General Hospital, Thomasville, Ga., says in part, 'Your selection of subject matter seems to be just what we have been looking for in our orientation program, and I wish to compliment you on the wide selection available on postwar activities.' The transcriptions were also used by the Office of War Information up to the time that organization was dissolved."

THE ANGLO-AMERICAN FINANCIAL AGREEMENT

Page 111: "The executive committee concluded that many goals of the committee were at stake in the proposed Anglo-America financial agreement. It was therefore decided to publish an objective statement concerning the British loan.

"Dr. Nicholas Murray Butler wrote the foreward to the resulting brochure, Fifteen Facts on the Proposed British Loan, which was edited by Robert L. Gulick, Jr. There was a first edition of 200,000 copies, and a second of 100,000 is now being printed. Hon. W. L. Clayton, Assistant Secretary of State, has this to say about the Fifteen Facts: "Permit me to congratulate you on an excellent job which I am sure will be most helpful in placing the loan before the public in proper perspective." Margaret A. Hickey, president of the National Federation of Business and Professional Women's Clubs, Inc., writes in similar vein: 'In my opinion this is excellent material, presented in a fashion which simplifies and clarifies the principal points involved in the legislation now pending before Congress.'

"The board of directors agreed, without dissent, to sponsor a campaign of public education relating to the agreement. A special committee was formed under the chairmanship of Hon. Charles S. Dewey, former Congressman from Illinois, and a vice president of the Chase National Bank. Other members of this committee include: Robert W. Coyne, National Field Director, War Finance Division, United States Treasury; Ted R Gamble, Special Assistant to the Secretary of the Treasury; William Green, president of the American Federation of Labor; Eric A. Johnston, president, Chamber of Commerce of the United States; Philip Murray, president, Congress of Industrial Organizations; Edward A. O'Neal, president, American Farm Bureau Federation; Philip D. Reed, chairman of the United States Associates of the International Chamber of Commerce; Anna Lord Strauss, president, National League of Women Voters; and Robert L. Gulick, Jr."

Pages 16-17:

RECOMMENDATION OF THE PRESIDENT

* * * * * *

"Among the special circumstances favorable to an expansion of the endowment's own direct activities, the most significant is the establishment of the United Nations with its headquarters in New York and with the United States
as its leading and most influential members. The United States was the chief architect of the United Nations and is its chief support. The opportunity for an endowed American institution having the objectives, tradition, and prestige of the endowment to support and serve the United Nations is very great. No other agency appears to be so favorably situated as is the endowment for the undertaking of such a program. So far as we have been able to ascertain, no other agency is contemplating the undertaking of such a program. Consequently, I recommend most earnestly that the endowment construct its program for the period that lies ahead primarily for the support and assistance of the United Nations.

"I would suggest that this program be conceived of as having two objectives. First, it should be widely educational in order to encourage public understanding and support of the United Nations at home and abroad. Second, it should aid in the adoption of wise policies both by our own Government in its capacity as a member of the United Nations and by the United Nations organization as a whole.

"The number and importance of decisions in the field of foreign relations with which the United States will be faced during the next few years are of such magnitude that the widest possible stimulation of public education in this field is of major and pressing importance. In furthering its educational objectives the endowment should utilize its existing resources, such as the International Relations Clubs in the colleges, and International Conciliation, and should strengthen its relationships with existing agencies interested in the field of foreign affairs. These relationships should include close collaboration with other organizations principally engaged in the study of foreign affairs, such as the Council on Foreign Relations, the Foreign Policy Association, the Institute of Pacific Relations, the developing university centers of international studies, and local community groups interested in foreign affairs of which the Cleveland Council on World Affairs and the projected World Affairs Council in San Francisco are examples.

"Of particular importance is the unusual opportunity of reaching large segments of the population by establishing relations of a rather novel sort with the large national organizations which today are desirous of supplying their members with objective information on public affairs, including international issues. These organizations—designed to serve, respectively, the broad interests of business, church, women's, farm, labor, veterans', educational, and other large groups of our citizens—are not equipped to set up foreign policy research staffs of their own. The endowment should supply these organizations with basic information about the United Nations and should assist them both in selecting topics of interest to their members and in presenting those topics so as to be most readily understood by their members. We should urge the Foreign Policy Association and the Institute of Pacific Relations to supply similar service on other topics of international significance.

"Exploration should also be made by the endowment as to the possibilities of increasing the effectiveness of the radio and motion pictures in public education on world affairs." [Italics supplied.]

"The search for the underlying causes of international investment friction has revealed that capital investment is a form of contact peculiarly apt to occasion conflict, while the existing institutions for the adjustment of these conflicts are not only inadequate but are fundamentally ill-adapted to the task. The defectiveness of the institutions of adjustment arises largely from the fact that the areas of political loyalty and political organization on which they are based, are smaller than the area of conflict-producing contact, which today includes practically the whole world. * * *

* * * * *

"With these general considerations in mind we now turn our attention to the appraisal of various policies which have been practiced or which may be suggested in connection with the problem of reducing the political friction connected with international private investment. These policies may be grouped according to their basic characteristics under three general headings, and will be so discussed: (1) mere anti-imperialism, (2) national supervision of investments abroad, (3) denationalization and mondial supervision of international investments. * * *"

1 The meaning of this special term will be explained later.
A WORLD INVESTMENT COMMISSION

Pages 498-499: "The functions which might be discharged by a world commission on permanent economic contracts between nations are plentiful and important enough to justify the creation of such an agency. The World Investment Commission, if we may give it that name, should begin the development of that effective supervision by the world community which must gradually undermine national diplomatic protection and render denationalization of investments possible."

Pages 500-501: "How would the World Investment Commission operate? It should have the following powers and duties:

- To register international loan agreements and concessions; to make their terms public; to regulate their terms in certain respects.
- To collect continuous and accurate information respecting international investment operations and all their ramifications and effects—social and political as well as economic.
- To call general conferences on a world or regional basis, or conferences of certain industries (e.g., concession holders, consumers, and states granting concessions in the oil industry). These conferences would consider problems raised by international capital migration, and out of them something akin to world investment legislation might emerge.
- To cooperate with the Mandates Commission of the League of Nations, the International Labor Organization, commissions on codification of international law, and other international agencies whose work has a bearing on the setting of standards for protection of capital-importing regions against ruthless exploitation.
- To examine and report on the financial condition of borrowing states and private enterprises; to make observations on the political and social implications of specific capital transactions.
- To call attention to any conditions likely to intensify international investment conflicts or to occasion political friction over investments and to make recommendations with respect thereto.
- To endeavor to conciliate disputes, calling conferences of lenders and borrowers for this purpose, mediating, arbitrating, seeking to work out compromises, employing the services of disinterested experts to provide full social and economic information on the basis of which equitable adjustments might be sought.
- To make a public report of its findings where a party to a dispute before the Commission refuses to come to an agreement which in the opinion of disinterested conciliators is just and reasonable.
- To publicly advise, after hearings, against further provision of capital to a state or corporation which has failed to observe a contract obligation without just cause. This would presumably make the flotation of loans difficult anywhere in the world for such a state or corporation. Here is one of the 'sanctions' which would enable the Commission to take over the function (now exercised by national diplomatic protection) of protecting investors abroad—that is, of guaranteeing minimum standards of fair treatment for the investment interests of aliens in all countries. If organized on a worldwide basis, this sanction would be sufficient in many cases to accomplish more in the way of protection than is now usually accomplished by diplomatic protection. At the same time, it would tend to remove investment protection as a pretext for national aggression and remedy other defects of the system of national diplomatic protection.
- To refer legal questions to the Permanent Court of International Justice or to the World Commercial Court (suggested below) for an advisory opinion or final settlement.
- To cooperate with regional organizations like the Pan American Union in the establishment of regional subcommissions for handling investment problems that affect mainly one part of the world."

Page 504: "This proposal would obviously involve the creation of an international corporation law, probably through an international treaty to be framed and adopted under the auspices of the League of Nations."

1The Commission would probably deal with State loans as well as with the private investments upon which the discussions of this volume have been focused.
Page 509: "As a means of filtering out the national interest in world capital movements and thereby promoting the dual process of denationalization and mondial supervision, a World Investment Bank might perform useful functions. Such a bank would sell its bonds to governments or to private investors and invest the funds so raised in long-term construction projects, such as railways in South America and China, airways over the world, canals, harbor works, international river improvements, and the like. * * *"

Pages 512-513: "A useful contribution to the denationalization of international investment (and also trade) relationships would therefore be made by the development of a world 'consular service' for the provision of detailed economic information and the encouragement of world commerce. Such a service could best be built on the foundation already laid by the excellent work of the League of Nations and the International Labor Organization in the field of economic information. * * *

Pages 515-516: "The League of Nations: It is worthy of note that practically all the specific measures proposed in this chapter for dealing with the political problems raised by international investments depend in some fashion upon the presence of a world political organization. If the League of Nations did not exist it would be necessary to create it, or something like it, before investment problems could be attacked with any hope of success. The League should be supported, strengthened, and developed. Its legislative powers should be increased and its authority enlarged. Just as the loose league of sovereign States first established under the Articles of Confederation developed into the Federal Government of the United States of America, so the League of Nations must be developed from a confederation of sovereign states into a federal world government. Of course the United States, which has such a large stake in the orderly supervision of international investment relationships, should actively encourage this process. An essential step is entry into the League. * * *

Pages 517-518: "International civic training: It is all too evident that the measures and devices proposed in this chapter can never succeed, cannot even be tried, unless there is a sufficient sense of world citizenship among the different peoples of the earth and among their leaders. Such a sense of world citizenship may be stimulated by a rational appreciation of the worldwide interdependence of economic, social, and political life, but to be politically effective the emotions must also be touched and loyalties to new supranational symbols must be developed. Can such loyalties be achieved short of an international working-class revolution, or can they be achieved by such a revolution? That is one of the most fundamental questions affecting the future form of social life on this planet. The development of international attitudes in the schools, world intellectual cooperation, adult education on the interdependence of the modern world, celebration of the heroes common to all mankind—all these things, and many more at first sight quite unrelated to international investments, have an important bearing on the specific problem of investment friction." * * *"

EXCHANGE OF CORRESPONDENCE REGARDING INTERNATIONAL RELATIONS CLUBS

April 20, 1954.

Mr. Joseph E. Johnson,
Carnegie Endowment for International Peace,
New York, N. Y.

Dear Mr. Johnson: My contacts with you and the other member of the endowment staff were so pleasant that it is with a keen sense of disappointment that I now resign myself to writing for certain information instead of visiting you in person. However, it is becoming increasingly evident that our activities will require me to spend all my time here.

In the confidential reports, as well as the yearbooks, there are references to "international polity clubs" which were, as I recall, established by the Carnegie Endowment for International Peace in colleges and universities, starting back in the early days of your organization. However, as you know time

4020-54—pt. 1—59
did not permit me to read all the material you made available to me, and there are gaps in my notes on this item. Would you, therefore, have someone on your staff answer the following questions:

1. Were these clubs an outgrowth of or connected in any way with the American Association for International Conciliation, the Institute of International Education, or any other organizations? (And if so, how did this come about?)

2. Were they a development from the “international mind” alcoves?

In the back of my mind there is a vague recollection that during a conversation with Dr. Avirett he mentioned that these clubs resulted in organization of the Foreign Policy Association or the Council on Foreign Relations. If I am correct, how did this develop and when?

3. How many such clubs were there in 1938 and how many are there today, if they still exist? If they no longer exist, is that due to positive dissolution as an activity of the endowment, or due merely to student and faculty disinterest or to some other factors?

4. I gather that each year books were sent by the endowment to each of these clubs. Were these volumes sent without charge, at cost, or at a discount?

5. Were all books selected for distribution in any 1 year sent to all the clubs? If not, what secondary method of selection was employed, such as the size of the college or university, or the club membership?

6. How did these clubs come into being at the college or university—in other words, did the endowment either by suggestion to the faculty or one of its members, or through other methods foster the formation of such clubs?

7. Were lists of books available periodically sent to the colleges and universities, from which the club or faculty adviser made a selection? Or were books automatically distributed at intervals throughout the year to all institutions?

I hope this will not place an undue burden on your staff—but since I cannot foresee a time when a visit to your office might be possible I shall appreciate very much your sending the information as soon as it is convenient.

With kindest regards, I am,

Sincerely yours,

KATHRYN CASEY,
Legal Analyst.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE,
Office of the President,
NEW YORK, N.Y., April 29, 1954.

Miss KATHRYN CASEY,
131 Indiana Avenue NW, Washington, D.C.

DEAR Miss CASEY: I, too, regret that you, yourself, could not come to see us again. In any event, here is the information on the International Relations Clubs which you requested in your letter of April 22. For your convenience, the numbers correspond to those of the questions asked in the letter.

1. The first student groups in colleges and universities for the serious study and objective discussion of international affairs—known as international politics clubs—were organized in the autumn of 1914 under the direction of the American Association for International Conciliation which, in turn derived financial support from the Carnegie Endowment. In the fall of 1920 when direction of the clubs was transferred to the Institute of International Education (organized largely under the leadership of Dr. Nicholas Murray Butler with substantial financial support from the endowment), the name of the clubs was the endowment in 1924, and the clubs were taken over by the endowment which changed to international relations clubs. The institute became independent of the endowment in 1924, and the clubs were taken over by the endowment which continued actively in charge of them until the spring of 1951. At this time the Association of International Relations Clubs, established in 1948, assumed supervision of the club program under a grant-in-aid from the endowment. Although no longer actively directing the club work, the endowment maintained a relationship with it through having a representative on the association’s executive board.

2. The clubs were in no way a “development” from the international mind alcoves, which were an entirely separate phase of the endowment’s program.

At no time in the past have the clubs had any organizational connection with the Foreign Policy Association, the Council on Foreign Relations, or any other organization except those indicated under “1.”
3. In 1938 there were 1,103 clubs as follows: 265 in high schools in the United States; 685 in colleges and universities in continental United States; 7 in the Philippines; 1 each in Hawaii, Alaska, Canal Zone, and Puerto Rico; 24 in the United Kingdom; 34 in 14 Latin American countries; 22 in China; 9 in Japan; 2 in Korea; and the remaining 57 in foreign countries including Canada, Egypt, Greece, Iran, Iraq, Siam, New Zealand, Australia, South Africa, Syria, and India.

In January, 1948, the National Education Association in Washington assumed leadership for the high school clubs. Information regarding them since then may be obtained from the association.

In 1954 (April 26) there are 476 clubs in colleges and universities in continental United States; 1 in Hawaii, and 28 in foreign countries including Canada, the United Kingdom, Australia, New Zealand, South Africa, Egypt, India, Japan, Pakistan, Philippine Islands, and Thailand, making a total of 505.

4. The materials sent to the International Relations clubs in high schools, colleges, and universities were a gift from the endowment, with the understanding that they would be kept together as a special IRC collection, in the library or elsewhere, readily accessible to the club members.

5. All clubs—large or small, in universities and junior and 4-year colleges, in the United States and foreign countries—received the same books in English with the exception of some of the groups in Latin American countries which were sent Spanish translations of some of the English publications or original Spanish publications. Cooperation with the Latin American clubs was discontinued during the academic year 1947-48. Pamphlets and mimeographed materials, less specialized and better suited to the age level, were sent to the high school clubs.

6. Although the endowment never had a field worker as such to stimulate interest in the club movement, it maintained a competent “secretariat” in its offices which carried on correspondence with the clubs, offering encouragement to both club members and faculty advisers in carrying on the work, as well as advice when sought, and suggestions for vitalizing club programs. It cooperated closely with the host clubs in the 12—1948 increased to 14—regions throughout the country where annual conferences were held, by helping to set up the programs, furnishing speakers, and arranging for an endowment representative to be in attendance at each conference. In the early 1930’s letters were sent at the beginning of the academic year to faculty members at a few selected institutions, informing them of the club work and its advantages. The clubs increased to such an extent in number, however, that this procedure soon became unnecessary. A great deal of the credit for this growth must be given to the continued interest of students and faculty members alike, who, upon transferring to a campus without a club, proceeded to organize a new one or reactivate a former one, and also to the establishment of clubs by students and/or faculty people who were told about the work by enthusiastic members or advisers of clubs on other campuses. On receiving an inquiry about the work, the endowment furnished materials descriptive of the club program and suggestions for organizing a club. The principal requirements for affiliation with the endowment were that the group would meet regularly with a faculty adviser for the study and discussion of world affairs from an unprejudiced and objective point of view and that the books should be kept together as a permanent collection. Upon notification that a club had completed its organization, it was placed upon the mailing list to receive all club materials.

7. Two installments of books were automatically distributed to the clubs each academic year. The books were initially selected by a member of the endowment staff and then submitted for approval to a committee of which Dr. Butler was chairman. In the first semester the books were sent to clubs which notified the endowment that they were functioning and ready to receive them, and in the second semester only to the clubs which had formally acknowledged receipt of the first, or fall, installment. The distribution of books was discontinued entirely in the spring of 1947.

In this connection, you will be interested to know that the Association of International Relations Clubs has just concluded its Seventh Annual Conference. At the final business session on April 23, the association voted to affiliate with the Foreign Policy Association, which is better equipped than the endowment to aid them in planning their programs for objective study of international problems. At the same time the association passed a resolution thanking the endowment for past services. It was with very real regret that the endowment came to the end of a long chapter, in which we like to think that a
contribution was made to the better understanding of the responsibilities which our country now bears as a world power.

Sincerely yours,

JOSEPH E. JOHNSON.

MEMORANDUM

JUNE 30, 1954.

Subject: Books distributed by Carnegie Endowment for International Peace.

Since it was impossible to check every volume distributed by the endowment through the international mind alcoves or through the international relations clubs and centers, a random sampling by year mentioned in the yearbooks was taken. When Dr. Kenneth Colegrove was in Washington, D.C., to attend the hearings before the committee, he was asked to look over the books distributed in the following years: 1918, 1926, 1928; 1931, 1932, 1933, 1938, 1939, 1941, 1943, 1944, 1947.

The authors and books for those years are given below. Those on which Dr. Colegrove commented are in italics.

---

1918 Yearbook, page 86 ("distributed principally to college libraries and International Polity Clubs"):
- C. R. Ashbee: American League To Enforce Peace
- E. W. Clement: Constitutional Imperialism in Japan
- Cosmos: The Basis of Durable Peace
- Robert Goldsmith: A League To Enforce Peace
- J. A. Hobson: The New Protectionism
- Roland Hugins: The Possible Peace
- Harold J. Laski: Studies in the Problem of Sovereignty—"Opposed to the national interest; inclines toward extreme left"
- Ramsay Muir: Nationalism and Internationalism
- Henry P. Munro, Ellery C. Stowell: International Cases
- H. H. Powers: The Things Men Fight For
- Bertrand Russell: Why Men Fight
- Walter E. Weyl: American World Policies

1926 Yearbook, page 56 ("distributed principally to college libraries and International Polity Clubs"):
- Carlton J. H. Hayes: A Political and Social History of Modern Europe (2 vols.)
- Prof. Schille Viallade: Economic Imperialism
- George Matthew Dutcher: The Political Awakening of the East
- Raymond Leslie Buel: International Relations—"Globalist"

1931 Yearbook, page 67:
- Butler, Nicholas Murray: The Path to Peace
- Eberlein, Marks, and Wallis: Down the Tiber and Up to Rome
- Ellis, M. H.: Express to Hindustan
- Keenleyside, Hugh L.: Canada and the United States
- Larson, Frans August: Larson, Duke of Mongolia
- Olden, Rudolf: Stresemann
- Patrick, Mary Mills: Under Five Sultans
- Phillips, Henry A.: Meet the Germans
- Read, Elizabeth F.: International Law and International Relations—"Rather leftist"
- Redfield, Robert: Tepoztlan (Mexico)
- de la Rue, Sidney: Land of the Pepper Bird (Liberia)
- Russell, Phillips: Red Tiger (Mexico)
- Ryhd, Hanna: Land of the Sun-God (Egypt)
- Sassoon, Sir Philip: The Third Route
- Sheng-Cheng: A Son of China
- Street, C. J. C.: Thomas Masaryk of Czechoslovakia
- Waldrom, Webb: Blue Glamor (the Mediterranean)
1932 Yearbook, pages 75, 80:
Akeley, Delia J.: Jungle Portraits
Buck, Pearl S.: The Good Earth—"Slightly leftist!"
Chase, Stuart: Mexico—"Mildly left"
Colum, Padraic: Cross Roads in Ireland
Forbes, Rosita: Conflict
Hindus, Maurice: Humanity Uprooted—"Marxian giant"
Ilin, M.: New Russia's Primer
McBride, Robert M.: Romantic Czechoslovakia
McMullen, Laura W.: Building the World Society—"Globalist"
Morton, H. V.: In Search of Scotland
Ross, Sir E. Denison: The Persians
Strong, Anna Louise: The Road to the Grey Pamir—"Well Known Communist"
Van Dyke, John C.: In Egypt
Wagner, Elasm: Korea
Weather, N. E.: Mustapha Kemal of Turkey
Andrews, Fanny Fern: The Holy Land Under Mandate
Arendtz, Herman F.: The Way Out of Depression
Bratt, K. A.: That Next War?
de Madoriga, Salvador: Disarmament—"Ultra globalist and aimed at sub-
mergence of 'national interest'
Harper, Samuel G.: Making Bolsheviks
Hudson, Manley O.: The World Court
Ilin, U.: New Russia's Primer
League of Nations: Ten Years of World Cooperation
Lefebure, Victor: Scientific Disarmament
MacNair, Harley F.: China in Revolution
Mitchell, N. P.: Land Problems and Policies in the African Mandates of the
British Commonwealth
Moulton, H. G.: Japan: An Economic and Financial Appraisal

1933 Yearbook, pages 77, 80:
Angell, Norman: The Unseen Assassins—"Globalist"
Casey, Robert J.: Baghdad and Points East
Cohen-Portheim, Paul: England, the Unknown Isle
Desmond, Alice Curtis: Far Horizons
Hedin, Sven: Across the Gobi Desert
Hudson, Manley O.: Progress in International Organization
Jones, Amy Heminway: An Amiable Adventure
Mackail, Rawton: Portugal for Two
Monsen, Ronald A.: Across Africa on Foot
Morton, H. V.: In Search of Ireland, Ireland
Patterson, Ernest Minor: America: World Leader or World Lead?—"Globalist"
Phillips, Henry Albert: Meet the Japanese
Raisnel and Huff: This Is Russia
Thomas, Valentine: Young Europe

And the Bravest of These: Katharine Roberts.
New Zealand: Philip L. Soljak.
Peace Atlas of Europe: Samuel van Valkenburg.
The French Canadian Outlook: Mason Wade.
Originally it had been intended to have others in addition to Dr. Colegrove make notations on these and other books distributed by the Carnegie Endowment.
for International Peace, either through the International Mind Alcoves, the international relations clubs and centers, or other means. However, up to this time, it has not been possible to proceed with this particular project.

KATHRYN CASEY,
Legal Analyst.

EXHIBIT—PART II. ROCKEFELLER

EXCERPTS FROM ANNUAL REPORTS OF THE ROCKEFELLER FOUNDATION AND MATERIAL TAKEN FROM OTHER SOURCES FROM 1929 TO 1952

(Source: The Rockefeller Foundation, 1932 annual report, pp. 274–275):

ECONOMIC PLANNING AND CONTROL

"Events of the past 3 years have made strikingly evident the tremendous social losses occasioned by the ups and downs of modern business enterprise. Much physical suffering, illness, mental disorder, family disintegration, crime, and political and social instability trace their origin to economic causes. In a time of depression, when enterprise is halted and millions of the unemployed are unable to command the necessities of life, the question is insistently heard, Why does this distressing situation arise in a country where raw materials exist in plenty, where technological equipment is of the best, and where workers are eager to apply their productive capacities? The opportunity and need for scientific attack on the problem of economic maladjustment are unmistakeable. The foundation views this field as highly important and well adapted to research.

"For several years various studies and organizations concerned with economic stabilization have been supported. It is believed that a more complete knowledge of the working of our present economic system—e. g., of conditions as revealed by realistic, statistical studies of unemployment; the characteristics, methods, and hazards of specified industrial enterprises; the complex forces operating in a competitive society in a number of specific situations—must supply the necessary basis for planning an effective economic organization."

(Source: The Rockefeller Foundation, 1936 annual report, pp. 55–56):

"* * * As one reviews the history of the men and women who, over the last 20 years, have received fellowships from the foundation, the record appears most gratifying. Today, they are occupying positions of importance and distinction in nearly every country of the world. They are on university faculties; they are connected with research laboratories; they hold strategic governmental positions; they are carrying on significant and productive work in wide fields of knowledge. Some of them, indeed, have gained outstanding recognition, such as the award of the Nobel prize. It would be idle to assume, of course, that their leadership and their contribution to scientific thought are the results solely of their fellowship experience. Doubtless, many of them would have gained eminence without this experience, or would have obtained the experience in other ways. But it is a satisfaction to record the subsequent success of highly promising men and women, picked largely from the younger generation, to whom the foundation is proud to have been of some assistance."

(Source: The Rockefeller Foundation, 1937 annual report, pp. 57–58):

THE DEBACLE IN CHINA

"Last year, in the Review, the following sentence appeared: 'China today stands on the threshold of a renaissance. The Chinese National Government, together with many provincial and county authorities and private organizations, are attempting to make over a medieval society in terms of modern knowledge.'

"This proud ambition, in which the foundation was participating, has been virtually destroyed by the events of the last 6 months. The program was primarily a program of rural reconstruction and public health. It was rooted in promising Chinese institutions like Nankai University in Tientsin, and the National Central University and the National Agricultural Research Bureau, both in Nanking. It was promoting studies in subjects like animal husbandry and agriculture; it was carrying on broadly based field experimentations; and it was training men and women for administrative posts in rural and public health work."
“Nankai University was completely destroyed last July. The universities and institutions in Nanking, where they are not too badly damaged, are serving today as army barracks. The field units in mass education and public health are so completely scattered that it is practically impossible to locate them. The work, the devotion, the resources, the strategic plans of Chinese leaders for a better China, have disappeared in an almost unprecedented cataclysm of violence.

“At the moment there is nothing further to report. The foundation still maintains its office in Shanghai. Whether there will be an opportunity to pick up the pieces of this broken program at some later date, no one can foretell.”

(Source: The Rockefeller Foundation, 1940 annual report, pp. 273-277.)

NATIONAL INSTITUTE OF PUBLIC AFFAIRS

“The foundation continued its support of the national institute's experimental program of recruiting and training personnel for the Federal services by a grant of $105,000 for the 3-year period from October 1, 1941. For the past 5 years, the program has involved the annual placement of approximately 50 graduate students preparing for public service careers, in agencies of the Federal Government for a year of practical apprenticeship. The institute also serves as a clearinghouse of information and as a liaison agency in matters relating to this recruitment and training program. Sixty percent of its "internes" are now in the Federal service; several are in State and local or other government services, and a number are continuing graduate study.

"The institute hopes to continue its program directed toward developing a more effective means of recruitment of persons for Government service, especially for its influence in improving the relations between the Federal authorities and the educational institutions of the country."

(Source: The Rockefeller Foundation, 1941 annual report.)
Pages 230-231:

INSTITUTIONAL GRANTS

"Council on Foreign Relations"

"Each study group consists of specialists in designated areas in the various problems to be dealt with. The program permits the continuous examination of events related to problems of special interests of this country, and the assembly and interpretation of research material. Each group works under the leadership of a rapporteur. A steering committee composed of the rapporteurs and the leading officers of the council is responsible for the general planning, the coordination of the activities of the groups, and the interchange of material and points of view.

"More than 250 memoranda on special subjects had been prepared before the end of 1941. These had been furnished to the Government services charged with handling the various questions discussed. Many representatives of these services had also participated in the discussion of the study groups."

"Foreign Policy Association"

"The former project is concerned primarily with the organization of educational work in relation to world problems, collaboration with colleges, schools, forums, women's clubs, youth groups, labor programs, agricultural clubs, etc. Its purpose is the preparation and distribution of educational material in the field of international affairs and the encouragement of discussion of such material. A special series of 'Headline Books,' published since 1935, is one aspect of the publication program. At least 15 titles have been added to the list over the past 3 years. Study materials which supplement these books are used by various groups throughout the country. Several of the 'Headline Books' have been translated into Spanish and distributed in South America.

"It is hoped to establish effective bases of cooperation with leading national organizations serving the cause of public education in the United States, and with Government agencies actively concerned with increasing general knowledge and understanding of problems of American foreign policy."

"In view of the current world situation, the Foreign Policy Association will concentrate its research during the coming year in three main fields: (1) Developments in the occupied countries of Europe; (2) political and economic trends in Latin America; and (3) problems of postwar reconstruction."
"In addition to its research activities, the association furnishes speakers to educational public policy organizations, arranges luncheon discussions, and conducts a series of broadcasts now distributed through 70 stations. Its Washington bureau collects firsthand information on current issues of American foreign policy. The association also maintains a Latin American Information Service, which published until the end of 1941 its biweekly Pan American News, furnishing background material on political and economic trends in Latin American countries."

* * * * * * *

Pages 233-234:

INSTITUTE OF INTERNATIONAL STUDIES

"Yale University

"The institute, founded in 1935, had the following objectives: To promote basic research in international relations with particular attention to studies designed to clarify American foreign policy; to develop a broad and well-rounded program of education and training in international relations on both the undergraduate and graduate level; to evolve procedures of coordination and integration among the various social sciences in the analysis of international problems; and to aid in the postdoctoral training of younger scholars in the general field of international relations.

"The research program of the institute included many projects centering around problems of American foreign policy, but designed also to interpret the role of power in international affairs, and the relation of national policies to military policies and principles of grand strategy.

"Four major studies have been published and several others are nearing completion. Certain of the projects are being carried on in conjunction with Government departments. Among the specific subjects proposed for study are: Problems of national defense; United States and the future order of Europe; hemispheric unity; the geographic basis of foreign policy; and inter-American trade relations.

"The program of education has been closely coordinated with the research program. The projected program for the next few years will not represent any substantial change in policy. A combined social science approach will stress analytical rather than historical methods."

(Source: The Rockefeller Foundation, annual report for 1942.)

Pages 179-180:

THE SOCIAL SCIENCES

"Social Science Research Council

"Washington personnel office. Even before the United States entered the war, a vital need was felt in Washington for an agency to promote more effective utilization of social scientists. In the stress of the prewar emergency the National Government had recruited many thousands of persons trained in the social sciences; later, of course, the demand greatly increased.

"It was foreseen that unless the recruitment policies were integrated and wisely administered severe shortages would result and skilled talent would be squandered.

"After a careful study of the problem the Social Science Research Council set up an office in Washington to work in cooperation with Government agencies on three tasks: (1) Consulting with Government agencies on policies and methods of recruitment; (2) advising with individuals who wished to contribute their talents where they could be utilized most effectively; and (3) consulting with university officials regarding the temporary release of members of their faculties.

"The Council already had joined with other national scientific councils in promoting the roster of scientific and specialized personnel, but responsible officials felt that this was not enough. Now, the office which has been set up in Washington provides a place to which persons may turn for extragovernmental advice concerning social science problems. Similar services had earlier been provided for engineers and specialists in the various field of medical and natural sciences."
"Public Administration Committee

The agencies through which society will seek to meet its diverse problems are multiform, and total effort, whether for defense or for the postwar world, will receive its primary direction through the agency of Government. For the past 7 years the foundation has supported the activities of the public administration committee, whose original objectives were to capture and record and lay the basis for the appraisal of measures initiated in the United States for grappling with the consequences of the worldwide social and technological changes that were taking place. The end objective was, if possible, to add to the store of principles of administration so that administrators who must make decisions might profit by recent and current experience.

The committee formulated a series of major studies of two general types: (1) Administrative problems of new and emerging governmental activities; and (2) appraisal and review of significant developments in administration of the last 3 decades.

More recently the committee has focused its resources and attention mainly on planning and stimulating rather than on executing research. A broadening of the program to include the field of government, with public administration as one sector is now contemplated. Such a program would deal less with the mechanics of administration than with the development of sound bases of policy determination and more effective relationships in the expanding governmental structure."
INTERNATIONAL STUDIES

"Columbia University School of International Affairs, Russian institute"

"Increased efficiency and rapidity of transportation and communication have ended for this country the possibility of isolation, either as a physical fact or as a national policy. Those responsible for the management of the interests of the United States, whether in governmental or nongovernmental capacities, will of necessity be increasingly concerned with the institutions, mores and policies of other nations and peoples. There must therefore be developed with the United States a body of men and women with a broad understanding of international affairs who have in addition training as functional or regional specialists. Only a body of men and women so trained will provide a reservoir from which experts capable of handling the increasingly complex and intricate problems of international affairs can be drawn.

"For some time Columbia University has been exploring the desirability of establishing at the university a school of international affairs. The recommendation that such a school be created was made in 1945 and included the proposal for establishment of six institutes designed to develop special knowledge and understanding of certain of the so-called power and problem areas of the world. It is planned to assemble in these institutes groups of outstanding scholars who have specialized in specific geographical areas. The university suggests that a British Commonwealth institute, a French institute, a German institute, a Russian institute, an East Asian institute, and an institute of Latin American affairs be created. The Rockefeller Foundation has made a 5-year grant of $250,000 to Columbia University toward the development of a Russian institute."

UNITED NATIONS INFORMATION OFFICE, NEW YORK

"One of the elements vital to the future success of world cooperation is the immediate accessibility of the huge documentation of the United Nations conference in San Francisco, which, by an almost unprecedented action of the conference, was made available for prompt public examination and study. With respect to many crucial issues the really significant material is not the formal language of the articles of the Charter, but the interpretation contained in the reports and discussions of the various committees. The conference, however, had no means of publishing this material. The secretariat which staffed the conference ceased to exist at the closing of the conference. The new secretariat is dealing with the future rather than with the past. The United Nations Information Office, therefore, with the consent of the authorities of the conference, is publishing the official document of the conference in cooperation with the Library of Congress."

Pages 8-9: "The challenge of the future is to make this world one world—a world truly free to engage in common and constructive intellectual efforts that will serve the welfare of mankind everywhere."

Pages 32-33: "International relations:

"The grants in this field went to agencies which conduct research and education designed to strengthen the foundations for a more enlightened public opinion and more consistent public policies."

"This parallels the grant of $152,000 made in 1945 to the Royal Institute to enable Arnold Toynbee to write a history of international relations from 1939 to 1949. An appropriation of $300,000 was made to the food research Institute of Stanford University for the preparation, in collaboration with experts from many countries, of a history and appraisal of the world's experience in handling food and agriculture during World War II. Another grant was for the purpose of assisting the United Nations information office to reproduce the documentation of the first General Assembly and Preparatory Commission of the United Nations. The Brookings Institution was given a fund which will enable Dr. Leo Pasvolsky, who was special assistant to the Secretary of State for International Organization and Security Affairs, to analyze the background of the development of the"
United Nations organization and to initiate studies and educational conferences on the problems that are emerging in the functioning of our new international machinery.* * *

Page 40: "In this connection, mention might be made of the appropriations, voted in 1946, through the foundation's division of the social sciences, of $283,000 to the Institute of Pacific Relations, $60,000 of which went to the American Council and $173,000 to the Pacific Council. Much of the work of this organization is related to the training of personnel, the stimulation of language study and the conduct of research on problems of the Far East. It is part of the pattern by which, from many different directions and points of view, efforts are being made to bring the West and the East into closer understanding."

Pages 182-183: INTERNATIONAL STUDIES

"The Brookings Institution

"The developing foreign policies of the United States as one of the major powers sharing world leadership are to be appraised under the new international-relations program of the Brookings Institution. Each of the studies is an integral part of a research plan geared to those international-relations problems with which the United States either is, or will be, concerned. This problem approach is intended to aid in formulating enlightened public opinion in training specialists in international affairs, and in aiding governmental agencies dealing with foreign relations. An annual seminar will endeavor to train specialists and aid teachers of international relations. A 1-year grant of $75,000 was made by the foundation in support of this program.

"Two annual surveys will be published. One of these will examine American foreign policies, but with particular attention to the problems directly ahead and to the factors likely to determine their solution. The second survey will consider the foreign policies of other nations, especially the major powers, and how these are being harmonized through the United Nations and its related agencies.

"Five major studies are in progress: The United Nations Charter and its effect on the powers, duties, and functions of the U. N.; the foreign policy objectives of the five major powers; the general effectiveness of international organizations and conferences as methods of diplomacy; present-day factors making for economic war or for economic peace in international relations; and changes in international security concepts resulting from technological and strategic developments.

"Dr. Leo Pasvolsky, who has been in Government service since 1934, has now returned to the Brookings Institution as director of these studies."

Pages 190-191:

"Institute of Pacific Relations

"The Institute of Pacific Relations, an unofficial international organization with a number of constituent national bodies or councils, aims to increase knowledge of economic, social, cultural, and political problems of the Pacific area. Training personnel, stimulating language teaching as well as curriculum attention to the Far East in general, and publishing research studies, are the institute's chief means of spreading knowledge. The distribution of educational materials to secondary schools and to the Armed Forces increased significantly during the past several years."

Pages 192-193:

United Nations Information Office, New York

"The importance of preventing possible serious misinterpretations of actions of international bodies due to unavailability of actual documents on transactions was recognized when the foundation early in 1946 appropriated $16,177 to the United Nations Information Office, New York, toward the cost of reproducing the documentation of the Preparatory Commission in London and of the sessions of the First General Assembly of the United Nations Organization. Preparatory Commission documents were microfilmed in London and the film flown daily from the Interim Organization to the United Nations office in New York and reproduced here by photo-offset within 24 hours of their arrival. Fifty or sixty copies were sent to the Department of State and to key libraries throughout the country."
One thousand other copies were distributed to interested libraries, institutions, and societies, and an additional number provided for editorial writers, news commentators, and others. This appropriation was an emergency measure to permit the reproduction of these documents and their distribution as promptly as possible.

**APPROACHES TO PEACE**

"Work which looks toward more adequate analysis and understanding of the issues in international relations continued to hold an important place in the grants made by the Rockefeller Foundation in 1947 in the field of the social sciences."

"Meanwhile we cannot neglect the direct approach to the overwhelming crisis of our generation, and for its part the foundation has contributed substantial sums over the last decade to organizations and projects that are concerned with the issues of international relations. This policy was, of course, continued in 1947. For example, the sum of $225,000 was given to Brookings Institution in support of its broad program of research and education in the field of foreign policy. This program, under the leadership of Dr. Leo Pasvolsky, involves, among other objectives, five basic studies:

"(1) Origin and Interpretation of the United Nations Charter.
"(2) Foreign Policy Objectives of the Major Powers.
"(3) Influences Making for Economic War or Economic Peace in International Relations.
"(5) International Organizations and Conferences as New Methods of Diplomacy.

"In addition, Brookings Institution, as part of its program in the training of specialists, has planned an annual 2-week seminar for about 100 teachers of international relations.

"Still another appropriation—in the amount of $75,000—was given for the creation of senior fellowships at the Russian institute of the School of International Affairs at Columbia University. The Russian institute, toward whose creation in 1945 the foundation contributed $250,000, is without doubt the leading graduate school in the United States in the field of Russian studies. In addition to the Russian language, its basic curriculum provides: (1) A broad background and training in 5 disciplines (history, economy, law and government, international relations, and the social and ideological aspects of literature) as applied to Russia; (2) an intensive research training in one of these 5 disciplines elected by the student; and (3) fundamental graduate training in the broader aspects of this elected discipline.

"The senior fellowships will make it possible to bring to the institute for advanced training some of those persons who are now conducting instruction in Russian subjects in other universities, thus enabling them to broaden their equipment and develop their effectiveness in Russian research.

"Other grants by the foundation in 1947 in this general field of international relations include the following:

"(1) The Royal Institute of International Affairs ($50,625)—a supplement to an earlier grant toward Prof. Arnold J. Toynbee's study of the history of the war and of the peace settlement.
"(2) Commission of the Churches on International Affairs ($15,000)—for preparations for conferences on the role of churches in international relations.
"(3) Johns Hopkins University ($37,400)—for a study of the trends and forces which affect the United States in its international relations.
"(4) Netherlands Institute of International Affairs ($25,000)—for a broadly based European conference on the economic and cultural aspects of the German problem.
"(5) Council on Foreign Relations ($90,000)—for general support."
THE HUMANITIES IN SPACE

"The range and variety of grants of this type made during 1947 may be briefly indicated. The American Council of Learned Societies received $12,000 for the work of its committee on Near Eastern studies, $25,000 for the translation into English of important Russian works, and $100,000 to augment the supply of materials needed for teaching and research on Slavic studies; the University of Pennsylvania, $80,000 for the development of studies of modern India; the University of Washington, $150,000 for studies of the Far East; Yale University, $25,000 toward the support of a group of advanced students of the Far East; the University of California, $50,000 to develop intensive instruction in Slavic and Far Eastern languages, and $100,000 for the development of junior personnel in Slavic studies; Columbia University, $25,000, likewise for Slavic studies; Indiana University, $27,500 for the development of studies of Eastern Europe, principally Finland and Hungary."

Pages 189-190:

THE FUNCTIONING OF AMERICAN POLITICAL DEMOCRACY

"Pacific Coast Board of Inter-Governmental Relations

"The foundation gave its support in 1947 to a pioneering educational experiment in intergovernmental relationships at the working level. On the Pacific coast the Governors of Washington, Oregon, and California, the chairman of the 3 State Leagues of Cities and State Associations of County Commissioners, and the coast regional chiefs of 11 Federal agencies, have created a Board of Inter-governmental Relations. The board aims to improve and coordinate government through meetings for the discussion of common problems, and acts as a nonprofit association solely to inform its individual members, and through them the public, of general and current problems. It takes no action, directly or indirectly, which might be construed as carrying on propaganda, or otherwise attempting to influence legislation.

"Thus far every meeting has had virtually full attendance, from the three Governors down. Typical subjects discussed to date include Federal-State-local tax and fiscal relationships; division of welfare costs; forest development, conservation, and protection; educational programs for veterans and nonveterans; problems of minorities in metropolitan centers; employment and unemployment; public-works planning and timing; adequate housing programs; industrial reconversion; availability of materials; and surplus property disposal."

Pages 190-191:

"National Institute of Public Affairs

"The National Institute of Public Affairs recruits from the immediate graduates of the colleges and universities in the country talent for administrative and management posts in the Government of the United States and other jurisdictions. Sponsored by a board of public-minded citizens and acting as a liaison unit between the colleges and universities and the Federal departments, it has completed the 12th year of its unique public service training program, under which 30 to 50 college graduates each year have been selected and given rotating assignments on a nonsalaried basis within Federal agencies. The institute provides intensive orientation, supervision, and a carefully planned program of reading, studies, and conferences with public officials.

"The foundation has supported this program since 1935. Maintenance for about half the interns is financed by funds or fellowships raised by various colleges or their alumni. Encouraging is the competition and career interest which the program stimulates on college campuses throughout the country; also the rapidity with which graduates of the institute have risen to positions of responsibility in public life.

"A natural complementary development, guided by the institute in its first stages is a parallel inservice training program, for selected personnel of some 15 Federal departments or agencies, which is now in its seventh 6-month session under a coordinator furnished by the Civil Service Commission. The departments of State, War, Navy, Commerce, and Agriculture, are supplementing this with coordinated programs of their own."
There is an urgent and ever-increasing need in this country for basic information on the economic and political structure of the world and on the trends and forces which prevail and collide in various parts of the world and which affect the United States in its international relations. It is not enough to point out these trends and forces; it is essential to measure and weigh them.

At Johns Hopkins University, Dr. W. S. Woytinsky has undertaken a piece of work which should help to answer this demand by giving an inclusive statistical picture of the different patterns of life of all nations of the globe and of the conditions in which they are facing the future. It will provide at least a partial background for discussion of such problems as the future of various races and continents; the fate of colonial empires; relations between industrial and agricultural nations; growth or decline of foreign trade; competition of raw materials, sources of energy, and means of transportation within the world economy; and conditions of world prosperity and peace. The work goes beyond the simple source book of statistics of international interest, in that these statistics are selected and organized with reference to specific problems of international importance. The resulting volume, America in the Changing World, should be valuable in promoting a better understanding of statistics, not as a mathematical discipline but as quantitative thinking on human affairs. The Rockefeller Foundation is supporting this project with a 3-year appropriation of $37,400.

The role of conflicting ideologies in foreign affairs is under discussion in a study group which the council has recently initiated on public opinion and foreign policy. The central problem of the group concerns the proper function of propaganda in the conduct of foreign affairs. Progress has been made on another study, the problem of Germany, which is financed by a special grant from the Rockefeller Foundation. The Netherlands Institute of International Affairs invited the Council on Foreign Relations to participate in this study, which is being undertaken on an international basis.

In general the policy of the foundation and, with occasional exceptions, its practice have conformed to the following principles: (1) The support of the foundation should be directed to purposes for which it is otherwise difficult to secure funds; (2) the support should be of an initial or catalytic character, with the idea that what has been demonstrated to be useful should then be carried on by other means; (3) current and palliative types of philanthropy should accordingly be left to others, not because they are unimportant, but because the needs they encompass are more generally recognized. Furthermore, the resources of this foundation, and indeed of all similar foundations combined, are insignificant in relation to such needs.

“Without question east Asia will remain for a long time to come one of the great problem areas of the world. The United States has need of specialists who possess at once high technical competence in the social sciences and a knowledge of the languages and cultures of the area. Looking toward the establishment of a research institute in the east Asian field, the school of international affairs at Columbia University has started a program of Far Eastern studies through the various social-science departments. Owing to recent expansion in the fields of Chinese and Japanese languages, literature, and history, Columbia has a firm foundation for these studies. The aim at present
is to promote a similar expansion in the social sciences, in order to provide
advanced training in economics, political science, and social analysis as related
to China and Japan. * * *

"United Nations Economic Commission for Europe—Training Scholarships"

"The United Nations Economic Commission for Europe has received a grant
of $12,000 from the Rockefeller Foundation to provide social-science scholarships
for selected European students.

"An operational body which deals with virtually all aspects of European
recovery and development, the Commission has attracted to its staff an interna-
tional group of competent economists. These men can offer promising graduate
students an introduction to the international approach to economic problems
while they are acquiring first-hand knowledge of applied economics. The Re-
search and Planning Division, headed by Mr. Nicholas Kaldor, formerly of the
London School of Economics, carries on work which is closely linked with the
technical economic problems encountered in the operational activities of the
Commission. Dr. Gunnar Myrdal, of Sweden, Executive Secretary of the Com-
misson, has established a special committee to administer the program."

(Source: The Rockefeller Foundation, 1949 annual report.)

"President's Review"

Page 5-7: "The deeply disturbed political situation now prevailing in a large
part of the world has had the effect of considerably curtailing the worldwide and
international scope of foundation programs. Profound political changes have
prevented the foundation from operating in several countries in which it was
formerly active. These countries include Poland, Czechoslovakia, Hungary, and
China. During the past year the far-eastern office of the international health
division of the Rockefeller Foundation was moved from Shanghai to Macao and
then to Bangalore, India. All personnel were withdrawn from China, and a
malaria project under way in the island of Formosa was transferred to Govern-
ment auspices.

"Monetarily speaking, this is an age of huge financial operations. In the United
States large funds, chiefly governmental, are available even in the relatively
restricted field of research and fellowships. This has brought about a sharp
awareness of the discrepancy between the resources of any privately endowed
philanthropic organization, such as the Rockefeller Foundation, and the magni-
tude of funds needed today for large-scale research or educational enterprises.

"Until recently the Rockefeller Foundation was a principal source of funds for
foreign student fellowships at the advanced level. Today, as shown by the
United Nations educational, scientific, and cultural organization handbook of
available fellowships, Study Abroad, appointments made annually by the founda-
tion constitute hardly 2 percent of the 15,070 comparable awards now offered,
62.5 percent of them by Government agencies. It has been calculated that in
1913, when there were about 900 institutions of higher education in the United
States, the appropriations of the General Education Board and of the Carnegie
Corp., the 2 principal foundations at that time, represented more than 15 percent
of the current income of all higher educational institutions. In other words,
these philanthropic resources were fairly large in relation to the activities with
which they were concerned, and they were not unsubstantial even with reference
to primary and secondary education.

"As things stand now, the income of the Rockefeller Foundation, the General
Education Board, and the Carnegie Corp. covers less than 1 percent of the
budgetary needs of the 1,800 institutions now ministering to higher education.
Indeed, the annual expenditures of all foundations, even though roughly $100
million, are insignificant in relation to public and private funds now needed and
now available for education, scientific research, and scholarly activities.

"In the light of these changed conditions I propose to devote part of this review
to a brief discussion of Rockefeller Foundation techniques in giving and in
cooperating with other agencies and other countries. It is hoped that some
light may be shed on the comparatively modest, yet significant, role that can
still be played under present world conditions by a privately endowed philanthropic organization."

"Council on Foreign Relations:

"The Rockefeller Foundation in 1949 appropriated $50,000 to the Council on Foreign Relations, New York, for an organized study of problems of aid to Europe in its broadest aspects. The European recovery program of the United States has a significance for our future prosperity and security so great as to challenge the best efforts of private citizens as well as those in public office. The Economic Cooperation Administration (ECA) believed that it would be of great value to the Government and to the public at large to have an appraisal of the European situation by a group of competent private persons free from the pressure of day-to-day decisions and unhampered by governmental procedures or the considerations of practical politics.

"Upon the invitation of the ECA, the council organized a group of leaders in the fields of economics, politics, and military strategy under the chairmanship of Gen. Dwight D. Eisenhower. At its monthly meetings this group has carefully examined the aims of American foreign policy with respect to Western Europe and has assessed the means—economic, political, and military—for achieving those aims. Special attention has been given to the continuing interests of this country, as opposed to urgent expediencies of today and tomorrow, and to the relation between current measures of policy and the attainment of long-term goals. Close liaison has been maintained with ECA and with other Federal agencies and departments, but the group has functioned independently of the Government.

"Conclusions will be presented in the form of memoranda to responsible Government officials. Nonrestricted information is to be released to the general public by means of articles or pamphlets in order to help the public understand and judge the measures which it will be asked to endorse and carry out. In addition, it is hoped to issue a major publication or series of publications on the operations, effects, shortcomings, and interrelations of United States aid to Europe under ECA and under the provisions of military lend-lease.

"To assist the group the council has provided a full-time research staff of experts in the various fields of study, headed by Prof. Howard Ellis of the University of California. Under the guidance of the study commission the research staff gathers facts and data for the discussion meetings and prepares memoranda on assigned topics. The council also furnishes library and clerical assistance. The study group is serving on a voluntary basis. The Rockefeller Foundation's grant is to cover salaries and expenses of the research staff."

"Institute of Pacific Relations"

Page 256-257: "The eleventh conference will convene in 1950 in India and will discuss recent political and economic trends in the Far East and their consequences for the Western World. Preparation for the conference is a part of the research program of the Pacific council, which is responsible for writing up the data papers which give the members of the conference the background information they need for the discussions. Some of these papers, such as those on the Chinese Communist movement, nationalism and communism in Burma, postwar development of Indian capitalist enterprise, the development of political parties in Japan and the international effects of the withdrawal of western power from the Far East, are of wide interest. In order to enable the institute to strengthen its conference and educational activities at a critical time in Far Eastern relations, the foundation in 1949 made a supplementary grant of $25,000, available until the end of March 1950. Of this, approximately $14,000 is to augment the research function of the Pacific council and $11,000 toward the expenses of 1950 conference."

(Source: The Rockefeller Foundation, 1950 annual report:)

"Brookings Institution"
Page 208–209: "The 10 yearly issues contain research on the immediate issues to be faced by foreign policymakers. Additional publications put out under the new program include a series of individual analyses on long-range problems. Recent studies in this group have been on the International Trade Organization as an instrument of American economic foreign policy, the United States and peace settlements, and a history of the United Nations Charter. In order that the values of this problem approach may be extended to Government leaders, educators, and businessmen, the Brookings Institution now holds an annual 2-week seminar on Problems of United States Foreign Policy. Seminars have already been held at Dartmouth College, Stanford University, Lake Forest College, and the University of Denver, with over a hundred persons attending each one."

Pages 209–210:
"Foreign Policy Association

"The Foreign Policy Association was created in 1918 for the purpose of carrying on 'research and education activities to aid in the understanding and constructive development of American foreign policy.' As the role of the United States has expanded in the international sphere, the association has undertaken to explain this role and its implications to an ever-increasing number of Americans. Thirty-two branch organizations have been organized in large cities throughout the country. Through the activities of these branches there have been organized local and national conferences, and a widespread educational program with frequent use made of radio and television. The three publications of the Foreign Policy Association, available to the general public, schools, organizations, and Government agencies, are a weekly foreign policy bulletin, which covers current issues, the foreign policy reports, published twice monthly, which discuss at some length pressing international issues and the popular Headline Books, with details on problems of importance to Americans and to the world."

(Source: The Rockefeller Foundation, 1951 annual report :)

Pages 68, 69, 70:
THE INTERNATIONAL SCENE

"With the enigma of Russian intentions still the top problem in world politics, the Russian Institute of Columbia University's School of International Affairs continues to be a key center for research and training in this field. Its 2-year course, requiring familiarity with the Russian language and providing intensive postgraduate instruction in the history, economics, law, politics, and culture of Russia, has in 5 years supplied the United States Army, the Department of State, and other Government services with more than 100 trained men. Staff members are frequently called on to lecture at the National War College, the Air War College, and outside universities. Earlier grants for the institute, which was established in 1946, totaled $362,000; and in 1950 the foundation appropriated an additional $420,000 toward support over a 5-year period.

"A postwar development of the Brookings Institution is its international studies group, organized in 1946 for research, education, and publication on questions of American foreign policy. Directed by Dr. Leo Pasvolsky and using a technique which is calls 'the problem method,' the group has held 10 seminars in various parts of the United States for university teachers, advanced students, Government administrators, and journalists. To date some 800 university professors have shared in foreign policy analysis through participation in these seminars. Research activities are reflected in a number of books, notably in the annual Major Problems of United States Foreign Policy, which has been adopted as a textbook at West Point, Annapolis, and various universities and colleges. A projected study which is now in the planning stage will analyze the basic framework of international relations, including the fundamental concepts and objectives of the major nations, patterns of economic behavior, political attitudes in international relations, the channels and instrumentalities of national action, and in general the whole pattern of internal and external factors which condition the international scene. Since the international studies group began 6 years ago, the foundation has appropriated $480,000 toward its program, including $180,000 in 1950."
Pages 355-356:

*United Nations Economic Commission for Europe*

- **Long-run tendencies in the European economy:**
  - In connection with its overall program on postwar recovery, the United Nations Economic Commission for Europe (ECE) in 1949 asked Prof. Ingvar Svennilson, the Swedish economist, to undertake a study of long-run trends in the European economy. Professor Svennilson and a staff of assistants at Geneva are now nearing the end of this work. It is essentially a survey of trends in the European economy for the years 1913-50, with emphasis on population, industrialization, manpower, and production, the influence of foreign trade on production and the important factors contributing to economic growth in Europe.
  - The Rockefeller Foundation appropriated $50,000 to the Economic Commission for Europe when Professor Svennilson began this work in 1949; in 1951 the foundation made a 1-year grant of $23,725 for expenses in connection with the completion of the survey. The United Nations intends to publish the findings.

Page 359:

*Public Administration Clearing House
Consultant for Japan.

Throughout the period of allied occupation of Japan there has been an effort to shift the emphasis of the Japanese governmental organization from a highly centralized bureaucratic control system to a more widely diffused pattern, with large areas of self-determination in local matters delegated to prefectures, cities, towns, and villages.

- One group in Japan which is sponsoring the spread of this movement is the recently organized Japan Public Administration Clearing House. All three levels of local government are represented in this group, which is made up of delegates from the Tokyo Bureau of Municipal Research and the national associations of prefectural governors, prefectural assembly chairmen, municipal mayors, city assembly chairmen, town and village mayors, and town and village assembly chairmen.

- Assistance was offered to the new organization by the Public Administration Clearing House of Chicago. With a grant of $10,740 from the Rockefeller Foundation, the Chicago Public Administration Clearing House arranged to send a consultant to Japan and to make its official resources available to the group in Japan.

(Source: The Story of the Rockefeller Foundation, by Raymond B. Fosdick)

Pages 283-284:

As we have already seen in earlier chapters, the example of Rose and Pearce in developing their programs on a worldwide basis was eagerly followed by the other divisions of the foundation as they began their activities after the reorganization of 1928. The details of many of these activities have already been considered; in all cases they were motivated by the single phrase in the charter: 'the well-being of mankind throughout the world'; and they were predicated on the conception that civilization and the intellectual life of men represent a cooperative achievement, and that the experience of the race can be pooled for the common good. It is an ironic circumstance that this objective should have had to run the gauntlet of two world wars with their hideous aftermaths, when behind closed frontiers, rigidly sealed off from contact with the ideas and opinions of other nations, vast populations have suffered from mental undernourishment and starvation. Intellectual malnutrition can be as stunting to human life and character as the absence of calories and vitamins. The influences that in normal times flow freely across boundary lines, the uninhibited stream of ideas coming from all corners of the world, are, in this modern society of ours, a corrective and stabilizing factor in the lives of men, bringing strength and fertility to soils that would otherwise become sterile and dry. 'Speech is civilization itself,' says Thomas Mann. 'The word, even the most contradictory word, preserve contact—it is silence that isolates.'
Page 297:

“A foundation with wide and intimate contacts can perform a useful function in serving as an unofficial clearinghouse for ideas and plans in many fields. Certainly this has been true of the Rockefeller Foundation. Its officers are in continual touch with promising developments and personnel around the world. The most effective projects it has supported have been developed in the field. These projects have come from close acquaintance with scientists and laboratories, from days and weeks spent on university campuses, from hard journeys on horseback and riverboat to discover the breeding places of disease or the prospects for a new type of corn. The officers thus develop a point of view that is both cumulative and comparative.

“Consequently, the foundation has become a center to which research students and universities turn for information; and much of the time of the officers is spent, not on questions of financial support, but in discussing with eager inquirers the developments in their fields in other institutions and in other countries. As the late President Keppel of the Carnegie Corp. said: ‘Much of what one university learns about another is learned in foundation offices.’ ”
TAX-EXEMPT FOUNDATIONS

HOUSE OF REPRESENTATIVES,

Hon. B. Carroll Reece,
House of Representatives, Washington, D.C.

Dear Carroll: I cannot be at the meeting on foundations tomorrow and in the meantime want you to know I think there should be an immediate cancellation of all public hearings.

Sincerely,

Angier L. Goodwin,
Member of Congress.

STATEMENTS OF THE RECTOR OF THE CATHOLIC UNIVERSITY OF AMERICA, AND THE HERITAGE FOUNDATION, INC., IN REPLY TO CONGRESSMAN HAYS’ REMARKS CONCERNING THE CATHOLIC UNIVERSITY AND SISTER MARY MARGARET PATRICIA MCCARRAN

THE CATHOLIC UNIVERSITY OF AMERICA,
Office of the Rector,
Washington, D.C., September 2, 1954.

Hon. Carroll Reece, Member of Congress,
Chairman, Special Committee To Investigate Tax-Exempt Foundations, House of Representatives, Washington, D.C.

Dear Congressman Reece: It has come to my notice that at a hearing of your committee in early June the assertion was made that a doctoral degree was granted by the Catholic University of America as a result of pressure.

On behalf of the university, I wish to deny this allegation as completely false. Throughout the 65 years of our existence, our academic standards have been recognized as high and as honestly enforced. Neither in the instance referred to nor in any other instance has pressure or influence brought about the conferring of a degree by the Catholic University of America.

According to our regulations, a student is admitted to graduate work only after rigid and impartial scrutiny of his prerequisite undergraduate training. The courses for the major and the minors in the master of arts and doctor of philosophy programs entail constant checks and examinations and are designed to prepare the student for independent thinking and research. For the doctor of philosophy, he must also prove his ability to read French and German.

The doctor of philosophy requirements include the publication of a dissertation based upon the student’s independent research. A small board of the faculty reads and judges the dissertation. While approval would not be given to views contrary to morals or Catholic faith, and while an effort is made on the part of the official reader to
protect the student from errors of fact and judgment, still, in these matters academic freedom is accorded a doctoral candidate and responsibility rests with him. Approval by the faculty of a dissertation means formal recognition that the student has demonstrated sufficient competency in research to justify consideration for the doctoral degree.

These regulations are carefully and honestly followed by our faculty without exception.

If the unwarranted assertion referred to above is included in the record of your hearings, may I ask that this letter be given equal prominence in your record.

With kind regards, I remain,

Sincerely yours,

Bryan J. McEntegart,
Rector of the University,
Titular Bishop of Aradi.

The Heritage Foundation, Inc.,

Hon. Carroll Reece,
Chairman, Special Committee to Investigate Tax-Exempt Foundations, Washington, D. C.

Dear Congressman Reece: During the course of the public hearings on the investigation into the tax-exempt foundations, generally referred to as the Reece committee, the insinuation was made that the graduate school at the Catholic University could be pressured or influenced into granting a degree when it was not earned or deserved.

A reference to the transcript of public hearings of your committee will make the point very clear. The remarks made by Congressman Hays with reference to Sister Margaret Patricia McCarran's work—Fabianism in the Political Life of Britain, are so derogatory and so full of insinuations that this attack upon the integrity of the university and upon the character of a nun should not be allowed to stand unanswered in a congressional record.

As the publisher of the second edition of Sister Patricia's book, the first edition having been published by the Catholic University of America Press, I hereby challenge every statement and every insinuation about this book and about the nun that the Congressman from Ohio made in this connection.

As a doctor's dissertation Fabianism in the Political Life of Britain is pretty much a public document and it can and it will withstand any criticism that might be forthcoming. The Heritage Foundation as publisher and Catholic University of America, I am sure, would agree that criticism of a volume or of a study and certainly of a doctor's dissertation would be in keeping with the true spirit of academic freedom. However, we would not agree with the methods used by Congressman Hays of Ohio. A person is still free in this country to agree or disagree with a book, an article or a doctor's dissertation. However, the obvious smear technique used by the Congressman from Ohio to discredit the reputable work of a reputable teacher in an outstanding university must not go unchallenged.
There are a number of instances in which the Congressman from Ohio was wrong.

First: He insinuated that Sister Margaret Patricia McCarran took more than the necessary time to obtain her degree from the university. The most casual amount of inquiry at the university would reveal the fact that Sister Margaret Patricia completed her work for her doctor of philosophy in 4 years. This happens to be an unusually short period of time.

Nuns do their full teaching job during the year in their own communities and their own schools. Sister Margaret Patricia is a full-time teacher in the College of the Holy Names in Oakland, Calif. Nuns, therefore, have to complete their work in summer school, night school, and then by special leave of absence from their communities in order to fulfill all of the requirements for an advanced degree. Therefore, some nuns and other religious working for advanced degrees take 6, 7, or more years before they meet all of the residence requirements for a doctorate. On this score, then, the Congressman from Ohio was completely in error.

Second: The insinuation was made that the Catholic University of America might have been pressured or influenced in some way into granting the degree to Sister Margaret Patricia. It would be well to point out to the Congressman from Ohio that the highest academic standards in the United States of America are maintained at Catholic University. Besides its recognition as an outstanding American university it has also been designated a pontifical university. There has never been a pressured or undeserved degree granted by the university in the past, and I am sure there will be none granted in the future. Even a casual reference to the high academic standards of Catholic University of America would have informed the Congressman from Ohio that his information on this score was also completely in error.

Third: The remarks in the record of the Congressman from Ohio constitute a stigma on the integrity of the faculty of Catholic University; on the honesty and character of its students who, for the most part, are devoted, self-sacrificing nuns, priests, and brothers of every religious order in the Catholic Church. The attack upon the character of Sister Margaret Patricia as a nun, devoted to a life of teaching, with a vow of poverty and complete worldly abandonment, is one of the most irresponsible, thoughtless, and uncharitable acts that has ever come to my attention.

I do not believe that in the records of the House of Representatives there could be found a more striking example of an irresponsible statement by a Member of that body.

Sister Margaret Patricia, Catholic University of America and Fabianism in the Political Life of Britain need no defense from me. However, as the publisher of the second edition of this volume I request that this reply to the unfounded and untrue charges and insinuations made by Congressman Hays be recorded and inserted in the official record immediately following the unjustified attack as it appears in the printed record.

Sincerely,

THE HERITAGE FOUNDATION, INC.,
ARTHUR L. CONRAD, President.
Pursuant to its resolution of July 2, the committee received the following statements, which were ordered incorporated in the record of proceedings:

STATE OF NEW YORK,
   County of New York, ss:

Charles Dollard, being duly sworn, deposes and says as follows:
1. I am president of Carnegie Corporation of New York.
2. Attached hereto are two documents marked respectively “Exhibit A” and “Exhibit B,” the former entitled “Introductory Statement to Special Committee to Investigate Tax-Exempt Foundations by Charles Dollard, President, Carnegie Corporation of New York,” and the latter entitled “Answers to Specific Charges, a Memorandum Submitted for the Record by Charles Dollard, President, Carnegie Corporation of New York, to Special Committee to Investigate Tax-Exempt Foundations.”

These documents were prepared for submission to the Select Committee to Investigate Tax-Exempt Foundations in connection with the testimony which I intended to give before that committee during the week of June 21, 1954, at the invitation of counsel for the committee.
3. Having been informed that no representative of Carnegie Corporation of New York will be heard by the committee, I submit these statements for the record and swear that they are true and correct to the best of my knowledge, information, and belief.
4. Also attached hereto is a photostatic copy of a letter dated June 9, 1954, addressed to me by Mr. Vannevar Bush, president of Carnegie Institution of Washington. This is the letter referred to on page 26 of exhibit A.

Charles Dollard.

Subscribed and sworn to before me this 7th day of July, 1954.

Gordon S. Walker,
Notary Public, State of New York.

Commission expires March 30, 1956.
PHILANTHROPY is an American habit, and the modern foundation is an American invention. Other countries have philanthropic foundations of various kinds, but it is in America that they have reached their most impressive development. Abraham Flexner, one of the most distinguished figures in the history of organized philanthropy, once wrote:

* * * There is not a nation in Europe that does not envy us the public spirit which our wealthy men have shown in dedicating a large part of their wealth to public services, in the form of foundations. * * *

The emergence of great foundations in America was no accident. Americans like to make money, and they enjoy spending the money they have made for the benefit of their fellows. It is quite true that in recent years the development of foundations has been facilitated by tax provisions; but it is a grave injustice to American philanthropists to say that they are moved chiefly by consideration of tax avoidance. Both the Rockefeller and Carnegie Foundations were set up at a time when there were no Federal income or estate taxes. Even today no one can doubt that the great bulk of American giving is in response to charitable impulses.

The function of the philanthropic foundations is to improve the tenor of human life in the area or areas in which they operate. They seek to make human beings healthier, happier, wiser, more conscious of the rich possibilities of human existence and more capable of realizing them. A foundation will, of course, fail of its purpose if it attempts to do everything at once—to be all things to all men. It must concentrate its grants in a limited number of fields, using its best judgment as to what expenditures will at any given time be of most value in forwarding its central purpose.

Free and untrammeled inquiry by freemen is of the very essence of a free society, its growth and development. Government has its necessary function in support of free schools and colleges and universities; but the success of government, whether Federal, State, or municipal, in the field of education, broadly defined, will be in proportion to the degree in which it does not dominate. The privately endowed institutions of learning—schools, universities, colleges, and foundations—help to set standards for education as a whole and engage in research, inventions, and discoveries in fields that may not yet interest government.

Private enterprise in education contributes to the diversity which is the life of our American system. Many different people and organizations are encouraged to work independently in recognizing and tackling new problems and in developing new ideas and processes. Their efforts will not be uniformly successful. But the net effect of their efforts will be good because of the very freedom that permits the best to demonstrate its superiority over the second best. Selection by competition is the cornerstone of American free enterprise.

---

1 Extract from letter dated December 15, 1952, from Abraham Flexner to Harold M. Keele, counsel for the Cox committee, reprinted on p. 763 of the hearings before the Cox committee.
A wise nation will never surrender to government the exclusive right to be concerned about the health, the education, and the prosperity of the people. The very essence of the American system is that government shall do everything possible to encourage private enterprise in all phases of our national life—economic, social, and cultural. Our Nation owes much of its vitality and momentum to the inbred reluctance of Americans to lean on their Government. Anything which might reduce this reluctance is in our opinion to be feared and avoided. Those who wish to have research, study, inquiry, and teaching put in the hands of government exclusively, or indirectly subject to government control, should look to Russia where this process has been perfected.

CARNEGIE CORPORATION OF NEW YORK

Now let me speak briefly about the Carnegie Corporation of New York, and the other funds established by Andrew Carnegie.

Carnegie Corporation of New York is an educational foundation, chartered by the State of New York in 1911.

During his lifetime, Andrew Carnegie made personal gifts for educational and cultural activities totaling approximately $107 million. In addition he provided endowment for six American philanthropic funds. The first five trusts which he established were chartered for work in specific fields:

- Carnegie Institute of Pittsburgh, 1896
- Carnegie Institution of Washington, 1902
- Carnegie Hero Fund Commission, 1904
- Carnegie Foundation for the Advancement of Teaching, 1905
- Carnegie Endowment for International Peace, 1910

Each of these trusts has its own board, its own staff, and its own capital funds. The total endowment of these first 5 trusts was $53,100,000.

Then in 1911 he established Carnegie Corporation of New York with the broad purpose of carrying on philanthropic activities which would contribute to "the advancement and diffusion of knowledge and understanding." Carnegie Corporation of New York received from Andrew Carnegie by gift and will an endowment of $135 million. The assets of the corporation as of September 30, 1953, were $173,661,599, the difference between the original endowment of $135 million and the present book value of the corporation’s holdings representing primarily gains on the sales and redemption of securities. Securities are carried at cost; the present market value is higher.

In his letters of gift to the corporation, Mr. Carnegie stipulated that only the income from the endowment should be available for expenditure by the trustees; and that the original trustees should elect their own successors. A complete list of current trustees of the Carnegie Corporation is appended to this statement.

It has been suggested that foundation trustees are figureheads and have no real knowledge of what the paid officers of the foundations are doing. This has no basis in fact with respect to the operations of Carnegie Corporation. The trustees of the corporation are active and responsible in both the making of corporation policy and the actual expenditure of corporation income. There is constant communication between officers and trustees. Attendance at board and committee meetings is uniformly high.
Carnegie Corporation has always made a full public accounting in its annual reports and in other publications; and we have long advocated complete public reports by all foundations, showing detailed facts as to the amount and sources of income and the amounts and objects of expenditures. Such exposure of foundation activities to public and governmental scrutiny is in our opinion the most effective and desirable means of insuring that foundation officers and trustees live up to their fiduciary obligations.

As soon as practicable after the close of the fiscal year and after an audit of the accounts by independent auditors, the officers of Carnegie Corporation present to the trustees a report of the year's operations that covers both its financial and its philanthropic acts. This report is printed and distributed to all those who have any interest in the corporation's work. In addition, the corporation now issues a quarterly report describing projects underway and announcing new grants. The mailing list for both reports is approximately 9,000 institutions and individuals.

It was Mr. Carnegie's wish that the income from the major part of the corporation's endowment should be used for the advancement and diffusion of knowledge and understanding among the people of the United States; included in the total endowment, however, is a special fund of $12 million the income from which may be used for similar purposes in the British dominions and colonies.

In the 42 years of its existence, the board of trustees of the corporation has voted grants totaling approximately $253,220,000, all representing income from the endowment. About 5 percent of the income has been spent for administration. The remainder has gone entirely to institutions, agencies, and individuals concerned with the increase or diffusion of knowledge.

Colleges, universities, and schools in the United States have received in direct grants about $68,300,000 or 27 percent. Professional and scholarly agencies have been granted approximately $69,300,000, another 27 percent. A very substantial part of this latter amount found its way indirectly to colleges and universities. Some $14 million was expended in the first 6 years of the corporation's life for construction of free public libraries and purchase of church organs in continuation of programs begun by Mr. Carnegie before the founding of the corporation.

The remainder of the total of $253,200,000, or approximately $100,800,000, has been granted to four of the other trusts previously mentioned, established by Mr. Carnegie, to help them carry out their chartered purposes. Here, again, a very substantial part of this money eventually found its way to colleges and universities.

More than half of this $100,800,000 has gone to the Carnegie Foundation for the Advancement of Teaching (established by Mr. Carnegie primarily to provide retiring pensions for college teachers), and to the Teachers Insurance and Annuity Association (established by the foundation and the corporation in 1918 to expand the pension idea on a sound actuarial basis).

From the beginning the Carnegie Corporation has operated as a grant-making organization rather than as an operating agency. The entire staff, professional and clerical, now numbers 33 and has never exceeded this figure. The trustees have always sought to achieve Mr. Carnegie's purposes through other agencies—especially colleges and
universities. The corporation has made grants to 734 colleges, universities, and schools in all 48 States, the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands. It has also made grants to many private research and educational agencies. The names of these colleges, universities, schools and private agencies will be found in the reports issued each year by the officers.

The trustees and officers of Carnegie Corporation are proud of the record of accomplishment of the corporation over the years since its founding. No doubt they have made mistakes and will make others in the future. No doubt their predecessors also made mistakes. Only death frees man from the possibility of error. But the record stands for all to see and it cannot be altered by those who seek to rewrite history and distort reality.

The question has been raised in these hearings as to whether foundations have supported pro-American projects and, through a shocking combination of innuendo and implication, the impression has been left that perhaps they have failed in this respect.

As far as the Carnegie Corporation is concerned, there can be only one answer to such a question. The corporation regards its entire program as pro-American. That is why the corporation is in business. It is the whole purpose of the corporation trustees and officers to work in behalf of their country, to strengthen it, and to insure its future. America is proud of its educational system. Literally millions of Americans have profited from this system. To strengthen education in America, to encourage the healthy growth of colleges and universities, and to promote that experimentation and innovation which is characteristically American are in the profoundest sense pro-American objectives. It is to just these objectives that the corporation is dedicated.

J. L. Morrill, president of the University of Minnesota, puts the matter this way:

If the best defense against democracy's enemies is to make America a better place in which to live and to place human welfare first, American foundations have rendered service far beyond the actual sums they have contributed to higher educational institutions. Thus, indirectly, the foundations can be credited with a significant role in the never-ending battle against democracy's enemies. And at this point I should like to add one fact of vital importance: In all our dealings with foundations and with their representatives, we have never found evidence of any motivation other than a sincere and patriotic desire to further scholarship in the best American tradition.

The corporation admits readily that it must choose between applicants for its funds. It also admits that those who do not receive them must feel that those who do are favorites. The corporation certainly favors those who come to it with the best and most imaginative ideas. It favors those who have demonstrated a capacity for productive scholarship. It favors those who are recognized by their peers as being first rate. It favors institutions honestly dedicated to the best in education and research.

It does not follow that those who do not receive corporation funds do not meet the tests indicated above. The corporation's funds are limited and it can support only a fraction of the worthy individuals and institutions who apply. But a foundation which in the first 40 years of its history has made grants to more than 700 colleges and universities can hardly be accused of "favoritism" in any invidious sense of that word.
Gilbert White, president of Haverford College, has offered some relevant comments on the smaller college:

It has been my own observation here of Haverford and at other small colleges with which I am familiar, that many of the larger foundations have been more than open to opportunities to support the smaller institutions. Relatively speaking, I think that on the whole the small colleges have received better treatment, taking into account the number of requests made, than have many of the larger institutions.

Now let me speak in more detail about Carnegie pensions and annuities for teachers. During the last 60 years, Andrew Carnegie and the Carnegie Corporation and the Carnegie Foundation for the Advancement of Teaching have together given over $80 million for such pensions or annuities for teachers in 375 colleges and universities in 42 States and in Canada.

Andrew Carnegie, speaking of the Carnegie Foundation for the Advancement of Teaching, said:

This fund is very near and dear to me—knowing as I do, many who are soon to become beneficiaries, and convinced as I am of their worth and the value of the service already rendered by them. Of all professions, that of teaching is probably the most unfairly, yes, most meanly paid, though it should rank with the highest. Educated men, devoting their lives to teaching the young, receive mere pittances. When I first took my seat as a trustee of Cornell University, I was shocked to find how small were the salaries of the professors, as a rule ranking below the salaries of some of our clerks. To save for old age with these men is impossible. Hence the universities without pension funds are compelled to retain men who are no longer able, should no longer be required, to perform their duties. Of the usefulness of the fund no doubt can be entertained.

The Carnegie pension program played a very significant role in developing private pension systems generally, and was the dramatic first step in the more or less universal establishment of pensions for teachers. A substantial part of the corporation’s current income still goes and for many years will go to pay those free pensions.

The great increase in the teaching population after the First World War, combined with a steady increase in professors’ salaries, made it impossible for the foundation, even with the assistance of the corporation, to provide free pensions for all college and university teachers. Accordingly, the corporation helped to establish the Teachers Insurance and Annuity Association in 1918, through which colleges and professors might cooperate in building a system of annuities based upon regular joint payments by the professor and his college. Through this company 75,000 teachers (men and women) have accumulated assets of $335 million toward their future retirement.

Men who genuinely wish American higher education to retain its vigor cannot help but applaud the philanthropic impulse which led Mr. Carnegie to diminish the extreme financial hazards of a teaching career. To the extent that these hazards drive good men and women out of the teaching profession, American education suffers. The economic circumstances of our teachers still are not enviable, but the hazards of the profession have in the past 50 years been notably diminished by the Carnegie pension program.

Millions of Americans have at one time or another made use of a Carnegie library. Andrew Carnegie and the Carnegie Corporation have devoted more than $56 million to establishing free public libraries. More than 2,500 library buildings were built by Carnegie money.
By 1917 it was clear that the idea of the free public library had been fully accepted. The trustees then turned their attention from erecting buildings to improving the service which libraries can offer. More than $15 million was granted during the next 30 years for improvement of college libraries, for refinement of library techniques and services, for support and endowment of the American Library Association, and for endowment or support of library training schools in universities such as Chicago, Columbia, Denver, Emory, North Carolina, and Western Reserve.

American libraries today are recognized throughout the world as outstanding. Americans take their free public libraries for granted and rarely recall today that these institutions stem from one of the most imaginative philanthropic conceptions in the history of human giving.

Other and more recent contributions of Carnegie Corporation to the field of education cannot yet be seen in full historic perspective but they merit comment. The corporation has played a significant role in raising the level of higher education in the South. It has done its part to preserve and reinvigorate the best elements in our tradition of undergraduate liberal arts education. It has had, along with other foundations, a rather marked effect in strengthening certain fields of postgraduate and professional education. It has supported plans designed to attract better qualified individuals into academic life.

Although chief emphasis is upon higher education, the corporation has made two substantial grants in the field of precollege education—to the National Citizens' Commission for the Public Schools, and to Teachers College, Columbia University, for a program in citizenship education. Prior to the war, the corporation also made substantial grants in the field of adult education.

But perhaps the most important thing that can be said about Carnegie Corporation in the field of education is that it has served over the years as a source of encouragement and support to gifted leaders, vigorous pioneers, and promising young people in American higher education. The effects of this cannot be measured, but it is not unreasonable to suggest that it has been a significant ingredient in our national life. America has grown great through the encouragement of talent and through the rewarding of creative leadership. In the field of education, Carnegie Corporation has contributed importantly to both processes since 1911.

These examples may serve to illustrate some of the activities of the Carnegie Corporation over the years. One could name many others. The high standards of our medical schools can be traced in the first instance to the effects of Abraham Flexner's report on Medical Education in the United States and Canada, financed by the Carnegie Foundation for the Advancement of Teaching and published by it in 1910. Thousands of scholarships and fellowships have been made available by foundations. Thousands of smaller but vitally important private organizations concerned with such diverse matters as the improvement of the civil service, adult education, music and the fine arts, religion and philosophy, have received substantial support. This listing could be enlarged to include all that is best in our society and way of life.

In the course of these hearings, it has been said or implied that the foundations have departed from the high purposes assigned them by
their founders; that the donors and creators of the great foundations would be horrified if they knew that their funds were being used for activities in controversial fields such as the social sciences.

Those who think so will find no comfort or substantiation in the first letter of gift, dated November 10, 1911, which Mr. Carnegie addressed to the trustees of his newly founded corporation. The third paragraph of this letter is worth quoting in full:

* * * Conditions upon the earth inevitably change; hence no wise man will bind trustees forever to certain paths, causes, or institutions. I disclaim any intention of doing so. On the contrary, I give my trustees full authority to change policy or causes hitherto aided, from time to time, when this, in their opinion, has become necessary or desirable. They shall best conform to my wishes by using their own judgment. * * *

Mr. Carnegie's own language makes it crystal clear that he had no thought of specifying the fields in which increase of knowledge would most profit his fellow men in years to come. As a student of history whose life spanned a period of great social, economic, and technological change, he knew that even the wisest man could not predict what knowledge will be most valued, what problems most important, what fields of research most fruitful, 1, 10, or 50 years hence.

Educational and philanthropic foundations and comparable organizations have served as a relatively modest (in size) but very important complement to public funds in the financing of education, particularly higher education. The total dollar contribution of educational and philanthropic foundations and comparable organizations to private higher education in this country is small compared with the public funds which have been poured into the field. Yet the private contribution is substantial, and without it the pattern of higher education in this country would have lost an element which has given richness and diversity to the whole system.

Those who believe that the United States must preserve a healthy balance between governmental and private control of our national life will be quick to see the usefulness of this contribution of private philanthropy. There are more than 1,200 privately supported colleges and universities in this country. These institutions have been vigorous and effective forces in preserving the highest standards and best traditions of our educational heritage. They would be very much less vigorous were it not for the wholehearted support of educational and philanthropic foundations.

FOUNDATION RELATIONS WITH RECIPIENTS OF GRANTS

The freedom of the scholar and teacher differs in no way from the freedom of every American. Freedom of inquiry is nothing other than the freedom of thought that every American enjoys as a birthright. The cabdriver is free to question the wisdom of city hall, and the farmer is free to reach his own conclusions on the Indochina war. These are cherished American rights.

The right of the scholar to study any subject that interests him and to arrive at any conclusions that seem sound to him is inseparable from those larger rights. In the Soviet Union scholars do not have these rights. They are told what conclusions they must come to. By the same token, in the Soviet Union the man in the street does not have the right to think freely. Freedom of thought is indivisible.
What are the obligations and limitations of a private foundation in the light of these principles? The Carnegie Corporation deals principally with men who are scholars or teachers or both. It must expend its money pursuant to the high purposes of its charter (the advancement and diffusion of knowledge), but it must do so without seeking to control the individual scholar or teacher. It must proceed with a scrupulous regard for the American tradition of free inquiry. The Carnegie Corporation, like other leading foundations, takes great pride in the tradition of restrain and mutual respect which characterizes its dealings with those who receive its grants.

The obligations and limitations of a foundation with respect to recipients of its grants may be clearly outlined. If a research grant is involved, the foundation must satisfy itself that the individual or organization under consideration will conform to the highest standards of scholarship and objectivity in arriving at conclusions. In making such judgments it is inevitable that any foundation will occasionally be fooled; but the record of a properly run foundation should show an overwhelming proportion of recipients who do in fact meet these standards.

If a teaching program is involved, the foundation must satisfy itself that the objectives of the program are within the scope of its charter and that the individual or organization involved will conduct the educational program according to the highest traditions of fairness, honesty, and academic excellence. Again, any foundation will inevitably commit some errors in making such judgments, but a properly run foundation should be able to point to an overwhelming proportion of recipients who meet these standards.

Having made the grant, the foundation should in no circumstances tell the recipient what conclusions to reach in his research, how or what to teach his students, or what to say in the book that he is writing. Any such practice would be intolerable to scholars and teachers, and at odds with the American tradition of free inquiry.

If a scholar or author working under a foundation grant has convicted himself of falsification or other forms of grave scholarly mispractice, then of course the foundation should take whatever steps are possible to prevent further misuse of its funds by that individual. But beyond such instances of clear scholarly delinquency, the foundation should not interfere with the recipients of its grants. It should not reserve the right to edit the book which is published with foundation support. It should not tell the teacher how to teach. It should not exercise thought control over the recipients of its grants.

It is extremely important for the American tradition of free inquiry that this principle of noninterference be maintained. At the same time it must be recognized that such noninterference involves consequences for the foundation. It means that the foundation cannot endorse all of the things done and said under its grants. It means that things occasionally will be done and said under foundation grants which are repugnant to the foundation itself. But, always and everywhere, this is the price one pays for freedom. Freedom is, in one sense, the right to be wrong. If you leave a scholar (or a cab-driver) free to find the right answer, you have also left him free to find the wrong answer. The history of our Nation provides abundant evidence that freemen will find right answers more often than wrong
answers, and the history of tyranny shows that men who are not free find very few answers of any kind. Nobody yet has discovered a better way of insuring the victory of truth over error than free speech.

Just as the foundations must be extremely scrupulous, so also must be the Government in not telling the scholar what to think. All of our private colleges and universities, our religious institutions, our teaching hospitals, our private preparatory schools, as well as our private foundations, enjoy tax exemption. We must be exceedingly careful not to formulate the doctrine that this tax exemption permits either the executive or the legislative branch of the Government to control the thinking of these institutions. Although medical schools and teaching hospitals are tax exempt, surely no one would think it his right to tell the cancer specialist how he should go about curing cancer. Although religious schools are tax exempt, surely no one would consider that he had the right to judge the validity of the religious doctrines taught. Although universities are tax exempt, surely no one would argue that Federal control of the faculty and student thinking would be a healthy step forward. In short, the doctrine that tax exemption justifies a political judgment as to the soundness of ideas can be a very dangerous two-edged weapon. Indeed it can be the most devastating weapon ever invented for invading the private life of this Nation.

Since the first list of subversive organizations was published by the Attorney General, the Carnegie Corporation has never made any grants, gifts, loans, contributions, or expenditures either directly or indirectly to any organization so listed, or to any individual or organization that was known or believed to advocate the overthrow of the constitutional Government of the United States by force or violence or other unlawful means.

It has always been the policy of the Carnegie Corporation to examine carefully the individuals and organizations who apply for our grants. This examination includes consideration of scholarly objectivity, public reputation, and standing as well as the loyalty and honesty of those who will direct the project. In recent years and particularly since the last war the problem of subversive activity has naturally received increased attention.

There are many ways and means by which we examine the individuals and organizations who apply for our funds. In assessing their reputation in their scholarly and professional fields we seek the judgment of their peers. We read their books and articles within the limits of time available. We are familiar with the reputation of the institutions with which the scholars are associated. Since most applications come to us from institutions rather than from individuals, the reputation of the institution is a significant factor in our judgments.

Before entering a new field of interest we make it our business to know most of the capable people who are working in the field. We see personally the applicants for funds and we visit the institutions with which they are connected.

Such investigation of applicants has been a continuous process since the founding of the corporation. These efforts are not sporadic but are a part of established policy.
IS THERE AN “INTERLOCK?”

The committee staff has asserted that the foundations form a tightly knit group—an “interlock”—and as a group play a key role in a tightly knit system that also includes operating agencies such as the Social Science Research Council, schools and colleges, and the executive arm of the Federal Government. One of the committee staff’s own witnesses, Dr. Thomas Briggs, had to admit that he did not know what the staff was talking about in making this assertion, and we share that handicap.

The foundations, the educational system, and the governmental agencies do not form a tightly knit group. Any responsible educational leader will confirm that fact. Just as each foundation pursues its independent course in traditional American fashion, so the colleges of the country pursue their independent courses. The public schools are under State and local control and only individuals abysmally lacking in firsthand experience of these institutions could picture them as part of a nationally integrated whole. Indeed the suggestion that the foundations have produced a national system of education is the sort of fantasy which could only be indulged in by individuals wholly unacquainted with the highroad and byroads of American education.

As for the collaboration between foundations, it is interesting to note that the staff of the Cox committee considered that the foundations cooperated all too rarely. The question was even raised at that time as to whether the foundations should not find some means of more effective collaboration.

Mention has been made of the fact that the foundations give their money through so-called operating agencies, such as the Social Science Research Council and the American Council of Learned Societies. Why shouldn’t they? But some have exaggerated the extent of this practice. The bulk of the money granted by the corporation for education and research has gone directly to the colleges and universities. Furthermore, almost all the funds granted to operating agencies eventually find their way back to the colleges and universities.

It is the essence of responsible philanthropy to seek guidance from those who are in a position to offer wise judgments. For this reason a foundation operating in the field of scholarship or teaching will habitually consult scholars and teachers. It will do this on a very broad scale. In addition to the many, many interviews which foundation officers have with scholars and teachers, the foundations find it profitable to keep in close touch with the organizations which scholars have formed to advance their common scholarly interests.

The so-called operating agencies are for the most part just such scholarly and teaching organizations run by scholars and teachers to serve their own needs and turned to by the foundations as sources of the best professional guidance. An organization such as the Social Science Research Council is the crossroads and the forum for some of the ablest scholars in the country. The council has a great many committees, each of which numbers among its members leading scholars from universities covering the length and breadth of America. The Social Science Research Council is one of the many scholarly organizations through which leading American academic figures achieve their common objectives. No foundation which hoped to maintain contact with American scholarship would want to ignore these organizations.
The corporation's policy of not handling fellowship programs itself but of financing them through scholarly agencies is an old one, and we believe a wholly sound one. The disbursement of fellowship funds should only be made on the judgment of competent scholars in the field or fields in which the awards are applicable. The scholarly councils and learned societies represent the simplest and most efficient means of insuring that fellowship awards will be made only by men who are most competent to make them.

THE SOCIAL SCIENCES

The corporation has given a good deal of money particularly in recent years, for research and teaching in the social sciences. An attempt has been made in the course of these hearings to attach a sinister significance to the social sciences. This is a grave injustice to the 40,000 or more Americans who earn their living by teaching or doing research in these fields.

"Social sciences" is a term which has come into common usage as a label for a certain sector of the world of knowledge. It is usually applied to history, political science, economics, sociology, anthropology, social psychology, and geography. It is sometimes taken to include law.

Much that goes under the label "social science" is not science in the strictest sense of that word. Indeed, much that goes on in these fields is a purely humanistic type of scholarship. There is some research in the social sciences which is more quantitative and precise. Whether the term "science" is justified for this latter research depends entirely upon how one wishes to define science.

What are these supposedly dangerous social sciences concerned with? What kinds of questions do they interest themselves in? Briefly stated, they are interested in all of the problems that men have always been interested in with respect to their own lives, the society they live in, their past, their means of livelihood, and the troubles that afflict them.

It has been said that the social sciences are new fields. This is not true. History has been the concern of distinguished scholars as far back as Herodotus, who considerably antedates the modern foundations.

What do social scientists do? The historian seeks to discover what the past can tell us about the human enterprise and about our own American background. The political scientist seeks to examine the problems involved in the governing of men. The psychologist may concern himself with why some children find it difficult to read or to learn. The sociologist may concern himself with why we have juvenile delinquency. The economist is interested in how our economy works, and why—on occasion—it doesn't work. The student of international relations is interested in the causes of war.

Are these silly questions? They are not. They are problems which concern all Americans, now more than ever before.

There have always been individuals who were opposed to the free examination of such questions. There always have been individuals who believed that man and society are much too dangerous as subjects for study. There always have been those who favor thought control.
But the American tradition of free inquiry is uncompromising. Americans are freemen, and they will continue to ask these questions about their own lives. Having asked them, they will feel themselves free to seek answers. They will not allow themselves to be fettered by fearful and small-minded men.

On this subject Laird Bell, former chairman of the board of trustees of the University of Chicago, has said:

To forbid or hamper foundations studying and reporting matters in the fields of economics, education, international relations, government, and public administration, is to deny or restrict the public access to the facts upon which judgment in a democracy should be based. Unless we want public decisions in these fields made in ignorance, agencies should have the same freedom as individuals to ascertain facts and express opinions. The agencies have better resources for this purpose than individuals, and the very multiplicity of such agencies is a better defense against erroneous opinions than suppression or intimidation of the agencies.

Take education, for example. No one knows to what conclusions research in economics and sociology may lead. Any deviation from accepted orthodox views is bound to be objectionable to someone, and there is always, but particularly right now, the probability that someone will consider that a view differing from the conventional is subversive. The same is true in the whole field of international relations, education, and Government administration.

The term "subversive" means different things to different people. I submit that there is a serious danger that the study of controversial questions, a study that in our complex civilization is increasingly important, may be discouraged by fear that some authorized or voluntary agency may choose to apply this dread word to activities which are entirely legitimate and in the public interest.

There has been an attempt made in the course of these hearings to attach a sinister significance to the word "empiricism." The attempt is wholly unjustified. To approach a problem empirically means to seek to discover the facts. The city which makes a traffic count at an intersection to determine whether a stoplight is needed is conducting an empirical investigation. The soap manufacturer who sends out research teams to discover how customers react to his product is conducting empirical research. The housewife who goes to the basement to discover how many mason jars she has before preparing a batch of preserves is conducting an empirical study. Literally millions and millions of dollars are invested by industry every year in empirical research. It is simply research which seeks to determine the facts objectively.

No foundation that I know of has ever said that empirical research can take the place of religion, morality, or any of the ethical principles that guide our lives. Research that seeks to get at the facts is a useful means of learning something. Americans like to get at the facts. They like to learn. They believe that knowledge will help them to build better lives for themselves, better communities for their children, and a better Nation. They do not have any illusions that facts alone will suffice, but they do not have any doubts that facts will help.

Much has been made in these hearings of the allegation that the social sciences are not "scientific" in the same sense as are the natural sciences. The latter have been referred to by the committee staff as "exact" sciences. These allegations have been highly misleading. Since no natural scientists have been called to testify on this point, I think it relevant to quote part of a letter I received recently from Dr.
Vannevar Bush, president of the Carnegie Institution of Washington (photostatic copy of the entire letter is appended to this statement):

I find it very interesting to try to state the essential differences between the natural sciences and the social sciences, for there seems to be a good deal of confusion on the matter. The real difference lies in the face that the social sciences bring in the human element, and this renders their problems inherently difficult. But often the distinction is made on the basis that the social sciences are observational in nature, whereas the natural sciences are experimental. In other words it is asserted that in the social sciences one cannot exercise control and hence cannot separate variables, whereas these are essential features of the natural sciences. This, it seems to me, is entirely an incorrect approach. In astronomy and also in geology we have observational sciences completely within the framework of the natural sciences. One does not manipulate the stars, neither does he separate out one factor in their complex performance; he merely takes what he gets, measures it as well as he can, and proceeds to construct his theories. Exactly the same thing is true if one is observing for example, the impact of migration upon a primitive people.

It is also sometimes stated that one can measure precisely in the natural sciences and cannot do so in the social sciences. This is again an incorrect criterion. Some of the data of the social sciences is precise, for example much of the material in the census. On the other hand there still remains a vast area of the natural sciences where measurement is crude and sometimes almost absent.

It has been said that “social science research in this country is financed virtually entirely by the foundations and the United States Government. There is very little privately financed social science research.” This is a misstatement. Many millions of dollars are spent each year by manufacturers, by merchandising concerns, by banks, by public utilities, and others in social science research. Market research is moderately big business. Banks spend many millions yearly in economic research. Insurance companies spend millions yearly in actuarial research and other kinds of statistical studies. Many great industries conduct extensive studies of employee attitudes, of industrial relations, of personnel problems, of customer relations, and so forth.

In no other country in the world have the social sciences developed as rapidly as they have in the United States. Americans are curious about their own society. The typical American reaction to curiosity is to seek the facts. These are the ingredients that make social science. As long as Americans retain their curiosity and their respect for facts, the social sciences will flourish in this country. Any attempt to stifle this curiosity or fetter the search for the facts is bound to do great harm, and, in the end, to be defeated.

Because of the similarity in words, uninformed individuals occasionally confuse the social sciences and socialism. The two are not related, even distantly. There are social scientists who hold every variety of political view. They do not differ in this respect from other groups. Presumably some are Socialists. No doubt there are those who favor other minority political and economic beliefs. But the overwhelming majority of them are middle-of-the-road Americans, with a middle-of-the-road view of politics and economics.

It is in the field of economics that the question of socialism is most frequently raised. The activities of the Carnegie Corporation in the field of economics have been relatively limited. Such grants as it has made in this field have gone chiefly to the Brookings Institution of Washington and the National Bureau of Economic Research in New York City.
A former vice president of the Brookings Institution, Dr. Edwin Nourse, was Chairman of the President’s Council of Economic Advisers in the last administration. The Research Director of the National Bureau of Economic Research, Dr. Arthur F. Burns, is Chairman of the same group in the present administration. The public reports of both Brookings and the national bureau have been generally accepted by economists in universities, in industry, and in the Government as wholly objective and untainted by any special pleading, socialistic or otherwise.

As a matter of objective fact, socialism has lost ground steadily in the United States during the first half of this century. Socialists, like all extremists, are essentially doctrinaire. The record might have been a vastly different one if Carnegie Corporation and other foundations had not helped American economists to make the objective studies that have exposed all doctrinaire positions in their true light, and thus reduced their allure for the public generally.

Another field of foundation activity that has been criticized is the field of international affairs. The implication has been left that it is somehow reprehensible for a foundation to foster an active interest in international affairs. The position of the Carnegie Corporation with respect to this matter is easily stated.

Americans have experienced 2 devastating world wars in 40 years. Their sons have been killed in Europe, in Africa, in Asia, and in the Pacific. They have suffered through the Korean war and face the threat of war in Indochina. Atomic war, with the total destruction of civilization, looms as an imminent possibility.

In the circumstances, all sensible Americans are interested in international affairs. All sensible Americans hope that wars can be avoided. All sensible Americans hope that law and order among nations will someday replace anarchy among nations. All sensible Americans hope that understanding among nations will someday replace hatred and bitterness among nations.

Andrew Carnegie believed fervently that the curse of war could be lifted from mankind. Some will argue that this belief was unrealistic; none can argue that it was un-American. Andrew Carnegie believed devoutly that all Americans should work for increased understanding among nations. It was not a dishonorable belief.

The Carnegie Corporation has an unqualified loyalty to the principles that have made our Nation great. The corporation is concerned that those principles—and the nation which embodies them—shall survive in a dangerous world. Such a concern leads inevitably to an interest in international affairs.

Therefore, the Carnegie Corporation has given money to enable Americans to gain a more adequate knowledge of the world at large. It has given money to enable Americans to study the problems of war and peace. It has given money to develop experts on international affairs.

The corporation does these things because it considers them essential to insure America’s future as a nation. The gravest threats to America’s future are on the international scene. One cannot be sincerely concerned about America’s future and unconcerned about the international scene.

A question has been raised as to propaganda and the influencing of public attitudes. The question must be divided. Carnegie Corpora-
tion does not engage in propaganda. But it is not only the right but the duty of educational and philanthropic foundations to assist projects which through the discovery of new facts or through the full presentation of old facts may lead people to better knowledge and understanding. Research, whether in the natural sciences, the social sciences, medicine, or public education, may well provide new information or new insights that will in some measure affect public attitudes.

In this sense of influencing opinion through knowledge and understanding, the work of an educational foundation unquestionably affects public attitudes. The effort to learn would be futile, indeed, if there were no effort to teach.

The Carnegie Corporation is only one of a great and varied group of public and private organizations concerned with teaching and research in this country—a group that includes schools, colleges, universities, scholarly societies, research laboratories, religious training institutions, foundations, and medical centers. These organizations, individually and collectively, have contributed enormously to the American tradition of inventiveness, innovation, freedom to learn, and freedom to teach. Each of them, from the largest foundation to the smallest college in the land bears a grave responsibility to keep this tradition alive. It is that tradition that has been called into question in the present hearings.

I am a graduate of the University of Wisconsin, and I should like to close this statement with an extract from the official record of the board of regents of that university. This extract is taken from the report of a special committee of the regents called into being by another and earlier threat to the freedom of inquiry. I quote:

We cannot for a moment believe that knowledge has reached its final goal, or that the present condition of society is perfect. We must therefore welcome from our teachers such discussions as shall suggest the means and prepare the way by which knowledge may be extended, present evils • • • removed and others prevented.

We feel that we would be unworthy of the position we hold if we did not believe in progress in all departments of knowledge. In all lines of academic investigation it is of the utmost importance that the investigators should be absolutely free to follow the indications of truth wherever they may lead.

The concluding sentence of this report is engraved on a bronze plaque which is set into the portico of Bascom Hall, the main classroom building of the university. Often as I went to and from my classes 30 years ago, I stopped to read it because it seemed to me to embody the essence of the spirit of free inquiry. This is the sentence:

Whatever may be the limitations which trammel inquiry elsewhere we believe the great State University of Wisconsin should ever encourage that continual and fearless sifting and winnowing by which alone the truth can be found.

These words were not written by scholars. They were written by brave and honest citizens—businessmen, lawyers, farmers—drawn from the length and breadth of Wisconsin. They were written in September 1894. Now, 60 years later, I can find no other words which so well summarize my own convictions and the convictions of my colleagues in the staff and board of Carnegie Corporation of New York.

CARNEGIE INSTITUTION OF WASHINGTON,

Dr. CHARLES DOLLARD,

Carnegie Corporation of New York,

New York 36, N. Y.

DEAR CHUCK: I find it very interesting to try to state the essential differences between the natural sciences and the social sciences, for there seems to be a good deal of confusion on the matter. The real difference lies in the fact that the social sciences bring in the human element, and this renders their problems inherently difficult.

But often the distinction is made on the basis that the social sciences are observational in nature, whereas the natural sciences are experimental. In other words it is asserted that in the social sciences one cannot exercise control and hence cannot separate variables, whereas these are essential features of the natural sciences. This, it seems to me, is entirely an incorrect approach. In astronomy and also in geology we have observational sciences completely within the framework of the natural sciences. One does not manipulate the stars, neither does he separate out one factor in their complex performance, he merely takes what he gets, measures it as well as he can, and proceeds to construct his theories. Exactly the same thing is true if one is observing, for example, the impact of migration upon a primitive people.

It is also sometimes stated that one can measure precisely in the natural sciences and cannot do so in the social sciences. This is again an incorrect criterion. Some of the data of the social sciences is precise, for example, much of the material in the census. On the other hand, there still remains a vast area of the natural sciences where measurement is crude and sometimes almost absent. Take the field of genetics, for example. When one is attempting to sort out the order of the genes of the chromosome of the fruitfly he measures the numbers of progeny and, in fact, assembles the sort of vital statistics for his organism which are quite parallel in nature to the type
of vital statistics utilized in population studies, and these are often subject to the same vagaries and influences and have to be used with care. The present geneticists are much concerned with the biochemistry of their subject and in particular with the influence of the cytoplasm upon the functioning of genes. There is involved an exceedingly complex chemical interrelationship, which is hardly subject to chemical analysis in the ordinary terms. One cannot control in the usual sense by introducing chemicals at will, for he is dealing with a live organism and the introduction of a single chemical affects the functioning in diverse and little understood ways. He accumulates a hint here, and a suggestion there, and attempts to make a consistent and useful pattern out of the vast maze of intricate and sometimes conflicting testimony. The parallelism with what he does with some of the investigatory work of the social scientist is almost complete.

There is often the assertion that the social sciences would prosper if they would carry over the methods of the natural sciences. This is unusually asserted by people who see the extraordinary results being attained in the natural sciences and who jump to a conclusion. But there is no such thing as a method of the natural sciences, there is a maze of methods, and the selection of these involves one of the greatest skills of genius. Certainly there are tools and instruments which are applicable in both fields, and which should be made use of wherever they can prove advantageous. But to try to carry over bodily methods of approach from any branch of science to any other leads always into difficulties, as would be expected, for the method must be based on the problem in hand and not on a priori considerations.

The real difference between the two great branches lies in the fact that the social sciences deal with the performance of human beings. It is far more difficult to measure these and to reduce all arguments to be in terms of numbers than it is to do the same thing for a molecule. We might note in passing that even the physicists, when dealing with the interactions inside the nucleus, have proceeded to abandon all of the usual mathematical formulations and are proceeding in terms of arguments which at times border on the mystical. But one cannot specify a human being in the same way that he can specify a chemical compound. Again be it noted that the chemists, dealing with proteins, are in much the same situation for they can neither specify the atomic arrangements involved, nor can they predict what characteristics one of their chemical modifications may produce.

The difference is hence a matter of degree as far as the use of measurement is concerned. Also one should note that there has been enormous progress in the last decade or two in reducing to measurement many matters in the field of the social sciences which were formerly thought to be beyond reach from this standpoint. But one cannot disregard the fact that there has been great science at times with very little in the way of measurement and mathematical formulation involved. The trend in both the natural and social sciences is toward the use of more measurement and more precision in the handling of them. This does not mean that a subject in order to be called a science needs to lean on the deflection of a needle or the dip of a balance.

The natural sciences are far more advanced down the road of use of measurement and the use of precise analysis. There is one effect which is important in weighing the validity of efforts. As rapidly as a science becomes precise and subject to mathematical treatment,
there is less of argument upon the basis of balance of evidence, and
opinions become to a great extent subject to tests in a form that are
universally accepted. For this reason the career of an individual in the
natural sciences who abandons logic, and who tries to support wild
guesses, is usually brief and conclusive. The social scientists do not
have the same degree of means for insisting upon rigor where it ap-
plies, and soundness and logical reasoning in the handling of evidence.
They are making great progress along these lines, but there is here still
a real difference in the way in which the scientists proceed as profes-
sional groups in the two fields.

I do not know whether there are any thoughts in here that will aid
your own thinking on the matter, but I hope the time is not far off
when we can again explore the subject together.

Cordially yours,

V. Bush.

Answers to Specific Charges

A memorandum submitted for the record by Charles Dollard,
president, Carnegie Corporation of New York

I have sought in oral testimony before this committee to make
clear how completely unfounded are the broad charges which have
been leveled against the Carnegie Corporation. It remains to answer
in detail certain specific charges which have been brought against
various projects with which the corporation has been associated.
The evidence which has been placed before the committee to date
on these matters has been characterized by errors of fact and errors
of interpretation. I am genuinely reluctant to engage in public dis-
putation on these matters. But the record must be set straight, and
I am sure that the committee will welcome such corrections as I am in
a position to offer.

I shall discuss five separate matters, in the order in which they
appear in the record:

I. An American Dilemma: The Negro Problem and Modern Democracy by
Gunnar Myrdal et al.
II. Education for International Understanding in American Schools. Prepared
and published by the National Education Association.
III. The Proper Study of Mankind by Stuart Chase.
IV. The American Soldier by Samuel Stouffer, et al.
V. Report of the Commission on Social Studies. American Historical Asso-
ciation.

I. AN AMERICAN DILEMMA BY GUNNAR MYRDAL ET AL

An American Dilemma has been referred to in the course of the
hearings by two witnesses, Messrs. Dodd and Colegrove. Originally
published in 2 volumes (1,500 pages) in 1944, it was the end product
of a 6-year study of the Negro problem, which study was financed
by the Carnegie Corporation at a cost of about $300,000.

In the early days of these hearings, one of the witnesses character-
ized this 1,500-page work by reading a series of short excerpts taken
from the introductory chapter of the work. Without raising the ques-
tion as to the appropriateness of characterizing a scholarly work by
lifting a few sentences out of context, and reading these sentences seriatim as if they followed one on another, one feels a duty to set the record straight.

Here is the first quotation which the witness offered:

Indeed, the new Republic began its career with a reaction. Charles Beard, in An Economic Interpretation of the Constitution of the United States, and a group of modern historians, throwing aside the much cherished national mythology which had blurred the difference in spirit between the Declaration of Independence and the Constitution, have shown that the latter was conceived in considerable suspicion against democracy and fear of the people. It was dominated by property consciousness and designed as a defense against the democratic spirit let loose during the Revolution.

Here are the two sentences which follow immediately on the paragraph quoted above and which the witness did not quote:

But, admitting all this, the Constitution which actually emerged out of the compromises in the drafting convention provided for the most democratic state structure in existence anywhere in the world at that time. And many of the safeguards so skillfully thought out by the conservatives to protect “the rich, the wellborn, and the capable” against majority rule melted when the new order began to function. (Italics ours)—Chapter I, page 7.

Other quotations read into this record earlier all leave the impression that Myrdal was consistently and bitterly critical of everything American. It is worth noting that the witness who read these quotations into the record overlooked passages which give a much truer indication of Dr. Myrdal’s attitude toward this country. Consider, for example, the following passage (p. 4, ch. I):

These ideals of the essential dignity of the individual human being, of the fundamental equality of all men, and of certain inalienable rights to freedom, justice, and a fair opportunity represent to the American people the essential meaning of the Nation’s early struggle for independence. In the clarity and intellectual boldness of the enlightenment period these tenets were written into the Declaration of Independence, the preamble of the Constitution, the Bill of Rights, and into the constitutions of the several States. The ideals of the American creed have thus become the highest law of the land. The Supreme Court pays its reverence to these general principles when it declares what is constitutional and what is not. They have been elaborated upon by all national leaders, thinkers, and statesmen. America has had, throughout its history, a continuous discussion of the principles and implications of democracy, a discussion which, in every epoch, measured by any standard, remained high, not only quantitatively but also qualitatively. The flow of learned treatises and popular tracts on the subject has not ebbed, nor is it likely to do so. In all wars, including the present one, the American creed has been the ideological foundation of national morale.

Another quotation which serves to illustrate Myrdal’s profound respect for America and Americans will be found in the author’s preface on page xlii. It reads as follows:

At this point it must be observed that America, relative to all the other branches of western civilization, is moralistic and moral conscious. The ordinary American is the opposite of a cynic. He is on the average more of a believer and a defender of the faith in humanity than the rest of the occidentals. It is a relatively important matter to him to be true to his own ideals and to carry them out in actual life. We recognize the American, wherever we meet him, as a practical idealist. Compared with members of other nations of western civilization, the ordinary American is a rationalistic being, and there are close relations between his moralism and his rationalism. This moralism and rationalism are to many of us—among them the author of this book—the glory of the Nation, its youthful strength, perhaps the salvation of mankind.

The truth of the matter is that any conscientious person who reads Myrdal’s entire report cannot possibly fail to sense his deep affection
for this country in which he received part of his education and which he has visited almost annually for the last 20 years.

Neither of the two previous witnesses who referred to Myrdal's work made any attempt to tell the committee what the Myrdal book was about, or to evaluate it as a scholarly work. Hence, it may be worth noting in passing that few studies of American social problems in this century have been as widely applauded or warmly reviewed. An American Dilemma stands and will stand as one of the great social documents of the century, and Dr. Myrdal will continue to be admired here and abroad as an objective and completely honest scholar.

One of the earlier witnesses dismissed Dr. Myrdal as a "foreigner" and a "Socialist." That Dr. Myrdal is a foreigner cannot be denied since he was born in Sweden and is still a Swedish citizen. It is worth asking, however, whether the witness would similarly dismiss Lord Bryce and De Tocqueville, two other foreign-born scholars, who helped America to see its problems in new perspective and to understand and appreciate its own greatness.

It is less accurate to refer to Dr. Myrdal as a "Socialist," without defining that opprobrious word. True indeed, he was and is a member of the Social Democratic Labor Party in Sweden which has been the dominant party in that country for many years. But it is common knowledge that the program inaugurated in Sweden by the Social Democrats is vastly different from what we in this country normally think of as socialism. While Sweden has gone beyond most states in the provision of social services to its people, facilities for production and distribution of goods are still almost entirely in private hands. Sweden's economy remains a private-enterprise economy.

The question remains: Why did Carnegie Corporation seek a foreign scholar to undertake this particular study and why did it finally select a Swedish scholar? The answer is contained in the following extract from the foreword to An American Dilemma which was written and signed by Frederick P. Keppel, then president of the corporation:

In 1931, the late Newton D. Baker joined the corporation board. He was the son of a Confederate officer, attended the Episcopal Academy in Virginia and the Law School of Washington and Lee University, and spent the greater part of his early years in the border States of West Virginia and Maryland. His services first as city solicitor and later as mayor of Cleveland gave him direct experience with the growing Negro populations in northern cities, and as Secretary of War he had faced the special problems which the presence of the Negro element in our population inevitably creates in time of national crisis.

Mr. Baker knew so much more than the rest of us on the board about these questions, and his mind had been so deeply concerned with them, that we readily agreed when he told us that more knowledge and better organized and interrelated knowledge were essential before the corporation could intelligently distribute its own funds. We agreed with him further in believing that the gathering and digestion of the material might well have a usefulness far beyond our own needs.

The direction of such a comprehensive study of the Negro in America, as the board thereupon authorized, was a serious question. There was no lack of competent scholars in the United States who were deeply interested in the problem and had already devoted themselves to its study, but the whole question had been for nearly a hundred years so charged with emotion that it appeared wise to seek as the responsible head of the undertaking someone who could approach his task with a fresh mind, uninfluenced by traditional attitudes or by earlier conclusions, and it was therefore decided to import a general director—somewhat as the late Charles P. Howard was called across the Atlantic to supervise the repatriation of the Greeks in Asia Minor after the close of the First World
War. And since the emotional factor affects the Negroes no less than the whites, the search was limited to countries of high intellectual and scholarly standards but with no background or traditions of imperialism which might lessen the confidence of the Negroes in the United States as to the complete impartiality of the study and the validity of its findings. Under these limitations, the obvious places to look were Switzerland and the Scandinavian countries, and the search ended in the selection of Dr. Gunnar Myrdal, a scholar who despite his youth had already achieved an international reputation as a social economist, a professor in the University of Stockholm, economic adviser to the Swedish Government, and a member of the Swedish Senate. Dr. Myrdal had a decade earlier spent a year in the United States as a fellow of the Spelman Fund, and when the invitation was extended to him by the corporation in 1937, was about to make a second visit at the invitation of Harvard University to deliver the Godkin Lectures ** * (pp. VI, VII).

II. EDUCATION FOR INTERNATIONAL UNDERSTANDING IN AMERICAN SCHOOLS—a book prepared and issued by the National Education Association

At an earlier stage in these hearings, one of the witnesses read into the record a number of quotations from the book Education for International Understanding in American Schools issued by the National Education Association. Careful scrutiny of the book itself will reveal that the quotations selected do not provide a fair picture of the views of the authors. No passages were quoted to illustrate the constructive and realistic attitude of the authors toward nationalism. For example:

"International understanding" is a broad term and necessarily encompasses many things. It does not connote the absence of national loyalty nor an unrealistic approach to the world. Rather, it includes the process of making students informed and loyal citizens of their own country—aware of the nature of the world in which they live, the relationship of their nation to the world as a whole, the forces that motivate national action, the life and institutions of other nations, and a host of other things in order that they may bring their intelligence and judgment to bear upon the problems of living in an interdependent world (p. 9).

Americans generally agree that our country must be prepared for any emergency, but the problem is to determine what is adequate preparedness. The problem is not simple, for our security rests upon the strengthening of the ideals of the American way of life as well as upon economic and military factors (p. 19).

The Brookings Institution, in a recent study, has outlined the problem thus:

"There are certain elements of national military power, however, that are required for the security of the United States, whether or not a system of worldwide collective security under the United Nations is effective. The essentially national elements relate to: the maintenance of an adequate military establishment; continuous research and development; the maintenance of a coordinated system of intelligence; plans for the organization of the Government for possible war, for the mobilization of industry and manpower, and for civilian defense, civilian economy, and national discipline. The full effectiveness of all these elements requires a unity of purpose and a high degree of moral strength among the American people" (p. 19).

As one scholar puts it:

"Patriotism, loyalty to one's nation, has in some places been criticized as an 'absurd prejudice' or as 'a vulgar vice,' or as 'a virtue—among barbarians.' Such criticism of patriotism are about as valid as would be the charge that one is less loyal and effective as a citizen because he is loyal to his family, his community, and the multiplicity of social groups of which one may be a member. Nevertheless, such criticisms are sound if patriotism means that love of one's fellow men stops at national frontiers, if it means that it must be based on malice to all and charity toward none outside one's national group" (I. L. Kandel) (p. 46).

"Nationalism has been, and is, one of the most powerful forces in the development of the kind of world in which we must live. The idea of 'one nation indivisible,' which we repeat in our pledge of allegiance to the flag, is also held, in one form or another, by most of the people in the world. We look to our
No passages were quoted which revealed the active concern of the authors for moral and spiritual values. For example:

There is another threat that is as great as that to be feared from new engines of destruction—the loss of the moral and spiritual values that a resort to force seeks to defend (p. 16).

The peaceful resolution of differences, however, is only possible within the limits of what nations and individuals consider to be the essential values governing their conduct, values, and principles that are not susceptible to change and which must be defended in the face of attempts to subvert them (p. 22).

Education as a force for world peace derives its validity from the fact that it is the process by which individuals and groups are made aware of the values and standards that men create to govern their conduct. The process of becoming aware of those standards and values involves the acquisition of knowledge and the development of a capacity to judge critically the mass of human experience in terms of these standards. It involves further the process of applying the standards and values to specific situations (p. 35).

No passages were quoted which reveal the alertness of the authors to the dangers of communism. For example:

The Soviet system, which we call “communism” is not the only form in which authoritarianism exists today, for there are absolute monarchies and dictatorships throughout the world. It has been entirely possible for democratic states to exist harmoniously in a world with nondemocratic states. However, if the ideology of any state requires attack upon the very existence of another state, such aggressiveness is a serious menace to the peace. It was this ideological aggressiveness—embodied in the mazism and fascism—coupled with the unscrupulous use of state power, that helped bring on World War II. This same situation—revolutionary ideology implemented the vast national strength—is evident in certain aspects of the foreign policy of the Soviet Union today.

The combination of an aggressive ideology with a powerful national state is made all the more dangerous because it is difficult or impossible to appeal directly to the people of that state. The denial of the concept of individual liberty, the strict censorship of access to information not approved by the state, and limitations of freedom of thought and expression make it extremely difficult for the people in any authoritarian state to express effectively that desire for peace which is undoubtedly the common possession of all peoples everywhere (p. 24).

In some instances, sentences were taken out of context in such a way as to affect the meaning of the total passage. For example, on page 45 there appears the passage quoted below. The two sentences italicized (italic not in original) were quoted to the committee. The remainder of the passage was not quoted to the committee.

T. V. Smith has said that “nationalism represents perhaps man’s most massive achievement up to date.” This is true because the evolution of the nation-state system represents an advance of men in the organization of a political unit larger than the tribe, the city-state, or the province. It made possible the maintenance of law and order over a larger area than was formerly possible.

Unfortunately man did not attain peace through the nation-state system on a worldwide basis. Militant leaders realizing the unifying spirit that could be aroused in their followers by an appeal to their new national loyalties utilized it for purely national ends. A spirit of narrow nationalism was stirred up in the people by impressing them with an idea of their own superiority. The self-interest of the race or nation was magnified.

People were taught to look down upon other nationalities as inferior. War was regarded as an accepted means of extending the prestige of the nation. This development was an important factor in bringing about both the First and Second World Wars. So long as these narrow nationalistic ideas continue to be held by many people in all nations today, there is a threat to peace (p. 45).

Note that the two italicized sentences taken alone give the impression of rather unqualified criticism of nationalism. Placed in context, it becomes apparent that the authors are critical of only those
narrow nationalistic ideas" which—in the hands of aggressor nations—brought on both the First and Second World Wars.

III. THE PROPER STUDY OF MANKIND, BY STUART CHASE

A witness has raised some questions about this book and its author. Stuart Chase is an extremely able writer who had in the past demonstrated a great capacity for translating technical material into terms which the ordinary layman could understand. The last assignment which Mr. Chase undertook prior to writing the Proper Study of Mankind was an assessment of the labor policies of the Standard Oil Co. of New Jersey. This study was commissioned by the Standard Oil Co. and the results were printed in its monthly magazine (the Lamp) and offprinted for wide public distribution. A careful study of Mr. Chase's record would have also disclosed the fact that he has performed similar assignments for a variety of other well-known industrial concerns.

Mr. Chase was called a "cultural determinist." The influence of social factors in determining behavior was observed by the ancient Greeks, and the modern case for culture as an influence on human behavior was first made more than 50 years ago by William Graham Sumner, one of the greatest of American sociologists and economists in a book entitled "Folkways." Chase's estimate of the importance of the so-called culture concept would be concurred in by a majority of the anthropologists in America. This does not deny (nor does Chase) the importance of biological and other factors in human behavior.

It was said "that there is not a balanced presentation of ideas" in Chase's book. The opinion of 10 qualified social scientists who read the book in manuscript was unanimously to the contrary, as was the opinion of almost every social scientist who reviewed the book in a professional journal.

It was stated that Chase's treatment of the field of economics is a "balanced presentation" because Chase knew this field but that his treatment of anthropology, sociology, psychology, etc., is unbalanced because Dollard and Young did not tell him what to say about these fields. Of course Dollard and Young did not censor Chase. What they did do was (a) help give Chase access to the most competent social scientists in the country, and (b) require him to submit his completed manuscript for criticism by competent social scientists representing all of the fields which the book covers.

That Mr. Chase made good use of the very trenchant criticisms which he thus received, prior to the publication of the book, is evidenced by the fact that competent authorities who reviewed the Proper Study of Mankind found no lack of balance in Mr. Chase's treatment of the various social sciences.

IV. THE AMERICAN SOLDIER, BY SAMUEL STOUFFER ET AL.

A witness made a general attack on the 4-volume work entitled "The American Soldier." His specific criticisms focused on chapter 1, of volume I, which is an attempt by the authors to explain how the studies on which the volumes were based came to be made, and chapter 2, volume II. The studies made by the Information and Education
Division of the Army which resulted in the adoption of the so-called point system for demobilization were singled out for particular attention.

Since the testimony on this matter is confused almost beyond belief, the following categorical statements are in order.

The studies which led to the establishment of the point system were made at the request of a Special Planning Division created in the War Department by General Marshall in 1943 or early 1944. This staff was assigned the responsibility for making forward plans for all phases of demobilization and related matters.

The chief contribution of the Information and Education Division was to define the factors which soldiers thought should be taken into account in a demobilization plan and to list the order in which the troops thought these factors should be weighed. The actual weights were assigned by the Special Planning Division, upon the recommendation of a committee of officers representing Army Service Forces, the Air Force and Ground Forces.

It was clearly specified in the overall demobilization plan that military necessity should outweigh other considerations and that theater commanders were authorized to retain "essential personnel" no matter what their point scores might be. If field commanders did not in fact take full advantage of this authority, it was not because of pressure from social scientists but rather resulted from congressional pressures and the very vocal outcries of wives and mothers for the release of their husbands and sons. Clear evidence supporting this will be found in the January 16, 1946, issue of the New York Times. It was on this date that General Eisenhower, then commanding general of the European theater, and Admiral Nimitz appeared before an extraordinary joint session of the two Houses of Congress to answer demands that soldiers be returned from Europe more rapidly.

It was implied that the activities of the Research Branch of the Information and Education Division were in direct defiance of the Secretary of War and as proof a directive issued by the Army in May 1941 was quoted.

The fact is that this regulation was issued primarily to protect the Army against the incursions of outside "pollers" who wished to use soldiers as a captive audience. The Secretary of War quite rightly outlawed such activities as soon as they were brought to his attention. A subsequent regulation issued by the Army specifically authorized the Information and Education Division to conduct studies of soldiers' opinions and attitudes and certified such studies as useful and necessary for the proper conduct of certain established Army activities. This regulation reads as follows:

d. Sample surveys.—Planning surveys and experimental studies of specific morale problems provide an accurate method of determining soldiers' mental attitudes and the extent to which the factors considered in these regulations in-

1 At various times during World War II, this Division was officially designated as the Special Services Division and the Morale Branch. Its mission remained constant despite these semantic changes.

2 A single paragraph from the Times, January 9, illustrates the point: "Letters from GI's bearing 'No boats, no votes' stamps and from organized 'Bring Daddy Home Clubs' piled up in legislators' letterboxes in what was termed the greatest volume of mail in congressional history. Some Congressmen talked of introducing legislation to force the Army to release men with 18 months' service, dependents, or a desire to go to school."

* See footnote p. 12, supra.
fluence the morale of the individual. Such surveys and studies should be based on the questioning of scientifically selected cross sections of troops under conditions which protect the anonymity of the individual. This research provides a necessary scientific check on personal impressions, and aids in the interpretation of statistical data from official records. The making of such sample surveys and experimental studies is the responsibility of the Director, Special Services Division, Services of Supply.

This regulation was published in the War Department, MR 1–10, March 5, 1943 (par. 43 D, p. 17).

It was implied that data resulting from opinion surveys or “polls” is “unscientific.” As a matter of fact, survey techniques are widely used by many of the leading industrial firms in the country. For the past 5 years, the economic forecasts of the Federal Reserve Board have been based to a very large extent on careful estimates of the intentions of consumers with respect to future purchases and future savings. These data are supplied by the Survey Research Center of the University of Michigan, one of the leading centers for the scientific study of attitudes and opinions, under contract with the Federal Reserve Board.

Social scientists made important contributions in World War I long before any of the foundations were active in these fields. Much of our present knowledge in the field of psychometrics is an end product of the pioneering work done by Guthrie, Miles, Bingham, et al., who were called on by the Adjutant General of the Army in 1917 to set up a system of classification for the Army. Similarly, the statistical procedures which now enable the General Staff of the Army to keep track of its day-to-day business were initiated by two economists, the late Leonard Ayers of Cleveland and W. Randolph Burgess, present Deputy to the Secretary of the Treasury.

If the Army has indeed been “invaded” by social scientists, the record should show that the invasion began when the authors of The American Soldier were still in knee pants.

V. REPORT OF THE COMMISSION ON SOCIAL STUDIES, AMERICAN HISTORICAL ASSOCIATION

In 1934 the Commission on Social Studies, an ad hoc group set up by the American Historical Association, published the final volume in a series of reports on the social studies field. This final volume, entitled “Conclusions and Recommendations,” has been discussed and quoted at some length in these hearings. It may be useful therefore to state what the book is about and describe the circumstances surrounding the Carnegie Corporation grant which made the book—and indeed the whole series of studies—possible.

The book does not advocate socialism. The authors did repeatedly record the observation that the United States appeared to be moving from an era of extreme individualism to an era characterized by far greater emphasis upon economic and social planning. This was an accurate observation.

The worst that can be said is that the authors not only reported this trend but appeared to accept it cheerfully. What they were accepting was not socialism. It was the New Deal.

The book was written in the depths of the greatest depression this country has ever known. The mood of the book was the national mood at that time. Those were the days of breadlines, soup kitchens,
and coal doles; of men selling apples on street corners or peddling cheap kitchenware from door to door; of 15,000 bonus marchers encamped on Anacostia Flats; of nearly 13 million unemployed.

Shall we now deny that there was at that time a widespread disillusionment concerning our economic system, or that men were energetically seeking new solutions to a desperate situation? Or if we admit those facts, shall we seek now at the height of our prosperity to reproach all those who shared the doubts and hopes of that time?

Since the word "collectivism" is used frequently throughout the book, it is useful to note that Charles Beard, in a letter to Frederick Keppel, then president of Carnegie Corporation, said that he had chosen the word because it "avoids the connotations of socialism and communism." Whether his choice was a wise one may be debated, but his intention is clear.

So much for what the book says. The relationship of Carnegie Corporation to the project remains to be clarified.

The Carnegie Corporation was first approached by Dana Carleton Munro, a medieval historian and well-known authority on the Crusades. The approach was made in behalf of the American Historical Association, one of the older scholarly societies in America, and without question one of the most honorable. The group of historians who had developed the project within the American Historical Association numbered among its members some of the most distinguished university professors of the time—Charles Beard, of Columbia; Isaiah Bowman, of Johns Hopkins; Guy Stanton Ford, of Minnesota; Charles Merriam, of Chicago; and Carleton J. H. Hayes, also of Columbia. All were men of great integrity and of high reputation as scholars.

In the early years of the study there appeared no foreshadowing of the political and economic views which characterize the final volume. But had the corporation seen the draft of the manuscript, it would not have sought to alter these views. The corporation made its grant to the American Historical Association. The association selected the members of the commission. The members of the commission were responsible for the book. The fact that the corporation has the power to grant or withhold funds does not give it the power to censor or rewrite the works produced under its grants. This means, obviously, that works will be supported by corporation grants containing views that differ from those held by trustees and officers of the corporation. This is as it must and should be. The alternative is thought control.

What actually happened was in the healthiest tradition of American life. Of the 16 members of the commission, 4 declined to sign the document. This disagreement was not in any way concealed. On the contrary, it is mentioned in an introductory note at the beginning of the volume. Furthermore, each of the men who declined to sign was invited to submit a dissenting opinion to be printed over his signature along with the report. None took advantage of this opportunity. One individual who did sign—Isaiah Bowman—prepared a vigorous statement dissenting from many of the "conclusions." This, too, was given full publicity. In fact, it appears as appendix C in the Conclusions and Recommendations.
Mr. Keppel, president of the corporation, expressed his private reservations concerning the final volume. In a letter to one of the authors of the book, Mr. Keppel says:

Frankly, I think that the report in its final form is a fairly vulnerable document, but I am not sure that in the long run that it is not going to be a good thing. • • • The fact that the report was not signed unanimously does not trouble me very much, nor the fact that I would have dealt with some of the material quite differently if I had been writing it myself.

LEAGUE FOR INDUSTRIAL DEMOCRACY—ANSWER OF DR. HARRY W. LAIDLER, EXECUTIVE DIRECTOR OF THE LID, TO STATEMENT OF KEN EARL

Sworn statement by Dr. Harry W. Laidler, executive director, League for Industrial Democracy, regarding the educational activities of the LID, submitted in writing to the Special Committee To Investigate Tax-Exempt Foundations. The statement is a reply to the criticisms of the league made by Ken Earl, attorney of the law firm of Lewis, Strong & Earl, Moses Lake, Wash., at the hearing of the special committee in Washington, D. C., Tuesday and Wednesday, June 15 and 16. These criticisms were contained in Mr. Earl’s mimeograph report and in his answers to the committee’s questions.

To Members of the Special Committee To Investigate Tax-Exempt Foundations of the United States House of Representatives:

My name is Dr. Harry W. Laidler, executive director of the League for Industrial Democracy. I have served as executive director of the league since its inception in 1921, and, prior to that, as secretary of the league’s predecessor, from 1910 to 1921. Outside of my LID activities, I have been a member of the New York City Council; a lecturer in economics at Brooklyn College, the College of the City of New York, and New York University; have written a number of books including college textbooks on economic movements and problems; am a member of the New York bar, and have been active in economic research organizations.

The League for Industrial Democracy is a nonprofit, educational organization of 49 years’ standing, incorporated as a membership corporation under the laws of New York State. It is not a foundation, as defined by the Webster’s New International Dictionary, which describes a foundation as “a corporation provided with funds for contributing to the endowment of institutions; that which is founded or established by endowment.” The league was not founded by an endowment. It has at the present time no endowment. It does not endow other institutions, and it receives but an infinitesimal part of its moderate income of less than $50,000 a year from foundations. Its members and board of directors were thus, in the nature of the case, somewhat surprised to learn that the league, after 49 years of fruitful educational activity, had been suddenly made the subject of a 39-page attack by Mr. Ken Earl, a Moses Lake, Wash., attorney, hitherto unknown to them, and had been selected for that unusual attention from thousands of foundations, as technically and popularly defined, and from tens of thousands of other tax-exempt associations.

The league, indeed, is one of the few tax-exempt educational societies in America dedicated to a better understanding of the labor
movement and to education for increasing democracy in our economic, political, and cultural life.

It has sought to stimulate college men and women in the public generally to understand the social problems of their times and to seek constructive, democratic remedies to social abuses. It has done valuable educational work through its researches, publications, conferences, lectures, college and city discussion groups, and information services. And it has sought to honor through its annual awards men and women who have served the cause of democracy—among them Mrs. Eleanor Roosevelt; Dr. Ralph J. Bunche, winner of the Nobel peace prize; Oscar L. Chapman, former Secretary of the Interior; John Dewey, philosopher and educator; Paul H. Douglas, Senator from Illinois; Thomas C. Douglas, premier of Saskatchewan, Canada; David Dubinsky, president of the ILGWU; the late William Green, late president of the A. F. of L.; John Haynes Holmes, pastor emeritus, Community Church; Sidney Hook, professor of philosophy, NYU; Hubert H. Humphrey, United States Senator from Minnesota; the late Philip Murray, late president of the CIO; Herbert H. Lehman, United States Senator from New York; Trygve Lie, former Secretary General of the United Nations; George Meany, president of the A. F. of L.; Wayne L. Morse, United States Senator from Oregon; Leland Olds, former Chairman of the Federal Power Commission; Walter P. Reuther, president of the CIO and of the United Auto Workers; Paul R. Porter, former United States Deputy for Economic Affairs in Europe; Clarence Senior, Latin American authority; and Dr. Selman A. Waksman, codiscoverer of streptomycin and winner of the Nobel prize in medicine.

John Dewey, foremost American philosopher and educator, was the league's honorary president for 11 years until his death in 1952.

Nathaniel M. Minkoff, secretary of the New York joint board, Dressmakers’ Unions, ILGWU, is its president. Its vice presidents include Dr. John C. Bennett, professor of theology and ethics, Union Theological Seminary; Dr. John Haynes Holmes, of the Community Church, New York; President A. J. Hayes, president of the International Association of Machinists; Dr. Bryn J. Hovde, former president of the New School for Social Research; Dr. William H. Kilpatrick, professor emeritus of education, Teachers College, Columbia; Dr. Alexander Meiklejohn, former president of Amherst College; Vida D. Scudder, for years professor of English literature, Wellesley College; and M. J. Coldwell, Member of Parliament of Canada. Its board chairman is Mark Starr, prominent labor educator and author; its treasurer, Joseph Schlossberg, member of the Board of Higher Education, New York, and secretary-treasurer emeritus of the Amalgamated Clothing Workers of America; and its secretary and executive director, Dr. Harry W. Laidler.

Its board of directors, consisting of 75 members, include many educators, businessmen, labor and civic leaders, and members of the legal and other professions.

All believers in the strengthening of the democratic way of life are eligible to league membership. Prior to the spring of 1943, the stated object of the league was “education for a new social order based on production for use and not for profit.” In that year, the membership voted to change the stated object to “education for increasing democracy in our economic, political, and cultural life.” In making
this change, the members of the league wished to broaden its basis, and to make it doubly clear that the league’s primary goal was education for a strengthened democracy in all phases of our life, rather than education for a particular type of social order.

Surely the league’s object, educational activities, or officers and associates in no way, in our opinion, justify the type of attack to which the league was subjected, without notice, before the special investigating committee.

THE LID’S TAX-EXEMPT STATUS

Mr. Earl seeks in his report to show that the League for Industrial Democracy should not continue to be tax-exempt.

The LID received tax exemption in the twenties. In the early thirties, the Commissioner of Internal Revenue questioned this exemption as the league, a pioneering educational society, was, in the nature of the case, constantly dealing with social problems of a controversial nature.

The question of the educational character of the league was then argued before the United States Circuit Court of Appeals, in the case of eyl versus the Commissioner of Internal Revenue. After examining the league’s educational activities, the court handed down a decision on April 13, 1931, in favor of the LID in what has since been regarded as a decision of historic importance. In this case, the court declared:

(1) The sole question presented is whether the League for Industrial Democracy is an educational corporation within the meaning of the statute. The facts are not in dispute. The league makes researches, gives lectures, holds debates and discussions, promotes, by writing pamphlets, books, and helping to distribute them, giving information concerning economic and social problems. It is well organized, has substantial sponsors, and claims to have a definite social doctrine. It claims the best education is self-education, and considers that the best work it can do among the colleges is by voluntary groups which organize themselves in various colleges and seek the benefit of the publication of its information. The fact that its aim may or may not resemble that of a political party does not of itself remove it from the category of an association engaged in educational work.

(2) Congress did not include a definition of the term “education” as used in the act. In the absence of specific definition, the words are to be given their usual and accepted meaning. Matter of Will of Fox (52 N. Y. 530, 11 Am. Rept. 751). “Education” has been defined by the encyclopedia and dictionaries as “impacting or acquisition of knowledge, mental and moral training; cultivation of the mind, feelings, and manners.” The definition given by the Funk & Wagnall New Standard Dictionary, volume 1, may be referred to: “Education, as understood today, connotes all those processes cultivated by a given society as means for the realization in the individual of the ideals of the community as a whole. It has for its aim the development of the powers of man (1) by exercising each along its particular line, (2) by properly coordinating and subordinating them, (3) by taking advantage of the law of habit, and (4) by appealing to human interest and enthusiasm. It includes not only the narrow conception of instruction, to which it was formerly limited, but embraces all forms of human experience, owing to the recognition of the fact that every stimulus with its corresponding reaction has a definite effect on character. It may be either mainly esthetic, ethical, intellectual, physical, or technical, but to be most satisfactory it must involve and develop all sides of human capacity.”

The organization has no legislative program hovering over its activities. It is clear that, as Congress did not intend to use the word “education” in the statute in any exceptional sense, but giving it its plain, ordinary meaning, it is
applicable to this appellant's contributions, and the deduction should have been allowed.

On the basis of the league's educational activities, the Bureau of Internal Revenue, following the passage of the Revenue Act of 1938, also declared that the educational activities of the League—its researches, pamphlets, promotion of debates, and discussions relating to economic and social problems, etc.—entitled the League "to exemption under the provisions of section 101 (6) of the Revenue Act of 1938 and the corresponding provisions of prior revenue acts."

ACTIVITIES, 1953-54

During the last year the LID has conducted a number of valuable educational activities:

Forty-ninth annual conference.—One of these activities was the holding of its 49th annual conference. At this conference, held on April 9–10, 1954, at the Hotel Commodore, New York, we sought to analyze various currents in our economic system, and seek to discover what had been the restrictions imposed on free enterprise, and how we would at present best characterize our present economy.

The first round table of the conference was held on Friday evening, April 9, 1954. At this session we asked a variety of opinions on the impact on free enterprise of monopoly, partial monopoly, trade agreements, and Government subsidies and regulations initiated by business groups. The round table panel represented a variety of interests and points of view. On the panel were Theodore K. Quinn, former vice president of the General Electric Co. and author of Giant Business; Dr. Solomon Barkin, economist, author, research director, Textile Workers Union of America; Lee F. Johnson, executive vice president of the National Housing Conference; Aaron Levenstein, author and member of the staff of the Research Institute of America; and Mark Starr, author and labor educator.

Following a number of brilliant and searching papers on the problem of subsidies, trade agreements and regulation, and their effect on free competitive practices, there was a vigorous discussion within the panel and between the panel and the audience.

The second session on Saturday morning, April 10, dealt with the effect on free enterprise and a laissez faire economy of labor, consumer, and political action, President A. J. Hayes of the International Association of Machinists, gave a paper on what, in his opinion, had been some of the achievements of the trade union movement, and its impact on our economic system. Wallace J. Campbell, Washington director, Cooperative League, United States of America, described the development of the cooperative and other consumer movements. James Farmer, student field secretary, LID, gave a factual statement on some phases of social-security legislation, while George Soule, professor of economics, Bennington College, and former president of the National Bureau of Economic Research, gave an analysis of the types of industry that were and that were not subject to public regulation.

The final round table of the conference discussed the important problem, How To Prevent a Depression.

Here, as elsewhere, the league sought to obtain the benefit of various viewpoints on whether the present recession was likely to lead to a
depression, and what measures should be recommended to labor, business and governmental groups to avoid mass unemployment. The panel was opened by Dr. Geoffrey H. Moore, associate director of the National Bureau of Economic Research, who presented an analysis of hopeful and less hopeful trends in the present business cycle. Dr. Moore had for many years worked with Dr. Arthur F. Burns, now Chairman of the President’s Council of Economic Advisers in the field of business cycles and is one of the Nation’s foremost authorities on business trends. His address was printed almost verbatim in the financial section of the New York Times.

He was followed by Wesley F. Rennie, executive director of the Committee on Economic Development, a committee of prominent businessmen who had recently formulated an antidepression program for business and Government. Congressman Jacob K. Javits, Republican Congressman from New York, presented his program for maximum employment. Dr. Boris Shishkin, director of research, AFL, analyzed the census figures on unemployment, and Dr. Theresa Wolfson, professor of economics, Brooklyn College, dealt with the need of long-range planning as a means of stabilizing employment at a high level. Max Delson, New York City attorney, presided. An enlightening interchange among speakers and audience followed.

Between the round-table discussions the league held its annual luncheon, at which President George Meany, of the AFL, and Senator Wayne Morse received citations for their contributions to democracy, and John Dewey awards to former LID student leaders were presented to Dr. Wolfson and, posthumously, to Dr. Felix S. Cohen, lawyer, writer, teacher, champion of the rights of the American Indian. President Meany delivered a valuable address on the Challenge of International Communism, while Senator Morse urged that the country’s legislators be kept better informed on the international situation.

The conference throughout was one of a highly educational character.

Pamphlets.—The LID has long been famous for its popular yet scholarly pamphlets on social and economic problems which are used extensively by labor education, labor, and civic groups.

The league has high standards for its educational pamphlets. It has an excellent pamphlet committee of which Mrs. Katrina McCormick Barnes (daughter of the late Senator Medill McCormick and the late Ruth Hanna McCormick), is secretary.

The committee carefully considers each manuscript, edits it for accuracy and language, and plans the pamphlet series. On the other hand, while endeavoring to choose authorities on particular subjects to prepare the pamphlets, the opinions expressed by the authors are their own and do not necessarily reflect the official point of view either of the pamphlet committee or of the league. In this respect, it is similar to the average book-publishing house.

During the last 2 years, the league has published a number of informative, educational pamphlets:

The Right To Make Mistakes, by George S. Counts, professor of education, Teachers College, Columbia—an examination of the errors in judgment of public figures in the last decade or so on domestic and international policy, and a plea for tolerance toward honest error and for freedom of inquiry and thought as an essential to the democratic way of life.
National Health Insurance and Alternative Plans for Financing Health, by Seymour E. Harris, professor of economics, Harvard University, a scholarly analysis of the economic and social problems involved in health insurance, national, and voluntary, by an economist who has given much thought to the problem of social security. The titles of the chapters indicate the types of problems dealt with: Chapter I—The Issues; Chapter II—The Cost of National Health Insurance; Chapter III—Can We Afford National Health Insurance?; Chapter IV—Insurance and Availability of Medical Resources; Chapter V—The Supply of Physicians; Chapter VI—The Problem of Financing the Medical Schools; Chapter VII—Voluntary Insurance; Chapter VIII—Voluntary Insurance Versus Federal Insurance; Chapter IX—Unresolved Issues; Conclusion; Postscript; Report on President’s Commission.

The pamphlet has a foreword by Alfred Baker Lewis, president of the Union Casualty Co., and is carefully documented. The pamphlet has been praised for its scholarship and keen insights.

Taft-Hartley Act in Action, by Jack Barbash. In this pamphlet, Mr. Barbash, formerly research director of the United States Senate Subcommittee on Labor and Labor Management, and author of Labor Unions in Action, has described the evolution of collective-bargaining legislation and the chief provisions of the Taft-Hartley Act, compared the two acts, presented criticisms of Taft-Hartley and presented a “design for Taft-Hartley changes.” The pamphlet contains an extensive list of references, and a selected bibliography. It has been described “as the best short treatise on Taft-Hartley thus far written.”

Forward March of American Labor, by Theresa Wolfson, professor of economics, Brooklyn College, and Joseph Glazer, educational director, the United Rubber, Cork, Linoleum, and Plastic Workers of America. Illustrated. This is an educational pamphlet giving a brief, concise, accurate history of the American labor movement especially prepared as an educational pamphlet for newcomers in the labor movement. It is now in its fourth printing, and is being revised and brought up to date. It has been checked and rechecked for accuracy and is extensively used by labor and educational groups.

Democratic Socialism—A New Appraisal, by Norman Thomas. A restatement by the well-known authority on American socialism of what democratic socialism is, and how its goals have been changed as a result of the economic, political, and social developments and social experiences of the past few decades. It was regarded as so valuable a contribution that, besides the press publicity, it was discussed on The Author Meets the Critic television show—the first pamphlet to be so treated.

World Labor Today, by Robert J. Alexander, professor of economics, Rutgers College. This is a careful, factual study by a student of the world labor movement of the development of the postwar labor movement throughout the world—in Western and Eastern Europe, the Middle and Far East and the Americas, with an estimate of trade-union membership, selected references and bibliographical notes.

Student activities.—The LID has continued during the year its educational activities on college campuses. The league since its foundation has sought to stimulate young men and women in the colleges to obtain an understanding of the great social issues of their day, and to do their part, after their college days were over and while in college
to help in the solution of these problems. It has never sought to
commit the students to any political or economic doctrine, but has
urged them to seek their own solutions. As a believer in democracy,
it makes ineligible to membership advocates of dictatorship. Its
SLID constitution reads:

By virtue of the democratic aims of the league, advocates of dictatorship and
totalitarianism, and of any political system that fails to provide for freedom of
speech, of religion, of assembly, and of political, economic, and cultural organiza-
tion; or of any system that would deny civil rights to any person because of race,
color, creed, or national origin, are not eligible for membership. Nor are those
close who whose political policies are wholly or largely determined by the policies
laid down by the leaders of a foreign government.

The league has a proud record of achievement in helping to start
young men and women on careers of public service, as the catalog of
its former student leaders will indicate.

Of the league's educational work in the college field in the past,
Prof. George S. Counts has the following to say:

Since its founding in 1905, the League for Industrial Democracy, in my
opinion, has done more than any other organization in arousing the social
conscience and advancing the political understanding of students in our colleges
and universities. From the beginning it has opposed all forms of bigotry,
obscurantism, and totalitarianism and remained true to the inscription on its
masthead, "education for increasing democracy in our economic, political, and
cultural life." It is dedicated without reservation to that sublime faith in the
human mind which is the foundation of foundations of free society in all ages.

Prof. Sidney Hook, chairman of the department of philosophy,
New York University, has written recently:

The SLID has been one of the most fruitful forms of extracurricular educa-
tional activity on the campus. It has supplemented, and sometimes supplied
where it was missing, the intellectual stimulus and motivation to explore the
problems of social philosophy and organization in the liberal arts college.

During the past year, James Farmer, the Student League's field
secretary, visited many college campuses, lectured on labor and social
problems before assemblies, college classes, and student groups, and
organized college discussion groups. Mr. Farmer, as is indicated by
the letters which the league receives, is noted for his knowledge of
social and labor problems, his clarity of expression, and his educa-
tional approach.

The following was received from a member of the faculty at
Central Michigan College:

I should like to express my appreciation and that of my students, for the
excellent talks presented for us by Mr. James Farmer, of your organization.
Mr. Farmer exhibited a degree of command of his subject and of control of
his audience that is rarely combined in one individual. He appeared to be
"up" on the best relevant sociological knowledge, and was able to present it in
a thoroughly stimulating manner.

A professor of sociology of an Indiana college writes:

James Farmer has just left for Chicago. He did a superb job on this campus
in the course of 2 days. His chapel address was enthusiastically received by
students and faculty alike and his talks in our classes were equally effective.
Only a talented, dedicated person could speak so many times in so short a
period and scarcely repeat himself.

Please know how grateful I am to you and the LID for making it possible
for Mr. Farmer to visit our campus. His message is urgently needed.
From an associate professor of Christian ethics, University of Southern California.

I am glad to supply my reactions to the address by James Farmer to our students. Mr. Farmer did an excellent job of summarizing some of our basic contemporary problems and of stimulating thought aimed at a constructive conclusion. His ability at analysis and careful clear presentation is marked. I hope that you will continue to use him in situations which utilize his outstanding talents.

A partial list of lectures given by Mr. Farmer this last year appears on accompanying sheets.

The SLID, in its various college chapters, emphasizes democratic, undogmatic discussion, and does much to stimulate debates and symposia where different points of view are represented. Thus the Yale John Dewey Society, a branch of the SLID, this spring held a debate on compulsory health insurance. Dr. D. Olan Meeker, chairman of the committee on national legislation of the Connecticut State Medical Society, opposed a system of national health insurance, while Dr. Theodore Sanders, of New York, a member of the executive board of the Committee for the Nation's Health, favored it.

The chapter also arranged a debate between Mark Starr, labor educator, and John Welch, assistant treasurer of a local textile company and consultant on labor relations on "Are trade unions too powerful?"

Its last meeting this spring was a panel discussion on Indochina, with a number of different points of view represented by Prof. Walter Sharp, director of graduate studies in international relations, Yale; N. Duc Thanh, president of the American Vietnamese Foundation; Jean Levy, a French Fulbright student; Stephen Reid, director of southeast Asian studies, and Milton Sacks, assistant in research in southeast Asian students. Another meeting was addressed by Norman Thomas.

Following each lecture, debate, and panel discussion, students and faculty are invited to participate. E. Wright Bakke, professor of economics; Brand Blandshard, professor of philosophy, and Prof. Carlton R. Rollins are faculty advisers.

The strictly educational character of the student LID is also indicated in the roundtable discussion in this May 7 and 8 SLID conference on The Patterns of Social Reform in North America, at the center of the Carnegie Endowment for International Peace. At this conference the students selected as topics for discussion, Social Reform and the Conflict of Rural and Urban Values, The Role of the Trade Unions in Social Reform, and Social Reform and the Communication of Ideas. Among the participants in these roundtables were C. Wright Mills, associate professor of sociology, Columbia University; Daniel Bell, labor editor of Fortune; Felix Gross, associate professor of sociology, Brooklyn College, and professor of public affairs, NYU; Mark Starr, educational director, ILGWU, and co-author of Labor in America; S. Martin Lipsit, associate professor, Columbia; Thomas Brooks, assistant trade union editor; Colin Cameron, Canadian member of Parliament, and several students. The discussions were informal, and no resolutions were passed.
During the winter and spring of 1953-54 in New York, the student members of the LID organized a number of meetings dealing with democratic developments in specific countries in Europe, Latin America, Africa, and Asia, addressed by Dr. Robert J. Alexander, of Rutgers; Joseph Monserrat, director, New York office, Puerto Rico Department of Labor; S. Atmono, of the Indonesian consulate; and others, including some graduate students.

This summer the student LID is organizing a tour to Saskatchewan, Canada, to study the farmers' cooperative movement and the activities of the CCF government; is sending student helpers to the CIO Institute at Port Huron, Mich., and scholarship students to the Summer Institute for Social Progress at Bard College, and is organizing an educational conference near Peekskill, N. Y.

City chapters.—The LID also organizes and conducts city branches, of which the New York chapter is the largest.

The meetings and affairs of the chapter during the last year were in brief as follows:

February 8, 1953: Award to Charles Abrams, housing expert. Speakers: Supreme Court Justice Bernard Botein; Helen Hall, director, Henry Street Settlement; Stanley M. Isaacs, member New York City Council; Alvin S. Johnson, president emeritus of the New School; Lee Johnson, executive vice president, National Housing Conference Theodore McGee, chairman of the Columbus, Ga., Housing Authority; William C. Vladeck, president, Citizens Housing and Planning Council; Walter White, secretary, National Association for the Advancement of Colored People; Benjamin Naumoff and Dr. Harry W. Laidler, chairmen.

The March 1953 programs dealt with Crime, Health, and Welfare in New York City. Among participants were Dr. George Baehr, president of the Health Insurance Plan of Greater New York; Henry L. McCarthy, commissioner of welfare, New York; Helen Harris, executive director, United Neighborhood Houses; Dorothy Dunbar Bromley, radio commentator; Dr. Ernst Papanek, director of Wiltwyck School; and Benjamin Naumoff, president of the chapter.

June 20, 1953: The Crisis in the U. N. Speaker: Clark M. Eichelberger, national director, American Association for the U. N. (at garden party).

October 14, 1953: The Struggle for Democracy versus Totalitarianism in Europe and Latin America. Participants: Amicus Most, formerly chief of the Industry Department, ECA in Germany; M. J. Coldwell, Member of Parliament of Canada; Jacques de Kadt, Netherlands, Member of Parliament; Serafino Romualdi, AFL representative in Latin America; Norman Thomas, chairman.

November 14, 1953: Tour of chapter members to U. N.

November 15, 1953: Recent Developments in Britain. Speaker: Austen Albu, Member of Parliament, president Fabian Society, and former deputy director, British Institute of Management.

December 11, 1953: Annual awards of chapter. Presentation of citations to George S. Counts, professor of education, Teachers College, Columbia; and Dr. Abraham Lefkowitz, principal, Samuel Tilden High School "for their outstanding contributions to education and civic progress." Drs. Counts and Lefkowitz delivered addresses, respectively, on The Right To Be In Error and on The Menace to Freedom. The award to Dr. Lefkowitz was given by Dr. William
Jansen, superintendent of schools, New York, and to Dr. Counts by Dr. George E. Axtelle, professor of education, NYU. Other participants were Dr. John L. Childs, professor of philosophy of education, Columbia; Dr. William H. Kilpatrick, foremost American educator; Mark Starr, labor educator, and Rebecca C. Simonson, teacher and vice president, American Federation of Teachers.

January 30, 1954: Tour to International Center of Carnegie Foundation and to Gold Coast Exhibition.

February 11, 1954: Cross Currents in Israel, Egypt, and the Far East. Participants: Prof. George E. Axtelle, recently returned from Egypt; and Louis Yagoda, former chief of CARE Mission in Israel.

May 12, 1954: Reception to Margaret Cole, author, member London County Council, honorary secretary, Fabian Society.

The chapter also held monthly radio programs over WEVD on economic, social, and civic questions.

The league stimulated much research during the year in connection with its meetings, radio broadcasts, and pamphlets and served as an informal information center on economic problems.

I have carefully read the report of Mr. Ken Earl on the League for Industrial Democracy, and the discussion before your committee on that report.

May I try to appraise both the report and Mr. Earl's observations before the committee. In the first place, there is an assumption throughout Mr. Earl's discussion that if an organization deals with economic, social, or political problems the solution of which necessitates legislative action, such discussion is political rather than educational.

On page 1748 of the report of the committee's discussion, Mr. Earl, for instance, mentions the fact that Dr. I. S. Falk, Director of Research and Statistics of the Social Security Board, gave a talk at our 1943 conference on the system of social insurance in this country and asked that it be strengthened. The address did not advocate the passage of any specific piece of legislation.

Mr. Earl remarks that he is not arguing whether the system of social insurance should or should not be strengthened, but that social insurance was a political subject, and thus, by implication, should not be discussed by an educational body.

The Moses Lake attorney infers the same thing about the items mentioned in the league's executive director's report in early 1953, in which, without mentioning any bill before Congress, or without engaging in any type of lobbying, the executive director enumerated some things that he believed should be considered in the field of conservation, social security, labor legislation, economic stability, housing, education, civil liberties, racial relations, corruption, foreign policy, trade unionism, and cooperation.

If, of course, the discussion of economic and social problems ceases to be educational because these problems have, in part, to find their
solution in some type of legislative action, all courses in political science, economics, and sociology given in college would necessarily be regarded as political, not educational, for today, with legislative and governmental bodies passing legislation on all matters that concern the life of the community, there is no question that does not have a political angle. If a college course or an educational organization deals with corporations, the professor must discuss antitrust and regulatory legislation. A discussion of trade unions and labor problems necessarily involves a discussion of collective-bargaining legislation. A course or conference on the problem of economic stability, must, unless the discussion deals with pure theory, bring in the question of public works, social-insurance legislation, governmental financial controls, taxation, minimum wages, tariffs, international cooperation, political alignments, and a host of other problems that have political overtones and are subjects of legislation. A course on or discussion of comparative economic systems must, to be complete, involve the question as to how one economic order, through democratic legislative process, might evolve to another economic order. The discussion does not cease to be educational in the sense of the provisions of the internal revenue law, if it is directed to the enunciation of principles and procedures which may sooner or later be incorporated into the law of the land. Otherwise all courses in college dealing with the social sciences would have to be regarded as political, not educational, in their nature, and the college would, by that token, cease to be educational, at least insofar as the teaching of the social sciences was concerned. The same thing could be said about very many tax-exempt organizations interested in one or more social abuses which require legislation to correct.

Of course the educational character of the colleges and of the courses they give in the social sciences has long since been established, and such discussions cannot be regarded as educational if they are held in our colleges, and political if they are held at meetings or in publications outside of academic halls. The books and pamphlets published by the league that are used in college courses cannot be regarded as educational in the classrooms and political in LID groups.

Mr. Earl’s charge against the league that it is primarily political, not educational in its nature is vitiated not only by his too restricted definition of education, but by a number of other false assumptions and techniques, the use of which in a college essay would, I fear, have been severely criticized in any class.

I. False assumption No. 1: The first false assumption is that the activities and point of view of an educational organization in 1954 can be judged by its alleged activities 22 years before. Instead of analyzing the league’s activities during the past season, Mr. Earl, near the beginning of his 39-page report, devotes 9 pages to expressions of opinion of a student magazine issued in 1932, the assumption being that these opinions represent those of the LID in the year 1954.

The extremely small degree of merit in this assumption is indicated by the following facts:

(1) First, that the publication referred to, Revolt, was not edited or published by the league proper, but by the Intercollegiate Council which had its own executive committee, and the league assumed little or no responsibility for its editorial policy;

(2) Second, that the Intercollegiate Council, while providing a free forum for the discussion of social problems by students and
others, did not hold itself responsible for all of the conflicting opinions expressed in its magazine;

(3) Third, that the stated object of the league was a different one in 1954 than in 1932, the league members having changed that object in 1943 from “education for a new social order based on production for use and not for profit” to “education for increasing democracy in our economic, political, and cultural life”; and

(4) Finally, that the economic and psychological situation in 1932 differed widely from the situation today, as was so vividly brought out by Congressman Hays and others at the hearings of June 15 and 16. In 1932, the country was in the midst of the greatest depression in its history; hundreds of thousands of white-collar workers, including many college graduates, were unemployed; many banks were closing up; the Government seemed to be doing little to grapple effectively with the unemployment problem, and many economists and others were predicting that the economic order was on the verge of collapse.

Moreover, the rising tide of fascism and nazism in Germany due, in part, to the great insecurity of white-collar and industrial workers after World War I, inclined many young people to think that, unless something was done in America to give employment to millions of jobless, fascistic demagogues might arise in this country.

The social reforms of the thirties and the preparations for war and World War II in the late thirties and early forties eliminated mass unemployment, and many of the fears of college students and others entertained in 1932 were found to be groundless. The young writers revised their economic and social outlook, and several of them became distinguished and most valuable public servants. It might be interesting in this connection that one of the writers for the September 1932 issue of Revolt, which Mr. Earl failed to mention, was J. B. Matthews, who soon after took a turn to the left, followed by one to the right.

II. A second assumption of Mr. Earl which has little or no validity is that the expressions of opinion on an international problem by 1 of the 75 members of the board made a decade ago—even an opinion at wide variance with that which the member holds today—necessarily reflects the opinion today of the LID. Mr. Earl has devoted 2 1/2 mimeograph pages (pp. 20-22) to Alfred Baker Lewis’ Liberalism and Sovietism. The pamphlet was not published by the LID, but by another anti-Communist organization. It gives a graphic account of the rising imperialism of Russia, as shown in its policy in Iran, the Balkans, Manchuria, and so forth, declares that “totalitarian dictatorships such as Russia are aggressive, that appeasement will not work, and that liberals should not form a united front with Communists. Toward the very end, however, Mr. Lewis expresses the hope that Russia’s imperialism may conceivably be less aggressive in the future.

Mr. Lewis was too optimistic concerning the possibility in the commensurate future of Russia’s dropping an aggressive policy. He was not so optimistic as General Eisenhower appeared to be on June 15, 1943, when he declared in Paris at a press conference, “There is nothing in my experience with the Russians that leads me to feel that we can’t cooperate with them perfectly,” and when, in November 1945, he sent a letter of good will to the National Council of American-
Soviet Friendship wishing it "the utmost success in the worthy work it has undertaken," but more optimistic than events have shown was justified and his position is of course a different one today. However, whatever position he took in 1946 was quite irrelevant to Mr. Earl's thesis, since the pamphlet was not an LID publication and the league was not bound by it. No one in his right mind could claim that an organization in which General Eisenhower functioned in 1945 was today bound by the opinions which he expressed 9 years ago on our future relations with Soviet Russia, opinions which he now finds to have been unjustified by recent events.

III. Another assumption of Mr. Earl that has little validity is that scattered excerpts from pamphlets published by the LID and of speeches delivered at league conferences necessarily portray the true character of the entire pamphlet or speech.

Many readers of these excerpts, I fear, would obtain an entirely false impression of the educational character of much of the league's literature.

The paragraphs devoted to the pamphlet, Toward a Farmer-Labor Party, published in 1938, but now practically out of print, gave little indication of the educational character of this pamphlet—its factual information on the history of minority parties; the reasons for their successes and failures; the problems confronting them; the concrete developments in farmer-labor political action in the late thirties in numerous States in the Union and the forces for and against their development, followed by a carefully selected bibliography. Nor do the excerpts on Russia—Democracy or Dictatorship? give any concept of the carefully checked facts presented in this pamphlet by Dr. Joel Seidman, now of the economics department of the University of Chicago, and Norman Thomas, on the Soviet dictatorship, facts gathered from many sources with infinite patience and industry at a time when such facts were difficult to gather. The pamphlet presents one of the most unanswerable indictments of Soviet dictatorship appearing in pamphlet form up to that time, but the excerpts printed give little indication of the true character of this pamphlet. The same is true of the paragraphs presented in the report culled from the pamphlet, Toward Nationalization in Industry. The reader of the report is given little idea of the factual material presented from authoritative sources on the industries discussed, and the arguments that are marshaled.

It might be added that all of the above pamphlets just referred are practically out of print. The league would like to revise them thoroughly in the light of recent developments, but unfortunately has not had the finances to prepare and publish such revisions.

Mr. Earl tries another technique when referring to the league's most popular pamphlet among trade unionists, The Forward March of American Labor. He does not criticize any of the facts given in this brief and popular history of the trade-union movement of the United States written by Dr. Theresa Wolfson, professor of economics, Brooklyn College, and by Joseph Glazer, educational director of a labor union—a pamphlet found most educational particularly by newcomers in the labor movement and by introductory students of labor.

Here Mr. Earl seeks to discredit the pamphlet by declaring that it possesses a "remarkable series of cartoons which, in the year 1953,
strike an impartial reader as a crude effort to discredit today's business
with faults long since corrected."

After reading this criticism, I reviewed the cartoons and found that
each one referred to a certain period in the development of labor; were
true of conditions in that period and made it evident to the ordinary
reader to what decade it referred. Thus the first cartoon, dealing
with child labor, and portraying a child worker and an employer,
reads, "Two-fifths of all the people employed in Massachusetts in 1832
were under 16." The second said, "Workers demanding tax-supported
schools were stoned in Boston in 1830." The third presented a picture
of Abraham Lincoln, father of the Republican Party, and a quotation
from him, "If any man tells you he loves America, yet hates labor, he
is a liar. If any man tells you he trusts America, yet fears labor, he
is a fool."

In practically every cartoon, the dates are given. Only two car-
toons referring to conditions in the 20th century present pictures of
employers. One deals with the use of detective agencies, with a cap-
tion, "The General Motors Corp. and its divisions spent $994,885 for
detective agency services from January 1934 to July 1936." The text
makes it clearly evident that practices of that type have largely dis-
appeared as a result, by the way, of the constant fight against it by
hosts of Americans, including members of the LID working in trade
unions and through educational and political channels. Another
deals with the rise in corporate profits from 1936 to 1944. The car-
toons, drawn by Bernard Seaman of the Hat Worker, are throughout,
I believe, fair to the spirit and condition of the times.

IV. A fourth assumption of Mr. Earl seems to be that one way of
discrediting a conference of the league is to make a broad generaliza-
tion as to the alleged political composition of its participants. Thus,
in characterizing the league’s conference at the Hotel McAlpin in 1943,
he declares:

The conference • • • brought together a number of labor leaders, Socialist
professors, and foreign politicians. They met to emphasize the need for postwar
planning if the free world was to be spared mass unemployment and depression.
The presence of so many Socialist leaders from abroad emphasized the reality of
the world movement against capitalist society, a movement in which allies join
hands across national frontiers to combat their own countrymen.

After reading these sentences, I glanced again over the participants
of the conference, which was devoted to a discussion of The Third
Freedom: Freedom from Want. I find that the Right Honorable
Arthur Greenwood, who, when member of the British war cabinet,
had initiated the preparation of the Beveridge report on social in-
surance, had broadcast from Great Britain a short message in which
he had declared that—

Freedom of the spirit is mankind's greatest need and dearest hope. We must
preserve that spirit. We must also free mankind from want. Broken, beaten,
impoverished, and underfed bodies, wracked by physical suffering and tortured
minds, are not worthy temples of the human spirit.

We also had a short address by the Honorable Margaret Bondfield,
the first woman Minister of Labor in Britain, on The Beveridge Plan
and International Trade. Miss Bondfield, who happened to be in this
country at the time, was the only foreign Socialist leader present at
and participating in this conference, and was invited because of her
intimate knowledge of the British social insurance system. A Professor Underhill, professor of history at the University of Toronto, was, it is true, a member of the Canadian Cooperative Commonwealth Federation, but was hardly one of its political leaders. Of the 27 participants in the conference discussions, not more than 1 chanced to be a member of the Socialist Party of the United States as far as I am aware. Practically all were Government experts on social insurance, college professors, labor, social welfare, and church leaders. All except 1 of the 27 participants dealt with the immediate questions involved in bringing about greater social security. One of the twenty-seven presented the claims of democratic socialism to a round-table audience. Not one urged the passage of a particular bill before Congress. The discussion was in general of a high order.

It would have been difficult for Mr. Earl to have found the contingent of Socialist leaders from abroad. On the other hand, Mr. Earl would have found as speakers a number of distinguished students of the problem of economic security, including, outside of Miss Bondfield, Dr. Carter Goodrich, professor of economics, Columbia University, and the chairman of the governing body, International Labor Office; Dr. Eveline M. Burns, then Director of Research, Security, Work, and Relief Policies, National Resources Planning Board, and author of an authoritative volume, Toward Social Security; Dr. L. S. Falk, Director, Bureau of Research and Statistics, Social Security Board; Henriette C. Epstein, vice president of the American Association of Social Security; Dr. Arne Skaug, Director of the Norwegian Government Disability Service, and then teaching at the University of Wisconsin; Donald H. Davenport, Chief of the Employment and Occupational Outlook Bureau of the United States Department of Labor Statistics; Alfred Baker Lewis, now president of the Union Casualty Co.; Donald S. Howard, assistant director of the charity organization department of the Russell Sage Foundation, and author of The W. P. A. and Federal Relief Policy; Dr. Herman A. Gray, then chairman of the New York State Unemployment Insurance Advisory Committee; E. J. Coil, director of the National Planning Association; Charles Abrams, housing expert; Ellis Cowling, educational director of the Consumers Cooperative Services; Charles C. Berkley, executive director of the New York Committee on Discrimination in Employment; F. Ernest Johnson, executive secretary, department of research and education, Federal Council of Churches; Rabbi Ephraim Frisch, former chairman, commission of justice and peace, Central Conference of American Rabbis; Leroy E. Bowman, now professor of sociology, Brooklyn College; Robert J. Watt, international representative, AFL; R. J. Thomas, then president of the UAW-CIO; Nathaniel M. Minkoff, secretary-treasurer, New York Joint Board ILGWU; Prof. John L. Childs, profession of philosophy of education, Teachers College; Mark Starr, labor educator; Jack Barbash, then of the staff of the United States Office of Education, and others.

Mr. Earl, in the final pages of his report seems to object to the LID because, according to him, it is continuing “to fill the air with propaganda concerning socialism” and “stumping for certain legislative programs.” Though the LID believes that an educational program which gives the truth about socialism is in every sense legitimate, the picture of conferences of the LID painted by Mr. Earl is, it seems to me, a far cry from the type of conferences which the LID is holding.
This holds true of the picture given by the attorney from Moses Lake, Wash., of the Conference on World Cooperation and Social Progress in 1951. There were many educational papers on the overshadowing problem of international cooperation presented at that conference: one by H. L. Keenlyside, Director General on the Technical Assistance Administration of the U. N.'s technical assistance program; Dr. Selman A. Waksman, Nobel prize winner in medicine, co-discoverer of streptomycin and incidentally one of the former student leaders of the LID while a student at Rutgers, on the World Health Organization; by William Green, president of the AFL, on what labor had done for international cooperation; by M. J. Coldwell, member of the Canadian Parliament, on the Colombo plan; by Paul R. Porter, Assistant Director of the ECA on international action against inflation and scarcity of raw material, and by Dr. Boris Shishkin, chief economist of the AFL, on the Marshall plan, delivered after Dr. Shishkin has spent 2 years in France in connection with the plan.

V. A fifth assumption of Mr. Earl seems to be (pp. 13-14 of his report) that, when the league grants a citation to a Democratic Socialist, this presentation carries with it proof of the league’s commitment to a particular political doctrine advocated by the award winner. Mr. Earl quotes the league’s citation to Premier T. C. Douglas of Saskatchewan with a view, I assume, of proving this point.

However, in the course of the last few years, the league has presented awards to men and women long associated with the Democratic, Republican, Liberal, and Socialist Parties, and to those independent of any party; to stated believers in free enterprise, and to advocates of democratic social planning. The league has not asked what politics the receiver of the award had, but what he had accomplished in advancing the democratic ideal. No one maintains that the presentation of honorary degrees by colleges and universities carries with it a commitment by the university to the point of view of the recipient. The same should be true of an award presented by educational societies of the type of the league.

VI. A sixth assumption of Mr. Earl seems to be that, somehow or other, the discussion of socialism and fundamental social change is not appropriate to an educational, tax-exempt society, a point of view again which the United States Circuit Court of Appeals and the Bureau of Internal Revenue have failed to share with him.

That assumption has likewise long been repudiated by economists and social scientists and by the great educational institutions of the country. For whether we like it or not, various types of Socialist thought and movements—Utopian, Fabian, Marxian, revisionism, et cetera—have had a great influence on the intellectual, the economic, and political life of the world. They have profoundly affected economic thought, historical interpretation, industrial motivations, immediate and far-flung social changes, and political institutions throughout the world. The Socialist movement is a significant one in most countries in Western and Central Europe with which the United States cooperates in opposition to Communist aggression and in defense of democracy. It is difficult, indeed, for a person in public life today to do his full part in dealing constructively with domestic and international problems without an understanding of socialism as a theory and as a movement, and of the differences between democratic
socialism, capitalism, communism, fascism, and other systems of thought and action.

That organization is doing a service to the community which seeks, among other things, to promote such an understanding.

Courses on various aspects of Socialist thought and action have been given for a half-century in scores of colleges throughout the country, and have universally been regarded as having a legitimate place in college curricula.

VII. Throughout Mr. Earl's report there likewise seems to be a feeling that it is somewhat un-American and uneducational to discuss the problems of public versus private ownership of enterprises and services. However, ever since the beginning of this country, the city, State, and Federal Governments have assumed greater collective responsibility in the fields of education, health, social security, conservation, et cetera, as a means of meeting certain popular needs, and there is an increasing need for analyzing present-day ventures in public control and ownership, of studying what types of controls to avoid in the future, and what types to encourage. Freedom of inquiry and expression on these controversial problems is of vital importance to our evolving democracy.

VIII. Finally, Mr. Earl seems to assume that it is uneducational to help to form and develop free forums for the free discussion of controversial problems in our colleges and universities, and that, if such forums are formed, the organization sponsoring them must necessarily assume responsibility for the opinions expressed in the student discussions.

However, the great need of our time is the stimulation of hard thinking and courageous expression of opinion on our burning social problems. America has become great because of the fact that, by and large, the expression of conflicting points of view on both technical and social problems has been encouraged, not discouraged, and today the problem of keeping our social engineering space with our technological development makes such freedom ever more important.

Yet, many educators have expressed in recent days a great fear that freedom was now being unduly restricted in many institutions of learning. Dr. Martin Essex, chairman of the committee on tenure and academic freedom of the National Educational Association, recently declared, after an extensive survey, that many faculty members are afraid to express themselves freely on the controversial issues of the day, that freedom to learn is today at a low ebb, and that "we are moving dangerously toward a sterile education." In this situation, the educational activities of the league are more necessary from the standpoint of our evolving democracy than ever before. It is likewise more necessary than ever to realize that no organization developing forums can be responsible for all of the opinions freely expressed therein. If this responsibility were assumed, freedom of speech in such forum would be dead.

DETAILED CRITIQUE OF MR. EARL'S REPORT

Commenting more specifically on some of the observations of Mr. Earl in his report and discussion at the hearings, may I make the following observations:
1. ISS: A study organization.—As Mr. Earl states, and as the LID proudly proclaims in its literature, the League for Industrial Democracy is the successor to the Intercollegiate Socialist Society, popularly known as the ISS. Mr. Earl rightly declares that this organization, formed as a result of a call by a distinguished group of writers and publicists, including Jack London, Upton Sinclair, J. G. Phelps Stokes, Clarence S. Darrow, and Thomas Wentworth Higginson, “the grand old man of Harvard,” had as its object “to promote an intelligent understanding of socialism among college men and women.” It should be added that the society was purely a discussion and study organization connected with no political party. It always made it perfectly clear that membership in it in no way committed the members to a belief in socialism. Such membership indicated merely that the member was interested in learning more about socialism and other movements for social change, or in promoting an understanding of socialism among others. The society throughout its existence contained within its ranks non-Socialists and anti-Socialists as well as Socialists.

That this pioneering educational society was a vital force for good in stimulating hard and constructive thinking on the social problems of the day is attested by the number of the former student leaders who later distinguished themselves for their service to the community in the fields of business, labor, education, and government. On the completion of the society’s 20 years of activity—16 under the name of the ISS, and 4 as the League for Industrial Democracy—Prof. A. N. Holcombe, professor of government, Harvard University, and later president of the American Political Science Association, wrote:

During the 16 years that I have been teaching economics and political science at Harvard, no organization has done so much as yours to stimulate a sympathetic interest in contemporary economics and political problems on the part of students and to direct their private studies into fruitful channels.

Dr. Harry J. Carman, professor of history and later dean of Columbia University and member of the New York City Board of Higher Education, declared in a letter to the executive director:

I have followed your work for a number of years; first as the Intercollegiate Socialist Society, and later as the League for Industrial Democracy, and I know that you have accomplished splendid results in an educational way. Despite our boasted progress, we are still ignorant, narrowminded, and, above all, intolerant. Anything which will tend to break down these barriers to real progress, cooperation, and human happiness, is decided worth while, and that, as I see it, is the kind of endeavor in which the League for Industrial Democracy is engaged. My heartiest congratulations and hope for your continued success.

Similar statements were made by Profs. Edwin R. A. Seligman, of Columbia, and John B. Commons, University of Wisconsin, past presidents of the American Economics Association, and a host of leading educators.

The fact that the LID began, therefore, as the ISS should in no way carry with it the inference that the league’s background was political. It was an educational society, and entirely independent of any political party, or of commitment to any specific social doctrine.

Articles in 1932 college paper.—Following his reference to the organization in 1905 of the ISS, Mr. Earl, on pages 3 to 11 of his report, proceeds to the year 1932, and discusses the articles in a small magazine, Revolt, which appeared for two issues in September and
December 1932 and was edited and published by the intercollegiate council of the league, not the general society. The LID as such assumed no responsibility for its editorial policy, and neither the league nor the intercollegiate council were responsible for the opinions contained in the articles appearing in its pages. The council felt that it was performing a useful function in providing a free forum for the expression of opinion of college students and others on the important social problems of the day.

The articles were written at a time when the stated object of the league differed from the present object and, as has been before stated, in the midst of a severe economic depression. They have no relevancy to today's educational activities of the league. Nor has the program of action mentioned by Mr. Earl, formulated by a number of students at two informal student conferences of the general society, any relevancy.

League organization and other educational activities.—Pages 11–13 of Mr. Earl's report deals with the 1950 conference of the league on Freedom and the Welfare State.

Mr. Earl quotes here a statement by the executive director of the league, and comments on that portion of the report that states that the league is organizing branches, conducting conferences, and scheduling lectures in the colleges, activities which the United States Court of Appeals in the Weyl v. Commission of Internal Revenue decision regarded as legitimate functions of an educational tax-exempt society. Mr. Earl, however, seems to look upon these activities as outside the scope of those of tax-exempt associations. We join with the United States Circuit Court of Appeals and educators generally in disagreeing with Mr. Earl.

How else, it might be asked, in response to Mr. Earl's position, can an educational society carry its information and ideas to the public than through the written and spoken word? And what is there non-educational in the formation of study groups and the enlargement of its individual membership through which such information and ideas may be given circulation? Colleges do not cease to be educational because they organize classes and student clubs. The very process of forming and running a democratic organization on or off the campus for the discussion of important public issues is, moreover, an educational process and the league has helped through its college and city chapters to educate large numbers of young men and women in active, constructive, democratic citizenship and leadership.

If all nonprofit organizations were to be denied tax-exemption for organizing branches, publishing literature and arranging lecture trips, few tax-exempt organizations would continue in existence.

The 1950 Conference on Freedom and Welfare State thoroughly educational.—Following Mr. Earl's comment on the remarks of the executive director at the 1950 Conference on Freedom and the Welfare State Mr. Earl quotes from some of the addresses of the speakers.

In doing this, he applies a technique similar to that used in describing the 1943 Conference on the Third Freedom—Freedom from Want, mentioned in previous pages under assumption No. IV. He mentions but a few of the articles and addresses presented at the conferences and selects out of their context a few paragraphs from a few addresses which, in his opinion, express an extreme point of view, thus tending

---

1 Ibid., pp. 756 et seq.
to leave in the minds of the investigating committee an unbalanced and distorted picture of the conference.

As participants in this 1950 conference to discuss Freedom and the Welfare State, the league presented to the luncheon and round table audiences Senator Herbert L. Lehman, to whom an annual award was presented; Oscar R. Ewing, Administrator, Social Security Agency; George Meany, then secretary of the A. F. of L.; Walter P. Reuther, president, UAW-CIO; Dr. Eveline M. Burns of the New York School of Social Work; Corley Smith, economic and social counselor, United Kingdom delegation to the U. N.; Margaret Herbison, Member of Parliament and Under Secretary of State for Scotland; Charles Abrams, housing expert; Prof. Sterling Spero, professor of public administration of the graduate division for training in public service, NYU; Norman Thomas, chairman, Post War World Council; John Roche, assistant professor of government, Haverford College; Bryn J. Hovde, then president of the New York School for Social Research; Israel Feinberg, vice president of the International Ladies’ Garment Workers, and Toni Sender, labor representative to the U. N. Economic and Social Council.

The formal speakers and informal participants from the floor were, for the most part, men and women who from their positions in education, labor, government, and the professions had an intimate knowledge of the issues discussed.

From the conference discussion, Mr. Earl selected a few paragraphs contained in the addresses of Messrs. Ewing, Reuther, Feinberg, and Thomas, and made the comment that “Both Mr. Ewing and Mr. Reuther seemed to feel that the real threat to America was from ‘reactionaries.’” President Reuther did see as dangers to our economy “the blind forces of reaction,” and maintained that, if reaction led to a depression, the Cominform would be provided with a powerful weapon with which to fight western democracy. The quoted paragraphs which most Americans I believe, would wholly or in large part agree, were but a part of addresses which emphasized the positive values of constructive welfare legislation, and urged a program in behalf of greater security and abundance. Mr. Ewing reaffirmed in his talk his belief “with all my heart that our American system is the best that man has so far devised.” But he declared that it was not perfect and that it could be made better. He recalled that—an hundred years ago those who opposed the establishment of free public schools called them “socialism” and many people shouted “socialism” when Congress set up the Interstate Commerce Commission and the Federal Reserve system, and passed the Securities Exchange Act and Social Security Act. He concluded that we must build strongly for the future in the fields of housing, labor legislation, conservation, utilization of our great sources of energy, etc.

Why Mr. Earl should think that such remarks were out of place in a free educational forum given over to the discussion of an important social problem, whether or not he agreed wholly with them, many of us fail to see.

Mr. Earl quoted the late Vice President Feinberg as urging that consumer purchase power be increased and that labor should have a greater voice in the formulation of economic decisions. He quoted Mr. Thomas as advocating more democracy in trade union administration, and the strengthening of civil liberties; as blaming the setbacks in civil liberties on “the whole Communist technique of conspiratorial
deceit,” on reactionaries, and on those politicians who seek to find an issue in a “socialism versus liberty.”

Mr. Earl might not agree with these statements, but he cannot say, merely because of his disagreement, that they have no place in an educational conference.

**Program for democracy—No advocacy of specific bills.**—On pages 14 and 15 of Mr. Earl’s report is a summary of a “program for democracy in action in 1953” presented for the consideration of the public by the league’s executive director. The program included, among other things, suggestions for labor unity; the purging of corrupt elements from business, labor, and government; a strengthened cooperative movement, a more consistent foreign policy, and programs for conservation, collective bargaining, social security, housing, civil liberties, and so forth.

It was not an official program of the board or the league’s membership; was concerned with many developments which required economic rather than political action; urged no specific bills before Congress and provided for no machinery for legislative action. It was similar to those proposed by individuals in many tax-exempt educational societies in the field of conservation, cooperation, and labor relations, and so forth, and presented a summary of issues which are discussed daily in classes of every American university and regarded as an essential part of their educational curriculum.

**Conference on Needed: A moral awakening in America; the Earl picture an unbalanced one.**—Pages 16 and 17, in discussing the league’s conference in 1952 on Needed: A Moral Awakening in America, repeats Mr. Earl’s same technique of naming only a few speakers, picking a few paragraphs out of their context, and presented a one-sided picture of the conference discussion.

It is true, as Mr. Earl states in describing this conference, that both Walter P. Reuther and James B. Carey, in discussing the activities of Philip Murray—receiver of a league award—vigorously criticized at this conference certain practices in the steel industry, where a strike was then being waged; that Dr. Abraham Lefkowitz, an educator, urged that students be inspired with the ideal of cooperation and social service—points of view which are legitimate in any educational program. It is also true that at the conference—a thing which Mr. Earl failed to mention—Wesley F. Rennie, executive director of the Committee for Economic Development, supported the thesis that American industrial and business leaders had become increasingly aware since the thirties of their social responsibility; that Charles Zimmerman, vice president of the ILGWU, urged labor to get rid of corruption within the house of labor, while Louis E. Yavner, commissioner of investigations in New York City under the LaGuardia administration; Rev. John Haynes Holmes of the Community Church, New York; Sidney Hook, professor of philosophy, NYU; Dr. George S. Counts, professor of education, Teachers College; Congressman Jacob K. Javits; former Congresswoman Helen Gahagan Douglas; public utility expert Leland Olds; James Rorty, author of Tomorrow’s Food; Mark Starr, labor educator, spoke in behalf of higher ethical standards in our political, educational, and international institutions.

No one, we believe, could attend the various sessions of the conference without realizing its unique educational values and the wide range of opinions expressed therein. And no one could read Mr. Earl’s ref-
erences to the conference without realizing how inadequate a concept any reader of these references would obtain of the league's 1952 gathering.

*LID* pamphlet on public ownership—*An educational treatise.*—In previous pages we have dealt with Mr. Earl's presentation (on pp. 16 to 20) of the executive director's pamphlet on Toward Nationalization of Industry, a pamphlet originally written in response to a request from high school debating coaches who had scheduled a discussion of public versus private ownership of basic industries among high schools throughout the country. Surely, if it is educational for the Foundation for Economic Education, a tax-exempt organization, to set forth the arguments for private enterprise in forest and public utilities, et cetera, it is educational for the league to set forth the facts which may support control by the community of specific enterprises. The presentation of the contents of this pamphlet, as I have before stated, by Mr. Earl, gives to the committee no conception of the factual nature of its contents; its careful references to over 40 authoritative sources, its selective bibliography, et cetera. Its educational character has time and time again been attested by professors of economics who have used it for collateral reading in their economics classes.

Mr. Lewis' pamphlet on Liberalism and Sovietism*—Not a league pamphlet.*—In previous pages of this statement, we have dealt with Mr. Earl's characterization of Mr. Lewis' Liberalism and Sovietism, not a league pamphlet. Of the purpose of this pamphlet, Mr. Lewis recently (July 6, 1954) declared:

This pamphlet was written some time ago, while the Progressive Party was shaping up. The pamphlet's main idea was to prevent liberals from going into the various Communist infiltrated organizations, whose stated purpose was liberal.

Since this period preceded the conviction of Alger Hiss, and the revelations concerning the Rosenbergs, a good many liberal-minded persons tended to fall for the Communist line that it was all right to cooperate with organizations with a sound stated purpose, even if such organizations had Communists in important places in them.

It was this feeling among too many liberals that I wanted to combat, and on the whole I think I have done so fairly well, if the pamphlet is read in its entirety.

Other league pamphlets—elsewhere discussed.—I have also dealt with Mr. Earl's discussion on pages 23–27 on Democracy vs. Dictatorship, The New Freedom: Freedom from Want, Toward a Farmer-Labor Party, Forward March of American Labor, and World Cooperation and Social Progress.

After commenting on the league's activities of former years, some as far back as the early thirties, it is regrettable that Mr. Earl did not give a fair-minded description of the educational activities of the last year or so, activities far more relevant to the problem which he poses than are those of past years. To these activities, Mr. Earl has seen fit to devote but 10 lines.

The summary of the league's 1953–54 activities is, therefore enclosed.

*Gaps in report.*—Finally, Mr. Earl's report is as conspicuous for what it leaves out as for what it includes.

The Washington State attorney, for instance, has nothing to say concerning the research activities of the league during the years, which have been the basis for much of its book and pamphlet, its lectures, and other educational activities.

1 Ibid., pp. 767, 768.
2 Ibid., p. 771.
3 Ibid., p. 773.
One of the volumes made possible through the efforts of the league was Social Economic Movements, a college textbook on comparative economic systems, which was used in past years as a text in some 40 institutions, which was republished in Great Britain, and which was regarded by Wesley C. Mitchell, late president of the American Economics Association and director of research of the National Bureau of Economic Research, as—

the most comprehensive survey of plans for bettering social organization that I have ever seen. The book is one that the world much needs and I hope many people will read.

The book, writes Prof. Louis M. Hacker, dean of the School for General Studies—

is amazingly complete; both trustworthy and a very useful handbook.

Similarly the books made possible by the league on Power Control, A Program for Modern America, Concentration of Control in American Industry, and its many symposia, have received high praise for their scholarship and accuracy.

A careful analysis of the league’s conferences, its popular and scientific pamphlets, and so forth, instead of the hop, skip, and jump method of research observed in Mr. Earl’s report would give a more accurate idea of the league’s educational accomplishments.

I, Harry W. Laidler, being first duly sworn, on oath declare that I have prepared the foregoing statement; that it is true and correct with respect to those matters stated upon personal knowledge and with respect to those matters not stated upon personal knowledge, it is true to the best of my knowledge and belief.

HARRY W. LAIDLER, Executive Director.

Sworn to before me this 14th day of July 1954.

MURIEL J. COMBERBATCH,
Notary Public State of New York.

Term expires March 30, 1954.

STATEMENT SUBMITTED BY THE AMERICAN COUNCIL OF LEARNED SOCIETIES

This statement is submitted by the American Council of Learned Societies in accordance with the procedure established by the committee and communicated to the council by telephone to its counsel on July 8, 1954.

In the preliminary reports prepared by the staff of the committee and in the testimony taken in open hearing by the committee, interest and concern were expressed in the activities of the council. Without directly and specifically charging any improper activity, the reports and testimony strongly implied that this organization, together with others, has engaged in some kind of conspiracy with the foundations, and that it has acted as a “clearinghouse” for the development and propagation of ideas that are in some indefinite way not consistent with our form of government.

The fantasy of these suggestions has been fully demonstrated in the testimony given on behalf of the Social Science Research Council and the American Council on Education. Presumably, the decision to dispense with further open hearings records the committee’s judgment
that the charges and innuendoes contained in the staff reports and in the early testimony were so completely without foundation as not to warrant serious consideration. The American Council of Learned Societies agrees with this conclusion. Nevertheless, serious charges have been made and publicized. In order to keep the record straight, the council believes it desirable to avail itself of the committee’s offer to present a factual picture of the council’s organization and activities.

At the very outset it should be stated that to the knowledge of the council no individual member of the council, its board of directors, or staff is now or ever has been a Communist. No society constituent of the council is or has been listed by the Attorney General or in any other way designated as a subversive organization.

On the contrary, it is our belief that one of the most effective ways to combat subversive ideas and activities is by the spread and promotion of the humanistic studies with which the council is concerned.

ORIGIN AND ORGANIZATION OF THE AMERICAN COUNCIL OF LEARNED SOCIETIES

The American Council of Learned Societies was founded shortly after World War I to represent academic societies concerned in the fields of humanities in joint dealings with comparable groups in other countries. The council remains today a federative body of humanistic learned societies, for the purpose of dealing with the interests of those organizations which extend beyond the scope of any of the particular constituent societies.

To explain more precisely the council’s area of concern, it is desirable to attempt a definition of “the humanities” as a field of study. Many such efforts have been made, without any wholly satisfactory result. It is possible to get some view of what is meant by listing the constituent societies of the council:

American Philosophical Society
American Academy of Arts and Sciences
American Antiquarian Society
American Oriental Society
American Numismatic Society
American Philological Association
Archaeological Institute of America
Society of Biblical Literature and Exegesis
Modern Language Association of America
American Historical Association
American Economic Association
American Folklore Society
American Philosophical Association
American Anthropological Association
American Political Science Association
Bibliographical Society of America
Association of American Geographers
American Sociological Society
College Art Association of America
History of Science Society
Linguistic Society of America
Mediaeval Academy of America
Far Eastern Association
American Society for Aesthetics
American Musicological Society

The humanities are concerned, then, with the things that are specifically human about man—his language, his history, his attempts to reach beyond knowledge of his tangible world through philosophy
and religion, and his realization of beauty through literature, music, and the arts.

The council maintains an office at 1219 16th Street NW., Washington D. C., with a full-time staff of about a dozen people. The names and addresses of the staff as well as of the present officers and directors of the council are attached. In the past, administrative expenses, including office rent and staff salaries, have run to about $100,000 annually.

ACTIVITIES OF THE COUNCIL

Within the humanistic field, the council's activities are directed broadly at the training and development of American scholars, the provision of new implements of study and research in these disciplines, and the addition to our humanistic knowledge. Any selection of the activities of the council for description here can only be illustrative of the range of its concern.

One further introductory remark is appropriate. In general, the council's activities touch directly only a relatively small group of scholars in institutions of higher learning, libraries, museums, and the like throughout the country. But, although these programs do not achieve great public notice, the council has always worked completely in the open, and has been subject to the fullest scrutiny by anyone interested. Its activities are reported in Bulletins recording its annual meetings and the work of the year there discussed. In recent years it has published a quarterly Newsletter, and of course, much of the research which the council fosters eventually finds its way into print.

So far as known to the council, none of these activities—all of them widely publicized—has ever called forth any question or complaint as to the propriety or integrity of the council's operations.

Wartime language program.—Before turning to the council's present-day activities, it may be instructive to review the one program in its history which had a direct impact on large numbers of American men and women. That was the council's work in the development of language training during World War II. It is very proud of its achievement in preparing the common defense, and this effort also illustrates the unexpected values which are sometimes derived from careful research in remote and what some may consider "impractical" fields of study.

Languages and linguistics, of course, are the basis of all the work in the humanistic disciplines. They have been of concern to the council from its beginning. In 1927, accordingly, the council began the collection and study of the American Indian languages, then rapidly disappearing, as an undertaking in the interest of pure linguistic science. The funds were supplied by the Carnegie Corporation.

It soon turned out that these languages could not be fitted satisfactorily into the descriptive patterns derived from Greek and Latin which had been worked out for the study of European languages. The small group of American linguists engaged in this study began to develop a completely new and American approach to the study and description of linguistic phenomena, which, a decade later, became the new science of American descriptive and structural linguistics. So rapid were the strides in this field, and so fruitful the development, that it can only be compared to the process that took place in the same period in the much more publicized field of nuclear physics.
A year or more before the American entry into World War II, members of the council and its staff began to realize that, in the event of war, there would be an urgent national need for training in Asiatic languages. Yet teachers, textbooks, dictionaries, teaching materials to fill that need were not available. The council began to examine the possibility of applying the new techniques developed in the study of American Indian languages to the study and teaching of other languages not in the European tradition, and specifically the languages of Asia which were destined to become crucially important.

With funds from the Rockefeller Foundation, the council started its intensive language program. Before Pearl Harbor, this program had developed a general approach to the problem of teaching Americans to speak these exotic languages, and had made substantial progress in the preparation of teaching aids and tools in specific languages such as Chinese, Japanese, Persian, Siamese, Malay, and Turkish. The work had progressed to the point that, at the outbreak of the war, the council was prepared to move into a full-scale teaching operation. This was done rapidly, beginning with Siamese at the University of Michigan, and by the summer of 1942, 56 courses were being taught in 26 institutions, in 22 languages, most of which had never before been formally taught in the United States.

When, early in 1942, the Armed Forces turned their attention to the language training problem, the pioneering developmental work done under the auspices of the council was ready to hand. A fruitful collaboration was established, with council staff members advising and consulting with the various branches of the Armed Forces which needed people with special language proficiencies. The council staff was expanded; in the work of preparing dictionaries, texts, and teaching manuals in a multitude of languages there were at times as many as 100 people on its payroll. The money was supplied by the Armed Forces.

The council participated with the Army in the Army Specialized Training Program (ASTP) language and area courses; with the Civil Affairs Training Schools (CATS) of the Adjutant General’s Office; and with the Language Branch of G-2 in organizing the operation of classroom instruction and the production of teaching tools.

At the end of the war, the whole enterprise was dropped by the Army as a part of our sudden demobilization. The council continued to publish textbooks and dictionaries through Henry Holt & Co., and to produce new ones slowly as the funds could be found. Among the casualties of this sudden termination was an almost completed Korean-English dictionary, which would have been immensely useful a few years later, but which, at the time, was still reposing on file cards, unpublished.

American studies.—Most of the council’s current activities are not so spectacular as the wartime language program just discussed. But this does not measure their usefulness.

The improvement of college and university study of the American tradition and experience has always bulked large in council concerns. A fair share of our effort and of the funds which we have had available to aid research and publication have been directed in this field.

Perhaps the largest undertaking in this area is the Dictionary of American Biography, of which the first 20 volumes appeared from 1928 to 1936 and the first supplementary volume in 1944. Funds for
this enterprise came from the New York Times, assisted by the large foundations.

The project envisages a single ready reference for the facts about the lives of distinguished Americans. Unfortunately, the dislocations of the war threw the work somewhat off schedule. We have just succeeded in raising funds for the compilation of the second supplementary volume, and are now entering upon its production. We hope to have the whole operation back on schedule before long.

Of equal scientific importance, but without such wide appeal, is the Linguistic Atlas of the United States and Canada. Here the attempt is to analyze and record the variations and nuances in spoken English from section to section of the continent. The first six immense volumes, covering New England, appeared between 1939 and 1944. Continuation of this work proceeds very slowly as the funds for it can be secured. Unfortunately, this may be too slowly, since regional variations in American speech are beginning to become obscured or to die out.

Extending humanistic scholarship beyond the West European tradition.—The modern study of humanities began with the Renaissance and its liberating rediscovery of the great civilizations of classical antiquity. It was for the study of these classical civilizations of Greece and Rome that the early humanistic tools and training were designed. The results of this orientation for the subsequent development of the West are so great as to defy description. Nevertheless it had an unfortunate effect, from the point of view of the study of humanities, in that traditionally these studies have concentrated on the classical and Mediterranean civilizations, and the West European and American traditions derivative from them, to the almost complete neglect of the rest of human experience.

Starting from a conference held on December 1, 1928, to discuss means for the development of Chinese studies in the United States, the council has taken leadership in correcting this deficiency by creating in American universities and colleges a better basis for studying the civilizations of Asia, Latin America, and Eastern Europe, particularly Russia. It has used every means available to it, including the provision of fellowships and study aids, to develop Americans trained in these fields, and to produce the implements—guides, translations, textbooks, bibliographies, catalogs—without which this kind of study cannot be carried on. It is not too much to say that there has been no significant improvement in the study of these areas in any American university or college, so far as the humanistic fields are concerned, in which the council has not been in some way involved.

In this broad field of endeavor, a number of lines of activity emerge clearly. One of the most important of these is the program of translating significant works of humanistic study from their original languages into English. In the past, these translation programs have included works in Chinese, Japanese, Russian, Arabic, Turkish, Persian, and Hebrew languages.

The council’s most recent effort in this field is a near eastern translation program. The five modern Arabic works which have so far been published under this program include analyses of the great controversies that pervade contemporary Muslim religion. Five more volumes are just going to press and about twenty others are in various stages of editorial progress.
Currently also it is bringing to a close a Russian translation series, which has concentrated on contemporary works. Among the 30 to 40 published volumes of this series are Vishinsky's Law of the Soviet State, Berg's Economic Geography of the U. S. S. R., Glebov's History of Russian Music, and others. It has also reprinted about 30 books in the original Russian, which were otherwise unavailable in this country. Among these was the 1941 5-year plan, of which only one copy had previously existed in the United States. These works have been invaluable, not only to American scholars, but to our foreign policy officials and intelligence agencies such as the CIA, and they are, often, the only authentic source materials that are available to scholars and others interested in these fields.

Another comparable translating venture is the Current Digest of the Soviet Press. This is a weekly publication containing sixty to seventy thousand words of translation of current Russian press and periodical literature. It was begun by the council, and is now carried on by it jointly with the Social Science Research Council from headquarters in New York. It has been justly called the biggest hole there is in the Iron Curtain.

Language and linguistics—In recent years a grant of funds from the Ford Foundation has made it possible to take up again some of the work in language teaching materials and methods which was left unfinished at the end of the war. The council now has work going in about 20 languages, including the revised Korean-English dictionary. Its ambition is to have a good American textbook on modern linguistic principles, a satisfactory students' dictionary, some graded readings, and a set of phonograph records to be used in teaching for every significant Asian language, that is, every language spoken by more than 10 million people.

Meanwhile, the work has been expanded to include the problem in reverse: i. e., methods of teaching English to speakers of other languages. This too has required the creation of new techniques and new materials, the most important of which is a series of textbooks for teaching English to Koreans, Indonesians, Turks, Persians, Thais, Serbo-Croatians, Burmese, Vietnamese, Greeks, Chinese, and to speakers of Spanish.

The problem of highly trained and specialized personnel.—In the future, no less than in the past, the people of the United States will not be able to depend upon numbers to maintain its leadership and security. We are a small numerical minority of the world’s population. Our continued progress, our security, even our survival will depend, as it has in the past, on our ability to utilize our resources of trained intelligence. An increasing recognition has been given to this problem in the laboratory and engineering sciences. But the need is no less pressing in the fields of humanistic study. The council has directed, and intends in the future to direct its attention to this weak spot in the Nation’s armor.

Naturally, officers and staff members of the council have a very wide acquaintance among scholars and teachers professionally concerned with the humanities. Concerning some of the people the council has detailed information derived from its special activities. For instance, its work in the development of Asian and Russian studies has given it, for many years, comprehensive knowledge of the academic personnel working in those fields. And the many applications
for its various fellowships, study-aids, and grants-in-aid of research comprise a file of the academic and professional careers of many scholars in all humanistic fields.

Up to 1949 the collection and dissemination of this information was haphazard and incidental. In that year, however, money was secured from the Rockefeller Foundation to make more formal investigations into the supply, potential, and distribution of trained personnel in the humanities. Hardly had these studies started when the Office of Naval Research and the Department of Defense became interested in the same problems, and asked the council to make a more elaborate investigation of them. With the cooperation of as many of the constituent societies as possible, the council gathered detailed professional information from some 27,000 scholars and students in the humanities and social sciences, probably about half of those professionally engaged in these fields. From these materials, when they had been coded and indexed, the Bureau of Labor Statistics abstracted the statistical information required by the Office of Naval Research. The Office was supplied with a microfilm of the schedules for its records, and the schedules themselves became what is now called the National Registration in the Humanities and Social Sciences, an imperfect instrument, but still the best accumulation of such personnel information available.

This kind of personnel work is done in close cooperation with the National Science Foundation, which maintains a similar register in the natural and physical sciences. In conjunction with the foundation, the council compiled and published a book, Classifications for Surveys of Highly Trained Personnel, which is now the standard guide on the subject.

It is hoped that work in this field can be improved to the point where the registration can be a source not only of information about the professional competences of individuals, but a basis for analysis of American potential in trained specialists in the humanistic fields, so that gaps in our specialized armament can be discovered and filled and we can be prepared for any emergency which the future might bring. Anyone who participated in the frenzied search for specially trained personnel in the early days of World War II realizes the magnitude of this task. We should never have to face its like again.

THE CHARGES MADE BEFORE THE COMMITTEE

Against the background of the factual description of the council and its activities presented above, it is useful to examine more directly some of the charges made against the council before this committee, either in staff reports or in testimony. Other witnesses have sufficiently indicated the difficulty of trying to pinpoint the charges and identify them with any precision. Nevertheless, it is easy to see what the graven men is.

It is suggested that the council, together with other research councils, has dominated American scholarship. It is implied that this power has been exercised to foist upon America policies and ideas alien to its heritage, and indeed subversive of its institutions. The mechanisms by which this end was achieved are said to be that the council has acted as a clearinghouse for channeling moneys from the foundations to students and causes congenial to these subversive ends,
and as a recruiting agency to place similarly oriented individuals in positions of importance in government.

As for the allegation of dominance there must be more than a little irony in it for anyone who has visited the offices of the council or read its financial reports and the reports of its annual proceedings. To make such a charge demonstrates an almost unbelievable ignorance of the mode of organization of American scholarship.

The American tradition, as has been pointed out in other statements to the committee, places the responsibility for scholarship, science, and higher learning in private, not governmental, hands. The result has been a national structure for the cultivation of this field of human activity of which Americans have every right to be proud, and which attests the fundamental soundness of that tradition.

It is a truism that Americans are the world's greatest joiners. Behind this truism, however, is the fact that our fantastic genius for spontaneous self-organization is one of the elements that has made this country what it is, and in particular has preserved vast areas of activity from governmental control.

This free-enterprise, self-organizing capacity is found in American business, philanthropy, politics, and social activity. It is found also in the fields of science, scholarship, and higher learning. We have almost 2,000 separate institutions of higher learning, each going its own way, without centralized planning or control. In many countries abroad, they would be marching in step under the direction of a governmental ministry of education.

Much the same is true of the organization of science, scholarship, and higher learning outside the universities. Abroad this is usually taken care of by a national academy of arts and sciences, such as was founded in France by Louis XIV and in Russia by Peter the Great and the Empress Catherine. Such academies are governmentally controlled and supported. Their members are selected, of course, for scholarly and scientific eminence, but too frequently with at least one eye on their conformity with the government.

In the United States we do it differently. Our instinct for private organization has led to the formation of private associations—professional, scientific, or learned societies—to pursue a shared interest in some scientific or scholarly activity. There are literally thousands of these societies, of all sizes, interests, and degrees of formality. Most of them have only local importance. Perhaps a couple of hundred have national membership and significance. Practically all of them are freely open to any person who shares their respective interests and is able to pay the usually modest dues.

In general, each of these private scientific or learned societies devotes itself to a specific branch of study: History, chemistry, archaeology, geology, etc. But sometimes, interests call for activity across these artificial lines which separate the branches of learning. Among the most important of these is the promotion of research and scholarship in the whole field of which the particular branch is a part. For these limited purposes, the most important of these scientific and learned societies have joined together in four national groups called councils: The National Research Council, based on constituent societies in the natural, mathematical, and biological sciences; the Social Science Research Council, based on societies concerned with economics, political science, sociology and the like; the American Council on
Education, based on societies as well as institutions of higher learning concerned with the techniques of college education; and the American Council of Learned Societies, based, as has been shown, on societies concerned with the humanistic studies.

These councils differ somewhat in size, structure, wealth, and methods of operation, but they are all distinctly private organizations, based on private associations and dependent upon private sources of funds for their support.

While the four councils are quite separate in every respect, they did, in 1944, create a mechanism for functioning together whenever that seems desirable. Two delegates from each of the councils meet approximately once a year in an informal group (it does not even have its own stationery, much less a staff) known as the Conference Board of Associated Research Councils. This board is quite without power and is simply a consultative body, which on rare occasions is used to carry forward enterprises in which all the councils have an interest.

For about a generation these organizations have devoted themselves to the creation of an American scholarship worthy of the richest and most powerful nation in history; and not without success. Nothing like this simple, democratic structure of scholarship and higher education exists in any other country. The caricature of it presented in the preliminary staff studies of this committee is so greatly at variance with the fact that they might have been written by some ill-informed foreigner.

So much for the charge of dominance. There remains the charge that the council acted as a clearinghouse for channeling foundation funds in the subversive directions identified by the committee staff. This requires a few words about the finances of the council and its relation to the foundations.

For a few years in the early thirties the Rockefeller Foundation did make available modest free funds which the council could spend for research in any way it chose. That practice was preceded and has been supplanted by a system in which the foundation money coming to the council is specifically earmarked for projects presented to and passed on in advance by the particular foundation making the grant.

In the 35 years of its existence, the American Council of Learned Societies has received and expended about $9 million. A little more than half of this has come from the great foundations. A detailed analysis of the source of all its financial support since 1937 was presented in response to the questionnaire distributed by the Cox committee and is available to this committee.

The money coming from the foundations falls generally into two categories. The first covers general administrative expenses and has run, as indicated above, to about $100,000 annually in recent years. Both the Carnegie Corporation and the Rockefeller Foundation have made substantial contributions for these purposes. More and more in recent years, however, the tendency has been to try to meet these costs from administrative charges against funds for specific projects. At the present time the council is receiving no contribution for central administration from either of these foundations, except as a percentage charge against funds for specific programs.

The second category of contributions from the foundations comprises grants for the support of specific projects for which the council is responsible. Such projects originate with the council staff, com-
mittees, or members. They must, of course be approved by the board of directors. Thence they are submitted to the foundations for support. Usually, if the program receives such support, it is administered by a special committee appointed by the board of directors for the purpose.

Such projects or programs may be works of research conducted by the council itself, such as the Dictionary of American Biography. In that case, the special committee picks the editor, who in turn selects the contributors, and the work proceeds under the supervision of the editor and the committee.

In other cases, the project may be a special fellowship or study aid program. The council has no such funds at present. In the past, it has conducted some 25 separately organized and financed programs of aid to individuals for study, research, or publication in the humanities. From 1926 to 1954 it has made slightly more than 2,000 awards to about the same number of people. The stipends have ranged between $100 and $6,000 and have averaged about $1,000. Such fellowship and study-aid programs are short-term operations, extending not more than 3 years. They are likewise administered by specially appointed committees who review the scholarly and technical qualifications of the applicants and make the awards. The names of all individuals who have received such awards and the subject-matter of the research are regularly published, were presented to the Cox committee, and are available to this committee.

All of the council's projects, of whatever nature, are presented to the foundations on their merits and in competition with projects sponsored by colleges and universities, other research institutions, individuals, and even its own constituent societies. Not only are the funds received from the foundations extremely limited both in amount and in the freedom with which they may be disposed of, but the council as a matter of policy does not interpose itself between any foundation and any other agency or individual in search of funds. Foundation policies and decisions in such matters are made by the foundations themselves.

Finally, there is the question of recruiting Government personnel. As has been indicated above, the council's contacts with scholars in the humanistic fields and its more recent work on the national registration in the humanities and social sciences have made it a valuable source of information about the professional and technical competence of individuals in those fields of endeavor. Institutions and agencies in need of such specialized personnel sometimes request information of this character from the council, and within the limits imposed by available staff time, the council responds. Such requests are infrequent, and come predominantly from universities and colleges, museums, libraries, and the like, and only very occasionally from the Government. Since the registration has been in usable shape, that is roughly the last year and a quarter, the council has responded to about 15 such requests, only one of which came from a Government agency.

The information supplied in response to such requests is in no sense a recommendation. To the best of the council's knowledge, it is not treated as such by the requesting agency or institution. Indeed, where the reference is to the registration, as it has invariably been since that
has been completed, the only information given is that supplied by the individual himself.

The council has assumed that it is not in the American tradition, in a register designed for employment purposes, to inquire about the individual's race, religion, or politics. Any information it might have on these points might be accidental or untrustworthy. It goes without saying, moreover, that the council has no facilities for investigation and clearance of individuals on security matters. It is not a proper body for such work in any case. Where requests for information come from a Government agency, therefore, the council takes no responsibility for such questions and properly assumes that any individual who is hired will have to meet the applicable security standards imposed by the Government.

CONCLUSION

The body of this statement has been directed, as was no more than proper, to the assumptions and presuppositions which were implicit in the reports of the committee staff and some of the friendly testimony which the committee heard. But the council cannot let this opportunity pass without saying vigorously and directly that it does not share a number of those assumptions and preconceptions.

It believes that, far from being committed to any particular body of doctrine, America is a land of boundless experiment, of constant and relentless search for better ways of doing things, for richer experience, to make human life fuller and more attractive. Nothing could be less American than an assumption that Americans had reached the ultimate boundary of thought—political, economic, social, or cultural as well as physical—in 1903 or 1953, or are destined to reach it in 2003.

A corollary of this interpretation of our tradition is the belief in the maintenance of a completely free market in ideas, no matter how unpalatable they may be to our preconceived notions. The moment we have to protect any mature American from any idea whatsoever, that moment we must stop boasting about American democracy.

The American Council of Learned Societies is concerned with thought, with ideas, with mankind's concept of itself and its place in nature. It believes that the best interests of America require uncompromising exploration of any thinking that mankind has ever done or is doing. There is no subversion comparable with an interference in the traffic in ideas.

Ideas are explosive materials. They must not be handled carelessly nor ignorantly. All the activities of the American Council of Learned Societies have been directed at creating and fostering in America the mechanisms through which ideas can be handled understandingly and without fear.

To this end it has done whatever it could to develop Americans trained to participate fully in the pursuit and communication of all humanistic knowledge and to provide the tools of study, teaching, and research with which such trained Americans have to work.

The council is proud of its record in these activities. It holds, moreover, that in the harsh decades ahead, many of our most pressing problems will lie in the very fields of the humanities with which the council is concerned. In its opinion no work is more important to the future security and welfare of the Nation.
VERIFICATION

STATE OF MASSACHUSETTS,
County of Essex, ss:

I, Mortimer Graves, swear and affirm that I am executive director of the American Council of Learned Societies; that I have read and am familiar with the contents of the foregoing statement; and that to the best of my knowledge and belief every statement of fact contained therein is true.

MORTIMER GRAVES,
Executive Director, American Council of Learned Societies

Subscribed and sworn to before me this 19th day of July 1954.
My commission expires November 30, 1956.

KATHLEEN T. FLYNN,
Notary Public.

STATEMENT OF ARTHUR S. ADAMS, PRESIDENT, AMERICAN COUNCIL ON EDUCATION

I am Arthur S. Adams, president of the American Council on Education. My request to appear before you was made by the authority and direction of the executive committee of the council, and I shall present a statement which that committee has unanimously approved. We are deeply concerned that the special committee may obtain a true picture of the role that philanthropic foundations have played in connection with education. We believe deeply and firmly in the importance of education to American principles and institutions. There often comes to my mind the historical fact that when the settlers of our country first came to its shores, they addressed themselves to
building a school building almost before they had provided shelter for themselves. The whole story of American greatness, to my mind, has been written in terms of educational opportunity.

Especially in times such as these, there is need for a clear and accurate public understanding of what our schools and colleges are trying to do. I believe that this committee has the opportunity to perform a great service by assisting the people to gain such a picture. Hence, although it was the understanding of many of us that the central focus of the investigation was to be the activities of foundations, it is gratifying that the focus has been broadened to include not only the relationships of foundations to education but also the relationships of education to the public welfare. This affords a magnificent opportunity for the committee to present a clear-eyed judicial appraisal of the importance of education to our society.

Now, let me comment briefly on some of the reasons why philanthropic foundations have flourished and multiplied in American society as nowhere else in the world. It is not because we have a monopoly of wealth; great fortunes have been amassed in other countries. I suggest it is because a climate has been established here, an atmosphere of freedom which encourages private initiative not merely for selfish purposes but for the public welfare. Both Federal and State Governments, from the beginning of our history, have maintained the position that it is in the public interest for individuals and groups of individuals to contribute voluntarily to worthy causes.

Advocates of centralized national planning and action have always contended that many of these causes could be served more efficiently by Government. In criticism of private initiative, they have pointed out that at times it has resulted in duplication of effort, lack of coordination, sometimes even naive support of dubious causes. One can accept these criticisms in large part and still assert with deep conviction that despite failures and mistakes, private funds, dispensed by independent agencies, have by and large made an impressive and creditable record. Both the mistakes and the achievements are symbols of free enterprise as we in America know it.

Now suppose that the climate in America should change, and it should become established policy that Government should regulate the purposes of private foundations, their methods of operation, and the appointment of their trustees and other personnel. What incentive would remain for anyone to give to them? It would be much easier simply to let the Government collect the money in taxes and take the total responsibility for the public welfare.

I take it that none of us desire such developments. I urge this committee to protect the climate of freedom in which we now live. True freedom means the right to make mistakes as well as to achieve successes. Federal control of foundations operating within the broad limits of public welfare would not last long. Foundations would simply disappear. Free enterprise of any sort vanishes under Government dictation.

Against this background, let us consider briefly the frame of reference supplied to this committee by its director of research to assist it in the current investigation. I would respectfully suggest that the committee scrutinize the document with great care before determining what guiding principles should be adopted. Several of the basic assumptions are open to serious question. I am confident that the com-
mittee desires to approach the study without prejudice in the interest of truth. The search for truth will obviously be severely hampered if the committee at the very beginning accepts a series of dubious concepts as the basis for its study.

I suggest, for example, that the committee give special consideration to the application of the term “un-American.” The report of the research director asserts that a political change so drastic as to constitute a “revolution” took place in this country between 1933 and 1936, “without violence and with the full consent of the overwhelming majority of the electorate.” He might have added that it was approved by the Congress as sound public policy and by the Supreme Court as constitutional. Later in the report there seems to be a definite implication that some, at least, of the changes made at that time were un-American.

It is a strange doctrine indeed that the overwhelming majority of the American people, acting through their own political and social agencies, can adopt un-American policies. Certainly the American people can make mistakes; they can also rectify mistakes. One may consider the 18th amendment to have been right or wrong, and its repeal to be either right or wrong; but surely both the adoption and the repeal of prohibition were American actions. To take any other position is to assume that the power resides somewhere, in some group, to pass judgment on the decisions of the American people made in accordance with the Constitution, and to declare some of these decisions un-American. I am confident that this committee desires neither to arrogate that power to itself nor to confer it upon its research staff.

This matter is closely related to the definition of “the public interest.” The research director has recommended that this phrase be defined in terms of “the principles and form of the Federal Government, as expressed in our Constitution and in our other basic founding documents.” What this passage seems to imply, in context, is that a foundation or other agency operates in the public interest only when it promotes acceptance of a particular theory concerning government, called in legal circles, I believe, a strict interpretation of Federal powers.

If this committee desires to discover to what extent foundations and other organizations have spent money and energy in promoting a special theory in constitutional law, it has every right to do so. I respectfully suggest, however, that if the committee discovers, as it well may, that little time and money have been so spent, it should report the fact in those terms. To report such a conclusion to the American people as a finding that foundations and educational agencies have failed to operate in the public interest would be a semantic distortion of the first order. The American people have more than an impression—they have a conviction—that efforts to control disease, to alleviate poverty, to advance science and technology, to expand libraries and museums, and to do many other things having nothing to do with the promotion of a special brand of political philosophy contribute to their welfare. Such activities are therefore, in any reasonable definition of the term, “in the public interest.” All of these areas happen to be among those in which foundations have been especially active.

I would suggest further that as part of the process of establishing a reasonable framework for its investigation, this committee consider
the historic purpose of tax exemption. It would appear that this privilege was originally related to the principle, stated frequently by the Founding Fathers, that the power to tax is the power to destroy. Tax exemption was presumably granted to local and State governments to reinforce their freedom from Federal control. Tax exemption was presumably granted to churches to reinforce the provision of the first amendment guaranteeing freedom of religion. Tax exemption was presumably granted to educational institutions and agencies to reinforce the constitutional provision against Federal control of education. Similarly, tax exemption was presumably granted to other agencies, such as hospitals, charitable and welfare organizations, and philanthropic foundations, on the theory that private initiative should be encouraged in certain broad areas of concern for the public welfare.

A contrary principle, frequently advanced in recent years and seemingly implicit in the report of this committee's research director, is that tax exemption not only confers the right but carries along with it the obligation of Federal supervision and, if need be, control. This doctrine is itself one of the most revolutionary concepts in the history of American Government. It could lead to Federal control, either by direct regulation or by threat of removal of the tax-exempt status, not merely of foundations but of health services, education, religion, and the operations of State and local government. It would seem to be highly important that this committee take a stand on this issue and announce in clear terms the extent to which it believes Federal control of tax-exempt institutions and agencies is justifiable. I should think the committee might question, for example, the assumption implicit in the report of its research director that the Government should determine the scope and direction of research and instruction in the social sciences.

We come now to the reason why the American Council on Education has become involved in this investigation. The argument of the research director seems to be this:

1. That beginning in 1933, a political "revolution" took place in the United States, supported by an overwhelming majority of the electorate, which in some of its manifestations seems to the research staff to be un-American.

2. That the approval of this so-called "revolution" by the electorate resulted from their indoctrination by the Nation's educational institutions.

3. That the indoctrination was engineered by a closely knit group of national organizations, including the American Council on Education.

The flimsiness of this line of reasoning can be demonstrated in many ways. One is to consider the time factor.

Of the population over 25 years of age in 1932, comprising roughly 88 percent of our potential electorate, more than 60 percent had received no formal education beyond the eighth grade. This fact seems to warrant the inference that more than half the voters completed their formal education before 1920. Yet the research director, in his own report, notes that the American Council of Learned Societies was founded in 1919, the National Research Council in 1916, the Social Science Research Council in 1923, the American Council on Education in 1918, and the John Dewey Society in 1936. The assumption that these organizations engineered a program of mass indoctrination through the schools that brought about the "revolution" of 1933 would
seem to be an undeserved tribute to their power, since in 1920 the oldest had been established only 4 years and the 2 youngest had not yet been conceived.

Let us approach this matter in another way. The director of research says his procedure has been to reason from total effect to primary and secondary causes. It would appear that in this instance he may have omitted the primary causes and have gone far beyond the secondary. Would he seriously contend that the farmers who roamed the roads of Iowa with pitchforks and shotguns in the early 1930's, or the industrial workers who stood in mile-long bread lines, or the veterans who sold apples on street corners, or the bankrupt businessman who jumped from 10-story windows did so because of something in their educational curriculum? Whatever one's political persuasion may be, one must concede that surely, the economic forces which brought the industrial machine grinding to a halt constituted more important causes for social change than any possible influence of the little red schoolhouse.

What, then, is the role of education in social change? It would appear that in a democratic society such as ours, where, as in all societies, constant changes are required to maintain equilibrium between the rights of the individual and the protective functions of government, education serves two essential purposes: first it strengthens the conviction that necessary adjustments can be made by peaceful means, and, second, by spreading knowledge, it assists the people and their leaders to discover what the appropriate adjustments are. To say that education provides the motivation for change because it performs these functions is like saying that fire engines cause fires because they are usually present at the scene and seem to have a significant role in the proceedings.

It seems apparent, from some of the testimony previously presented before this committee, that the director of research and his staff have done a considerable amount of research in the library. In that process, they have uncovered, in books and periodicals, numerous statements by educators advocating specific programs. Individual educators, like members of other professions, are human and are prone to argue that their ideas are worthy of immediate universal adoption. It would be an unwarranted inference to assume, however, that such statements invariably, or even usually, reflect prevailing beliefs or practices. The gap between theory and practice is as great in education as in other areas of human activity, such as ethics, and as great as the gap between individual opinions and the consensus in other professions, such as politics.

Furthermore professors, as the great historian Carl Becker once remarked, are by temperament people who think otherwise. If all their ideas were simultaneously adopted, the result would be utter chaos. Hence, by carefully selecting his excerpts, one can secure evidence from educational publications for almost anything he may set out to prove. The only way to find out what educational institutions are actually doing is to examine them at firsthand, without preconceived ideas. That is a vast undertaking, which the research staff of this committee has apparently not undertaken and has certainly had inadequate time to complete.
I suggest to the committee, therefore, that it be wary of conclusions based on the wishful thinking of individual educators as expressed in books and periodicals. To consider such material as presenting an accurate picture of educational practice is like judging the accomplishments of a session of Congress by a selected group of bills introduced rather than by the sum total of legislation actually passed.

With regard to the American Council on Education itself, I have brought with me a supply of pamphlets that describe its objectives and operations and list its membership. You will note that members of the council are institutions and organizations, not persons. You will note further that the largest group of members is composed of colleges and universities. That fact explains why the major interest of the council has traditionally been and is now in higher education, although it has a general concern with the whole range of education.

The council is thoroughly democratic in organization. Its governing body is the membership, represented by duly appointed delegates at the annual meeting. The interim policymaking body is the executive committee, elected by vote of the members. Membership dues comprise the major source of income for central operations.

The council has no power to regulate its members in any respect, nor has it ever attempted to exercise such power. Although the basic reason for this policy is that it represents a sound concept of service to education and to the public, a second reason is wholly practical. Since all authorities on higher education agree that its dominant characteristic is diversity, any effort toward regimentation from a central headquarters would mean disaster for the organization through the immediate loss of numerous members. The truth of this statement is clear from a mere listing of the affiliations of member institutions. One hundred and twenty-eight are affiliated with the Catholic Church, 61 with the Methodist Church, 24 with the Lutheran Church, 29 with the Baptist Church, 35 with the Presbyterian Church, and 60 with a dozen other denominations. Twenty-nine are supported by municipalities, 261 by 48 States, and 28 by other public and private agencies. A final 200 are privately supported, without special affiliation, and are administered by their individual boards of trustees. The constituent organization members of the council have a similar diversity of support and orientation. The most challenging problem of the council, under these circumstances, is to discover issues on which there is such agreement among council members as to warrant joint consideration.

Let me say emphatically that the college curriculum is not one of the matters on which agreement has ever been reached among institutions of higher learning. The standard educational curriculum apparently discerned by this committee's director of research is sheer fantasy. The idea that such diverse institutions as the University of Notre Dame, Southern Methodist University, Yale, and the University of California have adopted or would ever adopt the same curriculum is simply inconceivable. This diversity, reflected in the freedom of choice which every institution exercises with respect to its curriculum, is, in fact, the distinctive genius of higher education in America.

Yet American institutions of higher learning, and in fact educational institutions at all levels, do have some ideas in common, and feel that those ideas should be vigorously expressed. That is why they have created and now support national organizations such as the American Council on Education. In serving the cause of educa-
 tion, these organizations do believe, with great sincerity, that they render a national service. Unless the members likewise believed it, there would be no such organizations.

One of the central ideas that the American Council on Education is authorized and directed by its members to express is that the independence of colleges and universities should be maintained at all costs and against all agencies, including the Federal Government, that might attempt to dominate them. The basic reason is that they are opposed in principle and in practice to indoctrination. Although they approach their goals in many and varied ways, they share the purpose of preparing students to think for themselves and to continue the habit of study to the end that they may be well-informed and effective citizens. The distinctive product of higher education in the United States is not a person taught to embrace certain prejudices but a person trained to make intelligent decisions on issues as they arise. And this, in the expressed opinion of great American leaders, from Thomas Jefferson to Dwight D. Eisenhower, is a basic pro-American service.

The plain fact is that the schools and colleges of this country do not have the power to achieve mass political indoctrination even if they had the desire to do so. Political indoctrination of the great mass of American citizens is impossible for any institution or group of institutions so long as freedom of speech and press continue to exist. Indoctrination requires a negative as well as a positive force to be effective, as both Hitler and Stalin well know. Not only must a single doctrine be presented with persistence, but access to all other doctrines must be denied. The only agency in this country capable of mass political indoctrination is the Federal Government, and even the Government could not be successful by controlling the schools alone; it would also have to control the pulpit, the press, radio, television, and all other media of mass communication. Mass indoctrination is therefore a theoretical as well as a practical impossibility in America today. It simply does not exist. It cannot exist so long as any minority is free to raise its voice.

Let me summarize. The standard educational curriculum postulated by the committee's director of research is nonexistent. If the executive committee or staff of the American Council on Education had any desire to promote such a curriculum—which they do not—they could not do so, because the council's membership would literally dissolve if they did. If the council cannot promote such a curriculum itself, it certainly could not effectively participate in an alleged conspiracy among national educational organizations to reach the same objective. The alleged conspiracy, also, is a figment of imagination.

I am at a loss to understand what factual basis there could conceivably be for the allegations apparently made by the director of research against the American Council on Education. I shall be glad to answer questions, to the best of my ability and knowledge, about any of the council's operations. As I indicated at the outset, we welcome the opportunity to assist the committee in constructing a true picture of the part which educational institutions, educational organizations, and foundations interested in education have played in the development of American civilization.

The first draft of the above statement was prepared for presentation to the committee at the direction of the executive committee of
the American Council on Education, on the assumption that it would represent testimony offered voluntarily on the council’s initiative. Subsequently I received a subpoena to appear, and therefore felt it necessary to revise the first paragraph in order to remove any implication of presumptuousness on the part of myself or the executive committee.

I swear that the revised draft above, different in only this respect from the first draft, of which some copies are still in circulation, is accurate and true to the best of my knowledge and belief.

ARTHUR S. ADAMS,
President, American Council on Education.

WASHINGTON 6, D. C.

Subscribed and sworn to before me a notary public in the District of Columbia on this 21st day of July, 1954, by Arthus S. Adams who is personally known to me.

ELEANOR QUILL, Notary Public.

My commission expires January 14, 1957.

STATEMENT OF H. ROWAN GAITHER, JR., PRESIDENT AND TRUSTEE, THE FORD FOUNDATION

BEFORE THE SPECIAL COMMITTEE TO INVESTIGATE TAX EXEMPT FOUNDATIONS, HOUSE OF REPRESENTATIVES, UNITED STATES CONGRESS

KINGDOM OF DENMARK, CITY OF COPENHAGEN,

Embassy of the United States of America, ss:

H. Rowan Gaither, Jr., being duly sworn, deposes and says as follows:

1. I am president of the Ford Foundation.

2. Attached hereto are three documents:

   Statement of H. Rowan Gaither, Jr., president and trustee of the Ford Foundation, to the Special Committee to Investigate Tax Exempt Foundations, House of Representatives, 83d Congress;

   Reply by the Ford Foundation to allegations directed specifically against it contained in the record of the committee’s public hearings to date (supplement A to statement of H. Rowan Gaither, Jr.);

   History of the establishment of the Fund for the Republic (supplement of H. Rowan Gaither, Jr.).

These documents were prepared for submission to the Special Committee to Investigate Tax Exempt Foundations in connection with the testimony which I intended to give before that committee at the invitation of its counsel.

3. Having been informed that no representative of the Ford Foundation will be heard by the committee, I submit these statements for the record and swear that they are true and correct to the best of my knowledge, information, and belief.

H. ROWAN GAITHER, JR.

Subscribed and sworn to before me this 21st day of July 1954.

THEODORE SELLIN,
Vice Consul of the United States of America.
This sworn statement is submitted on behalf of the Ford Foundation in compliance with a request dated July 2, 1954, from the counsel for the special committee of the House of Representatives, 83d Congress, to investigate tax-exempt foundations.

The authorized purposes of the committee, as stated in House Resolution 217, are—

- to determine if any foundations and organizations are using their resources for purposes other than the purposes for which they were established, and especially to determine which such foundations and organizations are using their resources for un-American and subversive activities; for political purposes; propaganda, or attempts to influence legislation.

With reference to those authorized purposes, I wish to state:

The Ford Foundation devotes its resources entirely to the purposes for which it was established. As set forth in its charter, these are to "engage in charitable, scientific, and educational activities, all for the public welfare."

The Ford Foundation has not used any of its resources for un-American or subversive activities.

The Ford Foundation has not used any of its resources for political purposes, propaganda, or attempts to influence legislation.

The trustees and staff of the foundation are loyal, responsible Americans. Our operating procedures insure responsible and careful decisions in hiring staff, planning our program, and making grants. The Ford Foundation’s entire program is aimed at advancing the best interests of the American people.

To aid the committee in completing its investigation and to answer the general allegations in the record of these hearings, this statement is primarily a description of the personnel, policies and programs of the Ford Foundation. In separate supplements hereto, detailed answers are made to specific allegations against the Ford Foundation and certain individuals and organizations associated with it. Before turning to those subjects, however, I must comment on certain procedures of this committee and on some of the testimony presented to it.

The Ford Foundation, along with others, has been maligned in public by the witnesses called by this committee in the opening weeks of the hearings. This testimony has ranged from sweeping innuendoes to detailed allegations of wrongdoing. We have grave doubts as to the validity of any of the material charges against American philanthropy and education, and insofar as they refer to the Ford Foundation, we state they are erroneous and baseless. We had hoped, of course, to have the opportunity of replying to the charges in public so that the real record of the Ford Foundation would be known to all those who may have been misled by those charges. We therefore regard the decision of the committee to discontinue public hearings and to limit the foundations’ defense to written statements or closed sessions as a puzzling and unexpected act of injustice. However, we are ready to cooperate with the committee on the terms which it has set, because it is imperative, in our view, that the committee now receive all the information it requires in order promptly to complete its investigation in every respect.

To leave this investigation in any sense incomplete would be a reflection on the Congress and a disservice to the public. Moreover, it
would leave the door ajar to repeated investigations with all of their immense cost in terms of time, money, and effort to the Congress and to the foundations, and their unavoidable effect on the morale, initiative, and freedom of scientific, educational, and charitable organizations. Postponing or delaying completion of this investigation for any extensive period would produce these same undesirable effects.

The second preliminary topic I would like to discuss relates to certain testimony presented in these hearings by staff members and by witnesses procured by the staff. These individuals have put before this committee a theory about foundations which is erroneous and which could cause grave damage.

From the record of the public hearings, this theory appears to be about as follows:

Most trustees of most foundations have had so little time to spare from other activities that the foundations have been taken over by staff members, who are running them for their own purposes. These schemers really make the decisions as to how foundation money is spent; they have a master plan for society; and they are intent upon reshaping the country to fit that plan.

To this end they have engineered a giant conspiracy, subverting our people, our institutions, and our Government to produce the major political, social, and economic changes of the past 50 years.

Their partners in this conspiracy include the faculties and administrators of American colleges and universities, the members of the learned and educational organizations of the country, and public servants in State and Federal Government.

This theory is the sheerest nonsense. I believe this statement will show that it is false insofar as it is applied to the Ford Foundation. While I do not speak for the thousands of other American foundations, my experience in this field leads me to believe that the theory is no more applicable to them.

Contrary to the premise of the theory, the trustees and officers of the Ford Foundation are neither dupes nor plotters, nor are they delinquent in their duty. They are respected men of wide experience and alive to their responsibilities.

In attempting to portray the historic changes of the twentieth century as the result of a conspiracy, the theory ignores such factors as two world wars; an economic depression of global proportions; the emergence of the United States and Russia as world leaders of conflicting ideologies; the rise of nationalism and new nations in the less developed parts of the world; and vast scientific and technical change.

A main element of the theory is that the conspiracy has long been spreading through all levels of American education. If so, one can only wonder how such a situation has escaped detection by thousands of local school boards, parent-teacher associations and school teachers. We think the theory is an affront to the commonsense of the American people, who have presumably been the objects of the conspiracy and whose major decisions it is said to have dictated. Contrary to the notion that our educational system has been subverted, we share with most Americans the view that our public and private schools have served us well and deserve considerable credit for the advances we as a Nation have achieved.

Although the overwhelming majority of the press has derided the conspiracy theory presented in these proceedings, important segments
of the public may have gained the impression that it has been proved to the satisfaction of this committee. The other trustees and I are concerned with this possibility. Accordingly, we hope this committee will take positive steps to dispel any such impression, because it carries damaging implications not only for all private philanthropy, but for all science and education.

PRIVATE PHILANTHROPY IN A FREE SOCIETY

One of the most productive characteristics of American life has been the practice of voluntary giving for the public good. Since the very beginning of our history, the American people have recognized a duty to give to their churches and schools and to charitable causes, and they have looked upon the right to join together in private action for the public welfare as an important element in the idea of a free society.

In the past, private philanthropic efforts were devoted largely to providing education, supporting religion, and alleviating human suffering. As the Nation expanded, the role of philanthropy grew with it. Today private giving is related to every important charitable, scientific, educational, cultural, religious, economic and social need; and this breadth of voluntary effort is one of the sources of strength of our society.

This is not to say, of course, that private giving offers the only approach to our problems. Compared to the giant resources of Government, those of private philanthropy are meager. But in a free society some things, of course, are inappropriate to Government and must be handled by private means. The function of private giving, through foundations and otherwise, is something special. And the principle of private giving, I think, is vital.

The American people, it is estimated, give $5,600 million a year to private efforts for those causes they wish to support. Of this amount, however, less than 3 percent comes from foundations. We are thus dealing here with only a fraction, a small fraction, of private giving. At the same time, it is, I believe, an important fraction because there are things that a philanthropic foundation can do more efficiently than any other institution. The hopes of our people to solve some of their sorest problems often depend upon the existence of foundations, even though they represent only 3 percent of our national philanthropic effort.

Take for example the vital work of searching out and eliminating some of the causes of human suffering, whether due to physical or to social factors. Foundations are particularly able to organize and conduct these searches for several reasons:

One is that such searches often risk unpopularity and misunderstanding, and it has often been difficult to obtain initial or continuous public financial support for them. Frequently only a foundation can take on this kind of responsibility.

Second, such searches can require coordinated attacks on problems with multiple causes—juvenile delinquency, for example. Foundations can bring together into common endeavor the needed variety of persons with special skills and professional training.

Third, such searches can be long and drawn out. Sometimes they fail completely. Because foundations can assume financial risks in
the initial phases of exploratory research that the general public or
the Government cannot or should not take, they have often paved the
way for more general public support of such endeavors.

The fight against cancer is an example of such pioneering. The
foundations were among the first to support organized research into
this disease. Government participation came later. And finally the
fight was so dramatized that millions of individuals began to make
donations for an all-out attack.

Incidentally, the fight against cancer illustrates the three basic types
of work supported by the large foundations, which are the acquisition,
dissemination, and application of knowledge.

Scientists and scholars engaged in the search for new knowledge—
if their findings upset the status quo—must sometimes fight for their
discoveries tooth and nail. And foundations in supporting their
researches must be prepared to join in the fight to defend the principal
of freedom of inquiry.

Man’s right to acquire knowledge and to use it freely is one of our
noblest traditions. It was expressed in our earliest state papers, both
in colonial days and in the early years of the Republic. The suppres-
sion of ideas, and not the free exploration of them, was the great
fear of our Foundation Fathers—as it must be ours. It was the author
of our Declaration of Independence and the Virginia bill of rights
who said:

Here we are not afraid to follow truth wherever it may lead, nor to tolerate
any error so long as reason is left free to combat it.

This committee is conducting its inquiry at a time when reason is
being challenged on many fronts. The basic propositions of our own
national life have never existed in many areas of the world. Even
where they have at one time existed they have now all too often
been driven out. Freedom of inquiry, with all other liberties, is sup-
pressed in a growing number of police states. Education in such
countries has become a tool of autocratic control; its content dictated
by the state and its use prescribed by the state.

We have also seen, in a few harried years, man’s technical advances
in some areas of knowledge so outstrip his progress in others that he
stands in greater danger of their misuse. Scientific advances have in-
evitably been followed by new social, economic, and political problems.
Men trained by knowledge and experience to deal with such problems
have got to be brought together in patient, wise, and cooperative
efforts.

The great responsibilities of our generation are to preserve our
fundamental beliefs, to encourage progress and to solve in a peaceful
way the social, economic, and political problems which confront us.
Foundations are equipped to assist in these great undertakings.

However, the potential usefulness of foundations at this critical
time in history would be destroyed if the Nation were to forsake its
heritage of freedom and accept the conspiracy theory advanced in
the record of these hearings. This committee has received statements
from earnest and informed men disproving this theory with clear and
open expositions of the achievements and actual methods of their
organizations. On behalf of the trustees of the Ford Foundation, I
join in rejecting this frightened and mistaken theory; we reject also
the related allegations directed specifically against the Ford Founda-
TAX-EXEMPT FOUNDATIONS

The role of foundations has been so distorted in these proceedings, and their importance so obscured, that it may assist the committee to know how one foundation, the Ford Foundation, took its place in American philanthropy and how it actually conducts its affairs.

The remainder of this statement describes what the Ford Foundation is, how it operates and what it does.

The Ford Foundation is a Michigan nonprofit corporation incorporated in 1936. The trustees of the Ford Foundation, in addition to myself, are:

Henry Ford II, chairman; president, Ford Motor Co.;
Frank W. Abrams, associated with Standard Oil Co. of New Jersey for 42 years and chairman of its board at the time of his retirement last year;
James F. Brownlee, partner of the New York investment firm of J. H. Whitney & Co.;
John Cowles, publisher, Minneapolis Star and Tribune and chairman of the board, Des Moines Register and Tribune;
Donald K. David, dean, Harvard Graduate School of Business Administration;
Mark Ethridge, publisher, Louisville Courier-Journal and Louisville Times;
Benson Ford, vice president, Ford Motor Co.;
Laurence M. Gould, president, Carleton College, Northfield, Minn.;
John J. McCloy, chairman, the Chase National Bank of the city of New York and former United States High Commissioner for Germany;
Charles E. Wilson, president of the General Electric Co. until 1950 and now chairman, executive committee, W. R. Grace & Co.; and
Charles E. Wyzanski, Jr., judge of the United States District Court in Boston and president, board of overseers, Harvard University.

From 1936 to 1948 the income of the Ford Foundation was relatively small and its grants were made largely to local Michigan charities in which the Ford family had a particular interest. In the fall of 1948, the trustees anticipated greatly expanded resources due to the settlement of the estates of Mr. Henry Ford and Mr. Edsel Ford. They felt that to allocate this money wisely, they would have to begin by identifying those urgent human problems to the solution of which a foundation might make effective contribution.

To aid them in this task the trustees decided to appoint a study committee which would draw upon the advice of the best minds of the country. The committee's task was to define and examine the most pressing needs and to recommend a policy and program to the trustees. I was asked by the trustees to organize and direct that committee.

The study committee agreed at the outset that its purpose was not to compile a comprehensive catalog of projects which the foundation might undertake, but to identify the areas where problems were most serious and where the foundation might make the most significant contribution to human welfare.

This committee was hard at work for many months. We believe the conclusions and recommendations of the committee were influenced by the best judgment of our times. Hundreds of leading Americans were consulted in lengthy personal interviews. Advisers represented every major segment of American life, and every field of knowledge. The committee secured the opinions and points of view of officials in State and Federal Government, representatives of the United Nations and its affiliated agencies, business and professional leaders, and the
heads of many private organizations. Administrators and teachers of leading universities and colleges contributed generously of their time and thought. The views of military leaders and of labor were sought and obtained. Conferences were held with the heads of many small enterprises as well as those of large corporations.

Experts were asked for recommendations not only on problems within their special fields, but on more general problems as well. Incidentally, experts from the physical and medical sciences who were consulted by the committee agreed that the most urgent needs for foundation action were in the area of the social sciences, even though attention to their own special fields might thereby be postponed.

I would like to add that this practice of consulting the best available outside experts has since been steadfastly followed by the foundation in its operations. Each year we obtain the opinions of hundreds of consultants and advisers on the various parts of our programs.

The results of the study, including the proposed areas in which the Ford Foundation would spend its funds, were adopted by the trustees and were published and widely distributed in September, 1950. The five major areas of foundation attention announced at that time still form the basis of its program today. These can be briefly described: The foundation supports efforts to promote international understanding and peace because without peace civilization may well be doomed. It aids the strengthening of democratic institutions and processes because they are fundamental to human welfare. It helps programs to make our free economy stronger and more stable because economic health is necessary to man’s attainment of his other goals. It believes that education is vital to a free people, and supports its advancement on all levels. Finally, it holds that a better understanding of man will aid his progress, and therefore supports projects to increase such knowledge.

The trustees I listed are responsible for determining policy to guide the foundation in contributing to these objectives and for approving and authorizing the specific actions undertaken in pursuit of them. They fully recognize this responsibility and spend a great deal of time carrying it out. All foundation expenditures are made pursuant to a specific grant, appropriation or authorization by the trustees. The trustees establish and review the procedures for following up the results of grants. They select the foundation’s principal policymaking personnel and review operating procedures, including those for the selection and supervision of other personnel.

Formal meetings of the trustees are held at least quarterly, and each lasts at least 2 days. Prior to each meeting, the trustees receive a comprehensive docket setting forth the background of each proposal scheduled for consideration at that meeting, including such details as the history, organization, and operations of the proposed grantee, the qualifications of the personnel involved, and the comments of advisers used in the development of the project. Between formal meetings, the other officers and I frequently consult with individual trustees to review new proposals or consider operating matters. Ad hoc committees of the trustees are established to deal with special program or administrative matters from time to time. Such a committee may continue work on a major grant from its preliminary stage, before it is ever incorporated in a docket, until the grant has been completed and
the followup action is taken. In addition, most of the trustees are members of either the executive or finance committees, which meet often with the chairman, Mr. Ford, and with me.

The trustees of the Ford Foundation take their responsibilities most seriously. They feel deeply that the purpose of their effort is the advancement of the public welfare and that the resources of the foundation are devoted to the public interest.

At the same time, they are responsible for the management of an organization which is private, independent, nonpolitical and non-governmental. The philosophy which pervades their actions rests squarely on the American concept of private initiative and free enterprise. They are guided always by the responsibility to act in the public interest, but as private individuals operating a private organization they must accept the full responsibility for their decisions. To this end they have formulated a number of general policies. I would like to mention four in particular:

First, the foundation's funds can be given only for scientific, educational and charitable purposes. These are its charter purposes and are the permissible areas of operation for tax-exempt organizations. All of its private domestic grantee organizations are themselves exempt from Federal income taxes under section 101 (6) of the Internal Revenue Code. As representatives of the Internal Revenue Service testified to this committee, no un-American, subversive, or political organization can receive or retain this exemption privilege. Foundation operating policy and procedures assure that its funds will not go for un-American or subversive activities, or for propaganda or for attempts to influence legislation. After I have described the program of the foundation, I believe it will be clear that the activities supported by the foundation adhere strictly to basic American traditions and principles. It should also be clear that these activities are not propagandistic or partisan even though they involve subjects which are from time to time in the area of public debate and controversy. Propaganda and partisanship are excluded from research and educational activities by the high standards of objectivity and scholarship which the foundation insists upon in its grantees.

Second, the foundation has to have a program so that it can select from thousands of applications those relatively few it can support with its limited resources. The Ford Foundation endeavors to make grants only for those projects which clearly embrace one or more of the program objectives I have outlined. Projects must be sponsored and conducted by reliable organizations and competent persons. By its program the Ford Foundation concentrates dollars and efforts upon what are felt to be important needs instead of scattering its funds inadequately and wastefully over a large number of projects.

Third, the foundation tries to administer its gifts in ways which give general strength to its grantees—schools, colleges, and other private organizations—in addition to helping accomplish the particular purposes of its grants.

Fourth, the foundation seeks new opportunities for service arising from changing needs and conditions. It continuously reexamines its program and plans. Its arrangements with its grantees are such that the foundation retains the freedom to change its own program or to shift emphasis within its program.
I believe that the foundation's adherence to these general policies, as shown by the detailed record of its operations, answers the allegations of the staff and its witnesses. It also answers the major questions with which this committee is concerned.

HOW A GRANT IS MADE

The board of trustees makes the grants of the Ford Foundation. The only exception is a very limited number of small grants which I am authorized by the trustees to make when emergency needs arise between meetings of the board. I make no recommendation to the board on grants without first getting the advice of the officers of the foundation, which is based on extensive staff studies and reports.

The vice presidents and secretary constitute a program committee which meets several times a week and reports to me its findings on every grant proposal. This involves not only an appraisal of the proposed project but a careful inquiry into the qualifications of the agency conducting it.

If a project is approved by me for recommendation to the board, it is then fully analyzed in materials supplied to the trustees for their study well in advance of their meetings. Rejections of important proposals are also reviewed by the board of trustees.

In voting to support an activity, the trustees specify such terms and conditions as they think necessary for its efficient execution.

Let me give you an example of the processing of a grant:

At their last meeting the trustees voted to make a grant of $500,000 to the trustees of the University of Pennsylvania for a study of consumer expenditures, income, and savings in the United States. This action was the culmination of months of study, investigation, and consultation by the foundation's staff; of a careful appraisal of the results of this work by several trustees individually before their meeting; and of discussion and inquiry at the meeting itself.

The proposal had originated 6 months earlier. At a cost of more than $1 million, the United States Bureau of Labor Statistics had gathered data on consumer behavior in interviews with 12,500 families in 91 cities. The original purpose was to revise and improve the Consumers' Price Index. This initial purpose was fulfilled, but Government funds were not available to finance additional analysis of the data which would be of great usefulness to economists, sociologists, and marketing and advertising experts. A general public benefit would also accrue, since economists are generally agreed that a greater knowledge of consumer behavior would be useful in understanding and minimizing fluctuations in the economy as a whole.

The desirability of tabulating and further analyzing the data was initially brought to the attention of the Ford Foundation by the Bureau of Labor Statistics in December 1953. In January 1954, members of the foundation staff discussed the project in greater detail with Mrs. Aryness J. Wickens, Deputy Commissioner of Labor Statistics, and Mr. Robert Behlow, the Bureau's Coordinator of special projects. It was decided that Mrs. Wickens would hold a series of conversations with various universities to explore the possibility of a cooperative project. As a result, the Wharton School of Finance and Commerce of the University of Pennsylvania was selected to participate in the project.
In April 1954, the Wharton School, with the assistance of the Bureau, submitted to the foundation a detailed proposal on the project's scope, general purposes, and uses. They submitted descriptions of the source of books of basic data to be prepared by the Bureau and of research studies to be undertaken by the Bureau, the Wharton School, and faculty personnel of the University of Michigan, Yale University, and the Carnegie Institute of Technology. They also gave details of a proposed budget for the project, in addition to many other exhibits and schedules.

The foundation then sent copies of the proposal to seven independent, outside experts for their appraisal.

Dr. Neil H. Jacoby, member of the President's Council of Economic Advisers; Dean E. T. Grether, School of Business Administration, University of California (Berkeley); Professor Bertrand Fox, director of research, Graduate School of Business Administration, Harvard University; Professor Theodore Schultz, department of economics, University of Chicago; Professor George Katona, program director, survey research center, University of Michigan; Dr. Ralph A. Young, director of research, Board of Governors, Federal Reserve System; and Professor Franco Modigliani, School of Industrial Administration, Carnegie Institute of Technology.

The consensus of this group was very favorable and resulted in constructive suggestions for the conduct of the project.

The validity of the sample used by the Bureau in assembling the original data was the subject of consultation with three experts on sample design:

These men all endorsed the sample used.

Conferences were then held with those who would be responsible for conducting the project:

Dean C. Canby, Balderston, the Wharton School; Dr. Dorothy Brady, Chief, Division of Prices and Cost of Living, Bureau of Labor Statistics; Dr. Irwin Friend, professor of finance, University of Pennsylvania; and Dr. Raymond T. Bowman, professor of economics, University of Pennsylvania.

The proposed budget was carefully examined, and it was found possible to provide for nearly all the main points of the project even though the requested funds were reduced from $688,150 to $500,000.

During April the vice president responsible for economic development and administration programs and the staff member who had assisted him in investigating and preparing the proposal presented it to the foundation's program committee, where it was the subject of a series of meetings. The committee approved it and transmitted it to me. I reviewed it, approved it, and asked the secretary to summarize the proposal, with my recommendation, for inclusion in the docket being prepared for the trustees' May meeting. After this and prior to the meeting, the proposal was the subject of several discussions be-
tween individual trustees and various officers of the foundation. At
the meeting, the proposal was repeated by oral summary; and, after
discussion, the trustees voted a grant for the project.

**RELATIONSHIPS WITH GRANTEES**

The Ford Foundation is almost entirely a grant-making institution. While it occasionally administers activities directly, by far the major part of its program consists of the gift of money to others. From the outset the trustees adopted the policy of avoiding direct operations wherever practicable. Among other results, this policy makes a large operating staff unnecessary. It guarantees a wide and continuing representation of many different viewpoints. It enables the foundation to take advantage of the specializations offered by various existing institutions. It retains flexibility for the foundation. Finally, it enables the foundation to strengthen the grantees themselves and to support that multiplicity of educational and scientific organizations which is in itself necessary in a free society.

**Direct grants.**—A considerable part of the foundation’s program is in the form of direct grants to colleges, universities, or other operating institutions. Such grants are made after careful consideration of the merits of proposals and also of the qualifications of the individual or organization that would carry it out.

Once a grant is made to support a project, full responsibility is placed upon the grantee for its effective execution subject to the terms and conditions of the grant. Within those limits, the foundation makes no attempt to direct the detailed administration of the project, influence its course, or control its results. Of course, it follows up to determine that the funds are properly expended for the purposes of the grant and to learn what has been accomplished. But discharging this responsibility is to be carefully distinguished in every way from the domination or direction of grantees.

**“Intermediaries.”**—A formulation sometimes finds it useful to work through an independent outside agency in administering a program. There is nothing sinister or mysterious about the use of such agencies—which are sometimes called “intermediaries”—nor do they constitute bottlenecks or centers of control. They often take care of the administration of projects involving several operating agencies, such as a program of coordinated study by several universities. Their service to foundations provides a practical business solution to a variety of operating problems.

The Social Science Research Council, for example, performs the valuable function of bringing together individuals of common scholarly or technical interest and serves as a clearing house of information. Many scholarly organizations serve as foundation intermediaries and fill a real need for interuniversity and intergroup organization. Such agencies are indispensable if rapid development of education and research is to continue.

When the services of an intermediary are needed, the Ford Foundation prefers to support a competent agency that is already established in the field and let it deal directly with other groups and individuals in the selection and support of individual projects. Sometimes, however, qualified intermediary organizations to carry out a particular kind of program do not exist, and in such cases the foundation coop-
crates in establishing a new organization to fill the need. Six such independent grant-making organizations have been established: The Fund for the Advancement of Education; the Fund for Adult Education; East European Fund, Inc.; the Fund for the Republic, Inc.; Resources for the Future, Inc.; and Intercultural Publications, Inc.

Each of these organizations has its own independent board of directors, and its own staff. I make reference to these particular intermediaries at this point because it allows me to clear up a confusion reflected in the views of some witnesses in these proceedings. It is often assumed that the staff members of these organizations are employees of the Ford Foundation, which they are not; or that their detailed administration is my responsibility or that of the foundation’s trustees, which it is not. The trustees are fully acquainted with their proposed programs, but these intermediary organizations are responsible for the selection of projects to carry out those programs. They are not subsidiaries or divisions of the Ford Foundation. Their creation enabled the foundation to focus the special skills and competence of their respective organizations on detailed and technical activities in specific areas. It gave broad representation to new viewpoints. It tended to decentralize rather than to centralize administration of projects. And it enabled the foundation to remain a small and flexible organization. The performance of these organizations has confirmed the soundness of the trustees’ judgment in establishing them.

EXAMPLES OF FORD FOUNDATION PROJECTS

I turn now to examples of projects the Ford Foundation has supported since 1950 when it began full-scale operations.

During the period January 1951 to December 31, 1953, we committed a total of approximately $119 million. Of this sum, about $87,500,000 went to United States institutions operating within the United States, and another $19 million went to the United States institutions operating abroad. The amount that went directly to foreign institutions was $12,500,000.

Every cent of this money has been spent for one ultimate purpose—a stronger American society and a stronger free world. Within this broad purpose the grants made have been directed towards 1 or more of the 5 program objectives announced by the trustees in 1950. The full list of foundation grants has, of course, been made available to this committee and to the general public.

Support of education

The Ford Foundation has spent the largest share of its funds since 1950 in the field of education. Indeed, the support of education in the broader sense encompasses most of our activities. The foundation’s assistance for research and training in foreign policy and world affairs, for the study of human behavior, for work on problems in economic development and administration, for broader understanding and better functioning of free institutions, has all, in a sense, been aid to education—education directed to the development of the free and self-reliant mind and the growth of the human spirit.

In its approach to problems of education, the foundation does not attempt to promote any particular point of view. It is governed by the belief that in democratic countries there should be no single school
of thought concerning education and no central point of control, either in the hands of government or in the hands of some private group. We believe that our public-school systems must remain under decentralized control and that our private schools, colleges, and universities must retain their independence. To whatever extent our schools are drawn under central control, our democracy is to that extent weakened.

We believe also that our dual system of private and tax-supported institutions of higher education must be preserved. Despite the excellence of our State colleges and universities and the extensive diversity of their control, we regard the continuance of private colleges and universities as a most important national obligation.

Within this century the demands made upon these various institutions have been immense. The number of our young people attending college has increased almost tenfold; there are today some 21/4 million students in college. The growth of the demands on both elementary and secondary schools has been no less spectacular.

An enormous burden has correspondingly been thrown upon the teaching profession, and upon the administrative structure and facilities of our schools and universities. Intensifying this strain have been such other factors as the growing complexity of industrial life, with its requirements for training in vocational skills, and the dislocations resulting from the draft.

The trustees' appraisal of the opportunities for foundation action in advancing education brought them to the conclusion that two independent nonprofit organizations should be established to deal with some of the complex problems in education today. These were created in March 1951 and are headed by distinguished boards of directors. One is the Fund for the Advancement of Education, the purpose of which is to encourage and improve formal or institutional education, and which is under the chairmanship of Owen J. Roberts, former Associate Justice of the Supreme Court of the United States. The other, the Fund for Adult Education, has been established to support education for those whose formal schooling is finished, and is under the chairmanship of Clarence Francis, until recently chairman of the board of General Foods Corp.

The Fund for the Advancement of Education concentrates upon five major educational objectives. These are—

- Clarifying the function of the various parts of the educational system so they can work together more effectively;
- Improving the preparation of teachers at all levels of the education system;
- Improving curricula;
- Developing increased financial support for educational institutions; and
- Equalizing educational opportunity.

As of the end of 1953, the foundation had made grants aggregating $30,850,680 to this fund. The fund, in turn, had disbursed $22,242,568 for the benefit of hundreds of colleges, school systems, and teachers throughout all of the 48 States.

As of December 31, 1953, grants of $22,400,000 had been made to the Fund for Adult Education. After an initial period of surveys and experimentation, the fund's program was devoted largely to adult study and discussion activities involving the collaboration of a great many voluntary groups and associations.
Of the foregoing sum, $9 million was granted to help extend and develop educational television. The fund offered to match money raised locally for building and operating educational television stations in about thirty cities and university centers. Stations already are on the air with fund assistance in Madison, Wis.; San Francisco, Calif.; East Lansing, Mich.; and Pittsburgh, Pa., and others soon will be operating. With help from the fund, a center to produce and exchange program materials for these stations has been established at Ann Arbor, Mich.

The foundation has felt from the beginning that it should try to help develop the educational possibilities of standard television. Through its TV-radio workshop, the foundation supports the production of OMNIBUS, a 90-minute television program designed to demonstrate that commercial television may serve as a cultural and educational medium and still attract a large audience.

*Peace and international understanding*

Throughout most of their history, the religious spirit and humanitarian motives of the American people have led them to give help to people abroad. In more recent years, the recognition has grown that such help is also in our enlightened self-interest, since our own freedoms and even our survival can now depend on happenings thousands of miles from our shores. Because of this recognition the American people are carrying unprecedented burdens in an effort to establish a just peace throughout the world. In this effort the Ford Foundation feels it can as a private agency play a small but significant role.

In its international activities, the Ford Foundation supports three kinds of projects: foreign economic development, research and training in overseas problems, and educational activity on international affairs.

*Economic development.*—These projects are concentrated in South and Southeast Asia and the Middle East. The emerging powers in these areas are important to the United States and to the free world. Their choice between the democratic forms of government they prefer and the totalitarian forms which threaten them, depends largely upon their ability to make political and economic progress. The trustees have responded to requests of governments and private institutions in these areas for assistance in the production of food, in improving the techniques of village industry and in basic education. In India, for example, aid has been given to the Allahabad Agricultural Institute, which is supported by 5 American and 2 British religious organizations, to train a group of leaders who can teach better agricultural techniques in the villages. In Pakistan, the foundation has helped to establish a polytechnic institute and industrial training center, to ease the acute shortage of mechanically skilled workers in that country. In the Middle East, aid has been given the American University in Beirut for creation and support of an experimental farm and applied agricultural research program.

*Overseas training and research.*—The trustees recognized that the United States, in exercising its responsibilities of world leadership, has been handicapped by inadequate knowledge of other parts of the world and by a dearth of trained people. They decided, therefore, to support research and training projects on foreign areas in American universities for at least 5 years. The University of Michigan,
for example, received a grant last year under which a number of graduate students was taken to the Near and Middle East for field training under faculty supervision. Another example was the grant to the Hoover Institute and Library at Stanford University to improve its collection of materials on Asia and the Near and Middle East.

**Educational activities on international problems.**—If our capacity to work toward peace is to be increased, there must be a broad base of public understanding of international problems both in the United States and abroad. The trustees, therefore, have authorized the support of a variety of educational activities involving the dissemination of information and knowledge through voluntary organizations, publications, and other media. A grant to the Council on Foreign Relations, for example, enabled it to organize a study group on United States-Soviet Union relations composed of business and industrial leaders, scientists and scholars, to analyze the issues in conflict between the free nations and the Soviet Union. The foundation also has facilitated the travel and interchange of scholars and others, such as 4-H Club leaders, to increase their general understanding of international affairs.

In response to a special opportunity to strengthen an outpost of freedom surrounded by Soviet-controlled territory, the foundation has made grants to build a library and lecture hall at the Free University of Berlin, which was established following the war by students and teachers who fled the Communist-dominated university in the Soviet sector of the city.

Sometimes our efforts in distant parts of the world are misconstrued. For example, a well-known newscaster said a few months ago:

> The Ford Foundation has allocated 250,000 American dollars to the American Council of Learned Societies for the study of Telegu. It has handed over a quarter of a million dollars for the study of Telegu, which is a neglected oriental language spoken mainly in Hyderabad, India. If the disturbed dead could turn in their graves, Old Henry would be whirling tonight.

Actually, only a few thousand dollars of the total grant went for work on Telegu. But more important than that are the following facts: Telegu is today the language of more than 30 million Indians. Most of them live in Andhra on the eastern coast of India. It is true that the language has been neglected—by us, but not by the Russians. Telegu-language publications from Moscow are distributed every day. There is a Russian-Telegu dictionary. There is no comparable English dictionary. The Ford Foundation believes it is money well spent to help bridge the language gap between the United States and those millions of Indians.

Neither the laws of this country nor the articles of incorporation of the foundation prohibit or limit philanthropic activity abroad, and such activity is in keeping with some of the finest traditions of American life. It is also in line with the policies of the American Government, which is carrying on large-scale assistance programs in foreign areas.

In working abroad, the activities of a foundation must be consistent with the established goals of our Government; and our operating procedures and policies assure such consistency. But a foundation cannot become a mere tool of Government policy, or it will certainly end by
compromising both the Government and itself and diminishing the effectiveness of its own activity.

Operating in countries on the border of the Communist world, as we do, has its risks. These are sectors where Communist and democratic ideas are in conflict every day. The foundation has not, of course, worked in Communist countries, and we would withdraw our support from a country the minute a Communist takeover appeared inevitable. But we are willing to enter the fight to help people protect their freedom—even though at times the tide seems to be running against them, even though their country may not do everything exactly to our liking. The alternative is to leave the battlefield to communism.

The strengthening of democratic institutions

The Ford Foundation hopes to strengthen democratic institutions and processes because they are fundamental to the advancement of human welfare. In considering how to work toward this vitally important objective, the trustees and their advisers have had to assess the stresses and strains put upon American democracy by the upheavals of the first half of this century and especially by the internal and external threats of communism. In this connection the trustees decided after many months of careful staff work and consultation to establish the Fund for the Republic, Inc. This new, independent, nonpartisan organization, devoted to the problem of achieving security with freedom and justice, has received $15 million from the foundation. I am submitting a separate report on the details of this fund’s establishment as supplement B to this statement.

The trustees in analyzing our democratic strengths and weaknesses were led to a consideration of interracial relations. To increase the Negro’s opportunity for education, the foundation made a grant of $1 million to the United Negro College Fund, Inc.

We have been concerned with the need for improving the administration of criminal justice. To this end a grant of $50,000 was made to the American Bar Foundation, created by the American Bar Association.

Three groups seeking to improve the efficiency of Government at all levels have been supported: The National Civil Service League, the National Municipal League, and the Public Administration Clearing House.

Underlying their consideration of this part of the program was an awareness on the part of the trustees of the need for a widespread understanding of American ideals and traditions. They therefore have supported a number of important activities directed toward this end, in addition to the Fund for the Republic. The Advertising Council, Inc., received $50,000, matched by funds from other sources, for a restatement of our national beliefs and ideals. Through the fund for Adult Education, $500,000 went to the American Library Association to provide opportunities and materials for study and discussion of the basic national documents, ideas and experiences that constitute the American heritage. Almost 300 groups in 28 States are already participating in this program. Again through this fund, over a million dollars of foundation money went into the development of recorded educational radio programs. The first of these—a series of 13—dramatized the life and work of Thomas Jefferson and was broadcast over 168 stations throughout the Nation. The National Broadcasting
Co. in cooperation with the National Association of Educational Broadcasters adapted a part of the series for television, and the scripts were also published in book form.

The behavioral sciences

All the areas of the foundation's program concern the behavior of human beings. Clearly, the success of efforts to eliminate war, to strengthen free societies and to lift civilization to higher levels depends upon man's better understanding of himself. We recognize that our present knowledge of human behavior is inadequate, and that there are too few people capable of adding to this knowledge or even able to apply effectively what is now known.

The foundation's interest in this field is in no sense diminished by the difficulties which men face in the advance toward knowledge of human behavior, and by the fact that quick results are not to be expected. Here again is an area of effort that appears peculiarly appropriate to a foundation. Societies make progress when they can invest substantial resources in the acquisition of knowledge and in the training of scientists and scholars, and when they have faith that the investment will ultimately yield worthwhile returns. The foundation shares the faith of this country in scientific knowledge and education. In promoting the study of man it has confidence that the institutions and scholars it supports will in the long run contribute to the solution of many of man's problems.

The foundation's program to increase understanding of human behavior includes grants to universities and other educational organizations (1) to improve the competence of behavioral scientists and scholars; (2) to improve the sciences and disciplines which are concerned with behavior; (3) to improve the methods employed by the universities and scholars in scientific research and training; and (4) to strengthen the basic resources of universities and colleges that are engaged in training and research in human behavior.

Economic development

Another major objective of the Ford Foundation is to help keep our economy viable and stable because economic health is necessary to man's attainment of his other goals. In developing this program and in screening the many worthwhile applications submitted to the foundation, the trustees and officers have sought the advice of numerous American businessmen and economists. The grant to the Wharton School described earlier is an example of one of the ways in which the foundation is attempting to enhance our economic strength by assisting research and training in our educational institutions.

Another type of activity was the establishment of Resources for the Future, Inc., an independent agency concerned with the whole problem of wise use of our national resources. This agency sponsored the Mid-Century Conference, which was held in Washington last year, to discuss various aspects of the conservation, development, and use of our resources. More than 1,500 persons, including the President of the United States, took part. Here many different views, including those of industry, agriculture, labor, consumers, and Government, converged and often conflicted. The nonpartisan sponsorship of the conference and the objective methods by which it was conducted show how a foundation can properly support activities on subjects that are often controversial.
Manpower is a critical national resource, and as such is another subject of interest to the foundation. In the present period of preparedness we must obviously make the maximum use of our manpower. The foundation has provided substantial support to Columbia University for the National Manpower Council, established in 1951.

Other projects looking toward economic development and political stability, particularly in the newer nations of the free world, have received substantial support by grants to the Massachusetts Institute of Technology.

The foregoing outline of some of the activities of the Ford Foundation suggests the scope and character of our program as of today, after 3½ years of expanded operations. We expect this program continually to evolve as conditions change. As old problems come nearer to solution and new problems arise, the foundation must be able to respond and move in new directions. We will make mistakes, and may incur criticism. But our usefulness is really at an end if ever we become more interested in playing it safe than in serving humanity.

CONCLUSION

The Ford Foundation is a young foundation. It took its place among the large philanthropic organizations with its expanded program only in 1950. But even though it is still in the formative period of finding the most effective ways to serve the public welfare, it has had the opportunity and privilege to meet thousands of people, including representatives of hundreds of private organizations that are dedicated to the common good. It has therefore had an unusual opportunity to observe American private philanthropy in action, and to become acquainted with the people who run the organizations that constitute important parts of philanthropy. It has also had the opportunity to study the benefactions which flow in increasing volume from philanthropy to education, science, and charity.

The trustees and officers of the Ford Foundation, therefore, have no hesitancy in defending the institutions and individuals that make up American private philanthropy. We attach great importance to the successful defense of private philanthropy in America because it is an important exercise of the rights of private association and private action, and we have seen the collapse of free forms of society where such rights are curtailed. We think the public interest has not been served through the attacks which within the last 2 years have twice been leveled on so vital a part of our free and democratic system.

To date the record of this committee, because of its almost complete preoccupation with alleged shortcomings of foundations, has virtually ignored the great contributions of foundations to the public welfare. To leave the record in this imbalance would be inconsistent with this committee's declared purpose of conducting a fair inquiry.

The Ford Foundation respectfully submits that this committee has an unusual opportunity to render a great service at the time it makes its report to the Congress:

First, it can dispel public misunderstanding by denouncing all irresponsible testimony given in its public hearings insinuating that foundations have been party to a subversive conspiracy;

Second, it can restate and reaffirm the vital role of private philanthropy in America and in the free world;
Third, it can encourage the maintenance and growth of conditions under which philanthropy can flourish as an integral and indispensable part of the total American democratic system; and

Fourth, it can testify to all the adherence of the vast part of American philanthropy to the law, to public policy, and to our national objectives.

We hope that the committee will choose this constructive course.

SUPPLEMENT A

REPLY BY THE FORD FOUNDATION TO ALLEGATIONS DIRECTED SPECIFICALLY AGAINST IT CONTAINED IN THE RECORD OF THE COMMITTEE'S PUBLIC HEARINGS TO DATE

During the course of this investigation, several statements have been made attacking purposes, personnel and programs of the Ford Foundation. These statements or allegations appear in the speech of Mr. Reece before the House of Representatives on July 27, 1953, when he presented House Resolution 217, which speech has now been repeated in the record of this committee; in reports subsequently prepared by the committee staff; and in the testimony of certain witnesses.

Except for a few miscellaneous criticisms, these allegations follow two general themes: that certain present or former employees of the foundation are of "dubious" loyalty, and that certain grants have been made to individuals or organizations of questionable loyalty or for questionable purposes.

We believe the record of this committee's hearings does not substantiate these allegations. An examination of the press releases of the committee and the transcript of the hearings strongly suggests that many of the allegations—having been made perhaps carelessly or for partisan purposes—have now been forgotten, if not actually disavowed, by their authors.

We recognize therefore that it is not necessary to deal with all these allegations as if they were well-documented and seriously intended. Indeed it is impossible to deal with all the innuendoes and implications, for often the statements are vague and ambiguous; and it seems unnecessary to bother with those clearly irrelevant to the scope of the inquiry, as for example the farfetched charge that the Ford, Rockefeller, and Carnegie Foundations have violated the antitrust laws.

Nevertheless, we believe that the dignity and prestige of the Congress give even trivial and baseless comments a certain standing once they become part of the official record. It is our hope, by presentation of the following information, to set the record right and insofar as we are able, to prevent further undeserved injury to the individuals and institutions concerned.

I. CHARGES REGARDING THE LOYALTY OF CERTAIN PRESENT OR FORMER EMPLOYEES

We state for the record as follows:

1. Since the beginning of full-scale operations in 1950, the Ford Foundation has hired several hundred full-time, part-time and temporary employees, consultants and advisers. To the best of our knowledge and information, the record does not contain a single instance of anyone having been hired in any capacity by the Ford Foundation.
who had ever been a member of the Communist Party or of any other subversive organization.

2. In the hiring of personnel, the foundation follows the practices of any well-managed private organization. A careful investigation is made of the competence, character and integrity of all potential employees before they are hired. Regular supervision is of course exercised over employees after they are hired, and in no instance to date has any incident arisen or any information been discovered leading us to doubt the loyalty of any employee.

3. Based on the foregoing, we believe the officers and staff of the Ford Foundation are, without exception, men and women of competence, integrity and loyalty.

The foundation has carefully reviewed the allegations which have been placed in the record of this investigation against various of its employees. In general the allegations involve no more than legitimate differences of opinion between the person criticized and the critic. But by the clever use of innuendo, the suggestion is conveyed that there is something "dubious" if not actually subversive about the person with whom the critic disagrees.

Without exception, we reject the insinuations made in the record of the hearings of this committee to date that certain Ford Foundation employees are disloyal or subversive. Based on our investigations we believe these insinuations are erroneous and without substance. We are forced to the conclusion that the purpose in giving circulation to the allegations and to the material offered in their support was to cast doubt upon the loyalty of men against whom no real evidence was available, and thereby to reflect doubt upon the purposes and character of the Ford Foundation.

In reaffirming the foundation's confidence in the loyalty and competence of the men involved, it is not intended to say that all they have ever said or done, or all they may say or do in the future, necessarily represents foundation policy. They are men of standing and ability. Like all citizens, they have their views on public issues, and as free citizens they have the right to express them. If the committee wishes to question any of these persons further, we are certain they would be happy to provide whatever information is requested, and the committee should feel free to call upon them directly.

Case No. 1: Mr. Bernard Berelson

Allegation.—On pages 90–91 of the transcript of these hearings, the following statement appears:

Bernard Berelson is the director of the Ford Foundation's behavioral sciences division, which has just been allotted $3,500,000 for the creation of a center for advanced study in behavioral sciences which will consider social relations in human behavior. Berelson, while on the faculty of the University of Chicago, served on a committee to welcome the Red Dean of Canterbury, the Very Reverend Hewlett Johnson, world renowned apologist for communism who sports a Soviet decoration for his work in behalf of his Kremlin masters. The welcoming committee for the Red Dean of Canterbury was organized under the auspices of the National Council of American-Soviet Friendship, an agency which has been cited as subversive and Communist by the Attorney General of the United States.

---

1 References to the transcript of hearings throughout are to stenographic transcript prepared by Alderson Reporting Co., Washington, D. C.
2 Ibid., p. 36.
Mr. Berelson joined the staff of the foundation in July 1951. At the present time he is the director of the behavioral sciences program of the foundation.

Mr. Berelson is a social scientist of national reputation, who in the course of his career has been research director of the bureau of applied social research at Columbia University and dean of the Graduate Library School at the University of Chicago. He is a past president of the American Association for Public Opinion Research. He is the author of several books and numerous articles of acknowledged scientific merit.

In connection with the reference made to him in the record of these hearings Mr. Berelson states that:

(a) He is not nor has he ever been a member of or in any way affiliated with the National Council of American-Soviet Friendship.

(b) He is not and has never been a member of any organization cited by the Attorney General as subversive.

(c) He has never served on any welcoming committee for the Dean of Canterbury sponsored by the National Council of American-Soviet Friendship or by any other organization.

In connection with the incident mentioned, he states:

I recall signing a petition at the University of Chicago sometime between 1949 and 1951, asking the State Department to reconsider its adverse ruling on the Dean of Canterbury's application for a visa to enter this country, and to grant the dean such a visa.

I was not endorsing the dean's views, but merely expressing my belief that the United States in cases such as this should not place itself before the world in the ridiculous posture of appearing fearful of ideas with which we as a Nation do not agree.

This is the closest I ever came to "serving" on any committee concerning the dean and I have never seen or heard the dean.

Case No. 2: Dr. Philip E. Mosely

Allegation.—On page 91 of the transcript of these hearings, the following reference appears:

The East European fund was established by the Ford Foundation, is financed by it and deals with issues relating to the Soviet Union and its European satellites, and particularly with the settlement and adjustment of Soviet refugees who have come to the United States. The president of this fund is Dr. Philip E. Mosely, who is also director of the Russian Institute at Columbia University. Some years ago Professor Mosely made the following evaluation of the Soviet Union in a pamphlet he wrote for the Foreign Policy Association, also supported by foundations: "Over the long run, great numbers of people will judge both the Soviet and American systems, not by how much individual freedom they preserve but by how much they contribute, in freedom or without it, to develop a better livelihood and a greater feeling of social fulfillment."

Garet Garett, editor of American Affairs, said that this is straight Communist Party ideology: "It means only that pure Communist ideology may be thus imparted by Columbia University's Russian Institute through the Foreign Policy Association."

Dr. Mosely, who is an eminent scholar and authority on the policies of the Soviet Union, has been president of the East European fund since January 1952. The fund is an independent corporation established and financed by the Ford Foundation. One of its purposes is to help refugees from the Soviet Union to make reasonable economic, social and cultural adjustments to American life.

Dr. Mosely's special knowledge has been drawn upon repeatedly by our Government. For example, in 1951-52 he appeared at the request of the Attorney General of the United States as a principal expert witness in an action brought before the Subversive Activities
Control Board to compel the Communist Party of the United States to register as a Communist-action organization under the Subversive Activities Control Act. The report of the Subversive Activities Control Board in this case, Senate Document No. 41, 83d Congress, 1st session, dated April 20, 1953, reads in part as follows:

REPORT OF THE BOARD

Dr. Philip E. Mosely, professor of international relations at Columbia University and director of the university's Russian Institute, was petitioner's principal witness for the purpose of establishing that respondent's (Communist Party of the United States—CPUSA) views and policies do not deviate from those of the Soviet Union. Dr. Mosely has had a distinguished and active career in the field of international relations, and for more than 20 years has devoted his research primarily to Russian political and diplomatic history. While so doing, he has had occasion to analyze carefully the publications and other documents issued by respondent and the Soviet Union. He is eminently qualified to testify as an expert on evidence relative to the “nondeviation” criterion of the act.

Dr. Mosely's testimony traced the continuing stream of international questions upon which both the Soviet Union and the CPUSA have announced a position. He enumerated some 45 international questions of major import, extending over the past 30 years, with respect to which there was, as revealed by his testimony, no substantial difference between the position announced on each by the Soviet Union or its official and controlled organs and that announced by the CPUSA or its official and controlled organs.

In connection with his appearance in this case, a list of some 88 major publications by Dr. Mosely on subjects relating to Soviet policy was submitted to establish his qualifications as an expert.

With reference to the allegations made against him in the record of this investigation, the original source of the single criticized sentence, quoted out of context and twisted out of its original meaning, is Dr. Mosely's Face to Face with Russia, No. 70 of the headline series of the Foreign Policy Association, Inc., published on August 20, 1948. The sentence quoted cannot be understood except in the context of the four preceding sentences and the single sentence following it in the original pamphlet:

As we have seen, most of the problems we face in dealing with the Soviet Union are not direct Soviet-American problems, but are rather problems in third areas. The problem of Iran is not solely whether Soviet influence will dominate there, or whether British-plus-American influence will balance Soviet pressure. It is whether Iran can develop its resources and reshape its social and political structure to survive in the modern world. The same problems, written even larger, confront India, China, Indonesia, and the Arab East.

Over the long run, great numbers of people will judge both the Soviet and American systems, not by how much individual freedom they preserve, but by how much they contribute, in freedom or without it, to develop a better livelihood and a greater feeling of social fulfillment. The shape and purpose we give to our dealings with peoples in the non-Soviet world will determine whether American leadership continues to be acceptable to them (pp. 51-52).

The point of view expressed in these two paragraphs is that which underlies the point 4 program to assist the economic and social development of the underdeveloped countries and thereby to influence their political orientation in a way favorable to the free world and therefore to the interests of the United States.

In addition to the direct allegation against Dr. Mosely quoted above, reference was made (p. 92, Reece hearings transcript)1 to the fact that Dr. Mosely heads the Russian Institute at Columbia University, of which Philip C. Jessup and Ernest J. Simmons were identified as board members. If the implication is that Dr. Mosely is

1Ibid., p. 36.
 somehow suspect because of his association either with the institute or these two men, or both, we believe it is pertinent to note that the institute is being used as a center to train United States Army, Air Force, and Navy officers as well as State Department personnel. It seems to us unlikely that such functions would be entrusted to the institute if the Government had any question relating to its security.

Case No. 3: Mr. Bernard L. Gladieux

A number of allegations have been made concerning Mr. Gladieux in the record of these hearings (pp. 92–96, Reece hearings transcript). These are enumerated and specifically refuted in a statement which Mr. Gladieux has prepared and signed under oath. He has asked that the committee accept this statement, which is being submitted herewith, as part of its record. Mr. Gladieux has also stated that if the committee wishes to ask him to appear and testify, he will be glad to comply.

Mr. Gladieux has been a member of the staff of the Ford Foundation continuously from November 1950, until the present. He was originally employed on the basis of an outstanding record of service as a Government official and on the highest recommendation of responsible people. The foundation believes that Mr. Gladieux’s statement speaks for itself. We have had close contact with him during his 3 1/2 years of service with us, and there is nothing in his record of service to make us doubt his character, his integrity, or his complete loyalty. Based on the foregoing, we believe that the accusations which have been made against him in the record of the hearings before this committee are false.

Case No. 4: Mr. Robert Maynard Hutchins

Concerning the allegations made in these hearings about Mr. Hutchins, there is little to add to what is already a matter of public record. He has been a leading figure in American education and public life for nearly 30 years. His views on such matters as civil liberties, academic freedom, and the right of universities to carry on their work without political interference are well known.

The foundation feels it is unnecessary to repeat what Mr. Hutchins has already stated, before the Cox committee and on other public occasions, with respect to such criticisms of his views and actions as are in the record of this investigation.

Mr. Hutchins served the foundation as an associate director from late 1950 until May 1954. No action or statement of his during that time would lead us to have the slightest doubt of his deep and complete devotion to the ideals and interests of our country.

II. CHARGES MADE REGARDING DUBIOUS GRANTS

We state for the record as follows:

1. As a matter of policy and patriotism as well as for reasons of scientific integrity, the foundation would not make a grant to a subversive individual nor to a subversive organization.

2. The record of the foundation shows that of the hundreds of grants it has made, it has never given money to any organization on the Attorney General’s list of subversive organizations and that it has never made a grant to any individual known by it to be subversive.

1 Ibid., pp. 36, 37, 38.
2 Ibid., p. 38.
3. The foundation’s policies, program, and operations are controlled by its trustees, who are men of the highest patriotism, with broad managerial experience and national reputation. Foundation grants are carefully investigated before they are made, and are subsequently reviewed and evaluated.

4. Our practice of regular public reporting exposes foundation grants and policies to constant public scrutiny.

5. The entire program of the Ford Foundation is devoted to the welfare of the American people. In this positive and constructive sense, it is totally pro-American and actively antisubversive.

Case No. 1: Alleged subversive and un-American propaganda activities

In the record of these hearings (pp. 70–71, Reece hearings transcript) it is stated that—

Important and extensive evidence concerning subversive and un-American propaganda activities of the Ford Foundation which was available to the (Cox) committee of the 82d Congress was not utilized. Thus the Ford Foundation—which is the wealthiest and the most influential of all foundations—was not actually investigated. In fact, the hearings on the Ford Foundation constituted merely a forum for the trustees and officers of this foundation to make speeches instead of answering specific questions regarding the many dubious grants made by them.

The above statement must also be read in light of another made at the same type (pp. 64–65, Reece hearings transcript), in which the procedures of the Cox committee are referred to as follows:

The usual jurat was omitted. As a result of this, neither the Congress nor the people know whether these officers and trustees were telling the truth. In view of these circumstances, much of the testimony has no more validity than common gossip, and no proper investigation has taken place.

The witnesses for the Ford Foundation before the Cox committee were Messrs. Henry Ford, II, Paul G. Hoffman, Robert M. Hutchins, and H. Rowan Gaither. These are not men whose veracity changes with place and circumstance. The suggestion that because they were then not under oath their statements had “no more validity than common gossip” is contemptible.

In the Cox investigation, the foundation was not asked to testify or submit information under oath. Had it been asked to do so, it would have readily complied. In that investigation, as in the present one, the foundation has cooperated to the fullest with staff and committee members. It has answered all questions and has provided without exception whatever information has been requested.

With reference to the statement that the Cox committee had “important and extensive evidence concerning subversive and un-American propaganda activities of the Ford Foundation,” we remind this committee of the following:

1. In answering the Cox committee questionnaire, the Ford Foundation stated that it had not made grants to any organization listed as subversive by the Attorney General or, insofar as it could discover, to any individual who had ever been cited or criticized by the House Un-American Activities Committee or the Senate Subcommittee on Internal Security (answers D-10 and D-14 to Cox questionnaire).
2. In its final report, the Cox committee came to the following conclusion:

* * * It seems paradoxical that in a previous congressional investigation in 1915 the fear most frequently expressed was that the foundations would prove the instruments of vested wealth, privilege, and reaction, while today the fear most frequently expressed is that they have become the enemy of the capitalistic system. In our opinion, neither of these fears is justified. (H. Rep. 2514, 82d Congress, 2d sess., p. 10.)

It is impossible to believe that the Cox committee would have come to such a conclusion had there been any important and extensive evidence of the kind alleged.

**Case No. 2: The Fund for the Republic**

A number of statements have been made in these hearings (pp. 57, 58—59, 74, 103—105, 110, Reece hearings transcript) 1 to the effect that the creation of the Fund for the Republic by the Ford Foundation was an affront to the Congress; that its purpose is to investigate the Congress and interfere with the investigation of subversive activities in this country. Such criticisms are baseless.

Full public information has been made available from the start describing the actual purposes of this important undertaking. Supplement B attached summarizes the materials previously made available to this committee regarding the origins and purposes of the Fund for the Republic.

The counsel to this committee has indicated that the Fund for the Republic would be asked to make a further statement in its own behalf covering its operations to date. The foundation will provide any further information which may be reasonably required by the committee in order to aid it in disproving the charges which have been made against the fund.

**Case No. 3: The television program Assembly VI and the employment of Mr. Arthur Schlesinger, Jr.**

Mr. Schlesinger was once employed by the TV-Radio Workshop, at that time an agency of the Fund for Adult Education, a grantee of the Ford Foundation. He was hired by them to narrate Assembly VI, a television series reporting on the United Nations General Assembly meetings in Paris, November—December, 1951. It has been suggested (pp. 107—108, Reece hearings transcript) 2 that Mr. Schlesinger’s employment as narrator for these television films was improper because of his viewpoint on certain political questions. It should be noted that even in the criticism of his views, no statement is made that Mr. Schlesinger or his viewpoint is subversive or in any way disloyal.

In any case, Mr. Schlesinger was not employed because of his political opinions, nor did his employment by the TV-Radio Workshop signify endorsement of his personal views by the Workshop. Mr. Schlesinger is a well-known author, a Pulitzer prize winner in history, and is a highly competent radio and television commentator. These are the reasons why his services were used.

The program which Mr. Schlesinger narrated was broadcast over the NBC television network and consisted of 12 weekly one-half hour programs, beginning November 10, 1951. The series received favorable public comment from critics and listeners all over the Nation. A careful review of the scripts of these programs will reveal no evidence whatever of a lack of objectivity on the part of Mr. Schlesinger. More-

---

1 Ibid., pp. 26, 27, 40, 41, 42.
2 Ibid., p. 41.
over, except for the statements in these hearings, the foundation has never heard criticism from any source alleging bias of any kind in these programs.

Case No. 4: Fellowship grant to Moses Finley (Finkelstein)

On page 110 of the transcript of these hearings, the following allegation is made:

Another example of the kind of grants the Ford Foundation makes was revealed in the testimony of William M. Canning, a former member of the faculty of the City College and of Xavier University, who said under the oath at the hearings of the Internal Security Subcommittee that Moses Finkelstein, a City College teacher and later a professor at Rutgers University under the name of Finley, was a member of the Communist Party and that recently this man received a grant from the Ford Foundation.

Mr. Finley was one of 988 winners of faculty fellowships given by the Fund for the Advancement of Education, a grantee of the Ford Foundation, to enable younger faculty members in colleges throughout the country to improve their competence in undergraduate teaching. The fellowships covered compensation as well as travel and tuition costs. The total of these awards to date has been $5,950,000, plus travel and tuition costs. Mr. Finley's fellowship was for the academic year 1951-52, and amounted to $4,000. He received in addition $660 in travel expenses.

The Fund for the Advancement of Education, at the time of establishment of the faculty fellowship program in April 1951, appointed a committee on administration to administer the program. Its chairman was President Victor L. Butterfield of Wesleyan University. Other members of this committee were—

Chancellor Harvie Branscomb, Vanderbilt University
President Mary A. Cheek, Rockford College
Dean Fred C. Cole, Schools of Arts and Sciences, Tulane University
Dean Paul A. Dodd, College of Letters and Science, University of California at Los Angeles
Dean Eldon L. Johnson, School of Liberal Arts, University of Oregon
Chancellor Arthur H. Compton, Washington University (St. Louis, Mo.)
President Arthur G. Coons, Occidental College
President Albert W. Dent, Dillard University
Dean William C. DeVane, Yale College, Yale University
Dean O. Meredith Wilson, University of Utah
Dean Francis Keppel, Graduate School of Education, Harvard University
Dr. Nathan M. Pusey, then president of Lawrence College
President Goodrich C. White, Emory University
Dr. Payson S. Wild, Jr., vice president and dean of faculties, Northwestern University

All applicants are required to have assurance by the institutions in which they are employed of their reemployment for the following academic year, and their applications have to be fully recommended by their employing institutions.

Newark College of Rutgers University was the sponsoring institution for Mr. Finley, whose project involved research in the legal history and economics of the business practices of ancient Greece.

Rutgers University endorsed him "without reservation" on the application for the fellowship. In addition, endorsements were received from several outstanding scholars of law, ancient history and Greek and Latin, testifying to Mr. Finley's abilities as a teacher and scholar.

The fellowship to Mr. Finley had been granted prior to the hearings of the Senate Internal Security Subcommittee in which Mr. Finley was

1 Ibid., p. 42.
cited. Obviously, if such charges had been known at the time the grant was made, they would have been carefully investigated.

It is our understanding that there was no adverse information known to Rutgers University, the National Selection Committee or the Fund for the Advancement of Education regarding Mr. Finley at the time of his selection. The point of view reflected in the allegations which have been made in this instance would hold these non-governmental organizations culpable for a grant to an individual about whom no adverse information was known or available to a private agency at the time of the grant. This view is taken despite the fact that careful procedures have been established to assure an intelligent and objective administration of the fund’s fellowship program; despite a national selection committee made up of eminent educators from all over the country; and despite the fact that the alleged error in the selections constitutes only a minute fraction of 1 percent of the total number of fellowship awards.

The foundation feels this is not a reasonable standard by which to judge Rutgers University, or the Fund for the Advancement of Education or the Ford Foundation.

Case No. 5: Alleged “grant to a person who wants to abolish the United States”

On page 111 of the transcript of these hearings the following statement appears:

Another dubious grant of a different character was made to Mortimer Adler who received $600,000 from the Ford and Mellon Foundations to set up the Institute of Philosophical Research. Professor Adler is such an ardent advocate of world government that according to the Cleveland Plain Dealer, October 29, 1945, he said: “We must do everything we can to abolish the United States.”

Mr. Mortimer Adler is president and director of the Institute for Philosophical Research, which is supported jointly by grants made in June 1952, from the Fund for the Advancement of Education, a Ford Foundation grantee, and the Old Dominion Foundation. The grant to the institute by the Fund for the Advancement of Education was to provide assistance in clarifying basic philosophical and educational issues in the modern world.

Mr. Adler has described the facts about the statement attributed to him as follows:

“In October, 1945, I lectured at a small Catholic girls college in Cleveland, Ohio, the name of which I have now forgotten. The lecture was on the necessity of world government to procure world peace. In the course of the lecture, I said that just as our Founding Fathers were willing to abolish the separate and independent status of New York, Virginia, Massachusetts, etc., in order to form the more perfect union of the United States of America, so we, in our day, must be willing to abolish the separate and independent status of the United States in order to form the more perfect union of a world federal republic, constituted along democratic lines. I went on to say that the citizens of other independent states, such as England, France, and Russia, must be equally willing to abolish the separate and independent status of their states. Since I thought such willingness was very unlikely, I predicted that we would not see world government or world peace in our generation.

The next morning the Cleveland Plain Dealer reported the speech under the headline: “Adler Says: Abolish the United States.” Several weeks later the story from the Cleveland Plain Dealer, with headline, was reprinted in the Congressional Record as the result of some Clevelanders sending the clipping from the Plain Dealer to his Congressman.

Ibid., p. 42.
Mr. Adler also has stated that the theme of his Cleveland speech was in substance identical to that of his book, How To Think About War and Peace, which was published in 1943 and received generally favorable reviews. Mr. Adler's views on world federalism are widely known, and, whatever one may think about that point of view, we have never heard of any serious suggestion that it is subversive.

**Case No. 6: Alleged “Grant to promote socialism”**

The foundation in these hearings (pp. 111–112, Reece hearings transcript) has been criticized for having made a grant to the Advertising Council, Inc., because that organization published a pamphlet, The Miracle of America, which allegedly contains Socialist propaganda.

The Ford Foundation in July 1951, made a grant of $50,000 to the Advertising Council, Inc., of Washington, D.C., to help finance a series of discussions by a group of prominent men of varied backgrounds to be known as the American Round Table. The purpose of these discussions was to develop a clear-cut statement of the beliefs and ideals of our free American society.

The Advertising Council is a public-service organization maintained by American business and the advertising industry to provide free national advertising in support of major public-service programs. It is an organization with a magnificent record of service to the American Government during and since the war.

Some of the wartime campaigns of the council, carried on in cooperation with the Government, were: Air-gunner recruitment; Army nurse recruitment; care of the wounded; Christmas packages for men overseas; reduction of industrial accidents; metal-scrap salvage; and victory gardens.

The postwar campaigns have included the following: Armed Forces blood-donor campaign; better schools; civil defense; ground observer corps recruitment; fight tuberculosis; get out the vote; help for hospitals; jobs for veterans; our American heritage; religion in American life (“Go to Church” campaign); and highway safety.

The members of the council are eminent Americans. The last six chairmen of its board have been:

Stuart Peabody, assistant vice president, the Borden Co. (present chairman)
Philip L. Graham, publisher, the Washington Post and Times-Herald, Washington, D.C.
Howard J. Morgens, vice president, the Procter & Gamble Co.
Fairfax M. Cone, president, Foote, Cone & Belding
Samuel C. Gale, vice president and director of advertising and public service, General Mills, Inc.
Charles G. Mortimer, president, General Foods Corp.

President Eisenhower, in 1953, on the 10th anniversary of the council, wrote as follows:

The Advertising Council and the business concerns associated with it need no praise from me. The results of your work are obvious. The various Government departments whose programs you have done so much to forward have reason to be grateful to you. Your combined efforts have been worth many millions of dollars to our Government. And I like to think that the public spirit which has motivated you will continue to grow under this administration.

With reference to the charges contained in the record of these hearings regarding the Advertising Council, Mr. T. S. Repplier, president,
issued a public statement on July 29, 1953, reprinted in the Congressional Record of Friday, July 31, 1953, which stated in part:

Representative Reece mentions the council's public policy committee and states that several members of this committee have Communist-front affiliations. So far as we know, all members of this committee are Americans of unquestionable loyalty. The committee was set up as one of the checks and balances of the Advertising Council. All new programs are passed upon by the council's board; but as an additional check, they must also secure a favorable vote by three-fourths of the public policy committee. This committee was deliberately chosen to represent all phases of American life, including the major religions, business management, labor, medicine, education, social service, and so forth.

In regard to the council's booklet, The Miracle of America, it is dismaying to read that the Congressman regards this as a "rewrite of the British Labor-Socialist Party platform." The booklet has been praised editorially by such non-Socialist publications as Banking, published by the American Bankers Association, Business Week, the Houston Chronicle, the Chicago Tribune, and others. It was reprinted in its entirety in Our Sunday Visitor, a Catholic publication. The Army reprinted 55,000 copies for installations in the United States and abroad. The United States Chamber of Commerce distributed the booklet to all member chambers and urged its local use. About 140 leading American companies have purchased the booklet in bulk for distribution to their employees, including General Motors, General Electric, General Mills, Republic Steel, Standard Oil of California, Union Carbide & Carlson, Western Electric, and many other prominent American corporations who are scarcely prone to promote socialism.

It would seem that after 11 years of free service to the country in war and peace, the Advertising Council might be spared these accusations, which could only arise from inaccurate information.

Case No. 7: Alleged grant to "pro-Communist India"

On pages 112 and 113 of the transcript of these hearings the following statement is made:

The Ford Foundation has singled out India for some of its largest grants and is spending millions of dollars in that nation. Is there some special significance to singling out India for large Ford Foundation grants, in view of the fact that the head of the Indian Government is more sympathetic to the Soviet Union than toward the United States, and that he wants the United States to recognize Red China and admit that Communist nation, which is slaughtering Americans in Korea, to the United Nations? I am greatly concerned with what is being done with the Ford Foundation millions in India. That nation is a potential ally of the Soviet Union, and if the Ford Foundation projects in any way are fostering a pro-Soviet attitude in India, the consequences may be disastrous for the future of America. The stakes are very high, for if India should definitely become a Soviet ally, the power of the Kremlin's block would be immeasurably increased. My fear of what the Ford Foundation might be doing in India is increased by the fact that in the case of China the activities of the Rockefeller Foundation in that nation helped, instead of hindered, the advance of communism.

As we interpret this statement, activity by the Ford Foundation in India is criticized on two grounds: (a) Because the head of the Indian Government disagrees with certain policies of the American Government; and (b) because Ford Foundation projects may have the effect of encouraging a pro-Soviet attitude in India.

With reference to the wisdom of giving American assistance to India despite the fact that India at times disagrees with some American policies, Mr. John Foster Dulles, the Secretary of State, in testimony before the House Foreign Affairs Committee on April 5, 1954, said:

* * * Freedom accepts diversity. The Government of India is carrying on a notable experiment in free government. It provides a striking contrast with the neighboring experiment being conducted in China by the Communist police-state system.

Ibid., p. 42.
We believe that it is important in the United States that India's 5-year economic plan should succeed, and that to continue to help in this is legitimately in the enlightened self-interest of the United States.

The New York Times on Monday, June 14, 1954, reported a speech of Gov. Thomas E. Dewey of New York, which is pertinent in this context, in part as follows:

Governor Dewey warned yesterday against listening to the critics of leaders in other free nations. These critics, he said, tear down the leadership of these free countries "just because their governments are not like ours."

The Governor emphasized that "we ourselves are far from perfect," and that "we had better grow up fast enough to extend to others, from France to India and from Indonesia to Britain, the same tolerance of their difficulties which we ask them to extend to us."

As to the fear that Ford Foundation projects may have the effect of encouraging a pro-Soviet attitude in India, perhaps it will be most helpful to the committee if we describe the nature and objectives of our activities in that country and the policies and procedures which have been established to insure that projects are soundly conceived and properly administered.

One of the five major objectives of the Ford Foundation, as announced by the trustees in 1950, is to contribute to the mitigation of international tensions—in short, to peace. The interest of the foundation in the possibilities for highly useful work in India began following a visit and firsthand inspection by a number of foundation officials in the summer of 1951. At the time that newly independent country was in the fourth year of its drive to raise food production and develop its resources so as to provide a more nearly adequate existence for its 375 million people. Indian leaders were keenly aware of the threat to governmental stability, and perhaps even to national independence, which continued economic distress would produce. Foundation assistance to Indian development began in late 1951.

India is a country of some 500,000 villages, in which live nearly 85 percent of the population. Much of the activity of the foundation therefore has been concentrated on problems of village and agricultural improvement. The most important projects which have been supported include the following:

1. Development projects, 1 in each of 15 major states in India. Each project includes about 100 villages. Trained Indian extension workers go into the villages and work with the people to improve agricultural practices, literacy, and public health. Full financial responsibility for these projects was assumed by the Indian Government during 1953, and the Indian Government is now actively engaged in expanding this program to include the whole of India.

2. Thirty-four centers to train a total of four to five thousand village extension workers per year. These are the grass roots teachers needed for the village development program.

3. Three public-health training centers to train 300 public-health workers annually in the methods of village health work. These trained workers in turn will teach the men who will go into the villages to help improve health conditions.

4. Publication of a farm journal for the increasing number of village farmers who are able to read.

5. A study of secondary education in India looking toward improvement in teacher training.
6. Assistance on the problem of creating new employment opportunities in agriculture and industry.

7. A number of grants to American colleges and universities for research on India. Cooperation is being encouraged between Indian and American scholars and academic institutions. Fellowships and foreign travel grants have also been made available for Americans to study in India. Through these arrangements it is hoped that knowledge and research on Indian problems will be advanced in both India and the United States.

The foundation program in India was most carefully developed. After an initial on-the-spot survey, discussions were held with a large number of American experts in government and in private life. Over a period of several months, meetings were held to obtain advice and guidance from the many voluntary American organizations with long experience in the area. Only then was an appropriation of funds made.

Once established, the program has been administered with care so as to insure effective use of the funds provided, and to guarantee it would in no way prejudice the foreign policies of this country. Views are regularly exchanged between foundation officials and United States Government agencies concerned in the giving of technical assistance in India. A resident representative is maintained by the foundation in New Delhi who follows the day-to-day progress of programs, and consults regularly with officials of the Indian Government and of the American Embassy.

III. MISCELLANEOUS ALLEGATIONS

In addition to the above allegations regarding the staff and certain grants of the Ford Foundation, other miscellaneous charges have been made.

Case No. 1: Report of Norman Dodd, committee research director

In the report presented to this committee by its research director, Mr. Norman Dodd, in the opening week of hearings, the following statements appear (pp. 131-132, Reece hearings transcript) :

Finally, I suggest that the committee give special consideration to the Ford Foundation. This foundation gives ample evidence of having taken the initiative in selecting purposes of its own. Being of recent origin, it should not be held responsible for the actions or accomplishments of any of its predecessors. It is without precedent as to size, and it is the first foundation to dedicate itself openly to “problem solving” on a world scale.

In a sense, Ford appears to be capitalizing on developments which took place long before it was founded, and which have enabled it to take advantage of—

- The wholesale dedication of education to a social purpose;
- The need to defend this dedication against criticism;
- The need to indoctrinate adults along these lines;
- The acceptance by the executive branch of the Federal Government of responsibility for planning on a national and international scale;
- The diminishing importance of the Congress and the States, and the growing power of the executive branch of the Federal Government; and
- The seeming indispensability of control over human behavior.

We have studied these comments. We are frankly at a loss to understand what they mean and what criticism is intended. It is true that the foundation, like any private organization, has taken initiative in selecting purposes of its own. Avowedly, the trustees have dedicated the program of the foundation to the solution of human problems.

1 Ibid., p. 50.
On the other hand, we have never had the slightest interest in discouraging any responsible criticism of the educational system and we are not involved in any attempt to indoctrinate adults, encourage national and international planning by the Federal Government, diminish the importance of Congress, or establish control over human behavior.

Following the introductory comments quoted above, Mr. Dodd continued with these words (pp. 132-133, Reece hearings transcript):

As if they had been influenced directly by these developments, the trustees established separate funds for use in the fields of education, national planning, and politics. They set up a division devoted to the behavioral sciences, which includes a center for advanced study, a program of research and training abroad, an institutional exchange program, and miscellaneous grants in aid.

Supplementing these major interests are such varied activities as: a TV-radio work shop, external grants, intercultural publications, and an operation called the East European fund, which is about to be terminated.

What is considered that the capital resources of this foundation approach, or may exceed, $500 million, and that its income approximates $30 million each year, it is obvious that before embarking upon the solution of "problems," some effort should be made by the trustees to make certain that their solution is in the public interest.

To correct the more important errors of fact in the first paragraph above, the Ford Foundation has established several separate funds, including two in the field of education, but it has not established funds, nor indeed has it supported any projects, directed toward national planning or politics.

As to the third paragraph, quoted above, the trustees have decided to concentrate the work of the foundation on certain problems for the very reason that their solution is judged to be of the greatest importance to human welfare. If Mr. Dodd's comment is meant to suggest that the Ford Foundation trustees do not carefully measure foundation activities in terms of their contribution to the public interest, he is wrong.

The concluding portion of Mr. Dodd's comments on the Ford Foundation (pp. 133-134, Reece hearings transcript) reads as follows:

It is significant that the policies of this foundation include making funds available for certain aspects of secret military research and for the education of the Armed Forces. It becomes even more significant when it is realized that the responsibility for the selection of the personnel engaged in these projects is known to rest on the foundation itself—subject as it may be to screening by our military authorities.

In connection with the military research, it has been interesting to examine what the educational aspect of these unprecedented foundation activities can be expected to produce. The first example in a pamphlet in which the Declaration of Independence is discussed as though its importance lay in the fact that it had raised two, as yet unanswered, questions:

1. Are men equal? and do we demonstrate this equality?
2. What constitutes "the consent of the governed"? and what does this phrase imply in practice?

By inference, the first question is subtly answered in the negative. By direct statement the second is explained as submitting to majority rule—but the restriction of the majority by the Constitution is not mentioned. Only an abridged version of the declaration is printed. It is interesting that this should omit the list of grievances which originally made the general concepts of this document reasonable.

After a review of the list of our grants, we have concluded that Mr. Dodd's reference to the support of "secret military research" must be based on a misinterpretation of the grant by the Ford Foundation to the Rand Corp. The Rand Corp. is a nonprofit research institution

\[1\] Ibid, p. 50.
engaged primarily in research on problems of air warfare and other
defense matters under contract with Government agencies. The presi-
dent of the Ford Foundation was one of the organizers and is now
chairman of the board of directors of the Rand Corp.

To enable Rand to carry on a program of unclassified research in
the public interest, the trustees of the Ford Foundation on July 15,
1952, made a grant of $1 million. The financial arrangements were
made in such a way that the grant also added to the general financial
and organizational strength of Rand. To repeat, the research being
financed under our grant is entirely of an unclassified character.

The Ford Foundation takes no part in the selection of Rand person-
nel. Because of the nature of the primary work of Rand, its employees
engaged in classified work are presumably cleared under the usual
security procedures and regulations of the Government.

Regarding Mr. Dodd's reference to education in the Armed Forces,
the foundation, through the fund for the advancement of education,
has made funds available for a project for this purpose. It may be
helpful to summarize the information on the nature and origin of this
particular project which the fund has furnished us:

In the summer of 1951, at a time when there was some discussion in
the press of education in the Armed Forces, the Secretary of Defense
invited the Fund for the Advancement of Education to provide expert
counsel on the so-called I and E (information and education) program
of the Armed Forces.

Because of the importance of the problem and as a matter of na-
tional service, the fund employed two consultants to prepare a report
and recommendations.

At the same time, an advisory committee was appointed, composed of—

Harvie Branscomb, chancellor of Vanderbilt University
Leonard Carmichael, president of Tufts College
Henry T. Heald, chancellor of New York University
Lester Markel, Sunday editor of the New York Times
Milton C. Mumford, vice president of Marshall Field & Co.
James J. Reynolds, Jr., vice president of American Locomotive Co.
John Mayer, vice president of Mellon National Bank & Trust Co.

As a result of the consultants' initial reports, the fund was asked
to undertake the preparation of several kits of materials for the infor-
mation and education program, and several additional consultants,
under the direction first of William Litterick, former director of re-
search at Stephens College, and then of Dean John Bartky, of the
Stanford University School of Education, were added to the project
in a Washington office.

These consultants were selected and appointed by the fund; their
work does not involve the use of any classified material whatsoever.

Mr. Dodd makes reference to a pamphlet on the Declaration of Inde-
pendence which was prepared in connection with this project. He
states that only an abridged version of the declaration is printed and
criticizes the pamphlet in certain other respects.

The pamphlet in question is part of a kit of materials on the Decla-
ration of Independence for use in discussion groups among the troops.
The materials were actually prepared in final form by armed services
personnel from data given them by the fund's project personnel. The
kit contains four items: two large wall posters, one reading "The Decla-
ration of Independence," and the other reading "All Men Are Created
Equal—Consent of the Governed," a pamphlet entitled "You and
TAX-EXEMPT FOUNDATIONS

Your USA—The Declaration of Independence," which reprints this document in its entirety; and a second pamphlet entitled "You and Your USA—Group Leader's Guide—The Declaration of Independence."

The purpose of these materials is to assist in stimulating a thoughtful discussion on this historic document by our men in the service. Their intent is to encourage each man to think through its meaning for himself. The mistaken suggestion that these prepared materials somehow give a biased interpretation of the meaning of the Declaration of Independence is best refuted by an examination of the material itself, and copies are submitted as exhibit 1 hereto.¹

Case No. 2: Testimony of Mr. Aaron M. Sargent

Mr. Sargent in his testimony asserted that there is "not a single restrictive clause" in the articles of incorporation of the Ford Foundation; that the foundation and the funds it has helped to establish have "unlimited power to administer and receive funds" for "whatever a self-perpetuating board says is charitable or welfare"; and finally, he asserts that in determining what is charitable or welfare "there is no control whatsoever" (pp. 849-850, Reece hearings transcript).²

As a corporation organized under the provisions of the General Corporation Act of Michigan, the foundation is subject to the laws of that State. The foundation's activities are also subject to review by the Bureau of Internal Revenue because of its exemption from income taxation under section 101 (6) of the Internal Revenue Code. The foundation is, moreover, subject to all the normal police and investigatory processes of such organizations as the Federal Bureau of Investigation so far as violations of law are concerned. The policy of the foundation to make full public reports on all its activities subjects it to general public scrutiny. Its financial statements are audited by independent public accountants. In view of these various legal and other safeguards it is hardly accurate to suggest that, in carrying out their responsibilities, the trustees of the Ford Foundation are subject to "no control."

If Mr. Sargent intended to propose additional restrictions upon the functions of foundations and the powers of their trustees, he did not specify what he had in mind. We cannot believe that even he was proposing to substitute Government control for the basic concept of trustee responsibility.

At other points in his testimony, Mr. Sargent made the following statements:

The Ford Foundation used its financial power to attempt to resist the will of the people of Los Angeles in connection with a pamphlet known as the E in UNESCO (p. 850, Reece Hearings transcript).

Mr. Paul Hoffman, the president of the Ford Foundation, personally appeared before the Los Angeles Board of Education and sought to prevent the removal of these pamphlets out of the Los Angeles city schools by the action of a duly constituted board of the city of Los Angeles, and in so doing he engaged in lobbying, an activity prohibited to the Ford Foundation. * * * He did it as president of the Ford Foundation and used the power of the Ford Foundation as a leverage in the case (pp. 850-851).³

He was there using the weight and prestige of the Ford Foundation to try and influence a city board of education in support of this proposal (p. 864).⁴

The Ford Foundation has never attempted to "resist the will of the people of Los Angeles" in connection with a UNESCO pamphlet or any other matter.

¹ Not printed in record, included in committee file.
² Ibd., p. 279.
³ Ibd., p. 279.
⁴ Ibd., p. 285.
Mr. Hoffman on August 25, 1952, upon request, appeared as a private citizen before a hearing of the Los Angeles School Board to protest the banning of certain UNESCO publications from the Los Angeles public schools. Mr. Hoffman made it explicitly clear at the beginning of his statement that he was appearing purely in a private capacity and not as an officer of the Ford Foundation.

Mr. Hoffman is the father of seven children and he has been a resident of and prominent civic leader in the Los Angeles area for many years. Under the circumstances, it seems not unusual that he should have been asked to appear to give his personal views on the matter under discussion and, in view of his great personal interest in the Los Angeles school system, that he should have accepted the invitation. Surely, his assumption of the duties of the presidency of the Ford Foundation did not divest him of his rights to express his personal opinions.

**SUPPLEMENT B**

**HISTORY OF THE ESTABLISHMENT OF THE FUND FOR THE REPUBLIC**

A complete statement of the background and establishment of the Fund for the Republic, Inc., was furnished to this committee on March 11, 1954, in response to a request from the committee counsel. That statement included full texts of all those portions of the minutes of all meetings of the Ford Foundation board of trustees concerning the fund, together with related material in the dockets for such meetings, and various press releases. This statement digests those materials and is submitted to facilitate the incorporation of such material in the record.

The grant to the Fund for the Republic was designed to implement a specific part of the Ford Foundation’s broad five-point program. This program had been developed by a study committee which had been established in 1948. During the many months of its work, the study committee reviewed existing materials and consulted with hundreds of American leaders in all parts of the country as a basis for recommending those areas in which the foundation could make the greatest contribution to the public welfare. The committee’s study was considered by the trustees over a period of time, and in September of 1950 the trustees published their report outlining the expanded program for the foundation.

In that report, the foundation recognized the following facts: First, that one of the major problems of any democratic society is how to secure greater allegiance to the basic principles of freedom and democracy in an ever-changing world. There is real danger that the gap between profession and pursuit of the ideals of American freedom may widen under the tensions and pressures of the international crisis. Second, that the spread of communism represents one of the most critical threats to the American public welfare. And third, that some of the measures taken to deal with the threat of communism in themselves pose grave problems concerning traditional American freedoms.

After the adoption of the foundation’s expanded program in 1950 there followed a period of intensive planning and reexamination of these problems and of ways in which the foundation could help solve them through scientific study and educational activity. The results of these efforts supported the trustees’ earlier decision that it was appropriate and important for the foundation to attempt to deal with
these problems, and by the time of the trustees’ meeting of October 4, 1951, they had decided that a new and separate agency should be established for this purpose. The importance and complexity of this area of American concern necessitated, in the opinion of the trustees, the formation of an independent corporation directed by distinguished Americans who could specialize in making a concentrated attack upon threats to democratic processes. In October 1951 the trustees specifically stated that the purposes of the new agency were to be those set forth in the President’s report to their meeting. This report said in part:

The stated objectives of the fund shall be to help promote within the United States security based on freedom and justice. In this endeavor the fund would take into account:

(a) The danger to the national security from the persistent Communist attempt to penetrate and disrupt free and peaceful societies;
(b) The danger to the national security arising from fear and mutual suspicion generated by international tension;
(c) The danger to the national security arising from fear and mutual suspicion fomented by shortsighted or irresponsible attempts to combat communism through methods which impair the true sources of our strength;
(d) The need to understand and vindicate the spiritual and practical significance of freedom and justice within our society which are enduring sources of its strength; and
(e) The need to dedicate ourselves anew to the demonstration within America of a free, just, and unafraid society at work.

After this meeting, the trustees and the staff continued to consider more detailed aspects of the organization and program of the agency which was to be established. Fourteen months after the trustees had originally decided to create the fund, and 5 years after the trustees had first announced their interest in dealing with the problems for which the fund was created, the fund for the Republic, Inc., was finally incorporated on December 9, 1952. An initial appropriation of $1 million was made to enable the fund to begin operations.

The fund began with a board of directors made up of prominent and public-spirited citizens as follows:

James Brownlee, partner, J. H. Whitney & Co., New York City
Malcolm Bryan, president, Federal Reserve Bank, Atlanta, Ga.
Huntington Cairns, lawyer, Washington, D. C.
Charles W. Cole, president, Amherst College, Amherst, Mass.
Russell L. Dearmont, lawyer, St. Louis, Mo.
Richard Finnegan, consulting editor, Chicago Sun-Times, Chicago, Ill.
William H. Joyce, Jr., chairman, Joyce, Inc., Pasadena, Calif.
Meyer Kestnbaum, president, Hart, Schaffner & Marx, Chicago, Ill.
Elmo Roper, marketing consultant, New York City
George N. Shuster, president, Hunter College, New York City
Eleanor Bumstead Stevenson, Oberlin, Ohio

Each of the directors of the fund had been approved by each of the trustees of the foundation. I feel sure that the members of this committee would recognize the board as a distinguished group of loyal Americans.

Following its organization, the fund first concentrated on detailed development of its program and method of operation. A planning committee of the fund’s board of directors was established under the informal chairmanship of Dean Griswold. Mr. Paul Hoffman was
elected chairman of the board, and Mr. Bethuel M. Webster was
selected as counsel to the fund. By February 28, 1953, the directors
of the fund had progressed sufficiently in their planning of the fund’s
program and operations to be able to present to the foundation a
proposal requesting further foundation support in the amount of
$14 million. Included in that proposal was the following statement:

The directors see a pressing need for a clear statement in contemporary terms
of the legacy of American liberty. They believe that such a statement is one of
the most valuable contributions the fund can make in the near future.

A major factor affecting civil liberties is the existence of communism and
Communist influence in this country. The directors propose to undertake
research into the extent and nature of the internal Communist menace and
its effect on our community and institutions. This research would be carried on
concurrently with the study of the legacy of American liberty mentioned above.

The fund’s proposed program was presented to the foundation’s
trustees by four of its directors and its counsel. The directors were
Messrs. Hoffman, Griswold, Joyce, and Parten. The fund’s repre-
sentatives discussed their plans in detail with the foundation’s trustees.
In a later executive session, the trustees again reviewed the entire
matter. They concluded that the foundation should support the fund
by making a grant $14 million. This sum was to support the fund’s
operations for a period of 5 to 10 years; that is, the grant was made
to support a program of from $1,500,000 to $3 million a year. The
grant was not payable until the fund had been specifically ruled by the
Treasury Department to be exempt from income taxation under sec-
tion 101(6) of the Internal Revenue Code. The fund was ruled exempt
on January 20, 1954. After reviewing the matter at their next meet-
ing, the trustees of the Ford Foundation approved the final payment
of the grant, which payment was made on February 16, 1954.

I do not wish to discuss the details of the fund’s program to date,
since I understand the committee is going to obtain that information
from the fund’s distinguished chairman, Mr. Paul G. Hoffman. How-
ever, I would like to discuss one of its activities, which was used as
a basis for criticizing the foundation for establishing the fund. I refer
to the fund’s proposal to study some aspects of legislative investiga-
tions. In our preliminary thinking about the fund, it was apparent
that a study of legislative investigations was an appropriate activity
for the fund. Shortly after its establishment, the fund made a grant
of $50,000 to the American Bar Foundation to support such a study
by a special committee of the American Bar Association. This com-
mittee is headed by Mr. Whitney North Seymour and made up of
eminent members of the bar. Such a study is appropriate, it is needed,
and I hope the trustees of the fund take the necessary action to see the
need is filled. As the Supreme Court of the United States said in U. S.
v. Rumley in 1952, and I quote:

There is wide concern, both in and out of Congress, over some aspects of
the exercise of the congressional power of investigation.

I need hardly labor the point. The President of the United States
has similarly expressed concern over some of these problems and it is
clearly in the national interest and in the best American tradition that
a philanthropic foundation give support to students of the subject.
I would like to point out that the critics of such a study did not even
wait to see whether the study would be fair, would be objective, or
even whether it would be made. Instead, through distortion of the
TAX-EXEMPT FOUNDATIONS

facts, they suggested that the entire $15 million of our grant to the fund was somehow going to be used to attack Congress as a whole, or its investigating powers in particular. This was not true; and it would have been clear that it was not true to anyone who had sought to determine the truth before he spoke.

The trustees of the Ford Foundation are proud of their act in creating the fund for the Republic. The problems which the fund was created to help solve are increasingly crucial ones. The threat of communism concerns every American. The need for restating and defending the basic traditions of American freedom, especially in the light of tensions, events, and implications in the present world situation, similarly becomes more pressing.

I am sure that when this committee reviews the facts it will agree with the trustees of the foundation that the creation of the fund was appropriate and patriotic, and that the fund’s activities constitute a promising start on a vital and noble task.

STATEMENT OF PAUL G. HOFFMAN, CHAIRMAN OF THE BOARD, THE FUND FOR THE REPUBLIC, INC.

I expected to testify on June 29 at the request of the special committee. A day or two before the 29th I was told that the hearings had been terminated or suspended, that my engagement was canceled. I am sorry I have thus been kept from testifying in person as to the purposes, program, and activities of the fund for the Republic and from answering questions.

I submit this statement not because the transcript of hearings contains evidence concerning the fund—for none has been offered so far—but because Representative Reece’s speech of July 27, 1953, now a part of the record of the investigation, contains references to the fund, and to me personally, which, in the interest of accuracy and fairness, require comment.

Mr. Reece said:

The Members of this House were amazed when they read just recently that the Ford Foundation * * * had just appropriated $15 million to be used to “investigate” the investigating powers of Congress, from the critical point of view (transcript 57).

No Congressman * * * could fail to be alarmed at the fact that $15 million * * * was to be expended to attack the Congress for inquiring into the nature and extent of the Communist conspiracy * * * (transcript 58).

The Communists have their own agency to smear the committees of the United States Congress and to defend Communists hailed before them. It is called the Civil Rights Congress and has been listed by the Attorney General as Communist and subversive. To give it liberal respectability, Mr. Paul Hoffman, former president of the Ford Foundation, was made chairman of this king-sized civil rights congress endowed by the Ford Foundation. The Fund for the Republic, as this Ford Foundation agency is named, has announced that it will make grants for an immediate and thorough investigation of Congress (transcript 58-59).

* * * the previously mentioned Ford Foundation grant makes available $15 million for investigating congressional methods of inquiries into communism and subversion. * * * (transcript 74).

* * * a grant of $15 million, to protect the civil liberties of Communists and to investigate the Congress of the United States * * * is really peanuts to the Ford Foundation. * * * Here is the last of the great American industrial fortunes * * * being used to undermine and subvert our institutions, $15 million being set aside to investigate the Congress of the United States * * * (transcript 103)."
The declaration that the fund for the Republic is a "king-sized civil
rights congress" (and thus subversive)—"given liberal respectability"
by my appointment as chairman—would be actionable as slander but
for the fact that it was uttered by Representative Reece on the floor
of the House. But I pass that, not without feelings of chagrin and
shock that the privilege of the House should be so abused.

The documents and data requested by the special committee have
been supplied; and it is hoped that the committee will refer to this
body of information rather than to the Reece speech for the facts.
The plain truth is that there is no basis whatever for the charge that
the Fund for the Republic was established to attack the Congress.
The facts pertinent to the charges are as follows:

In December 1952 the fund approved a grant of $50,000 to Ameri-
can Bar Foundation, a tax-exempt organization, to finance seven dif-
ferent studies bearing on individual rights as affected by national
security proposed and to be conducted by a special committee of the
American Bar Association. A description of the grant is contained.
in materials submitted to your counsel and staff. One of the seven
proposed studies was—The extent to which Congress should limit the
scope and regulate procedures of its investigations—a topic con-
cerning which many Members of Congress have manifested interest.
In a speech in the House on August 1, 1953, shortly before his resigna-
tion from Congress to become president of the Fund for the Republic,
former Representative Clifford P. Case, of New Jersey, described his
personal familiarity with the plans of the ABA committee, pointed
out that the ABA committee was approaching its task with full appre-
ciation of the importance of the congressional investigating process,
and made it a matter of record that he himself had introduced the
chairman of the ABA committee to the Speaker and to the minority
leader of the House of Representatives—both of whom expressed inter-
est in, and offered suggestions concerning, the study and plans out-
lined by the ABA committee chairman.

Your counsel and staff have been supplied with the statement of
William J. Jameson, president of the American Bar Association,
printed in the January 1954 issue of the ABA Journal, describing the
study which is being made with the fund's grant. In an editorial in
the July 1954 issue the ABA Journal it is said:

The American Bar Association will welcome at its annual meeting in August
the forthcoming report of its special committee on individual rights as affected
by national security headed by the highly respected, highly competent Whitney
North Seymour, of New York City. Mr. Seymour is already nationally recog-
nized as an outstanding lawyer in the field of civil liberties. His committee will,
no doubt, have proposals relating to procedures for our investigating agencies.
These proposals will be based upon the sober second thought of the capable,
qualified lawyers whose loyalty to our American institutions is unimpeachable.
Congress and the public are much in need of such sound advice today. Our
people recognize that we need investigating procedures and procedural standards
which will be fair as well as effective. In such fair procedural standards we will
find security both for our lives and our liberties.

Meanwhile, as your committee knows, the Congress itself, aware
of abuses and of the need for satisfactory procedures, is looking for
the answer to a serious problem.

The notion suggested by Mr. Reece that $15 million was to be ex-
pended "to attack the Congress for inquiring into the nature and
extent of the Communist conspiracy" is met by the fact that the Fund
for the Republic itself has just about completed one phase of an inquiry into the nature and extent of the internal Communist menace. The consultants on this project—an undertaking in which I have been greatly interested since before the establishment of the fund—are Prof. Arthur E. Sutherland of the Harvard Law School, Prof. Clinton Rossiter of Cornell, and Father Joseph M. Snee, S. J., of Georgetown. Briefly, the study about to be completed consists of the preparation of a comprehensive bibliography of materials concerning communism in the United States and a definitive digest of public proceedings in which communism was involved. The bibliography and digest, together with microfilm copies of the principal records of public proceedings, will be reproduced in such form as to be widely available to interested persons throughout the country. The directors of the fund take some satisfaction in the fact that in one of the fund’s first endeavors it is making available for the first time in convenient form basic information of incalculable value not only to the Government and to the Congress but to all persons and agencies engaged in fighting the Communist menace.

In his speech of July 1953 Representative Reece said “some large foundations must answer” the following question:

Have they financed studies regarding the excellence of the American Constitution, the importance of the Declaration of Independence, and the profundity of the philosophy of the Founding Fathers? And, if not, what is their excuse for neglecting the study of the basis of the American Republic? (Transcript 68-9.)

I am happy to say that it has been the purpose of the Fund for the Republic since it was established to reexamine, with a view to greater understanding and wider application, the sources of strength in our society as expressed in the Declaration of Independence, the Constitution, and in our free institutions, and that projects suggested for this purpose are being considered and advanced as rapidly as circumstances permit.

In conclusion, I want to emphasize that the officers and directors and staff and resources of the Fund for the Republic are devoted exclusively to the purposes and program of the fund itself. The fund is a tax-exempt membership corporation engaged in research and education. Its financial resources consist of $15 million granted by the Ford Foundation but administered by the fund’s own board of directors. The Fund for the Republic is completely independent of the Ford Foundation—except that it is obliged by the terms of its grant to engage in activities consistent with its tax-exempt status.

STATE OF NEW YORK,

County of New York, ss:

Paul G. Hoffman, being duly sworn, says:

I am chairman of the board of directors of the Fund for the Republic, Inc. I have read and know the contents of the foregoing statement, and the same is true to the best of my knowledge, information, and belief.

Sworn to before me this 21st day of July, 1954.

PAUL G. HOFFMAN.

Notary Public, State of New York, No. 31-5288500.

STATEMENT OF JOSEPH E. JOHNSON, PRESIDENT, CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE

INTRODUCTION

The Special Committee To Investigate Tax Exempt Foundations has now ended public hearings without giving the foundations themselves an opportunity to testify. This would have been a violation of fair procedure in any case, but it was rendered extraordinarily so by virtue of two facts. First, the bulk of the testimony presented in the hearings had, apparently by design, been hostile to the foundations. Secondly, a month after the hearings closed, the staff was permitted to introduce extensive material attacking certain foundations, including the Carnegie Endowment, with inadequate opportunity for challenge.

Under the circumstances it is important to give a short summary of the history and record of the endowment before commenting on statements made concerning it.

THE RECORD OF THE ENDOWMENT

The Carnegie Endowment for International Peace, which is entirely separate from all the other organizations created by Andrew Carnegie, was established by him in 1910 with a trust fund of $10 million. He directed that the principal of the fund should remain intact and that the income should be administered by his trustees "to hasten the abolition of international war."

This objective is spelled out in the endowment's charter as follows: "to promote the advancement and diffusion of knowledge and understanding among the people of the United States; to advance the cause of peace among nations; to hasten the renunciation of war as an instrument of national policy; to encourage and promote methods for the peaceful settlement of international differences and for the increase of international understanding and concord; and to aid in the development of international law and the acceptance by all nations of the principles underlying such law." From the beginning these objectives have been the basis for the work of the organization, for its educational activities and for the research which it has undertaken and supported.

These facts furnish the explanation for several differences between the Carnegie Endowment for International Peace and other foundations to which this committee has directed its attention. In the first place, the endowment has a specific set of objectives toward which all its efforts are directed. Secondly, it has comparatively limited resources; the endowment's income on its fund has never reached $600,000 a year and is now slightly over $500,000. In this connection, it should be noted that a tabulation based on the questionnaires submitted 2 years ago to the Cox committee placed the endowment below 30 other foundations in terms of net worth.

A third distinction, arising in part from the relatively limited resources of the organization, is that the endowment is not primarily a fund-granting foundation. Although in former years a fair proportion of the endowment's funds were expended in grants, it has always carried on operations of its own. Today the endowment functions almost exclusively by carrying out—through its own staff or through contracts—specific programs authorized by the endowment's trustees.
The objectives spelled out in the charter as the focus of the endowment effort in the pursuit of peace were defined by trustees named by Mr. Carnegie and working in consultation with him. He was inspired to establish this institution by admiration for the policies of President William Howard Taft, and his principal associates in its formation—men whose vision and leadership have most influenced its activities—were Elihu Root and Nicholas Murray Butler. Among the other distinguished Americans who made up the original board of trustees and assisted in charting the course for the endowment were John W. Foster, John Sharp Williams, and Joseph H. Choate. The high caliber of the original board has been maintained throughout the years. Trustees have included leaders of both major parties in the United States and eminent citizens from all sections of the country. One President, Dwight D. Eisenhower, and one Presidential nominee, John W. Davis, have been trustees. There were also five Secretaries of State: Messrs. Foster and Root, Robert Bacon, Robert Lansing, and John Foster Dulles. Trustees who have served as Senators included Mr. Root, Mr. Williams, Mr. Dulles, George Gray, and Robert A. Taft. The board has been characterized by the faithful attendance of its members at meetings, despite a wide geographical distribution, and by their profound and active concern with the endowment’s work.

The record shows that the trustees of the endowment and its staff have for 43 years conscientiously pursued the purpose for which Mr. Carnegie established the organization. In doing so they have had repeated occasion to applaud the wisdom of Mr. Carnegie who, not pretending to a clear knowledge of the future, gave the trustees appropriate discretion in these words:

Lines of future action cannot be wisely laid down. Many may have to be tried, and having full confidence in my trustees I leave to them the widest discretion as to the measures and policy they shall from time to time adopt, only premising that the one end they shall keep unceasingly in view until it is attained, is the speedy abolition of international war between so-called civilized nations.

I can speak from personal knowledge only of the years since July 1, 1950, when I became the endowment’s president, and all of my statements as to its activities before that date are based on its records. Moreover, none of the members of the senior staff concerned with recommending policy to the trustees and carrying out their decisions was with the organization before the end of World War II. The history of the endowment prior to that time, however, is a matter of record in year books which were widely distributed from the beginning. Despite the international wars which have engulfed the world—and which have frustrated, in a manner which Mr. Carnegie could not have foreseen in 1910, the efforts to achieve peace—the endowment’s record is one in which the trustees and staff take pride.

A few examples taken from this record may serve to illustrate the methods by which the original instructions of Mr. Carnegie have been carried out.

People in many foreign nations have learned about the American principles of liberty through the endowment. The texts of our Constitution and the Declaration of Independence were translated into several foreign languages and widely distributed, and the teaching of American history was financed in the universities of England, France, and other nations.
The endowment pioneered in the "exchange of persons" and so helped to launch the mounting flow of exchange students, teachers, technicians, and agriculturalists which today is actively supported by the United States and other governments and by private organizations. Nearly 20 years in the writing, James T. Shotwell's monumental Economic and Social History of the World War was completed by the endowment in 1937 and distributed to governments, libraries, and universities throughout the world. Over 250 authors, researchers, and editors of many nationalities collaborated in the preparation of this comprehensive analysis in some 150 volumes of the effects of the First World War. This study remains a major contribution to the world's knowledge of the effects of war, both immediate and long-term, on governments and on the economic and social life of belligerents and neutrals.

From the beginning the trustees and staff of the endowment have devoted a very substantial part of their efforts to increasing public knowledge about and understanding of international relations. Like Mr. Carnegie, they have been convinced that in those countries where public opinion is the basis of official policy, policy can only be consistently wise when it rests upon informed public opinion. It is this conviction which has determined the endowment's educational activities.

These activities have been very diverse. Among them has been the distribution abroad of important collections of books on American history, government, law, economics, and literature in major cities of Europe, Asia, and South America. A similar activity for a similar purpose was the fostering of international relations clubs on college and university campuses, chiefly but not exclusively in the United States. The point of view which has underlain these educational activities is well expressed in a statement made about the international relations clubs in 1941, and in slightly different form many times before:

"The purpose of the endowment in undertaking this work is to instruct and to enlighten public opinion. It is not to support exclusively any one point of view as to how best to treat the conditions prevailing throughout the world but to fix the attention of students on those underlying principles of international conduct, of international law and of international organization which are essential to a peaceful civilization.

Over a 20-year period the endowment spent $184,000 toward cataloging and reorganizing the Vatican library's priceless historical collection, thus making it readily available to scholars for the first time.

The active leadership and support of the endowment was the chief force behind the research, publication, and development that took place in the field of international law in the first half of this century. Carnegie fellowships in this field have helped train many persons for their present positions of responsibility in American public and academic life.

Canadian-American relations, an example to the world of peaceful international cooperation, were the subject of a 25-volume history prepared and published by the endowment. This work formed a model for subsequent studies of friendly relations among other nations.

Turning now to the period on which I can report from personal knowledge, there are four current programs to which the endowment today devotes the greatest part of its funds.
First, in the new building at First Avenue and 46th Street in New
York, there is an international center which was designed to provide
convenient, well-equipped facilities for organizations presenting pro-
grams on world affairs. Since its opening in June 1953, there have
been more than 750 programs in the center attended by more than
30,000 persons. Fulbright scholars have held discussions in the cen-
ter; the Christian Science Monitor Youth Forum meets there; stu-
dents from Africa have arranged an exhibit of native art of the Gold
Coast; Columbia University has scheduled some of its bicentennial
events there.

Second, there is a program on universities and world affairs. On
the basis of experience in trial surveys at 8 universities and in
regional conferences attended by representatives of more than 200
colleges and universities, the endowment has encouraged American
institutions of higher learning to conduct self-surveys and appraisals
of their activities bearing on world affairs. One hundred colleges
and universities have survey committees cooperating in the program:
each committee is appointed by the president of the university and
reports to him. Each university committee reviews its program and
activities in its own way and makes recommendations looking toward
a more effective use of the university’s resources. The endowment
makes no recommendations. It acts as a clearing house for the ex-
change of information between cooperating institutions and in compiling
results of the survey in a series of eight volumes to be published
next year.

Third, there is a publications program. Primary emphasis is on
International Conciliation, a periodical now published five times a
year. Each issue is devoted to a study of some problem of interna-
tional organization, selected particularly from fields in which infor-
mation is not easily available. A special number each fall presents
background information on issues before the current session of the
United Nations General Assembly.

In two series of books and pamphlets, the endowment has under-
taken studies of various organs and activities of the United Nations.
Subjects have included the International Court of Justice, the Security
Council, the General Assembly, and disputes brought before the United
Nations. Other publications have dealt with a variety of topics such
as institutes of world affairs and current research in world affairs.

Finally, there is a series of studies now in progress in representative
countries throughout the world concerning their national policies and
attitudes toward international organization, particularly in regard to
the United Nations. Arrangements for the studies vary from one
country to the next. The normal pattern is for some leading private
institutes to assume responsibility for the study in its country. The
studies will be published in a series of some 20 volumes.

In undertaking these studies the endowment has assumed that inter-
national organization is here to stay in some form or other and that
it is and will remain an important factor in international life. We
are trying to find out, if we can, why these countries joined the United
Nations, what they expected to get out of joining it, what they have in
fact got out of it, and what they think may be the future. We also
hope that these studies will help in preparing for the proposed confer-
ence to review the United Nations Charter. In addition, we hope to
encourage research in the field of international organization in general.
Today the endowment distributes over four thousand copies of its annual report to libraries, colleges and universities, newspaper and radio stations, organizations and individuals concerned with international relations, and to all the Members of the Congress of the United States.

We believe the activities which are summarized above, and described in greater detail in those reports, are in keeping with the purposes for which the organization was founded and are in the public interest. The story is one which the trustees and staff of the endowment are glad to submit for the records of this committee.

STATEMENTS CONCERNING THE ENDOWMENT

I turn now to specific statements concerning the endowment, made either in the hearings of the special committee or in memoranda prepared by the committee's staff which have been brought to our attention. In considering these statements and the following comments thereon, it is important to bear constantly in mind the distinction between facts and inferences which witnesses or staff drew from them.

1. Alleged aid to individuals and organizations with leftist records or affiliations

The associate staff director of the committee referred in the hearings to testimony before the Cox committee which he alleged showed that the Carnegie Endowment for International Peace gave grants to 15 "individuals and organizations with leftist records or affiliations" (transcript, p. 1022). This misleading statement must not stand unchallenged. It is true that the Carnegie Endowment made at one time or another grants or payments to 1 organization and 14 individuals that, in the language of the counsel for the Cox committee, had been "cited or criticized by the House Un-American Activities Committee or by the McCarran committee * * *" (Cox committee hearings, p. 583). To have been "cited or criticized," however, is not proof of "leftist records or affiliations" and there was no reference by any member of the Cox committee or its counsel, or by me, to "leftist records or affiliations." Furthermore, the record of the Cox committee hearings contains no shred of evidence, nor even an allegation, that any of the work performed with endowment funds had a "leftist" character.

My testimony before the Cox committee showed that grants made by the endowment to the Institute of Pacific Relations, the only organization involved, ceased in 1939, years before any question was raised about the activities of that organization (Cox committee hearings, p. 581). Moreover, the chairman of the present committee indicated that * * * up until the late forties the IPR had an excellent standing * * * (transcript, p. 1192). Of the individuals named who had been "cited or criticized," Alger Hiss constitutes a special case. With regard to him, there is nothing to be added to the detailed testimony of John W. Davis and Henry M. Wriston on his connection with the endowment (Cox committee hearings, pp. 569-572, 183-184). As to the other 13, the officers of the endowment did not, according to its records, have at the time the payments were made any knowledge of the citations or criticisms, and indeed most of the payments took place before any such citations or
criticisms had been published. Furthermore, the total received by these 13 people amounted to $3,701.67, less than one-fiftieth of 1 percent of all endowment expenditures.

2. "A propaganda machine"

At the hearing on May 11, the committee counsel made the following statement:

* * * we suggest that a proper subject of inquiry for the committee is whether or not propaganda is desirable for a foundation which operates as a fiduciary manager of public funds. The case of the Carnegie endowment we will be glad to introduce evidence later to show that they were consciously produced, a propaganda machine. We are anxious to get the facts * * * (transcript (ibid., p. 52), May 11, pp. 137-138).1

This statement must presumably be read in the light of the definition of propaganda given the previous day by the research director:

Propaganda-action having as its purpose the spread of a particular doctrine or a specifically identifiable system of principles, and we noted that in use this word has come to infer half-truths, incomplete truths, as well as techniques of a covert nature (transcript, May 10, p. 37).2

Using this definition, the answer to the counsel's charge is that the endowment is not and never has been "a propaganda machine." Nor has it ever disseminated "half-truths" or "incomplete truths," or used "techniques of a covert nature."

Certainly it is a fact that the endowment has advocated world peace and international understanding, but what reasonable person would disapprove these ends or characterize the activities of the endowment in pursuit of them as "the spread of a particular doctrine or a specifically identifiable system of principles"?

Moreover, if, as seems to be the case, the research director included the Carnegie endowment as one of the foundations engaged in education for international understanding which are "discrediting the traditions to which (the United States) has been dedicated" (hearings, May 10, p. 45),2 he is drawing an inference for which there is not a shred of evidence. The methods of the endowment have been truly educational and not propagandistic, and its whole tradition has been as American as George Washington, Thomas Jefferson, and Dwight D. Eisenhower.

To understand the endowment's approach to its task, one must look to its history, placing its educational activities on behalf of international peace and understanding in historical perspective.

Today, to be in favor of peace, is like opposing sin. People differ on the best way to attain the goal but not on the general aim. This was not clearly so in 1910. War was respectable in many quarters and was regarded as an ordinary instrument of national policy.

In working for peace and international understanding in the early days of the endowment the founders were neither pacifists nor advocates of the doctrine that peace could be attained by mere altruism or by emotional fervor. They believed, on the contrary, that the road to real peace was through the development of law, through research, and through education of the peoples and leaders of the world in terms of hard realities.

Unfortunately, war came in 1914. That war itself, however, gave the peoples of the world a drastic and expensive education on the im-

1 Ibid., p. 52.
2 Ibid., p. 17.
portance of peace. As Nicholas Murray Butler told his fellow trustees in 1920:

*** It is no longer necessary to discuss (the desirability of international peace) with anybody. The elaborate moral arguments and pleas that were heard for a hundred years before the outbreak of the Great War were made so much more effectively, so much more convincingly, by the war itself, that they now sound like pleas in a dead language. We are now confronted with the problem of how most wisely to insure the maintenance of international peace and how most effectively to carry forward an ordered civilization.

Butler saw that the war had underlined the importance of international relations and shown that what concerned each nation concerned all. As a matter of fact, the peoples of the world would never again be able to remain apart. Indeed, they would be increasingly drawn closer together due to an event 7 years before the endowment was founded, the successful experiment of Orville and Wilbur Wright at Kitty Hawk.

During the interwar period the endowment's activities both in research and in education were primarily addressed to the problem defined by Dr. Butler: “How most wisely to insure the maintenance of international peace and how most effectively to carry forward an ordered civilization.” The problem was an immense one, and the outbreak of war in 1939 showed that the solution was not yet at hand.

Since the end of World War II the United States has embarked on a new phase in foreign policy. One of its major decisions was to work through an international organization, and subsequently also through regional organizations, to achieve peace, which is the goal of the endowment. The policy of participation in international organizations has had the overwhelming support of the United States Senate, with votes of 89 to 2 for the United Nations Charter, of 72 to 1 for the Rio Treaty, and of 82 to 13 for the North Atlantic Treaty. This policy has been of a bipartisan character and clearly reflects a belief that membership in these international organizations is in the national interest of the United States.

The endowment has pursued a program of research and education in relation to these organizations. The effort has been directed toward making them better understood and toward the problem of improving these still far from perfect instruments.

In charging that the endowment has been “a propaganda machine,” the staff of this committee must have overlooked the objectives assigned as early as 1911 to the Division of Intercourse and Education:

To diffuse information and to educate public opinion regarding the causes, nature, and effects of war, and means for its prevention and avoidance.

To cultivate friendly feelings between the inhabitants of different countries, and to increase the knowledge and understanding of each other by the several nations.

A comparison of the research director’s definition of propaganda with these objectives and with the activities of the endowment must surely lead fair-minded persons to conclude that the endowment has steadily pursued those goals by methods which are educational in the best sense. If in a few instances in the past the endowment strongly advocated particular means for the advancement toward peace, these efforts were, like all other endowment activities, thoroughly American in character; they were without exception in support of projects endorsed by the incumbent President of the United States. This is
true, for example, of the World Court, which was endorsed by Presidents Harding, Coolidge, Hoover, and Franklin D. Roosevelt.

In support of the argument that the endowment has engaged in propaganda, Mr. Dodd referred specifically to the international relations clubs and the international mind alcoves. The endowment's support of the international relations clubs was not propagandistic either in intent or in fact. The statement quoted above (p. 5) to the effect that the “purpose of the endowment in undertaking this work is to instruct and enlighten public opinion * * *” is exact, and it was adhered to. As to the international mind alcoves, these were started during World War I. The phrase “international mind” had been coined by Dr. Butler in 1912 in a statement, framed copies of which were hung over each alcove:

The international mind is nothing other than that habit of thinking of foreign relations and business, and that habit of dealing with them, which regard the several nations of the civilized world as friendly and cooperating equals in aiding the progress of civilization, in developing commerce and industry, and in spreading enlightenment and culture throughout the world.

The endowment sent collections of books to libraries in small communities throughout the United States to interest the general reader in foreign affairs and in other lands. No library received the books except upon request. These collections were given the name International Mind Alcoves. It is also to be noted that the State library commissions or State librarians of 34 States were at their own request placed upon the list of recipients of alcove collections; through their offices the books were sent by mail to inaccessible small communities.

What should be stressed in this regard is that the books did not emphasize any one point of view. They were small collections of books on one particular subject, which in this case was international relations rather than, say, engineering or English literature. Not by the widest stretch of the imagination could such action be called propaganda.

As to the international relations clubs, the first of these were established under the leadership of the endowment just prior to World War I, and the largest number came into being in the period between the wars. The clubs were formed purely for educational purposes. They were helped by the endowment through the sending semiannually of collections of books and pamphlets dealing with important international questions and by arranging for occasional speakers on request.

It should be noted that most of the clubs were set up at a time when there was little or no formal teaching of international relations on college campuses throughout the United States. To encourage interest in the study of foreign relations in colleges is not propaganda but education.

Section II of this summary of activities, the only part which relates to the endowment, is an amazing document which, were it not to become part of the record of a congressional committee would not require even the following brief comments.

To one familiar with the work of foundations, it appears to be confused, disorganized, inaccurate, and full of inconsistencies. It assumes a relationship between the Carnegie Endowment and the Rockefeller Foundation which did not in fact exist. It appears to imply that there
is something discreditable or not in the public interest in research study and education in international relations and international organization, entirely disregarding the fact that no organization can work effectively for international peace (which is the precise purpose for which the endowment was founded) without intensive attention to the whole field of international relations including present and potential international organization.

Diligent efforts to disentangle the charges against the Carnegie Endowment suggest that there are four:

(a) That the endowment has consistently worked for world peace;
(b) That the endowment has been of service to the United States Government;
(c) That the endowment has engaged in propaganda;
(d) That the endowment has supported not only subversive and leftist organizations and individuals, but certain other organizations disapproved by the authors of the memorandum.

With respect to (a) and (b), we feel indebted to the memorandum for showing that the endowment has consistently sought to carry out the wishes of Mr. Carnegie, and that it has been of service to the United States Government in times of both peace and war. If the endowment is criticized on these counts, I can only assume that the committee staff is critical of American efforts toward world peace and of patriotic service to the United States.

Moreover, it simply is not true that the endowment “has not sponsored projects advocating other means” for achieving peace than international organization (ibid., p. 876), or that it has sought to “achieve peace through a world-government arrangement” (ibid., p. 889).

The propaganda charge has been answered on pages 10-14 of this statement (ibid., p. 1057). I am more confused than ever, however, as to what the staff means by propaganda, and am left with the impression that there is no conceivable foundation activity—at least in the field of international relations—which staff members would be willing to call educational.

The final charge relating to alleged support of subversive individuals or organizations has also been dealt with above (pp. 8-9 of this statement, ibid., p. 1056-57).

The memorandum also speaks disparagingly of certain other institutions which the endowment has at one time or another assisted or cooperated with. I refer to such organizations as the Council on Foreign Relations, the Foreign Policy Association, the Commission to Study the Organization of Peace, and the Institute of International Education. These can speak for themselves. As president of the Carnegie Endowment I can say that I believe our cooperation with them promoted the purposes of the endowment and was in the public interest.

**CONCLUSION**

It is clear that I have a very different view from certain members of the committee’s staff as to foundations and their role in American life. It is evident that these staff members are unhappy about changes
during recent decades in American attitudes toward foreign relations and in our country's position in the world. They appear to feel these changes should not have occurred, that the changes resulted from certain tendencies in research and education, and that foundations are primarily responsible. I have the impression that they go so far as to believe that governmental intervention of some kind in the work of the foundations would be a corrective.

My own outlook in relation to the particular work in which the endowment is active is quite different. I believe the changes which have occurred in American policy and attitudes in the international field have resulted from democratic adjustment to the problems created by modern social and political upheavals, new inventions, and two world wars. One of our major problems has been to protect our national security in a world of new power relationships and at the same time to seek roads toward a lasting international peace. I rejoice that this country has been able to grapple with these problems as they arose by the orderly procedure of constitutional government. The education of the public and its leaders is vital to the success of such a procedure.

As a relative newcomer to foundation work, I express the belief that foundations by their promotion of research and of education, both formal and informal, in the field of international relations have made a valuable contribution in the public interest during these past 40 years not unlike in importance the contributions of foundations in other fields.

I have examined the record of the Carnegie Endowment for International Peace with some background of training in the appraisal of historical evidence. To me this record shows that the endowment, within the limits of human fallibility and of time, resources, and circumstance, has endeavored to carry out Andrew Carnegie's original intention. The goal has been to rid the world of war. That international peace, founded upon freedom and justice, is in the national interest and is a prime objective of the Government and people of the United States is beyond and above all dispute.

JOSEPH E. JOHNSON.

I, Joseph E. Johnson, being first duly sworn on oath, declare that I have read the foregoing statement; that it is true and correct with respect to those matters stated upon personal knowledge, and that with respect to matters not stated upon knowledge, it is true to the best of my knowledge and belief.

JOSEPH E. JOHNSON.

Subscribed and sworn to before me this 3d day of August 1954.

Notary Public, State of New York.

Term expires March 30, 1954.
TAX-EXEMPT FOUNDATIONS

STATEMENT OF THE ROCKEFELLER FOUNDATION AND THE
GENERAL EDUCATION BOARD, BY DEAN RUSK, PRESIDENT

LETTER OF TRANSMITTAL

NEW YORK, N. Y., August 3, 1954.

HON. B. CARROLL REECE,
Chairman, Special Committee To Investigate Tax-Exempt Foundations,
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: I have the honor to transmit herewith sworn statements on behalf of the Rockefeller Foundation and the General Education Board about certain matters raised before the Special Committee To Investigate Tax-Exempt Foundations of the 83d Congress.

We had expected that our organizations would be given the same opportunity to present our case before the committee that was afforded to our critics. When the committee announced on July 2, 1954, that no further public hearings would be held, we immediately sent a telegram to the committee, reading as follows:

The Rockefeller Foundation and General Education Board have been informed that the congressional Special Committee To Investigate Tax-Exempt Foundations decided today to terminate its public hearings. We have not commented upon the issues thus far raised because we expected to appear and have an opportunity to reply in public hearings.

We must assume that the committee's decision means that it will not submit a report to the Congress containing any material adverse to our two foundations on which we are not fully heard. This is fundamental in view of the nature of the charges and innuendoes made against our foundations by committee staff and other witnesses. These charges and innuendoes are not supported by the facts. We shall avail ourselves of the committee's invitation to submit a sworn written statement on issues raised before it for inclusion in the permanent record of the Congress and in any official publication of the proceedings of the committee. We note that the committee expects our statement to be made public; we fully agree in view of the wide publicity already given to adverse testimony. The record of our two foundations over the past half century testifies convincingly to their integrity, patriotism, and devotion to the public interest.

We received from you on July 3, 1954, the following telegram in reply.

Re your telegram: The Rockefeller Foundation and all others who were expected to be called as witness will be given ample opportunity to make statements for the record just as they might have done in open hearings and will also have opportunity to give full information which may be necessitated by the presentation to the committee for the record of further data by the committee staff. All statements by witness or the staff which are presented for the record will be made available to the press.

The accompanying statements, which are submitted pursuant to our telegram quoted above, consist of a foreword by John D. Rockefeller 3d, chairman of the boards of trustees of the 2 organizations, a statement in behalf of the 2 organizations by the undersigned as president of both, setting forth comments and principles which are applicable in respect of both organizations, and separate supplemental statements by each organization, dealing with certain specific grants which were referred to in the public hearings or in committee staff reports.

We wrote to you on June 4, 1954, requesting to be advised as to the particular grants, out of the more than 41,000 made by these 2 founda-
tions, which would, in the opinion of the committee, call for discussion by us. In reply, counsel for the committee informed us by telephone that we ourselves would have to determine this from the testimony received by the committee and that we would have opportunity to submit materials, subsequent to testimony, on any matter on which we would need more time for research in our records. Your telegram of July 3 also mentioned giving us an “opportunity to give full information which may be necessitated by the presentation to the committee for the record of further data by the committee staff.

We respectfully submit that the committee has presented us with formidable dilemmas.

The first has to do with the subjects we should cover in our reply. We find in the present record of the committee no prima facie case of any instance of wrongdoing on our part. Were we to undertake to make a full statement on all matters commented upon before the committee we would have to range over most of our tens of thousands of grants and deal with a full half century of the social, economic, and political history of the United States. Yet we have been asked to reply promptly and briefly. In the attached statement we have tried to state our position on a series of issues which seem to us to be the most relevant and important. Even so, we are not able to discuss, in a brief statement, the large numbers of grants which would substantiate our view. More important, we have no assurance that we have dealt with all of the issues which might seem important to one or another member of the committee.

A second concern relates to the future procedures of the committee. Are we to know what information comes to the attention of the committee or its staff which might be critical of our two foundations? Will we be given full opportunity to know about and to reply to material which might influence the committee toward conclusions adverse to us?

We believe, and the chairman has so stated, that the committee does not wish to inflict injury upon established institutions such as ours. We suggest that the committee insure this by affording the foundations an opportunity to be heard on the draft of any report which the committee proposes to submit. We see no other way to insure that we are responsive to the real issues in the minds of the committee which would have been disclosed had public hearings not been terminated.

We hope that the committee will find the attached statements useful in its deliberations.

Respectfully yours,

DEAN RUSK,
President, the Rockefeller Foundation and General Education Board.

FOREWARD BY JOHN D. ROCKEFELLER 3D, CHAIRMAN OF THE BOARDS OF TRUSTEES, THE ROCKEFELLER FOUNDATION AND GENERAL EDUCATION BOARD

One of the basic factors that give our American democracy its strength is the sense of responsibility on the part of the individual for his fellow citizen and his community. Philanthropy, whether it be on an individual or foundation basis, is an important expression of this fundamental. The giving of the individual will always be para-
mount, but foundations have come to play an increasingly important role.

The wise distribution of philanthropic funds is more difficult than is commonly supposed. Fully appreciating this fact, my grandfather established the Rockefeller Foundation and General Education Board in order to provide the continuing wisdom and insights of a group of distinguished and experienced men. To them was given broad discretion.

The charter of the Rockefeller Foundation provides that its funds shall be spent for “the well-being of mankind.” This gives great latitude as to the fields of program, but no latitude as to the purpose or objective—man’s well-being. Thus, in considering program or individual projects the primary concern of the trustees is to make sure that the action taken will effectively advance the interests of man or, differently expressed, the public interest. An important guide toward this end has been the founder’s statement that, “The best philanthropy involves a search for cause, an attempt to cure evils at their source.”

While my grandfather never participated in the affairs of the foundation or the General Education Board once they were formed, he followed with great interest for nearly 25 years their programs and progress. To him, to my father who was chairman of both boards until 1940, and to the other members of our family, the achievements of these two foundations have been a source of genuine satisfaction. We feel a deep sense of gratitude to their trustees and officers who have rendered such devoted service over the years.

The trustees of both the Rockefeller Foundation and the General Education Board have noted the expressed desire of the members of the special committee to investigate tax-exempt foundations to carry out their responsibilities in such a way that their report will make a constructive contribution insofar as the future of foundations is concerned. The trustees feel confident that the statements which are submitted herewith will be received and considered in this spirit.

I. INTRODUCTORY COMMENTS

The Rockefeller Foundation and the General Education Board are two foundations established and endowed by John D. Rockefeller in 1913 and 1903, respectively. In accordance with the usual practice, this statement is presented by their president as an authoritative expression of the views of the two corporate bodies. It is verified by him under oath, as are the separate supplemental statements of the two organizations.

The connection of the incumbent president with these two foundations dates from his election as a trustee of the Rockefeller Foundation in April 1950, and as a trustee of the General Education Board in December 1951. As to events prior to those dates, this statement and the supplemental statements are necessarily based not upon the president’s personal knowledge of the activities of the 2 organizations but upon his information and belief, derived from the extensive records of the 2 foundations and from discussions with present and former trustees, officers, and staff. In the case of 2 foundations which are 41 and 51 years old, a considerable number of important participants are no longer alive and others are widely scattered.
Among the criticisms of the Cox committee's investigation of foundations in 1952, advanced as reasons for a second investigation, was the fact that foundation witnesses were not sworn when testifying before that committee. It was said on the floor of the House that—as a result of this, neither the Congress nor the people know whether these officers and trustees were telling the truth.

We protest this statement and we do not know what the speaker meant when he added:

For the sake of the foundations, this error should be rectified.¹

We have no objection to testifying under oath. The omission of an oath was not at the request of the Rockefeller Foundation or the General Education Board but was the decision of the Cox committee, with the apparent consent of all committee members then present. Had the witnesses who testified in behalf of our organizations been under oath, their testimony before the Cox committee would have been the same, with the understanding which was clearly implicit throughout those hearings that as to facts not within their personal knowledge they were testifying upon information and belief. We have no double standard for testimony, depending upon whether it is sworn or unsworn.

We affirm unequivocally the integrity, patriotism, sense of responsibility and devotion to the public interest of all those, whether trustees or officers, who have over the past half century made the decisions which carried out the trusts laid upon the Rockefeller Foundation and the General Education Board. There is no trace of Communist infiltration into either of these foundations. In the course of the present investigation, it has been stated or implied by witnesses before the committee that they are in some way involved in an extraordinary catalog of offenses, ranging from aiding and defending Communist practices in the schools to violation of the antitrust laws. Although it is hard to believe that the committee has taken seriously the great majority of these charges, we shall try to be responsive and at the same time, to furnish information about the actual roles of our two foundations over the past decades.

We comment in this and in 2 supplementary statements, 1 for the Foundation and 1 for the Board, on what seem to us to be the more important issues raised before this committee. If we do not respond to every expressed or implied charge, it should be understood that we do not concede them. We are confident that the committee will agree that we would not show a proper respect for the Congress were we to assume that the committee itself has embraced all of the bizarre innuendoes presented in the testimony.

The record of this investigation suggests to us that foundations are not the only institutions under scrutiny here and may, in fact, be serving as an indirect channel for criticism of important segments of our national life, such as our educational systems, our scholarly organizations, and many established polices of the Government itself.

Our 2 foundations can state our own actions and why we have made the grants we have made, now amounting to more than $800 million. We can also state the basis of our confidence in the institutions and organizations to whom we have made these grants. We should regret, however, being placed in the position of speaking for those for

¹ Congressional Record, July 27, 1953, p. 10190. See also ibid., p. 28 et seq.
whom we are not accredited spokesmen. Our school systems, our colleges and universities, and our research and scholarly organizations are able to speak for themselves and we would not wish their position to be prejudiced by any failure of our own to present their views adequately.

We feel strongly about some of the fundamental issues which have been raised before this committee; some are of greater moment to our free society than is the position of any particular foundation; if we speak forcefully, we believe that we owe the committee a duty to do so.

II. General Considerations

A. Public Responsibility and Free Enterprise in Philanthropy

The Rockefeller Foundation and General Education Board have always acknowledged that their funds are held as a public trust. Our trustees recognize a heavy public responsibility, arising from the voluntary action of John D. Rockefeller in committing substantial private funds to a public purpose, from the policy and laws of the State of New York and of the United States which permit the two foundations to act corporately for a public purpose, and from the important privileges granted to educational, religious, and charitable institutions by certain Federal and State tax laws.

Though dedicated to the public interest, the Rockefeller Foundation and the General Education Board retain many of the essential attributes of private, independent organizations. They are nonpolitical and nongovernmental in character. In each case their policies and decisions are in the hands of a board of trustees of responsible citizens, who contribute time and a lively interest to their activities and who select officers and professional staff to carry out their policies. The foundation and the board hold and invest their own funds and decide how to spend them for the purposes for which they were created. They are private in that they are not governmental; they are public in that their funds are held in trust for public rather than private purposes. As social institutions, they reflect the application to philanthropy of the principles of private initiative and free enterprise, under public policies which have long recognized the benefits of such activity to a free society.

Most of the discussion of the free-enterprise system in America has focused upon its accomplishments in lifting the figures of national production and the general standard of living to levels never before attained in any other country. With Government controls limited, the release of the energies behind individual initiative has been given, we believe deservedly, a large measure of the credit for these extraordinary results. Less attention has been paid to the reliance we have placed upon the philanthropic impulse of private citizens. This has been left in large measure free from Government control and has been given positive encouragement through the tax laws. The result has been an impressive voluntary outpouring of wealth for charitable, educational, scientific, and religious purposes, transforming material wealth into opportunities for pursuing the enduring values of the mind and spirit.

The voluntary association of private citizens for the carrying out of public tasks is deeply rooted in our tradition and saves us from a
dismal choice between leaving many tasks undone or handing them over to an all-pervasive Government. It has been argued that the favored tax position of schools and colleges, foundations, and a large number of charitable activities rests upon the propositions that they do what Government itself would otherwise have to do from public funds and that independent organizations can do many of these tasks better than could Government. While there is evidence that such views have had a strong influence, a more fundamental basis for the public policy on the matter appears to us to be the importance in a free society, of encouraging the widest diversity of individual and group effort in order that citizens may share directly in the privileges and responsibilities of free institutions.

President Eliot of Harvard, speaking in 1874, long before our foundations were established, said:

* * * In England and the United States, the method of doing public work by means of endowments managed by private corporations, has been domesticated for several centuries; and these are the only two nations which have succeeded on a great scale in combining liberty with stability in free institutions. The connection of these two facts is not accidental. The citizens of a free State must be accustomed to associated action in a great variety of forms; they must have many local centers of common action, and many agencies and administrations for public objects, besides the central agency of Government. * * * To abandon the method of fostering endowments, in favor of the method of direct Government action, is to forego one of the great securities of public liberty.

These are among the basic considerations which have led the Congress, the legislatures of the 48 States, and the courts to shape the laws and public policy in such a way as to encourage private philanthropy. The principles involved were brought to our shores by the first settlers and have been reflected in official attitudes throughout our history. The Congress has affirmed its support of this policy by recent increases in the permissible deductions for charitable contributions made from individual and corporate incomes. One of the two recommendations of the Cox committee was the following:

2. That the Ways and Means Committee take cognizance of our finding that the maintenance of private sources of funds is essential to the proper growth of our free schools, colleges, churches, foundations, and other charitable institutions. We respectfully suggest that the committee reexamine pertinent tax laws, to the end that they may be so drawn as to encourage the free-enterprise system with its rewards from which private individuals may make gifts to these meritorious institutions.

We conclude that the underlying public policy is firmly established and represents not only a traditional attitude of long standing but the present policy of Federal and State governments.

We wish to emphasize that the Rockefeller Foundation and General Education Board have conformed to all applicable laws and authoritatively expressed public policies, and will continue to do so. This is our duty as citizens, and was clearly the wish of our founder. We shall be attentive to the views of responsible critics, but we do not expect to treat criticism as legislation or to accept the adverse witnesses who have testified before this committee as exponents of public policy. Our trustees would violate their trust if they should fail to bring to bear...
upon its performance the full extent of their experience and judgment and should substitute therefore the least common denominator of divergent views from every quarter.

Where public interest and private initiative are subtly merged, as in the case of an endowed foundation, how is the public interest safeguarded? In the case of the Rockefeller Foundation and the General Education Board, continuous effort is made to do so along several lines.

First, and most important, the trustees and officers in the performance of their duties are infused with a deep sense of public obligation. Having been entrusted with decisions to spend funds for the public good, they bring to their tasks the best of their judgment and skills, a disinterested rather than a partial view, and as much imagination and insight as their capacities permit. Their decisions cannot hope to win universal approval, and occasional mistakes may occur, for these are inevitable accompaniments of risk bearing. In judging the record of these trustees and officers, it is not reasonable or proper to use, as a test, one's agreement with each individual decision. The fair test is the seriousness and general competence of the attempt, on the part of trustees and officers, to discharge faithfully their difficult duties.

Second, we appraise our own judgments through the advice and counsel of many others who can contribute the wisdom of experience and special knowledge. This is a continuous process, systematically pursued by the officers, involving consultation with hundreds who give generously of their time and thought to the problems presented. Some of it is reflected in a more formal arrangement when competent individuals are invited to serve the foundation on boards of consultants on such matters as medicine and public health, agriculture, or legal and political philosophy.

Third, we respond fully to our obligation to conform to all relevant laws, to make regular reports to public authorities to whom such reports are due, and to use our best efforts to furnish information requested by any official body.

Fourth, the Rockefeller Foundation and the General Education Board keep the public informed as to their activities through regular publications which are given wide circulation.

Publications

In their long series of annual reports, the foundation and the board have sought to tell in plain terms both what they were doing and why. The policies of the trustees, the thinking which led to the development of those policies, and the methods of the officers in applying those policies, have been regularly disclosed. Grants have been listed, with a statement of their purpose and amount. These annual reports, supplemented frequently, in the case of the foundation, with brief reports entitled "The President's Review," have been given the widest distribution, both in the United States and abroad, to the press and to leading libraries, as well as to individuals and institutions on extensive mailing lists. In the last few years the foundation has also issued quarterly reports at the end of each calendar quarter covering grants made during that period. Since 1914, the general education board's annual reports have been equally complete and detailed.

In addition to these regular reports, special volumes are published where it is felt that they would meet a scientific, scholarly, or general interest. Recent examples are the volumes Yellow Fever, edited
by Dr. George K. Strode; The Story of The Rockefeller Foundation, by Mr. Raymond B. Fosdick; Crete: A Case Study of an Underdeveloped Area, by Dr. Leland G. Allbaugh; and The Sardinian Project: An Experiment in the Eradication of an Indigenous Malarious Vector, by Dr. John A. Logan. To these are added a large number of technical articles arising from the research of the foundation's own staff in such fields as virus diseases and agriculture.

Our heavy correspondence and press clippings every year bear witness to the attentive reading of these reports and the widespread interest they have aroused.

In his report to the committee, its director of research charges that the foundations have not reported the purpose of certain grants "in language which could be readily understood." In our case, the record of careful and full reporting makes it evident that any allegation of attempted concealment or distortion is without substance.

B. THE TAX EXEMPTION PRIVILEGE

The American Governments, Federal and State, from their earliest days have used the tax laws as effective and versatile instruments for the encouragement of voluntary private philanthropy. This encouragement has taken a variety of forms: Exemption of philanthropic enterprises from income tax, exemption of bequests to philanthropic organizations from estate and inheritance taxes, exemption of inter vivos gifts to such organizations from gift taxes, permission to deduct contributions to such organizations from income otherwise subject to tax.

Although tax privileges in one or more of these various forms doubtless have an important influence on the organization of foundations today, it should be noted that the tax element played no significant part in the creation of the Rockefeller Foundation and the General Education Board by John D. Rockefeller. In 1903, when the General Education Board was founded, there were neither income nor estate taxes, and although the 16 amendment, authorizing a Federal income tax, had become part of the Constitution before the incorporation of the Rockefeller Foundation in May 1913, the first income tax law under the new amendment was not enacted until the following October, and the tax which it imposed was at too low a rate to have an appreciable influence.

The statement has been frequently repeated in the course of this investigation that a large part (sometimes placed at 90 percent) of the funds distributed by tax exempt foundations represent money which, but for the tax-exemption privilege, would belong to the Government. As to our two foundations this assertion is not correct. For example, the ordinary annual income of the Rockefeller Foundation in recent years has averaged around $15 million. Dividends received from corporate stocks held by the foundation account for 91 percent of this amount. We are advised that if the Federal income-tax exemption were withdrawn, the tax payable by the foundation on the basis of the above figures, under the present corporate income-tax structure, would be about $865,600, or at a rate of between 5 and 6 percent rather than 90 percent. This is due in part to the 85 percent dividend receipts credit, in part to the costs of operating the foundation's programs in

1 Stenographic transcript (hereinafter cited as transcript), ibid., p. 49.
public health and agriculture, costs which would clearly be deductible in arriving at taxable income, and in part to the right to deduct, in any event, in arriving at taxable income, contributions made to other tax-exempt organizations not in excess of 5 percent of the donor's net income. These figures do not take into account capital gains (as in 1952) or losses (as in 1951) resulting from the sale of investment securities.

Nor can it be supposed with any certainty that a repeal of the existing income-tax exemption of foundations would result in any significant increase of the public revenues. True, a fund which had been distributing all or the major part of its income in grants might not be able to deduct more than a limited percentage of this total in computing its income subject to tax, though it might well be held that the usual limitation is inapplicable to a corporation whose sole authorized activities consist of charitable operations and grants. In any event, the removal of the exemption might serve to influence some boards of trustees, as a matter of provident discharge of their trust, to discontinue grants and substitute direct operations in such fields as scientific research, health, or public welfare, on such a scale that the clearly deductible costs of operation would exhaust the income, leaving nothing against which the tax could be assessed. Although the benefits which could be derived from such direct operations might be of great significance, there would be a corresponding loss of flexible and strategic financial reserves available for the support of research and scholarship in established institutions of learning—particularly where uncommitted funds are needed to follow up on promising new leads in scientific and scholarly investigation. Even though it would be possible to discourage the grant-making function of foundations by changes in existing tax laws, these changes would not insure additional funds for the Public Treasury and might, in fact, work against the public interest.

It should further be noted that under their present status the funds of the Rockefeller Foundation and the General Education Board are a part of the general stream of enterprise which produces taxation for the support of the Public Treasury. As has been indicated, their funds are invested largely in corporate stocks and other types of securities. The Rockefeller Foundation pays substantial taxes through the corporations whose stocks it holds. We are advised that during 1952 the foundation's share of corporate taxes, based upon its own holdings of corporate stocks, amounted to approximately $12,785,000. Our two foundations also pay other taxes; for example, the transportation tax on the travel of staff, the tax included in rent and on supplies, and social-security taxes on payroll to name a few. When the foundation or board makes a philanthropic gift, such funds or the income therefrom go quickly into the payment of salaries and travel, the purchase of equipment and supplies, and a wide range of similar uses which are tax yielding in character. Apart from money which goes directly into the Public Treasury as taxes, both the Rockefeller Foundation and the General Education Board have contributed substantially (over $75 million) to tax-supported institutions and agen-

---

5 The recommendation has been advanced before this committee that foundations should not hold more than 10 percent of the stock of any one corporate enterprise. Our foundations voluntarily adopted this principle some years ago and at present have reduced all of their holdings below this level with the exception of one company, our stock in which (22 percent of the shares outstanding) resulted from a gift. We are planning to make a similar reduction in this holding.
cies, such as State universities, public boards of education and boards of health. These contributions have been much larger than any income tax we might have paid had we not been tax exempt.

In broader terms, the activities of such agencies as endowed foundations make an important contribution to the economic structure upon which Government finance must rest. If, for example, the support of economic research makes it possible for both business leadership and Government to understand more clearly and more accurately the surging processes of our productive system and, on the basis of such knowledge, to make decisions which level off the peaks and troughs of the business cycle and sustain a high and steady national production, the benefit to the public purse is obvious. It is even more obvious that the virtual elimination of yellow fever, the sharp reduction in malaria and hookworm, have direct economic benefits as well as those which are measured in terms of the physical welfare of human beings.

The Rockefeller Foundation and General Education Board are large net contributors to, and not charges upon, our national wealth and Public Treasury. We believe that we clearly pay our way.

What has been said is not intended to depreciate the value of the exemption from Federal and State income tax of activities of a charitable, educational, or religious nature. The need for more, rather than less, private enterprise in such fields adds importance to the encouragement which legislatures have given through such exemptions to the prospective donor. The importance of the exemption should not, however, be unduly exaggerated in terms of dollars, nor should the fact of exemption be made an excuse for characterizing foundation funds as Government funds, or for restricting such funds to fields in which Government itself operates, or for projecting Government into fields which are better left to the private citizens of our richly diverse society.

C. INTELLECTUAL SURVEILLANCE

Much of the testimony heard by the committee bears directly or indirectly upon a fundamental and sensitive problem of foundation activity—that of foundation control over studies aided by foundation funds.

The implied premise of much of the criticism of foundations to be found in the testimony is that foundations should be held responsible for the views expressed by those who receive foundation grants. This, in turn, rests upon the premise that the power of the purse means control over the product. The criticism fails because of the errors in its premises.

The product to be expected from a foundation grant of the type so frequently criticized in testimony is an intellectual product. The exercise of control would frustrate the principal object of the grant, namely the unimpaired thinking of the scientist or scholar. If the answer were to be determined in advance, there would be no need to make the grant or conduct the study.

It should be noted that one of the committee's witnesses, Dr. Thomas Henry Briggs, testified:

It should go without saying that a foundation should never "attempt to influence findings and conclusions of research and investigations either through designation of personnel or in any other way."*

* Transcript, p. 271, ibid., p. 102.
Under our general practice, we consider that our responsibility is to make a sound judgment at the time a grant is made, a judgment which encompasses the importance of the purpose for which the grant is requested and the capacity and character of the individuals and institutions who are to make use of it. But having made the basic judgment that the recipient has the capacity and character to carry out the study, we exercise a minimum of further control. Ordinary prudence and the obligations of our trust require that we insist upon financial accounting, to assure ourselves that funds are used for the purposes for which they were appropriated. Where a second grant to a particular undertaking is up for consideration, some assessment of the work done under the first grant is necessarily involved. Frequently, those who are working under foundation grants are visited by one or more officers of the foundation while the grant is still current, primarily to keep us informed as to what is going on in the field. If the foundation should discover that an improper use were being made of its funds, such as for subversive activities, the foundation would undoubtedly intervene.

Subject to the foregoing, it has been our consistent policy not to attempt to censor or modify the findings of scholars and scientists whose work we are supporting financially. This long-standing policy, which we believe to be wise, rests both upon principle and upon very practical considerations.

The following are among the more important of these:

1. For the foundation to exercise intellectual supervision over its grantees would require the foundation itself to formulate an officially approved body of doctrine in almost every field of human knowledge. This is not our role, and is quite beyond our intentions or our capacities.

2. In most cases, the foundation could make itself responsible for scholarly or scientific conclusions only if it, with its own staff, substantially repeated the studies in question as a basis for its own finding. This, too, we could not undertake except where our own staff is engaged in research, as in virus diseases and agriculture.

3. The role of surveillance would add enormously to the staff and overhead costs of the foundation and consume philanthropic funds for unnecessary and socially undesirable functions.

4. The foundation is almost never the sole contributor to the recipient of a grant; in fact, in the vast majority of cases it is a minority contributor. We see no basis in principle for the foundation to assert a right of control taking precedence over national governments, state legislatures, departments of education, boards of trustees of colleges and universities, faculties, other private donors, publishers, etc. For foundations to attempt to exert such authority would lead to the confusion of responsibility.

5. No institution, scholar or scientist of character would accept a grant which is conditioned upon intellectual control. To any scholar worthy of the name, nothing is more important than his intellectual freedom.

6. The foundation necessarily makes a grant before the results of the studies financed by the grant can be known. It is difficult to see how this order of procedure could be reversed.

The considerations outlined above seem to be conclusive against the exercise of intellectual control by a private foundation over the recipients of its grants. We believe that a free society grows in
strength and in moral and intellectual capacity on the basis of free and responsible research and scholarship. We shall continue to support vigorously this concept which lies at the heart of free institutions and we will oppose any effort by government to use the tax-exempt status to accomplish indirectly what could not be done directly under the Constitution.

D. CONGRESSIONAL JURISDICTION

We respect the heavy responsibility which rests upon the Congress for carrying out the onerous tasks placed upon it under the Constitution, but we submit that there are wide areas in the life of our people which were not intended to be subject to congressional regulation and control. We have welcomed the statements of the chairman and of other members of the committee which indicate that this important principle is receiving the committee's attention.

However, the committee has heard considerable testimony maintaining that foundations have contributed too much toward an empirical approach as contrasted with a philosophical approach to certain studies. We shall speak of this point later; for the moment, we wish merely to observe that the relation between empirical studies and fundamental or general principle is an intellectual issue which is as old as man himself, which entered our literature at least as early as Plato and Aristotle, and which will endure as long as there are men to think. It is not a question which any foundation, or all the foundations, can or should referee or decide, and our foundations have never attempted to do so. Nor is it, we submit, a matter under the jurisdiction of the Congress.

Similarly, the curriculums of our schools are in the hands of tens of thousands of agencies which are independent in curriculum matters; these are the State and local educational authorities, teachers in our schools and colleges, and the boards of our independent educational institutions of all levels. The great strength of our educational system is its variety of patterns and its decentralization of control. We believe that it is not for government, nor for foundations, nor for any other group, to attempt to impose conformity upon this variety. If anyone has the impression that the foundations have the power to do so, he is wrong as a matter of fact. If anyone has the impression that our particular foundations have exerted pressure to produce such uniformity, he is equally wrong.

E. PERSPECTIVE AND DISTORTION

The Cox committee reported to the Congress that it had been "allotted insufficient time for the magnitude of its task." We respectfully submit that the present committee faces even greater limitations of time and staff if, even though giving attention to fewer foundations than did the Cox committee, it extends its inquiry into a half century of social, economic, and political change in the United States.

The committee has before it a number of reports prepared by its own staff which purport to deal with these complex events. They have been widely regarded as a confused and inadequate review of the decades they purport to cover and are particularly deficient at the

---

*Final report, p. 6.*
very point of greatest interest to this committee, namely, the responsibility of the foundations for the events themselves.

We ourselves do not find them to be a competent review of the trends they discuss, more particularly as to their sweeping generalizations, their proposed definitions of key terms, the accuracy and relevance of their charts and tables, and the imbalance of the selected quotations which they contain. We assume that we are not called upon to persuade staff members that they have been wrong about views which they have now placed in the public record as sworn testimony and that the committee will adopt procedures which will not permit staff to participate in both an accusatory and an adjudicating role.

Although several sections of this statement have a direct bearing upon these staff reports, we offer here brief comments on three of them.

Report of the director of research

The committee's director of research described the logic used in the preparation of his initial report as "reasoning from a total effect to its primary or secondary causes." If we read his report fairly in the context of this investigation, his logic produces the following: (1) A revolution occurred in the United States in the years 1933-36; (2) this revolution occurred without violence and with the full consent of an overwhelming majority of the electorate; (3) this could not have happened had not education in the United States prepared in advance to endorse it; (4) the foundations contributed funds and ideas to education; (5) therefore, the foundations are responsible for the revolution.

The report in question seems to give little weight to the great depression of the early 1930's, to World War I, and to World War II. Since the foundations have been charged with some undefined responsibility for an increase in the powers and functions of government, surely it is relevant that war and depression brought about an increased exercise of power by both the executive and legislative arms of the National Government under the Constitution. Surely it is also relevant that, while some measures adopted by Government during these decades were abandoned, others have continued, despite changes in party control, as a part of ongoing public policy. In any event, a number of allegations heard in the course of these hearings appear to be directed, not at foundations, but at the executive, legislative, and judicial branches of the Government and at the electorate. We must strongly protest any attempt to involve our two nonpolitical organizations in questions which are so basically political, both because the charges are unsupported and because it would be out of character for our two philanthropies to attempt to reply to such attacks in effective political terms.

We must also comment upon the use of the word "revolution" in the report of the director of research. The word has strong emotional associations. It is frequently used in debate between political parties and between factions within a political party—and in such use, it is ordinarily accepted as a forensic figure of speech.

We object, however, to the use of the word "revolution" in an official proceeding where the implication is a charge of wrongdoing. Such a figure of speech should not be used as a basis for alleging improper conduct or for impugning the reputations of respectable and law-
abiding citizens. It does not help to put the word in quotation marks—these become lost. It does not help to say, at the beginning of the report, “In no sense should they [i.e., the statements in the report] be considered as proof” 10 for such statements are overlooked. It does not even help that the report came only from a member of the staff, for it has already been attributed in the press to the committee itself.

As a recent statement of the American tradition on such matters, we cite the following portion of an address made by President Eisenhower on May 31, 1954, at the Columbia University bicentennial dinner in New York:

Whenever, and for whatever alleged reason, people attempt to crush ideas, to mask their convictions, to view every neighbor as a possible enemy, to seek some kind of divining rod by which to test for conformity, a free society is in danger. Wherever man’s right to knowledge and the use thereof is restricted, man’s freedom in the same measure disappears.

Here in America we are descended in blood and in spirit from revolutionaries and rebels—men and women who dared to dissent from accepted doctrine. As their heirs, may we never confuse honest dissent with disloyal subversion. Without exhaustive debate—even heated debate—of ideas and programs, free government would weaken and wither. But if we allow ourselves to be persuaded that every individual—or party—that takes issue with our own convictions is necessarily wicked or treasonous—then indeed we are approaching the end of freedom’s road.11

Report of the Assistant Director of Research on “Economics and the Public Interest” 12

A further issue of major importance is raised by this report, which is entitled “Economics and the Public Interest.”

In his introduction, the writer of the report says:

This report is made for the purpose of showing the nature and increasing costs of governmental participation in economic and welfare activities of the Nation.

The body of the report contains a number of tables reflecting the upward trend of Federal Government expenditures for such purposes as housing and slum clearance, social security and health, education (including the GI bill of rights), public works, food programs, etc. The foundations are brought into the picture by statements in the preface to the report to the effect that “Most, if not all of these newer activities of government are recommended in * * * reports by various educational groups, social science, and others, supported by foundation grants,” 13 and that “Much of this planning was done with the aid of social scientists in government employ * * * [many of whom] were directly or indirectly connected with educational organizations who have and still are receiving very substantial aid from the large foundations.” 14

The implication of these statements is that a grant by a foundation to educational groups or institutions, or for the training of individuals through fellowships, makes the foundation responsible for the views of such groups, organizations and individuals on public issues. The report in question seems to assign this responsibility to us even in the case of employees of Government who are known to work under the policy direction of the President, Cabinet officers, and the Congress.

10 Transcript, p. 42, ibid., p. 19.
11 Transcript, p. 1407, ibid., p. 628.
12 Transcript, p. 1403, ibid., p. 627.
13 Transcript, p. 1405, ibid., p. 627.
We do not see how such responsibility could possibly be assigned to foundations, if for no other reason than that it would be wholly contrary to public policy to give foundations the power to exercise it. Nor do we see why funds from foundation sources should be considered as so different in this respect from funds from all other sources.

Let us assume, however, for the sake of argument, that if the statements in the report were borne out by the facts, the foundations would be properly chargeable with a share of the responsibility for the increases in governmental expenditure resulting from “these newer activities of government.” Would this be reprehensible “error,” amounting to misconduct on the part of the foundations? If so, how much graver must be the responsibility of the Members of Congress who actually determined the policies and voted the funds in support of measures which, according to the words of the report, “may be said to be subversive, un-American, and contrary to public interest.”

And how has the Supreme Court of the United States escaped impeachment for sustaining the constitutionality of such measures?

We respectfully urge the committee to reread the report and to compare the views of the Federal Constitution expressed by its author with those of the Supreme Court as set forth by Justice Cardozo (an appointee of President Hoover) in Helvering v. Davis (301 U.S. 619 (1937)), upholding the constitutionality of the old-age benefit provisions of the Social Security Act:

“Congress may spend money in aid of the “general welfare.” Constitution, art. I, sec. 8; United States v. Butler (297 U.S. 1, 65); Steward Machine Co. v. Davis, supra. There have been great statesmen in our history who have stood for other views. We will not resurrect the contest. It is now settled by decision. United States v. Butler, supra. The conception of the spending power advocated by Hamilton and strongly reinforced by Story has prevailed over that of Madison, which has not been lacking in adherents * * * (p. 640).

* * * Counsel for respondent has recalled to us the virtues of self-reliance and frugality. There is a possibility, he says, that aid from a paternal government may sap those sturdy virtues and breed a race of weaklings. If Massachusetts so believes and shaps her laws in that conviction, must her breed of sons be changed, he asks, because some other philosophy of government finds favor in the Halls of Congress? But the answer is not doubtful. One might ask with equal reason whether the system of protective tariffs is to be set aside at will in one State or another whenever local policy prefers the rule of laissez faire. The issue is a closed one. It was fought out long ago. When money is spent to promote the general welfare, the concept of welfare or the opposite is shaped by Congress, not the States. So the concept be not arbitrary, the locality must yield * * * (pp. 644–645).

Our foundations have taken no position either for or against social-security legislation. We are not quoting the opinion of Justice Cardozo as an expression of the views of our foundations on the broad question of constitutional interpretation which he discusses. Again our foundations have no corporate opinion on such issues. But we respectfully submit that on such matters, as on the other controversial matters covered in the assistant research director’s report, where the legislative, executive, and judicial branches of the Government have spoken in their support, the measures in question cannot properly be characterized as “revolutionary,” “subversive,” or “un-American.”

Report by the legal analyst

The policy issues presented by this report, parts I and II, are discussed in other sections of this statement. This report contains, however, statistical information about our grants which, on the basis of our own records and published reports, is so inaccurate as to be seriously misleading. The following items illustrate these inaccuracies.

Regarding grants by General Education Board to Dec. 31, 1952

3 The legal analyst’s report added to this figure a personal gift of $35 million by John D. Rockefeller, Sr., which resulted in a total figure of $60,087,000. The personal gift has been eliminated in this comparative statement, which is limited to the foundation’s contributions.

If we are furnished information as to the figures desired, we shall be glad to supply them in the interest of an accurate permanent record.

F. SCOPE OF THE PRESENT INVESTIGATION

At the first public hearing, the chairman of this committee included the following in his remarks about the scope of the present inquiry:

Moreover, and again with an occasional exception, we shall chiefly confine our attention to the work of foundations in what are called the social sciences.
Little criticism has come to us concerning research or other foundation activities in the physical or exact sciences, such as medicine and physics.  

If we shall not spend much time in exposition of what great amount of good the foundations have admittedly done, it is because we deem it our principal duty fairly to seek out our error. It is only through this process that good can come out of our work. It will be for Congress, the people, and the foundations themselves to judge the seriousness of such error, and to judge also what corrective means, if any, should be taken. Our intention has been, and I wish to make this doubly clear, to conduct an investigation which may have constructive results, and which may make foundations even more useful institutions than they have been.  

We appreciate the fact that the chairman has taken note of large fields of foundation activity which have, over the years, become largely noncontroversial in character. With full confidence in the importance and usefulness of our support for work in the social sciences, we urge the committee to take all of our activities into account in any evaluation of our two foundations. In the case of the Rockefeller Foundation, for example, it grants in the social sciences represent 15 cents of the foundation’s dollar expended. We believe that these appropriations have rendered a notable public service. But the broader question of the benefit to the public of any particular foundation necessarily involves a view of its work seen as a whole.  

The committee has had little attention drawn to the wide-ranging scope of the private philanthropy provided by our two foundations. It would be impossible for us to summarize this activity in the space reasonably available to us. We respectfully urge any committee members who have not had an opportunity to do so to read Raymond B. Fosdick’s book, a copy of which we are furnishing each member of the committee, our replies to the Cox committee questionnaire, and our testimony before that committee.  

We append two tables which we believe will be of some assistance. The first is a summary table covering both organizations, which was furnished to the Cox committee, but now is brought up to date through 1953. The second is a breakdown of grants of the Rockefeller Foundation to show something of the larger purposes for which they were made.  

Mindful of the chairman’s desire to concentrate: (a) on the social sciences, and (b) on seeking out error, we are naturally interested in the standard by which error is to be identified. If knowledge is much more elusive in the study of human affairs than in the case of physical phenomena, just so is it more difficult to be certain about what constitutes error.  

Any scholar or scientist is subject to temporary errors; under conditions of freedom, corrections are worked out in the process of scientific and scholarly debate, oral or written, and the issues resolved by further testing and experimentation. It is not impossible for such issues to remain unresolved indefinitely, where no existing hypothesis appears adequately to explain all the data which must somehow be taken into account. Such differences are not treated as charges and countercharges but are the bricks out of which the edifice of knowledge is gradually built.

16 Transcript, p. 3, ibid., p. 2.  
17 Transcript, p. 5, ibid., p. 3.  
18 Appendixes A and B.
If, however, we classify as error any departure from a generally accepted principle of dogma, or any view which opposes one's own, or any questioning of one's own commonsense experience, or any view which conflicts with one's own interest, then an official search for error must evoke the gravest misgiving. We have supposed that our constitutional arrangements and public policies make room for the widest divergence of ideas, while exacting a course of conduct from each of us which shares equitably the privileges and responsibilities of freedom.

We do not feel it necessary to consider at length the full implications of the above comments, because we believe that there are other questions which would be more immediately helpful to the committee in judging the role of our foundations in the social-science field. These questions are—

(1) Is it a reasonable exercise of the discretion vested in the trustees of the Rockefeller Foundation to appropriate funds in support of social studies as a contribution to the well-being of mankind?

(2) Is it a reasonable exercise of such discretion for the trustees to make such grants almost exclusively to colleges, universities, and other research and scholarly organizations?

(3) Is it a reasonable exercise of such discretion to make such grants to such institutions, without requiring that the resulting studies conform to predetermined views of the foundation itself?

(4) Does the totality of grants made in support of the social sciences by the Rockefeller Foundation represent a body of research and investigation which is consonant with the public interest of the United States and with the well-being of mankind?

We believe that all four questions must be answered affirmatively.

III. ORGANIZATION AND PROCEDURES

A. ORGANIZATION AND PURPOSES

The Rockefeller Foundation was chartered by a special act of the Legislature of the State of New York in 1913 for the purpose of promoting the well-being of mankind throughout the world. In 1929 the Laura Spelman Rockefeller Memorial, another philanthropic foundation established in 1918 by Mr. Rockefeller, was consolidated with the Rockefeller Foundation. The total of Mr. Rockefeller’s gifts to the foundation was $182,851,000, and the assets of the memorial at the time of consolidation had a value of $58,756,000. By the end of 1953, the foundation had made 30,572 grants, totaling $501,749,878 in expended and authorized appropriations. Its remaining capital funds have a present market value of approximately $366 million.19

The General Education Board was incorporated in 1903 by a special act of Congress for the purpose of promoting education in the United States of America, without distinction of race, sex, or creed. It received from Mr. Rockefeller $129,209,117 in a series of grants and an additional $15,751,625 from the Rockefeller Foundation, making a total of $144,960,742.20 The board has made 11,287 grants totaling $317,733,124, for the benefit of education in this country. Its funds

19 As of July 21, 1954.
20 An additional $116,615 was received in gifts from other sources.
have now been distributed or allocated except for a relatively small balance of about $700,000 and, for this reason, it is in the process of winding up its activities.

Although they are legally independent of one another, the Rockefeller Foundation and the General Education Board have had close ties. For many years a substantial majority of both boards of trustees has been identical. Since 1936 they have had the same chairman (successively John D. Rockefeller, Jr., Walter W. Stewart, John Foster Dulles, and John D. Rockefeller 3d) and the same president (successively Raymond B. Fosdick, Chester I. Barnard, and Dean Rusk). For a much longer period they have had a common treasurer; they are both served by the same comptroller. They have occupied offices on adjoining floors of the same building, which has fostered close contacts between the two staffs.

The operations of each organization have been in a broad sense coordinated with those of the other. Thus the foundation, authorized under its charter to promote the well-being of mankind throughout the world, has tended to defer to the General Education Board on opportunities for aid to education as such within the United States, the field to which the board is directed by its charter. Of course, the Rockefeller Foundation has made substantial sums available to educational institutions in the United States and other countries in connection with its own activities.

B. TRUSTEE RESPONSIBILITY

The allegation has again been made before this committee that the trustees of foundations abdicate their responsibility. The Cox committee inquired into this point in 1952 hearing considerable testimony upon it, and reached a finding favorable to foundation trustees which concluded with the following statement:

As to the delegation by trustees of their duties and responsibilities, the problem is basically the same one that confronts the directors of a business corporation. Both must rely in large measure upon their staffs. There is this one important difference, in the opinion of the committee. The trustees of a public trust carry a heavier burden of responsibility than the directors of a business corporation. In fairness it should be said that in the opinion of the committee this principle is fully recognized by the trustees of foundations and that they make a determined effort to meet the challenge.

It is difficult to understand the allegation in the case of the General Education Board prior to the recent curtailment of its activities, or its survival in the case of the Rockefeller Foundation, where the facts conclusively refute it. The explanation may lie in the quandary in which a hostile critic finds himself when he wishes to attack a grant which has been made by a board of trustees of distinguished citizens whose broad experience, public service, and loyalty cannot be effectively questioned. He elects to retreat into the position that “These men obviously didn’t do it,” rather than face the fact that such men might disagree with him.

The trustees of the Rockefeller Foundation, a complete list of whom is attached, fully recognize a heavy responsibility for the trust which has been placed in their hands. They meet it in the following manner:

---

21 As of July 21, 1954.
22 Final report, p. 11.
23 Appendix C.
(A) Board meetings

The full board of trustees meets twice each year, in April (1 full day) and in December (2 full days). The 1st day of the December meeting is ordinarily given over to a general discussion of the policies and procedures of the foundation; it is here that the trustees are afforded an opportunity to raise new ideas and offer criticisms and suggestions about the work of the foundation in its broadest aspects. As for the appropriations of funds to be considered at the 2 full meetings, the trustees are provided a docket at least 10 days in advance, which contains a description of the activities for which funds are recommended by the officers. The distribution of such a docket prior to each meeting gives the trustees an opportunity to study proposed actions in advance and to be prepared to offer suggestions or raise questions or consult with others before final action is taken. At each meeting, proposed appropriations are presented orally by the officers and are subject to discussion, approval, modification, or rejection by the full board. This consideration is not merely formal in character but includes the type of exchange which develops a consensus in the board and between the board and the officers which gives direction and guidance to the work of the foundation.

(B) Executive committee

The executive committee of the board of trustees has seven regular and two alternate members under the chairmanship of the president. It meets at least six times a year at the offices of the foundation. It receives an advance docket and considers proposed appropriations with the same procedures used by the full board. It is limited in the amounts it may expend between board meetings without the express authorization of the board.

(C) Special policy committees

From time to time the chairman of the board of trustees may appoint a special policy committee of the trustees to review the policies and operations of the foundation. Such reviews extend over a period of months and require substantial commitment of time and interest from the trustee members of such committees. Their conclusions and recommendations are reported to the full board where thorough discussion serves to clarify policy and to readjust the work of the foundation to changing conditions.

(D) Other trustee committees

Other standing committees of the board are the finance committee, the nominating committee and the committee on audit, whose functions are indicated by their titles.

(E) Informal discussion

The trustees take a lively interest in the work of the foundation which leads to a considerable amount of informal discussion among themselves, between trustees and officers, and between trustees and individuals outside the foundation.

(F) Publications

The trustees receive and read the publications of the foundation, including a monthly confidential report prepared by the officers for the information of the trustees. The latter report is “confidential” largely because it is intended only for use within the foundation itself and because it occasionally discusses the progress of scientific and scholarly studies before the scientists and scholars themselves are ready to make their findings public.

(G) Visits to foundation activities

Many of the trustees have an opportunity from time to time to see firsthand some of the work being supported by foundation appropriations, both in the United States and abroad. On occasion, 2 or 3 members of the board may be asked specifically to visit a particular activity, such as the Mexican agricultural program, on behalf of the foundation. Since trustees are men whose other interests require travel, they frequently avail themselves of opportunities to discuss foundation affairs with our representatives stationed abroad and to visit one or another project.

(H) Election of officers

One of the most important duties resting upon trustees is the election of the officers of the foundation. This is particularly true in the case of the president, the two vice presidents, the secretary, the treasurer, the comptroller,
and the directors of the four divisions. With the exception of the president, the treasurer and the comptroller, the officers are elected annually upon the nomination of the president. It is fair to say that the procedures of the foundation give the trustees an excellent opportunity to know and to judge the personalities, character, and quality of work of the principal officers of the foundation.

It should be obvious from the above summary account that the role of a trustee of the Rockefeller Foundation is an active one, particularly for those trustees who serve on one or more of its committees. Despite the demands made upon trustees' time, the attendance of trustees at board and committee meetings establishes a remarkable record of attention to duty on a voluntary and unremunerated basis. Absences are almost invariably limited to those who are ill, out of the country, or prevented from attending by some other clearly overriding consideration. Over the past 5 years, for example, if we exclude only trustees actually abroad or on formal leave of absence, attendance at board and executive committee meetings has averaged 86 percent of the membership. This compares most favorably with the experience of large business corporations.

We conclude these remarks about the role of trustees by repeating here a portion of the testimony given before the Cox committee by Chester I. Barnard, former president of the foundation and general education board:

* * * I have been a director of business corporations and still am for 40 years. I never have seen any board that I have been on—and I know how many of the others operate—in which the attention to the policies and the details by the directors or trustees, whichever they use, were such as it is in the Rockefeller Foundation. I do not know any organization in which a week in advance you have a complete docket book with the explanation of every item over $10,000 that you are going to be asked to vote on, and that includes with it a detailed list of every grant-in-aid, of every scholarship or fellowship that has been granted and any other action taken, and that has attached a list of the declinations. That is just as important from a trustee's point of view as the approvals. Nor have I ever known of any organization in which so much careful attention was given to it.

In 12 years I have missed no meetings of the board of trustees of the Rockefeller Foundation and only 3 of its executive committee meetings, and that is not unique at all. That is some record for people who are busy, and every one of the members on this board is busy. They read the docket book in advance. In addition to the docket book every single item in most circumstances has to be presented by the director of the division which proposes it, and he has to subject himself to cross-examination, and he gets it. He doesn't get it on every item, of course, but he gets it. So the matters that come before the board of trustees of this foundation in my experience have been given more careful attention by more competent people than I have seen in any other institution. There is just nothing like it, and the idea that this thing has been run without adequate attention by the trustees, that it is just in the hands of a bureaucracy of officers, just certainly isn't true, and it ought to be recorded here that it isn't true.24

C. OFFICER AND STAFF RESPONSIBILITY

More has been said about trustees than about the officers and full-time professional staff, since the role of the latter is better understood. The officers and staff of the Rockefeller Foundation are organized, broadly speaking, into the divisions of medicine and public health, natural sciences and agriculture, social sciences, humanities, and in administration. The full-time personnel of the general education board has now been sharply reduced because of the liquidation of its activities.

While, as has been shown, the trustees do not “abdicate” their responsibilities to the officers of the foundation, they must and do rely heavily upon the officers for the effective performance of the foundation's tasks. The officers make recommendations on policy, seek the most promising opportunities for the application of foundation funds, review and investigate requests, propose grants for trustee consideration, and keep in touch with educational, scholarly and scientific leadership in many countries. Some are engaged directly in scientific research in such fields as virology and agriculture. In addition to handling the extensive administrative business of the foundation, the officers are responsible for the approval of small grants and the award of fellowships under general policies established by the trustees and from funds made available by them for that purpose.

It should be noted that the officers act as a group; their decisions and recommendations are not made individually but in a process of discussion which brings to bear a variety of experience and judgment. The divisions hold frequent staff meetings on requests falling within their respective fields of interest; discussions between divisions occur where proposals involve more than one; finally, proposals to the trustees are considered in a conference of the principal officers of the foundation, where criticism and discussion can take place on the broadest basis.

The bylaws of the Rockefeller Foundation provide that the president is the only officer eligible to serve as a trustee. Among the principal officers of the foundation are always a number who by experience and capacity would be entirely qualified to serve as trustees and, were they not officers, might well be invited to join the board. In fact, then, the affairs of the foundation are in the hands of a board or trustees of 21 distinguished citizens an officer group of highly qualified individuals, all of whom can be relied upon to carry the heavy burdens of their philanthropic trust with care and a deep concern for the public interest.

D. TYPES OF GRANTS

The trustees of the Rockefeller Foundation determine, on recommendation of the officers, what grants are to be made by the Foundation, but the trustees delegate to the officers restricted authority to make certain smaller grants in categories described below. The trustees also determine, upon recommendations of the officers, what expenditures are to be made for administration and similar purposes.

The foundation makes grants both to individuals and institutions. Grants to individuals are in the form of fellowships or of travel grants and are limited in amount and duration. Grants to institutions are, in accordance with the policy of the foundation, made only to other tax-exempt institutions in the United States and to such institutions abroad as are comparable in character and purpose to those receiving tax exemption in this country. By following this policy, the foundation is assured that its grants to institutions in the United States are limited to those which the Government itself has recognized as being philanthropic in character.

In brief, the foundation’s grants are handled as follows:

1. The board of trustees, at its meetings, may make grants without limit in amount, from either income or principal.
2. Between meetings of the board, its executive committee, consisting of seven members and two alternate members (all trustees) may make grants from either income or principal, subject, however, to the following limitations:

(a) Each grant must be in accordance with the general policies approved by the board;
(b) No grant may increase by more than $500,000 a grant previously made by the board;
(c) No new grant may exceed $500,000; and
(d) Total grants between meetings of the board may not exceed $5 million unless authorized by the board.

A summary of the minutes of each meeting of the board and of the executive committee, listing all grants, is sent to all trustees immediately following the meeting. All actions of the executive committee are reported to the board at the first board meeting following such actions.

3. The trustees delegate to the officers authority to make certain smaller grants in the following categories:

(a) Grants-in-aid.—These are allocations made by the officers from funds appropriated for this purpose annually for each division of the foundation by the trustees. Each allocation is limited to $10,000; total allocations to a project may not exceed $10,000 in any one year, and total support of a project through grants in aid may not extend beyond 3 years or be in excess of $30,000. The formal action authorizing the grant in aid must be signed by the director of the division concerned, by the president or vice president, after examining the supporting materials, and by the comptroller, who certifies the availability of funds for the purpose. The usual grant in aid is about $2,000; not more than about 7 percent are for as much as $10,000. All allocations are reported promptly to the executive committee of the board of trustees.

(b) Director's fund grants.—A director's fund of not more than $5,000 is set up annually for each division (as an allocation from the grant-in-aid appropriation made by the trustees). Individual allocations from this fund may not exceed $500 and are made through a written action signed by a division director and certified by the comptroller. All such allocations are reported twice a year to the trustees. The fund provides a flexible mechanism for prompt response to the needs of individual scholars and scientists at strategic times in the development of their work. The grants are used for such things as equipment, honoraria, travel, materials and research assistance.

(c) Fellowship awards.—These are awards made by the officers from funds appropriated annually for this purpose by the trustees. The action making the foundation's award is signed by the director of the division concerned, the president or vice president, and the comptroller. All fellowship appointments are reported promptly to the executive committee.

IV. Foundation Support for Social Studies

A. Background of Foundation Interest

In a formal sense, the Rockefeller Foundation undertook financial support for social studies when, in 1929, it was consolidated with the
Laura Spelman Rockefeller Memorial and continued an interest already developed by the latter philanthropy.

In much broader terms, the foundation came to believe that its commitment to promote "the well-being of mankind throughout the world" compelled it to give attention to the baffling complexities of human relations—to the processes by which men earn a living and the difficulties they encounter in working out tolerable relations among individuals, groups, and nations.

From the beginning the foundation never considered that it had or should have solutions to social problems behind which it should throw its funds and influence. It has had no nostrums to sell. Its approach rested upon a faith that the moral and rational nature of man would convert an extrusion of knowledge into an extension of virtue, and that he could make better decisions if his understanding could be widened and deepened.

The experiences of World War I and the painful uncertainties of the postwar and depression period seemed to reflect a growing and menacing gap between man's technical and scientific capacity and his apparent inability to deal with his own affairs on a rational basis. In any event, it did not appear that we could escape fundamental political, economic, moral, and social problems by concentrating upon "safe" scientific subjects. Successes in public health were to mean rapidly falling death rates and increased population pressures upon resources. The study of nuclear physics, at first only a brilliant extension of man's intellectual curiosity, was to lead to hydrogen weapons.

There was no illusion about the rudimentary character of the so-called social sciences or about the severe limitations which are encountered in attempting to apply the methods of the physical sciences to man's own behavior. Nevertheless, it was felt that there might be sufficient regularity about human behavior to permit fruitful study and that a scientific approach might evolve methods of study which, if not a direct application of techniques developed in the older sciences, might lead to surer bases of knowledge than we now have. In any event, the possibility was worth the effort and the very attempt might uncover promising leads which would increase our knowledge to a constructive degree.

A further impulse behind the interest in social studies was a conviction that the strengthening of our own free institutions required a better understanding of the processes of a free society and the framework within which a citizen enjoys the privileges and bears the responsibilities of liberty itself. At a period when free institutions came under challenge from totalitarian ideology of both the left and the right, it was felt that penetrating studies of our own free economic and political institutions would help them to withstand assault.

It was fully appreciated that social studies would involve controversial subjects. It was felt, however, that a private foundation could, without itself taking sides on controversial issues, make a contribution by supporting objective studies which might illuminate such issues and reduce contention.

Three brief excerpts from our records throw light upon the way in which the foundation has approached the support of the social sciences. The first is a memorandum prepared by the executive committee of the Laura Spelman Rockefeller Memorial in 1924, referred to by Dr. Thomas Henry Briggs in his testimony before this com-
mittee, the gist of which is quoted in Mr. Fosdick's history of the foundation:

The present memorandum proposes to indicate principles which affect the ability of the memorial to become associated with projects in the field of social science. Certain principles would seem to make association undesirable. It appears advisable:

1. Not to contribute to organizations whose purposes and activities are centered largely in the procurement of legislation.
2. Not to attempt directly under the memorial to secure any social, economic, or political reform.
3. Not to contribute more than a conservative proportion toward the current expense of organizations engaged in direct activity for social welfare.
4. Not to carry on investigations and research directly under the memorial, except for the guidance of the memorial.
5. Not to attempt to influence the findings or conclusions of research and investigations through the designation of either personnel, specific problems to be attacked, or methods of inquiry to be adopted; or through indirect influence in giving inadequate assurances of continuity of support.
6. Not to concentrate too narrowly on particular research institutions, incurring thereby the danger of institutional bias.

Certain principles would seem to make assistance from the memorial desirable. It appears appropriate:

1. To offer fellowships to students of competence and maturity for study and research under the supervision of responsible educational and scientific institutions.
2. To contribute to agencies which may advance in indirect ways scientific activity in the social field.
3. To make possible the publication of scientific investigations sponsored by responsible institutions or organizations through general appropriations to be administered in detail by the sponsoring agency.
4. To contribute toward the expenses of conferences of scientific men for scientific purposes.
5. To make possible, under the auspices of scientific institutions, governmental agencies or voluntary organizations, demonstrations which may serve to test, to illustrate or to lead to more general adoption of measures of a social, economic or governmental character which have been devised, studied and recommended by responsible agencies.
6. To support scientific research on social, economic and governmental questions when responsible educational or scientific institutions initiate the request, sponsor the research and assume responsibility for the selection and competence of the staff and the scientific spirit of the investigations.

The second quotation is a brief statement on controversy adopted by the trustees of the Laura Spelman Rockefeller Memorial and subsequently by the trustees of the Rockefeller Foundation, following the merger in 1929 of the two philanthropies:

Subjects of a controversial nature cannot be avoided if the program is to concern itself with the more important aspects of modern social life. In fact, successful treatment of issues of a controversial sort would be so important a contribution to the fundamental objectives of the program that the existence of militant differences of opinion cannot be thought to preclude the promotion of inquiry under appropriate auspices.

The last is taken from a memorandum prepared by the director of the division of social sciences of the foundation in 1944:

1. Though the degree of social need is always pressing toward grandiosity, modest work will, in the long run, be most effective.
2. In recommending grants officers should try to anticipate the future—never merely ride the coattails of an already discernible trend.
3. The social sciences division has no "nostrums" to sell. In choosing the objects of grants the guiding tendency should be not to pronounce answers but to

TAX-EXEMPT FOUNDATIONS

B. EMPIRICAL STUDIES

It has been suggested to this committee that foundations have had an adverse effect on scholarship and research through an undue emphasis on empiricism and "a premature effort to reduce our meager knowledge of social phenomena to the level of applied science." 29

We have presumed to question whether this committee has a mandate from the Congress to inquire into the decision of foundation trustees as to the distribution of funds between empirical and nonempirical studies or to inquire into the current practices of our colleges and universities in this regard. But we do not seek to evade the merits of the issue.

The history of the intellectual processes by which man has accumulated knowledge shows that observation, experimentation, induction, deduction and verification have each had an important role to play and that it is by their skillful and imaginative combined use that we have been able to push back the frontiers of knowledge. Without empirical examination, general propositions fail to establish and maintain contact with reality; without general concepts, fact-finding becomes aimless wandering and produces helter-skelter collections of unrelated bits and pieces. By observation and experimentation man refines his ideas about the world in which he lives; by other rational processes he reduces his masses of fact and impression to a degree of order and gives them meaning. After enough regularity has been exposed to justify the construction of a general theory, then and only then can occur the crucial test of verification. Throughout this process the questions "What is it?" and "How does it happen?" are among the tools man uses while seeking an answer to the underlying question, "What does it mean?"

The interplay of observation, experimentation and theorizing has produced brilliant results in the natural sciences, enabling man to fight back at disease, to harness new forms of power, and to wrest a more abundant living from his environment. But even in the case of the natural sciences, the path he has traveled has been a tortuous one, filled with false leads, imperfect observation, inexact experiment, theories which claimed too much, and contradictory facts for which he could find no adequate explanation. New ideas have had to run a gantlet of prejudice and entrenched opinion. Today's firmly held truth is modified by tomorrow's fresh discovery. And still today, as man looks out from peaks of knowledge which he dared not hope to scale, he sees still higher peaks on the distant horizon and vast fields of ignorance still to be explored. The process continues—with new findings, new mistakes, new instruments, new techniques, and most important of all, new concepts and fresh imagination.

It was inevitable that an attempt would be made to apply the methods of the natural sciences to human affairs. Chemical and physical approaches to the subtle problems of living matter—once considered domiinated by mysterious "vital forces" had striking and

---

29 Transcript, p. 42, ibid., p. 19.
promising successes. It was wholly natural to attempt to apply similar analytical and quantitative techniques to social problems. It should not be surprising that this attempt would encounter major obstacles—as did the efforts of those who first tried to apply Newton’s physics and Lavoisier’s chemistry to biology and medicine. The techniques appropriate to the laboratory were insufficient for the study of man in his social environment; the circumstances of study were different in fundamental respects; conditions could not be readily controlled so as to study one factor at a time, as the physical scientist often does. The basic equipment of the scientist was nevertheless required: careful examination of the evidence, an objective approach to data, and a lively and fertile imagination in the construction of hypotheses to be tested, and, throughout, a clear recognition that there must be a joint emphasis on speculation and experience. Beyond that, techniques had to be revised and improved; the danger of seeing too much had to be avoided; and the disconcerting influences of undetected factors had to be faced. Although his problems of procedure were difficult enough, the social scientist also faced the resistance and even hostility of man himself, with his personal or group interests affected and his emotions and traditional patterns upset by new knowledge.

The social scientist persists in his effort to learn more about human behavior, despite the modest beginnings and the challenging complexity of his task. He believes that he is beginning to know something, even though he is sure that he does not know everything. He is in position to throw some light on some situations, knowing better than most where his present limitations are. For example, we know a great deal more now than we did 20 years ago about the processes by which we make a living in a free enterprise economy—more about capital growth, the labor force, the market, rates of productivity, prices; and this knowledge is becoming more accessible to the tens and hundreds of thousands whose decisions determine the ebb and flow of our economic life. We know more about the consumer, his plans and prospective demands, his liquid assets, his preferences. We know more about personnel selection and training, the motivations which affect productivity, the techniques of management. We know more about the processes of normal development, the way in which people learn. We can be quite accurate about short-range population predictions affecting such matters as our requirements for schools and teachers or our pool of manpower for military service. We at least know something about what new knowledge we need to extend these predictions over a longer range.

These few examples are given to illustrate that our knowledge about human affairs is increasing, even if slowly and imperfectly, and that such knowledge as we have can contribute practical benefits while the search continues. If there are claims being made which seem overreaching, if social scientists are in disagreement among themselves and with the layman, if there are many questions which cannot be answered, all this is entirely normal. If there are errors and a danger that we shall be misled by errors, the safeguard is the classic and traditional one: free debate, the empirical testing of opposing views, and a standing invitation to confront error with truth. Our society is deeply in debt to the best of the social scientists. They are among the most important of today’s pioneers.

As far as the Rockefeller Foundation is concerned, we attach no particular importance to the argument about whether the term “social
science” is properly used. Some of those who object to it probably overestimate the certainties of the natural sciences. Some who use it may claim too much for our knowledge of man. It is our view that much more can be known about man than we now do and that knowledge is to be preferred to superstition or prejudice. If a little knowledge is a dangerous thing, the remedy is to advance further into the unknown and seek out its mysteries, not to retreat into enforced ignorance.

Our foundations have provided funds for promising studies of an empirical character in the social sciences, largely in the fields of economics and human behavior, and we take genuine satisfaction from them. These studies have been, for the most part, much more than mere fact finding; they have been accompanied by a sensitive interest in generalization and underlying principle. It has been our impression that those who are engaged in such studies are much aware of the importance of general concepts and are the first to recognize the inadequacies of the tentative generalizations thus far reached. The final answers have not been found is a reason for continuing the effort rather than for abandoning the approach.

It should not be surprising that, on a comparative dollar basis, foundation funds might seem to be more heavily concentrated in empirical studies. They represent a relatively new field for academic development and reflect, as the president of the Social Science Research Council has pointed out, the pragmatic element in the American experience. Further, they are expensive and are often beyond the reach of ordinary college and university budgets. Under these conditions, foundation support is required if significant advances are to be made.

Alongside of empirical studies, our foundations have been interested in philosophy and theory and have made many grants for the more speculative fields. We have an active interest in moral, political, and legal philosophy, in moral and spiritual values, in the philosophy of history and the theoretical aspects of economics and international relations. If the amounts have not been large in total, it is partly because large amounts are not needed, as contrasted with empirical studies. A further reason is that the special combination of interest and speculative capacity is somewhat rare, professional opportunities are limited, and large numbers of scholars in these fields do not come forward. Finally, it is not at all clear just how a foundation interest is best expressed; perhaps what is most needed is fellowship or grant-in-aid opportunities for younger scholars and a certain amount of free time for older scholars in widely diverse fields who wish to philosophize about their experience and get their thoughts into more systematic form. These are questions to which we are giving continuous attention.

V. SPECIFIC QUESTIONS

A. INTRODUCTION

We turn now to the specific questions which the Congress has referred to this committee for determination. According to the report of the committee’s director of research, these questions are the following:

Have foundations—
Used their resources for purposes contrary to those for which they were established?
Used their resources for purposes which can be classed as un-American?
Used their resources for purposes which can be regarded as subversive?
Used their resources for political purposes?
Resorted to propaganda in order to achieve the objective for which they have made grants?  

B. CONFORMITY TO CHARTER PURPOSE

The first question cited above is whether foundations have used their resources for purposes contrary to those for which they were established. As to the Rockefeller Foundation and General Education Board, the answer is clearly "No."

Let us first consider the foundation. It would surely be hard to find words of broader import than those used in its charter to describe its purpose, "to promote the well-being of mankind throughout the world." Only one inference can fairly be drawn from this wording: that the intent of the founder was to place no limitation on the discretion of those who from time to time would be responsible for controlling the destinies of the foundation, so long as their decisions could reasonably be regarded as contributing to the well-being of mankind.

This was the determination of Mr. Rockefeller, based upon his long experience of personal giving, and his knowledge of the pitfalls awaiting donors who attempt to circumscribe too narrowly the purposes for which philanthropic funds will be available over a considerable period of years. He preferred to leave the decision as to program and policy in the hands of succeeding boards of trustees, believing that a trust in their wisdom and experience was less likely to be frustrated than an attempt on his part to anticipate the needs of later generations.

Where the charter uses such broad language to describe the organization's purpose, a strong presumption of validity attaches to the determinations of its trustee, unless they fall clearly beyond the generally recognized area of permissible philanthropic giving. Whose judgment is to be substituted for that of the trustees, as better qualified to determine the purposes for which the Rockefeller Foundation was established? Is a grant to be condemned as not within those purposes because, for example, it is in support of studies relating to the United Nations? True, there was no United Nations when the foundation was established in 1913. But the foundation's charter was framed to meet the needs of an unforeseeable future. That was the precise reason for stating the organization's purpose in such comprehensive terms. Those who would impose a restrictive interpretation on such language have a heavy burden of proof to carry, and may fairly be said to expose themselves to the suspicion of wishing to substitute their own political and economic predilections for the open-minded, farseeing vision of the foundation's creator.

Turning to the General Education Board, we find that its charter expresses a similar breadth of purpose. The special act of Congress incorporating the board in 1902 declared its object to be "the promotion of education within the United States of America without distinction of race, sex, or creed." The types of education to be encouraged, the methods to be pursued, the institutions to be benefited, were wisely left to the discretion of the Board's trustees. With respect to the General Education Board we repeat what we have said as to the foun-

30 Transcript, p. 47, ibid., p. 21.
dation, namely, that those who claim that the organization’s resources have been used for purposes which are contrary to those so broadly expressed in its charter have a heavy burden of proof to carry, and one which, we submit, has been far from sustained in this investigation.

A criticism has at times been made that the interest of the Rockefeller Foundation in the social sciences represented a departure from “the wishes of the founder.” There was discussion in the foundation from the beginning about a possible interest in the social sciences; Mr. Rockefeller himself established the Laura Spelman Rockefeller Memorial to carry on his wife’s interest in social-welfare activities. At an early stage the memorial decided to concentrate largely in the social-science field; this interest became a part of the program of the Rockefeller Foundation upon the consolidation of the two philanthropies in 1929.

It should be pointed out that John D. Rockefeller, Jr., served as chairman of the board of trustees of the foundation for 22 years (1917–39). He had been intimately associated with his father’s developing philanthropy and served the foundation during the period when the natural sciences, social sciences, and humanities were added to its program.

John D. Rockefeller 3d, the present chairman of the board, testified at some length on this point before the Cox committee in 1952.31

There is no credible evidence to support the assertion that our two foundations have in some reprehensible way departed from the purposes of our founder or the purposes inscribed by public authority in our charter.

C. ALLEGED SUPPORT OF UN-AMERICAN OR SUBVERSIVE ACTIVITIES

We come next to allegations that the foundations have promoted “un-American” or “subversive” action. This has been defined to this committee by its director of research as “any action having as its purpose the alteration of either the principles or the form of the United States Government by other than constitutional means.” 32

The Rockefeller Foundation and General Education Board would never knowingly participate in or support un-American or subversive action. We were requested to report to the Cox committee the names of recipients of grants who had been listed by the Attorney General as subversive or who had been cited or criticized by the House Un-American Activities Committee or the Senate Internal Security Subcommittee. No grant has ever been made by either foundation to a recipient whose name appears on the Attorney General’s list of subversives. This list, however, applies to organizations only, not individuals, and to the best of our knowledge there is no similar comprehensive list of individuals who have been officially designated by government as subversive. Consequently, independent philanthropic bodies such as our foundations, whose earnest desire is to avoid gifts to subversive individuals, are without reliable and positive guidance in making their grants. The House Un-American Activities Committee has published Cumulative Index V to its publications, but this document states: “The fact that a name appears in this index is not per se an indication of a record of subversive activities. It

31 Hearings, pp. 565–568.
32 Transcript, p. 37, ibid., p. 17.
simply indicates that said name has been mentioned in connection with testimony or a report submitted.” \(^{33}\)

In making their reports to the Cox committee, our two foundations revealed the names of all grant recipients who, so far as we could discover, had ever been commented upon adversely by either of the House or Senate committees above mentioned, or who had been listed in any report of either committee as having been identified by a witness as a Communist, as one of a group affiliated with an alleged Communist-front organization, or as one of the participants in some form of pro-Communist activity. Because they came within one or another of these categories, the Rockefeller Foundation named 2 organizations and 23 individuals who had benefited from its grants, and the General Education Board named an additional six individuals to whom or for whose support it had made grants.

The reporting of these names was by no means an acknowledgment by our foundations that the organizations and individuals were in fact subversive. On the contrary, a number of them have steadfastly denied under oath any Communist affiliations, and now occupy positions inconsistent with any serious doubt as to their loyalty. Two of the individuals have admitted that they were Communists at one time, but they have publicly renounced the party. Neither of the two organizations has been placed on the Attorney General’s list of subversive organizations. Furthermore, in most cases the grants were made by our foundations long before the recipients were named even in the manner above mentioned, and also before the slightest question had been raised about them.

Our foundations refrain as a matter of policy from making grants to known Communists. This rests upon two elements, the clearly expressed public policies of the United States, within which our foundations operate, and the increasing assaults by communism upon science and scholarship which would lead our foundations, on intellectual grounds alone, to withhold support.

We recognize the necessity for Government to seek out and deal with subversive activity from any quarter. In this, Government is entitled to the sympathetic assistance of all responsible citizens. Where freedom and security are balanced against each other and it becomes necessary to locate the line which separates permitted and prohibited conduct, difficult decisions have to be made which reach into the fundamentals of our society. For example, the definition of subversion is a matter of extreme difficulty.

On broad grounds of public policy, we believe that private citizens and organizations should approach unofficial definitions of subversion with the greatest caution. This is not merely because the task is difficult, as the Congress has found it to be on the official plane. If private organizations and associations should produce their own definitions of subversion and should act toward their fellow citizens on the basis of such private definitions rather than of those furnished by duly constituted authority, the mutual confidence and trust which are the cement of our democratic society would rapidly crumble away. The presumption of innocence is more than a luxury to be enjoyed in settled times; it is a vital element in a society of freemen who work together by consent and not by force. Under the American system,
TAX-EXEMPT FOUNDATIONS

tyranny in government can be struck down at the ballot box but it is far more difficult to hold private organizations to proper standards if these organizations intrude upon security activities which are at the heart of the governmental function.

A private citizen or organization can properly look to Government for guidance in matters affecting loyalty and subversion. When one turns to public laws and to official declarations of public policy for a definition of the term "subversive," one finds a lack of precision which itself may reflect differences about what constitutes wise policy in this field as well as possible concern about the impact of applicable constitutional provisions. For such constitutional provisions as those concerning treason, bills of attainder, free speech, free press, and due process of law enjoin caution upon Government lest the voice of the opposition be silenced by public authority and fair differences of opinion lead to the persecution of those with whom we do not agree.

We attempt to set standards for our activities and appropriations which go far beyond any definition of subversion. We believe objective scholarship to be inconsistent with attitudes predetermined by a totalitarian ideology or with conclusions which are reached to conform to a dictated pattern. The search for the highest quality, for scholars and scientists of complete integrity, for men and women of fine character and acknowledged capacity for leadership necessarily means that questions of loyalty arise only in the rarest instances.

But we have always kept in mind the importance of the nonconformist in the advancement of human thought. This is not communism—it is the antithesis of communism, which regiments its followers and tolerates no dissent from the dogma of the Kremlin. Mistakes can and will be made and private organizations cannot guarantee a perfect record, any more than can an intelligence agency of Government itself. So long as there is alertness to the dangers involved, and reasonable effort to avoid them, we believe that the public interest will be adequately protected. It would be gravely injurious to the public interest if fear should lead to such restrictive procedures as to impair seriously the work of the foundations at the frontiers of human knowledge.

We expect Government, acting under the law and the Constitution, to identify what is subversive. We expect that the standard of conduct thus defined will be applied by due process. We believe that private citizens and organizations are entitled to rely upon a man's reputation among his fellows for character, honesty, loyalty, and good citizenship and that private citizens and organizations should not enter upon certain of the techniques of investigation appropriate only to Government. We recognize that this is a field of infinite complexity and are prepared to cooperate in any reasonable way to take account of dangers from any source.

D. SUPPORT OF PRO-AMERICAN PROJECTS

We turn next to the related question whether our foundations have adequately supported pro-American projects.

Our grants are made almost exclusively to colleges, universities, and other research and scholarly organizations. We affirm our confidence in them as patriotic institutions which recognize their obligation to serve the public interest. The diversity of interest and aspiration among the American people forbids our thinking of pro-American
in terms of a narrow formula couched in purely political terms. Institutions which nourish the entire range of the religious, scientific, economic, social, artistic, and cultural values of our society are, in the deepest and best sense, pro-American in character. We know of no class of institutions more alive to our basic values and more concerned to see them understood and appreciated than are our colleges and universities. We know of no better investment in the future of our country than our substantial grants to such institutions.

If we think, not of institutions, but of the kinds of work performed or supported, again we believe that our two foundations have contributed immeasurable benefits to our country. We mention, but do not emphasize, that a very large portion of our funds has been spent in the United States. We would suppose that a 35-year campaign against yellow fever was pro-American and that those who gave their lives in the foundation's successful fight against this pestilence served America, as well as the rest of mankind, as truly as did the soldier who gave his life in battle. The building of a giant telescope on Mount Palomar, the campaign against hookworm, the large and sustained interest in Negro education, large-scale support for the study of the economics of a free-enterprise system, the provision for thousands of fellowships, are all examples of activities of which America has been a major beneficiary. It does not diminish America's gain to know that others benefited as well, nor does it subtract from the end result to know that the impetus came from a desire to "promote the well-being of mankind throughout the world."

In a somewhat narrower sense, however, our two organizations have consciously sought ways and means of contributing to the strengthening of our national life. This has been expressed in large support for medical education in the United States, in grants for extensive studies of our own economy, in support for studies of our legal and constitutional system, our State and local governments, by interest in national, regional, and local history, in support for both creation and appreciation in the arts. Materials available to the committee will show many hundreds of grants for such purposes. In American history, for example, they will show 33 grants in 1953, 27 in 1948, and 25 in 1943—just to take 3 typical years.

In addition to American studies in the United States, we have encouraged American studies abroad, parallel to area studies of other cultures in this country, as a means of establishing a base of knowledge for broader and more accurate understanding between Americans and the peoples of other cultures. Grants for this purpose have gone to such universities as Oslo, Munich, Ankara, Tokyo, Kyoto, and Doshisha, to name a few.

We see no basis for any assertion that we have been negligent about the interests of our own country in carrying out the mandates of our charters.

From the context in which the question of pro-American projects was introduced, we infer that it was intended to raise the question of foundation support specifically for patriotic organizations. Nothing we say is intended to deprecate in any way the value of patriotic and civic societies, which keep alive a love of country and a respect for the American tradition. In a free society, particularly where there is a strong emphasis upon individual liberty and initiative, there is an important role for those who regularly remind us of the claims of the
Nation upon our interest and loyalty. But we question whether the Congress would wish to use its investigatory or tax power to press particular claimants upon philanthropic funds which are entrusted by law to the judgment and discretion of boards of trustees. Such claims, if officially supported, would quickly multiply until they encompassed every worthwhile purpose in our society and would not obviate the ultimate need to make difficult choices in applying limited funds to vast human needs. It is not surprising that our foundations, which have largely concentrated upon basic research and support in certain fields for institutions of higher education, should have had little or no contact with patriotic, veteran, or civic groups whose activities are of a quite different nature. We have supposed that it has been well understood that we have elected to work in other directions, since we have very little correspondence in our files from such groups raising the possibility of foundation support. Such as we have concerns itself largely with local hospitals or other local charities which, from the beginning, it has been the policy of our organizations not to assist.

There are some indications in the record of these hearings that the term "pro-American" includes repentant Communists. We know of repentant Communists who have benefited directly or indirectly from our grants. If it transpires that a former Communist is to be included among those to benefit from a proposed grant, our inclination would be to make a judgment, however hazardous it might be, on the merits of each particular case—a judgment as to the ability, character, integrity, and present loyalty of the individual concerned. The fact that a person may in earlier years have been a Communist would not in itself disqualify him for a foundation grant. Nor does the fact that he has repented give him a claim to foundation assistance superior to that of persons without a Communist record.

The committee will recognize that the problem is not a simple one. For it, apparently, is only in very special cases that a former Communist and his sponsoring institution gain immunity from continual harassment. Further, a difficulty arises in applying our usual tests of high intelligence, strong character, qualities of leadership, and unusual promise for the future. One questions whether there is particularly fertile ground for foundation aid among those who have already demonstrated political naivete, and have shown a willingness to submit their minds and spirits to totalitarian discipline. We are not prepared to express a general view on such cases; it is a matter to which we have given considerable thought and which will continue to receive our attention. It is also one of the questions about which public policy needs clarification by those in responsible authority.

E. ALLEGED "POLITICAL" ACTIVITIES

Another allegation has been that foundations have promoted "political" activities. On this the Rockefeller Foundation and General Education Board enter a categorical denial and observe that no evidence whatever has been produced which relates us in any way to support for any political candidate or any political party.

On our boards of trustees are some who, quite outside of their service to our foundations, have publicly identified themselves with one or the other major political party. Some trustees have accepted public
service, whether political or nonpolitical in character, under every administration in office since our foundations came into existence. Many trustees, however, have not indicated a political position, even to their fellow trustees. We do not ask trustees or prospective trustees about their politics and have no intention of doing so. Emphasis is upon the nonpolitical and nonpartisan character of our work. The same holds true insofar as our officers are concerned. It is clearly understood that no one connected with our foundations may properly identify these philanthropic institutions with political partisanship in any form.

Since it is well understood that we do not participate in partisan politics, the criticism has taken the form of a charge that we have favored “attitudes normally expected to lead to legislative action.” Such a charge eludes examination. The Rockefeller Foundation and General Education Board do not adopt “attitudes normally expected to lead to legislative action.” We have supported studies about a wide range of human affairs, the purpose of which has been to add to our knowledge and to illuminate problems with fact by seeking out the underlying facts and principles. If legislatures make use of such knowledge in the course of lawmaking, the relation is much too remote, and the intervening factors far too complex, to sustain a charge that the work of our foundations has promoted “political activities.”

F. ALLEGED “PROPAGANDA”

This investigation has heard a great deal of talk about “propaganda,” coupled with the specific charge that foundations have violated their tax-exemption privilege by carrying on “propaganda” activities. The Rockefeller Foundation and the General Education Board deny this charge and affirm that we have exercised great care to avoid any such infraction of our tax-exemption privilege. No inquiry has ever been directed to the Rockefeller Foundation or the General Education Board by the Bureau of Internal Revenue or the Internal Revenue Service raising any question of violation in connection with any grant ever made by either organization.

Where support has been extended to studies in political science, economics, sociology, or international relations, areas in which controversy is almost unavoidable, these boards have never sought to promote a partisan or doctrinaire approach to the subjects, but have been interested solely in the highest standards of objective, scholarly research. If in rare instances the recipient of a grant has departed from these standards, this has not been done with the consent or approval of our organizations.

The trustees of the Rockefeller Foundation, to their abiding honor be it said, have held true to the concept of trusteeship which has forbidden them to employ the large funds under their control for advancing the ideas or interests of any particular class or school of thought. It is significant that the most violent and unrestrained charges of “propaganda” have come from the mouth of a witness who seriously maintained that the Federal income tax reflected a Socialist plot to destroy the Government. This is the man who charges that the foundations, through their influence on education, “are directly

32 Transcript, p. 27, ibid., p. 17.
involved” in a movement which is “the greatest betrayal which has ever occurred in American history.”

It should be a sufficient answer to these irresponsible allegations for the Rockefeller Foundation and the General Education Board to point to the roster of leading citizens drawn from many walks of life who for periods of 41 and 51 years, respectively, have guided the activities of these two organizations as members of their boards of trustees and as officers. They have included bankers and corporation executives, officers of leading universities, eminent figures in medicine and the law, Nobel Prize winners, outstanding newspaper publishers, occupants of high governmental office. They have come from no one section of the country, and have been chosen with complete disregard for partisan political affiliation. It is beyond belief that these men have been guilty, as charged before this committee, of either perpetrating or conniving at “the greatest betrayal” in American history, or of not knowing what they were voting funds for. Such charges are, we submit, false on their face, irresponsible in origin, and an imposition on the time and attention of this committee.

What are the controlling rules and principles with respect to propaganda activities and their effect on the tax exemption of foundations? They have been plainly stated for the benefit of this committee by the Assistant Commissioner of Internal Revenue, Mr. Norman Sugarman. He has referred to section 101 (6) of the Internal Revenue Code, which grants exemption to any foundation—

* * * organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes * * * no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation.” [Italics supplied.]

The italicized words were added by an amendment adopted in 1934. As Mr. Sugarman said:

The committee reports and the language of the 1934 act establish that the words “carrying on propaganda” do not stand alone, but must be read together with the words “to influence legislation.” Thus the law expressly proscribes only that propaganda which is to influence legislation.”

* * * * * * * * *

Congress saw fit only to circumscribe the exemption with a restriction against substantial activities to influence legislation.

As Mr. Sugarman also pointed out, the income-tax regulations defining what is an educational organization entitled to exemption throw additional light on the meaning of the word “propaganda” as it is used in the tax law. This paragraph (regulations 118, sec. 39, 101 (6)-1 (c)), after stating that an educational organization is one designed primarily for the improvement or development of the individual, adds that, under exceptional circumstances, it may include “an association whose sole purpose is the instruction of the public,” and continues as follows:

An organization formed, or availed of, to disseminate controversial or partisan propaganda is not an educational organization within the meaning of the code. However, the publication of books or the giving of lectures advocating a cause of a controversial nature shall not of itself be sufficient to deny an organization the exemption, if carrying on propaganda, or otherwise attempting, to influence
legislation forms no substantial part of its activities, its principal purpose and substantially all of its activities being clearly of a nonpartisan, noncontroversial, and educational nature.

We think the committee will be interested in comparing those provisions of the law and the regulations with the definition of propaganda which the committee's director of research, after 6 months' study, offered as a guide to assist in determining the question whether foundations had forfeited their exemption by their conduct in this field. That definition is as follows:

Propaganda—action having as its purpose the spread of a particular doctrine or a specifically identifiable system of principles * * * in use this word has come to infer half-truths, incomplete truths, as well as techniques of a covert nature. "

In spite of his reference to half-truths, incomplete truths, and techniques of a covert nature, not a word in the report would suggest that, as Mr. Sugarman later so clearly demonstrated, "propaganda" was not forbidden to a tax-exempt organization unless it is used "to influence legislation."

In order to be sure that it is conforming to public policy in this respect, the Rockefeller Foundation follows the practice of making no grants to any American organizations which have not themselves established their right to tax exemption by a ruling of the Commissioner of Internal Revenue.

G. ALLEGED "INTERNATIONALIST" BIAS

In his report to the committee, its director of research stated that his studies of foundation activities "seemed to give evidence of a response to our involvement in international affairs." While we were at first inclined to believe that this was intended as a compliment, a closer examination of the context made it plain that it was offered as a derogatory allegation. This was confirmed by our study of part II of a later report by the committee's legal analyst, received by us on July 19, 1954, which purported to deal with the "internationalist" activities of the Rockefeller Foundation. Before examining some of the curious charges made in these staff reports, it might be well to look at some facts.

The foundation is a philanthropy whose activities are not limited by national frontiers and whose charter purpose is the promotion of "the well-being of mankind throughout the world." It has been active in varying degree in more than 90 foreign countries or territories. It now has offices or laboratories in London, Paris, Tokyo, Cairo, New Delhi, Poona, Mexico City, Bogotá, Medellín, Rio de Janeiro, Belém, Port of Spain, Ciudad Trujillo, Lima, Santiago, Johannesburg. Its officers travel into almost every area on this side of the Iron Curtain.

The international character of the foundation's work has been one of its major characteristics. Whether in medicine and public health, natural sciences, agriculture, social studies or the humanities, the foundation has sought the most fertile ideas, the most urgent needs, the most capable men, and the most promising institutions wherever they could be found. There is nothing mysterious or sinister about the reasons for this.

39 Transcript, p. 37, ibid., p. 17.
30 Transcript, p. 48, ibid., p. 20.
First, Mr. Rockefeller's philanthropic interest was worldwide in scope, and was rooted in the sympathetic concern which Americans have shown for the needs of people in other lands throughout our history.

Second, an attack up certain types of problems, such as yellow fever, malaria, wheat stem rust, compels a pursuit of the problem across national boundaries.

Third, the general body of knowledge, scientific or otherwise, is an international heritage and grows through the labor of scientists and scholars in many centers of learning, in many laboratories, in many countries. The most cursory glance at the list of Nobel prize winners and the most elementary understanding of the history of our culture make it clear that this is so.

Fourth, any philanthropy which is committed to an interest in the well-being of mankind throughout the world cannot reasonably ignore the vast problems which are comprised in the term "international relations." If this was true in earlier decades, it is underscored with fateful emphasis by the statement of the American Secretary of State at the 1953 meeting of the General Assembly of the United Nations that "Physical scientists have now found means which, if they are developed can wipe life off the surface of this planet." 41

We accept as an established fact that the United States is involved in international affairs and that this involvement produces an impact upon every home and every citizen. It is as much a part of the environment in which we live as is the air we breathe.

This recognition does not mean that the Rockefeller Foundation has any formula of its own as to just how the problems of international relations should be resolved. We have no corporate position on such questions as World Government, Atlantic Union, the role of the United Nations, international trade policies, regulation of armaments, security alliances, and so forth. We believe that problems of relations among peoples and governments are proper subjects of examination and study, that knowledge about them is to be preferred to ignorance, and that reliable information will put men into position to make wiser decisions.

In the field of international relations, the foundation has pioneered in what has come to be called technical assistance, primarily in such fields as medicine, public health, and agriculture. In addition, it has provided support for studies or for creative work in such fields as international economics, international law, comparative government, history, creative arts, and the so-called area studies. that is, studies which cut across cultural boundaries and establish a bridge of information and understanding despite differences in language, race, creed, and cultural tradition.

We have attempted to be helpful and cooperative in our attitude toward existing machinery of international cooperation, whether the League of Nations, the United Nations, the World Health Organization, the Food and Agriculture Organization, etc. Where an international body is undertaking work in which the foundation has an interest, an occasional grant has been made by the foundation to support such work. On other occasions officers and staff of the founda-

---

tion have been loaned to international organizations for particular jobs, as in the field of medicine and public health. In working with international organizations, the foundation does not enter into the political discussions and decisions which might be made by those bodies. Our collaboration rests upon a joint interest in activities appropriate to philanthropy.

A complaint has been made that we have directed education "toward an international frame of reference." What we have done has been to provide financial support to colleges, universities, and other educational bodies to enable them to do what they themselves have wanted to do, namely, to study the world outside as well as inside the United States and to find a reasonable place in school and college curricula for learning about other peoples and their cultures as well as our own. We find it puzzling to be called upon to defend what seems to us to be so obvious, that American scholarship should encompass other cultures and that educated Americans should know something about the world in which they live. This is particularly true today when American citizens are called upon to have reliable information and balanced judgments about complex international issues which affect the very life of the Nation.

Turning to part II of the report of the committee's Legal Analyst, it is not easy to discover exactly what our sins are supposed to be. Indeed, its preface states: "There is no distinction here as between so-called good or bad activities of the foundations * * * ."

The report contains a number of statements which are clearly in error. For example: "As a matter of fact, the [Carnegie] Endowment and the foundation concentrated their grants among the same agencies in practically every case." This is simply not true, quite apart from whether it would have been reprehensible.

Again, the report refers to "* * * activities of the foundation in connection with 'one-world' theories of government and planning on a global scale * * * ."

If the expression "one-world theories of government" means anything, it means world government. No shred of evidence is presented in the report to show that the Rockefeller Foundation or any of the organizations to which it has made grants has advocated world government. In an appendix referred to as Exhibit-Rockefeller, the report gives a number of quotations from our annual reports and president's reviews. One of these, taken from the 1946 president's review, reads: "The challenge of the future is to make this world one world—a world truly free to engage in common and constructive intellectual efforts that will serve the welfare of mankind everywhere."

That this sole reference to "one world" (an expression first popularized by a former Republican candidate for the Presidency) had nothing whatever to do with world government is apparent.

The legal analyst's report, part II, contains the following paragraphs:

There is nothing ambiguous about the warning on page 9 of the 1941 annual report of the foundation:

"If we are to have a durable peace after the war, if out of the wreckage of the present a new kind of cooperative life is to be built on a global scale, the part that science and advancing knowledge will play must not be overlooked."
This statement appears in the report for the 12-month period ending December 31, 1941—not quite four weeks after Pearl Harbor—yet there can be no doubt that as far as the foundation was concerned only "a cooperative life... on a global scale" could insure "a durable peace." 45

We gladly reaffirm the quoted portion of the 1941 annual report but it is interesting to see the full context. We quote three full paragraphs:

"If we are to have a durable peace after the war, if out of the wreckage of the present a new kind of cooperative life is to be built on a global scale, the part that science and advancing knowledge will play must be overlooked. For although wars and economic rivalries may for longer or shorter periods isolate nations and split them up into separate units, the process is never complete because the intellectual life of the word, as far as science and learning are concerned, is definitely internationalized, and whether we wish it or not an indelible pattern of unity has been woven into the society of mankind.

There is not an area of activity in which this cannot be illustrated. An American soldier wounded on a battlefield in the Far East owes his life to the Japanese scientist, Kitasato, who isolated the bacillus of tetanus. A Russian soldier saved by a blood transfusion is indebted to Landsteiner, an Austrian. A German soldier is shielded from typhoid fever with the help of a Russian, Metchnikoff. A Dutch marine in the East Indies is protected from malaria because of the experiments of an Italian, Grassi; while a British aviator in North Africa escapes death from surgical infection because a Frenchman, Pasteur, and a German, Koch, elaborated a new technique.

In peace as in war we are all of us the beneficiaries of contributions to knowledge made by every nation in the world. Our children are guarded from diphtheria by what a Japanese and a German did; they are protected from smallpox by an Englishman's work; they are saved from rabies because of a Frenchman; they are cured of pellagra through the researches of an Austrian. From birth to death they are surrounded by an invisible host—the spirits of men who never thought in terms of flags or boundary lines and who never served a lesser loyalty than the welfare of mankind. The best that every individual or group has produced anywhere in the world has always been available to serve the race of men, regardless of nation or color. 46

Apparently the focus of interest of the legal analyst's report, pt. II, is to be found in the following quotation from its first page:

At the same time that Carnegie and Rockefeller agencies were concentrating on the chaotic condition of education in the United States (discussed in pt. I), organizations bearing the same family names were focusing attention on other types of conditions which in the opinion of the trustees required improvement. While these so-called problems covered such varied fields as public health, malaria in Africa, and exchange of professors and students of international law, there was an indirect relationship between them, and also between them and education: namely, all of them were on the periphery—if not directly in the center—of international relations and governmental activities.

That both the foundation and the endowment did carry on activities which would directly or indirectly affect legislation is borne out by their own statements, as found in their annual reports.

That they both engaged in propaganda—as that word is defined in the dictionary (on page 49 of the report this becomes "in the sense defined by Mr. Dodd in his preliminary report"), without regard to whether it is for good or bad ends—is also confirmed by the same source.

That both had as a project "forming public opinion" and "supplying information" to the United States Government to achieve certain objectives, including an internationalist point of view, there can be no doubt.

None of these results is inherent in the purposes of either of these organizations.

Our comments on the above quotation follow:

(1) The Rockefeller Foundation has carried on public health activities, fighting malaria and yellow fever, for example, in many for-
eign countries, and has invariably had cordial relations with the governments of those countries. The suggestion that there was an "indirect relationship," apparently regarded as sinister, between these activities and other "on the periphery" of "international relations' and 'governmental activities" is so vague and unintelligible that we can make no reply without further specifications.

(2) It is true that studies supported wholly or in part by our grants may have indirectly affected legislation. The intelligent and alert legislator is constantly in search of help from the work of scholars, and like the experienced foundation officer, is quick to distinguish between true, objective scholarship and propaganda masquerading as such. Does the legal analyst mean to suggest that foundations should withhold support from sound, independent scholars for fear that their studies will not remain sterile, but will impress legislators sufficiently to influence their official action?

Neither of our foundations have ever been directly involved in an attempt to influence legislation affecting the subject matter of its grants or has ever made a grant to an organization for the purpose of assisting in influencing legislation.

(3) As to the allegation that the foundation has engaged in propaganda, our first observation is that even if the definitions of this word referred to by the legal analyst are accepted as relevant, the charge cannot be sustained. We have never offered remedies of our own as a cure for public problems. We cannot suppose that the term is intended to apply to foundation publications emphasizing the importance of fighting disease, the desirability of constantly advancing the frontiers of knowledge, or the urgent need for peace in a troubled world.

But the fact is that the definitions of propaganda referred to are not relevant to this inquiry because they ignore the statutory qualifications of this word as it is used in the section of the Internal Revenue Code dealing with tax-exempt institutions. As Mr. Norman Sugarman, Assistant Commissioner of Internal Revenue, brought out in his testimony, the Internal Revenue Code denies exemption on account of propaganda activities only where the alleged propaganda is designed to influence legislation. The only institutions in the United States receiving grants from our foundations are institutions whose right to tax exemption has been affirmed by executive ruling. As against the legal analyst's viewpoint, we adopt and follow the determinations of those who are charged with the duty of applying and enforcing the definition as it appears in the Internal Revenue Code.

A possible key to a better understanding of the report is to be found on page 59:

There has been a singular lack of objectivity and a decided bias toward a socialized welfare state in the proposals of these organizations, and every effort has been made by them to advance the philosophy of "one world" to the complete disregard of comparable effort on behalf of a more "nationalistic" viewpoint.

We have commented earlier (p. 15) on increases in Federal powers and expenditures, probably referred to in the above quotation as "a socialized welfare state." What is the more "nationalistic" viewpoint to which reference is made? Just as we do not use our funds to support doctrinaire world government, neither do we use them to support

47 See our discussion on p. 1100 ante.
doctrinaire isolation. It is precisely at points where such extreme views converge in controversy that research and scholarship can contribute to our public life.

The committee's staff reports repeatedly confuse the study and discussion of public issues with the systematic propagation of particular points of view. There is much evidence that we have given financial support to the processes of study and discussion because, indeed, we have. There is no evidence that we have, as foundations, systematically urged solutions of our own, for we have not.

The legal analyst's report concludes with 32 pages of quotations from the publications of the Rockefeller Foundation during the years 1932-51. We regret that there is not space to reprint them here for we would stand on them now. We see no conflict between respect for our own national life and culture and a desire to increase "the infinity of threads that bind peace together" through channels of international cooperation. It is on this basis that we have made large numbers of grants both for the strengthening of our own national life and for more accurate and deeper understandings across national frontiers.

H. ALLEGATIONS OF FAVORITISM

We turn next to the charge that "only a few [colleges] had participated in the grants which had been made" by foundations and that foundations have been guilty of "favoritism in making * * * grants." Such charges have no basis in fact when applied to the Rockefeller Foundation and the General Education Board, but we would not wish the wide scope of our grants to becloud an underlying issue. Our position is that the concentration or dispersion of grants is a matter which lies within the discretion of our trustees. They have no obligation to effect a wide distribution of their funds; the test is whether they have reasonable ground to believe that their appropriations promote our charter purposes. In stating the facts as to the wide range of institutions which have received our grants, we wish to avoid even the appearance of criticism of any foundation which might have concentrated upon a single or a few institutions.

A study of grants made by the foundation since its establishment in 1913 and of grants made by the General Education Board since it was chartered in 1903 reveals the following facts as of December 31, 1953. The number of institutions and organizations in this country that have received grants from one or both of these boards totals 1,061. These institutions are distributed in 45 States and the District of Columbia. If assistance given through the foundation's operating program in public health is included, the distribution of funds covers all 48 States.

The Rockefeller Foundation has made grants to 611 institutions and organizations in the United States, involving a total of over $216 million. This figure does not include grants for our operating programs in public health and agriculture, or for fellowships and travel grants. The 611 recipient institutions were located in 41 States and in the District of Columbia. They were both public and private and included great universities, small independent colleges, agricultural colleges and institutes of technology, medical schools and teaching hospitals, special laboratories, art institutes, symphony societies, mu-

48 Hearings, pp. 18, 19, 20.
seums, special research bureaus, and various organizations of scholars and scientists.

The General Education Board's record also shows a wide distribution and a great variety in the types of institutions to which grants were made. Grants have been made in 44 States to 598 organizations. They were made to public and private universities, small liberal arts colleges, State departments of education and agriculture, State teachers colleges and normal schools, agricultural and technical institutes, libraries, community schools, medical colleges, museums, and various scholarly and professional organizations.

It should be stressed, however, that it has not been the objective of the Rockefeller boards to distribute their funds with a view to securing extensive institutional representation or geographic coverage. Rather they have sought to place their funds wherever they would be most effective in carrying out the purposes of their charters.

Thus, in an effort to improve knowledge and practice in the field of public health, the foundation made large grants to Harvard University and John Hopkins University, institutions which were prepared to establish strong schools of public health, whose faculties could furnish leadership not only within their own institution and locality but for the field of public health as a whole.

Likewise in seeking to advance knowledge of the biological sciences, grants were made to institutions that had built up strong departments in this field and had attracted to their faculties scientists who were engaged in significant research. Advanced research in this field is carried on most effectively where there is ready association with scientists working in related fields, such as physics and chemistry, where contact is possible with doctors trained in medicine, surgery, dermatology, etc., where laboratory facilities are generous and graduate assistants are available. Hence, large grants for the expenses of research in biology have been made to such institutions as the Massachusetts Institute of Technology, Stanford University, Johns Hopkins University, and California Institute of Technology, not because these institutions were located in particular sections of the country, or because they were favored institutions, but because they offered exceptionally good opportunities to advance knowledge in a certain field.

While it is true that the total funds given to such great universities as Columbia, Harvard, Chicago, and California were considerably larger than those given to many other institutions, the reasons for this lay not in any favoritism toward the institutions but in the fact that they gave clear evidence of interest and significant achievement in important fields of learning and had demonstrated their ability to provide an especially favorable setting for the advancement of research and training in these fields.

Support for our great universities results in direct benefits to institutions in all parts of the world through the advanced training which they are able to offer. For example, the Rockefeller Foundation has given large grants in support of chemistry and biology at the California Institute of Technology. In the last 5 years alone, 314 post-doctoral faculty members of some 200 colleges and universities in the United States and abroad have taken advanced training in these 2 departments alone. Ninety-nine doctor of philosophy degrees have
been given to representatives of an almost equal number of institutions.

The Rockefeller Foundation has given $4,687,083.90 to the Harvard University School of Public Health. In the years 1950, 1951, and 1952, 119 graduates were distributed across the length and breadth of the country, with 21 going to the Army, Navy, and Air Force; 22 to the United States Public Health Service; 42 to local and State health services; 19 to teach in other centers; and the remaining 15 to other posts.

It is also relevant, in view of the charge that foundations tend to favor the large institutions, to point out that some of them became large and strong because of substantial foundation assistance. Chicago, Emory, Vanderbilt, Tulane, California Institute of Technology are among those whose growth has been actively encouraged by funds from the Rockefeller boards; Duke is an example where large support has come from another foundation.

In all these grants, no individual project or institution has been considered an end in itself. Rather an effort has been made to choose for assistance only those projects or persons that gave promise of becoming, in the words of one of our early trustees, "the seed corn for the future." The idea is to help establish standards that will lead to continuous improvement in the quality of research and scholarship.

This has been true in the program of the General Education Board as well as in that of the foundation, although geographical considerations played a greater role in the work of the board, which recognized a special regional interest in the South. From the beginning, the board stressed the importance of establishing standards of excellence and strove, not to help all institutions, or even those whose need was greatest, but rather to strengthen a number of soundly established colleges and universities in strategic locations so that they would set standards and stimulate similar development in other institutions of the region, and thereby contribute enduring benefits to all education in this country. Grants involving more than $190 million (in amounts of $1 million or more) for endowment, buildings and equipment, and for the increase of teachers' salaries, were made to 37 colleges and universities scattered throughout the country. Because of the special needs of the southern region 21 of these institutions were in the South. If some of them received substantially more than others, the answer may be found both in their needs and in the opportunities they offered for contributing to the strength of American education. A further explanation lies in the high cost of certain kinds of education—such as medical education. For example, board grants for the building, equipment, and endowment of the School of Medicine and a Teaching Hospital at Vanderbilt University, Nashville, Tenn., totaled $15 million. Similarly, grants for Meharry Medical College in Nashville, for the training of Negro doctors, totaled $4,800,000.

We are very much aware that the legitimate needs of the Nation's schools and colleges are vastly greater than the total resources of our two organizations. We have not taken the view, however, that since we could not do the entire job we should do none of it. Consequently, choices had to be made.

The General Education Board has spent over 80 percent of its resources in direct support of institutions of higher education. That endowment, capital plant, and other forms of basic support were con-
sidered vitally important (and proved to be costly) is testified by the fact that the board now terminates its 51 years of activity, having spent its capital and income, as well as substantial grants from the Rockefeller Foundation, for the purposes for which it was created. There has been no regret that the continued activity of the board itself seemed less important than the encouragement which its funds could give to our colleges and universities. There was regret that more funds were not available to continue a job which was in no sense completed. We hope that others will see in the experience of the General Education Board the deep and enduring satisfaction which comes from investment in vital institutions of learning.

In the case of the Rockefeller Foundation it continues to commit a large share of its resources to institutions of higher education (over 50 percent in 1953). Some indication of the relation between our assets and the existing need is given by the fact that our colleges and universities, in the United States alone, could wisely use in a single year additional funds equal to the present assets of the foundation.

I. RELATION WITH THE UNITED STATES GOVERNMENT

Some mention has been made in these hearings of an alleged “purposeful relationship” or “operational relationship between foundations, education, and government.”

That there are many relationships between education, particularly public education, and government is a matter of common knowledge. The annual expenditure of approximately $7 billion of public funds for education, the many services which educational institutions provide for Government by contract or otherwise, and the importance to the Nation of a well-educated population, are major elements in this common interest.

The very limited relations which the Rockefeller Foundation and General Education Board have had with government are apparently not so well understood. We have been concerned to preserve our nonpolitical and nongovernmental status. While acting within the broad framework of public policy, we do not consider that we are agents or instruments of government. We have no clandestine arrangements with government; we are independent philanthropies committed to publicly known purposes and activities.

Our operational contacts with government arise in the following ways:

(a) We are encouraged by public official statements to continue our activities abroad as an expression of technical assistance in the private nonpolitical field.

(b) Our officers traveling abroad sometimes pay calls upon American Embassies, Legations, and consulates and exchange general information about the situation in a particular country, as do American businessmen or other citizens traveling abroad.

(c) On occasion, an officer or officers of the foundation may be asked to serve in an individual capacity on some governmental advisory body. The foundation accepts the public duty to free a portion of the time of its personnel for such service, even though the service itself is not rendered as a representation of the foundation.

49 Ibid., p. 20.
(d) The foundation, with a long experience in what has come to be called technical assistance, is sometimes consulted by public officials in regard to methods of rendering such assistance, but this has happened infrequently.

(e) Our two boards have made grants for projects sponsored by agencies of government, such as the Library of Congress, the United States Office of Education, the Department of Agriculture, the United States Public Health Service, State departments of education, State boards of health, local government agencies and, of course, to State-supported colleges and universities.

J. SCHOOL AND COLLEGE CURRICULA

It has also been charged that foundations have been responsible for "changing both school and college curricula to the point where they sometimes denied the principles underlying the American way of life" 49 and for promoting "a national system of education." 50

Our two foundations have had neither the power nor the intent to bring about such changes. Responsibility for American public education rests with 48 State boards or State departments of education and with some 99,000 local school boards whose members are chosen in accordance with the laws of their communities. It has been noted that among the outstanding characteristics of the American system of education are its diversity, the absence of centralized control, and acceptance of both public and private agencies in the accomplishment of its purposes.

The vast majority of young people in the United States are educated in publicly supported and publicly controlled institutions. In 1950 attendance at the public elementary and secondary schools and at public institutions of higher education was 26,564,436; at private institutions it was 4,723,132.51 Standards and regulations for the accreditation of public school teachers are determined by State laws and State boards of education, and teachers' salaries are determined and paid by local school boards or under authorities approved by State legislatures.

The past few decades have witnessed numerous new developments in American education. One of the greatest factors in this change has been the phenomenal growth of our school population. From 1900 to 1950 the enrollment in our public secondary schools rose from 519,257 to 5,706,734.52 This meant not only a tremendous increase in the number of teachers required and more facilities for training them, but it almost completely changed the job of the secondary school. Instead of dealing with a student body of fairly similar background and purposes, it had to provide for the educational needs of young people who varied greatly not only in their economic and social backgrounds, but in their abilities, their interests, and their plans for the future. In many communities not more than 5 percent would go on to college, and the traditional college preparatory curriculum had little meaning for them.

49 Ibid., p. 20.
50 Ibid., p. 48.
This big change had its impact also on the colleges when the problem arose of articulating the secondary school’s curriculum with the college curriculum, when college enrollments also began to show large increases, and when changing teacher certification requirements and the need for more teachers laid new burdens on teacher-training facilities.

All these changes led to much discussion among educators about ways in which the secondary schools and colleges could be improved. A number of State departments of education began studies of the problem, as did a great many educational organizations, such as the National Education Association, the American Association of School Administrators, the American Council on Education, the Progressive Education Association, the American Historical Association, the Mathematical Association of America, and the Society for Curriculum Study. The United States Office of Education made a national survey, arranged for conferences, and issued a publication on Needed Research in Education, and the various university schools of education encouraged their faculties to undertake studies of the problems of general and teacher education.

Some of the witnesses before the committee seem to regard these activities as the fruit of a malevolent impulse to subvert our institutions. No doubt some of the studies referred to were unproductive, or went off on the wrong track. Teachers and college professors are as liable to error as the members of any other profession. But the wholesale accusations against our leading teachers’ organizations, which have occupied so much of the committee’s time, are believed to rest upon a perversion of the facts and to be an unwarranted attack upon the loyalty, patriotism, and intelligence of a devoted group of public servants.

During the period of rapid change in our school population, new teaching devices had become available to the schools in the form of radio and films, research had produced a number of new methods of testing and measuring, studies of human behavior were throwing new light on the learning process, and advances in science made it necessary to change the content of many courses of study.

Meanwhile, the country was not only undergoing a vast industrial development but experiencing a great economic depression and two world wars. These were the things that were responsible for changing American education—and not the activities or funds of any foundation.

With so many cataclysmic changes occurring in so brief a time, it is difficult to assign relative importance to the various forces just mentioned. Few can doubt, however, that the great depression of the thirties was a prime factor in a reappraisal of educational thought. In a period of insecurity, it was but natural that questions should arise as to the effectiveness of our educational system. It was but natural, too, that the millions of restless, unemployed young people would have questions as to the value of their school experience and that educators should reexamine not only the purpose but the techniques of education. Consequently, the years that followed witnessed a considerable number of studies and experiments relating to new educational programs and methods. As a result much was written and many controversies developed, although actually few far-reaching
changes occurred in curricula and methods in the high schools and colleges. Ray Lyman Wilbur, a former president of Stanford University, once said that “Changing a curriculum is like trying to move a cemetery.” The few school systems and colleges where considerable changes were introduced attracted much comment and perhaps tended to distract attention from the more persistent and extensive problems of teacher shortages, crowded classrooms, and outmoded school facilities that were products of the depression and of the war years.

It is in this setting that we must consider the role of the Rockefeller Foundation and the General Education Board in educational change. Except in the fields of public health, medicine, and agriculture, the Rockefeller Foundation has not engaged in or supported educational activities in the narrowly professional sense of that term; its work has been concerned chiefly with the support of advanced research and the training of personnel for leadership in the fields of science and scholarship. This work has inevitably served not only to increase the body of knowledge available for educational purposes, but by its emphasis on excellence, it has raised standards of research and teaching in the United States and throughout the educational world.

In the field of public health, the work of the foundation has been trail-blazing, both in this country and abroad. The education of doctors and scientists for public health work has been forwarded by liberal support of many postgraduate schools of hygiene of university grade; public health nurses have been trained in institutions from Johns Hopkins and Toronto to Bangkok and Peking; national and local health departments in 68 countries have been strengthened with equipment and essential services.

In medical education in the United States, the joint efforts of the Rockefeller Foundation and the General Education Board, with contributions of over $100 million, matched many times by the generosity of others, were to a great extent responsible for raising the teaching of medicine in the United States from the very immature position it occupied in 1910 to a status of excellence that today is shared with only a few countries in the world.

A few exceptional grants by the foundation have been directly concerned with educational activities. One of these was the support given to the Commission on the Financing of Higher Education of the Association of American Universities. This commission was set up by the association to study and make recommendations about ways of meeting the growing financial problems of our institutions of higher education. The Institute of International Education in New York City has received a number of grants from the foundation toward its general support. These grants were made in the belief that it is rendering important services as a clearinghouse of information on student-exchange programs and in helping Government agencies and many colleges and universities to handle the complicated problems involved in the administration of these programs.

Obviously none of the efforts just described has been instrumental in changing both school and college curricula in the direction of uniform patterns, or in promoting a national system of education.
In considering these charges as they relate to the General Education Board, it should be noted that the board has never sought to impose a particular doctrine of education or to promote particular forms of curriculum organization or courses. To be sure, the $99 million which the board spent to support pioneering efforts in medical education resulted in widespread changes in that field. The funds, however, were granted to strengthen established institutions and to permit them to offer more through training to medical students.

The great bulk of the board’s funds—more than $250 million—were used for endowment, buildings and facilities, increased funds for teachers’ salaries, and help in meeting current expenses for established institutions whose activities and traditions had long been part of the American scene. Some were church-affiliated colleges, others were well-known independent institutions, and some were State supported. All were striving to set standards of educational excellence; all had had difficulty in providing the evermore costly type of higher education demanded and needed by the American people. In this strengthening and support of traditional American education, the role of the General Education Board was simply that of a donor of funds to institutions that had demonstrated their ability to meet the recognized educational needs of their communities and to exert leadership in the maintenance of standards of excellence.

A small part (8 percent of the board’s grants has been used, either directly or through endowment and support of schools of education, for study and experimentation with educational methods and procedures. No program of education can remain static and be healthy. There must be constant experimentation with improved methods and study of ways to utilize new knowledge if American education is to be adequate to its task.

The board’s interest in experimentation dates back to 1917 when the Lincoln School of Teachers College, Columbia University, was established for the purpose of experimenting with educational procedures and materials. The grant was made in response to a growing recognition among educators that the curricula of both the elementary and secondary schools were no longer meeting the educational needs of great numbers of their pupils.

This was the beginning of the board’s activity in the science of education. A few miscellaneous grants were made in the years that followed, e.g., the grant to the University of Buffalo for a study of the articulation of the college with secondary schools, grants to Antioch and the University of Chicago for curriculum experimentation, and the grant to the American Council on Education for the cooperative test service which was to prepare objective tests for use at the secondary school and junior college levels. In 1933, however, following an extensive survey of recent educational developments participated in by 55 experts in various fields of education, the board began a phase of its program concerned especially with the improvement of education at the secondary school and junior college levels. During the next 6½ years, while the major part of its funds continued to be spent on strengthening educational institutions, on support of studies in agri-

65 “Education which is not modern shares the fate of all organic things which are kept too long.”-Alfred North Whitehead, The Aims of Education and Other Essays (New York : The Macmillan Co., 1929), p. 117.

66 For a fuller discussion of this grant, see the General Education Board’s supplemental statement, p. 3. Ibid., p. 1141.
cultural economics, nutrition, and forestry in the South, and on basic studies of child growth and development, grants were also made for studies and experiments concerned with the improvement of general education or, as later described, with "the care and education of young people of high school and junior college age." 57

This program on which some $8,500,000 was spent, stimulated a widespread interest in educational improvement. Through support of research, it helped to build up a much-needed body of organized psychological, physiological, and social knowledge about youth; and it did much to encourage a continuing consideration of problems involved in the care and education of youth in modern society.

It did not, however, attempt to promote any specific form of reorganized education or to introduce any particular ideas or materials into the curriculum. Rather it provided opportunity for study and deliberation by 17 national and regional organizations, 6 statewide organizations, and 10 local educational groups; it supported research at 5 university schools of education, and enabled 21 colleges and universities to engage in research and experimentation of a great many different kinds. This opportunity was still further enlarged by the support of cooperative studies involving many schools and colleges, each one of which was enabled to study its own particular problems in a manner decided by its own staff and administration. Thus there was the cooperative study of general education which involved 22 colleges interested in improving their general education program. There was the 8-year study of the 30 schools, in which a group of high schools ranging from the frankly conservative to the advanced progressive worked together to find out ways of evaluating the results of their programs. There was also the cooperative study of teacher education in which some 25 universities and colleges engaged in teacher education, 25 school systems, and 10 States with programs of inservice teacher education, pooled their experience and tried out various ways of making teacher education more effective.

Efforts to develop new instructional materials were aided and again these efforts included many different approaches to the problem. Because it was quite generally admitted that new materials were needed, particularly in the social studies and in the natural sciences, grants were made, for instance, to Stanford University for an inquiry into ways of improving teaching and developing new materials in the social studies; to the Society for Curriculum Study to enable it to prepare a series of teaching units on areas in American life, called Building America; 58 to the National Education Association and the National Council on Social Studies for a series of teaching materials to be prepared by a group of scholars and experienced teachers; and to Teachers College of Columbia University for new teaching materials in the natural sciences. At the University of Chicago aid was given to the establishment of a center where research materials on child growth and development were assembled and made available to teachers of educational psychology.

Obviously this diversified program in which so many institutions and so many people with different points of view and different experiences participated was no effort on the part of the board to slant

57 General Education Board, annual report, 1940, p. 8.
58 For a fuller discussion of this grant, see the General Education Board's supplemental statement, p. 8. Ibid., p. 1142.
school and college curricula in a particular direction. Furthermore any careful examination of these school and college curricula will reveal not only that they continue to show the wide diversity that is one of the strengths of our educational system, but also that they are more concerned with education for good citizenship than ever before in our history and that through them all runs a common core of loyalty to our American way of life.

Here it may be of interest to note that the number of States which required by law the teaching of the United States Constitution increased from 5 in 1917 to 40 in 1940, and the number of States making the teaching of United States history mandatory in the high schools increased from 15 to 26 in the same period. Our foundations do not claim credit for this development any more than we accept responsibility for alleged inattention to such matters.

As for the charge of promoting "a national system of education"—if what is meant here is Federal aid for education, the answer is that the General Education Board has itself taken no position on this matter. There are many arguments both for and against Federal aid to education and they have been discussed since the first bill for Federal aid to agricultural colleges was introduced by Justin P. Morrill in 1857. The establishment of the land-grant colleges in 1862 and the passage of the Smith-Hughes Act for Federal aid to vocational education in 1917 show that the issue is not a new one. Studies supported by our foundations on the financing of education reflect a wide variety of views. The fact remains, however, that this country does not have a national system of education and that control of American education, as stated before, lies in the hands of 48 State boards of education, thousands of college and university boards of trustees, and 99,000 local community school boards. No prerogative of the States has been more jealously guarded against Federal encroachment than their educational autonomy. The record speaks for itself.

K. COMMUNITY SUPPORT OF EDUCATION

It has been alleged that the foundations have decreased the "dependency of education upon the resources of the local community." What are the facts? In 1920 public expenditures for education in the United States amounted to $1,151,748,000. By 1950 this had increased to $7,011,768,000. In other words, the public, far from relinquishing its responsibility for its schools, had increased its support of them from taxes by more than sixfold. In 1920 the total expenditures of the Rockefeller Foundation and the General Education Board were $8,959,942 or just less than eight-tenths of 1 percent of what the public was then spending for education. In 1950 the expenditures of both boards totaled $14,414,736, an amount equal to two-tenths of 1 percent of the funds being spent for public education.

In fact the total expenditures of some 100 philanthropic foundations for education and a wide variety of other things have been estimated at

---

60 Ibid., p. 20.
$133 million for 1950—an a small sum when compared with the huge public expenditures for education.

Obviously the contributions of the Rockefeller boards or, for that matter, of all philanthropic foundations, were not relieving the public of its responsibility to support education. Thus, education continues to be paid for at an expanding rate by the local community and is controlled by States and local school boards. Far from decreasing dependency on the local community, the gifts of the Rockefeller boards have served to encourage from public and private sources increased support of needed educational services. From the beginning it has been a policy of these boards to make grants only where there has existed a strong institutional commitment to the work supported and where there has been evidence of a sound base of community support for the institution.

Among the devices used for encouraging the assumption of increasing responsibility on the part of the community has been the making of appropriations payable against matching funds raised from other sources. The success of this device is shown by the fact that a sample of 10 such conditional grants made by the Rockefeller Foundation, totaling $6,025,000, shows that they encouraged $9,300,248 in contributions from other sources for the same purposes. Similarly, 10 typical conditional grants made by the General Education Board, totaling $8,500,000, were in large part responsible for gifts to the recipient institutions of about $13 million.

Another device for discouraging dependency upon foundation gifts is the tapering grant. In writing about this, Raymond B. Fosdick says:

> The proper objective of a foundation, unless created for a particularized purpose, is to prime the pump, never to act as a permanent reservoir. * * * The proportion of a budget which it provides should not be so large as to discourage support from other sources. Its contributions should not dry up the springs of popular giving. On the other hand, when a foundation withdraws from a project, its withdrawal should not be so precipitate as to wreck the enterprise. A tapering down of contributions over a period of years will, under ordinary circumstances, give an organization a chance to build up stable support from its own natural sources.\(^{63}\)

This persisting concern for a project’s ability to secure “stable support from its own natural sources” has been characteristic of the programs of both Rockefeller boards. From the beginning they have been conscious of the importance of avoiding the assumption of obligations that are properly a public responsibility.

At the end of a report (pt. I) furnished to this committee by its legal analyst, she makes the extraordinary contention that the great gifts which foundations have poured into education in this country have involved an “encroachment on State powers” and that in order to accomplish this the States, or at least many of them, have been “invaded as it were through the back door.”\(^{65}\) So far as the General Education Board is concerned, nothing could be further from the truth. Before the committee accepts this conclusion of its legal analyst, why should it not go to the sources, and inquire of the State departments of education with whom the General Education Board has had cordial working relations for 50 years, whether they feel that State prerogatives

---

65 Hearings, p. 700.
TAX-EXEMPT FOUNDATIONS

in the educational field have been invaded or encroached upon? If space and time permitted, we could furnish innumerable pieces of evidence in contradiction of this perversion of the facts, so far as the General Education Board is concerned.

L. TRAINING FOR PUBLIC SERVICE

The research director of the committee has called its attention to foundation grants for “training individuals and servicing agencies to render advice to the executive branch of the Federal Government.”

Our two foundations have provided funds to a large number of institutions which have trained individuals for participation in all aspects of our national life; Federal, State and local governments, schools, colleges and universities, business, law, medicine, agriculture, scientific research, the creative arts, etc.

We make no apologies for the devotion of funds to the training of individuals for service in executive branch—or any branch—of the Federal Government. We can imagine few better uses, or more pro-American uses, of funds dedicated to the public interest.

M. ALLEGED INTERLOCK

Reference has been made in the testimony to an “interlock” among foundations, even to a “diabolical conspiracy.” The allegation seems to be that foundations act in concert to use their combined funds to achieve reprehensible objectives by financial pressure and power.

We have already pointed to the well-known intimate association between the Rockefeller Foundation and the General Education Board, involving the same founder, a number of the same trustees and officers, the same location, and programs which have reflected some division of responsibility between them. This is the only “interlock” of which we have knowledge.

Some of our trustees also serve as trustees of other institutions and organizations, including other foundations. These were reported fully to the Cox committee, which commented as follows in its report to the Congress: “It is also understandable that the services of an outstanding man should be sought by more than one foundation and that we should therefore find a number of individuals serving on the board of more than one foundation.”

The counsel of the Cox committee made the following comment during the hearings of that committee:

Mr. KEELE. The remark that Mr. Sloan made this morning leads me to make a personal observation, which I think good taste would not have permitted had he not made the remark. He said he did not know many of the people in foundation work.

At that luncheon in New York in September, I observed with some amusement that there was more introducing of the members of the various foundations to one another than there was of introducing me to the members of the foundations. It was quite obvious to me that there was a lack of acquaintance among the philanthropoids, if we may say so.

The overlapping of trustees between particular foundations occurs, if at all, in the case of 1 or 2 among boards of 15 to 20 in number. If

---

66 Hearings, p. 20.
67 Ibid., p. 47.
68 Ibid., p. 25.
69 Final report, p. 11.
70 Hearings, p. 500.
there is any instance of any manipulation of 2 foundations through any such relationship, we do not know of 1.

More than one foundation may from time to time make grants to the same recipient institution. A glance at the public records will show, for example, that our leading universities quite frequently receive grants in the same year from a number of foundations for a variety of purposes. Much more rarely, two or more foundations may make grants to the same study, project, or purpose. Sometimes the foundations would be in touch with each other in that situation; at other times their only contact would be with the applicant institution. Applications themselves sometimes refer to the fact that a request is being submitted simultaneously to more than one foundation.

The principal occasion for consultation among foundations, particularly among those interested in the same broad fields, arises from the desire on the part of each one to use its funds to the best advantage. Obviously, if one foundation is ready to proceed with significant grants in a particular field, others will wish to take that into account in their own plans. With governments and international organizations entering the field of technical assistance, an increase in the number of foundations, and developing interest among business corporations in philanthropic programs, any single foundation must give increasing attention to what others are doing if it is to use its own funds wisely. Informal discussions among foundation officers are the typical means for exchanging such information.

It need hardly be said that such exchanges do not result in agreed lists of preferred applicants nor in blacklists. The applicant who finds his request rejected by a number of foundations is not entitled to attribute his lack of success to a combination against him. On the contrary, foundations are jealous of their freedom of action and judgment, and are little concerned about whether or not another foundation would have made the same decision.

One witness stated, "It is my opinion that the Rockefeller, Ford, and Carnegie Foundations are guilty of violation of the antitrust laws and should be prosecuted." Such a charge has no rational substance where, as in our case, there is no monopoly, no combination, no restraint, and no trade.

VI. CONCLUSIONS

The committee's director of research concluded his report with the statement:

It seems incredible that the trustees of typically American fortune-created foundations should have permitted them to be used to finance ideas and practices incompatible with the fundamental concepts of our Constitution. Yet there seems evidence that this may have occurred.

The chairman of the committee, speaking on the floor of the House of Representatives on July 27, 1953, said:

The method by which this is done seems fantastic to reasonable men, for these Communists and Socialists seize control of fortunes left behind by capitalists when they die, and turn these fortunes around to finance the destruction of capitalism.

---

71 Hearings, p. 212.
72 Ibid., p. 31.
73 Congressional Record, July 27, 1953, p. 10188; hearings, p. 25.
A full examination of the facts will remove these fears. The Cox committee reported:

It seems paradoxical that in a previous congressional investigation in 1915 the fear most frequently expressed was that the foundations would prove the instruments of vested wealth, privilege, and reaction, while today the fear most frequently expressed is that they have become the enemy of the capitalistic system. In our opinion neither of these fears is justified.\footnote{Final report, p. 10.}

We believe that no evidence received by this committee warrants a change in that opinion. Free enterprise in philanthropy has been an extraordinary success in the United States. Governmental controls should be introduced with the utmost caution, so as not to dam up the stream of philanthropy. However, understanding the desire of the Congress to protect the public interest, we offer the following suggestions which we believe the committee will find constructive.

\textit{(1) Public accounting}

We are convinced that tax-exempt organizations should make regular public reports about their funds and activities. Any such requirement should not be so burdensome as to cause an unnecessary diversion of philanthropic funds to administrative costs. We would not, for example, propose that smaller foundations be required to undertake the extensive publication program of the Rockefeller Foundation and General Education Board. The character of the essential public disclosure might vary within broad limits.

One of the two recommendations of the Cox committee was the following:

1. Public accounting should be required of all foundations. This can best be accomplished by amendment of the existing laws in substantially the form here-with submitted as appendix A, to which we direct the attention of the 83d Congress.\footnote{Final report, p. 13.}

We understand that legislation giving effect to this recommendation was introduced in the 83d Congress by Representatives Richard M. Simpson (Republican, Pennsylvania) and Brooks Hayes (Democrat, Arkansas), former members of the Cox committee, but that it has not yet been enacted. We would support legislation along such lines.

Otherwise, we see no need for new legislation.\footnote{See colloquy between Congressman Angier L. Goodwin (Republican, Massachusetts), and T. Coleman Andrews, Commissioner of Internal Revenue, hearings, p. 460.} Abuses can be dealt with under existing law; the gradual accumulation of legislation affecting religious, education, and charitable activities will, we fear, inject Government more and more into fields which are more appropriate to private initiative and judgment.

\textit{(2) The role of the Internal Revenue Service}

The Internal Revenue Service carries a heavy burden in its duties in connection with the granting and withholding of the tax exemptions provided by law and in reviewing the reports which are required from tens of thousands of tax-exempt organizations. We understand from testimony that only a limited staff is available to review these reports because Service personnel is ordinarily assigned to work most likely to bring in a financial return to the Government in increased collections of taxes due.

Reputable tax-exempt institutions are interested in having the public protected against abuses of the tax-exemption privilege. The Con-
gress may wish to make it possible for the Internal Revenue Service
to make modest additions to staff for this purpose, even though such
additions would be unlikely to increase tax receipts.

(3) Congressional investigations

The role and procedures of congressional investigations are being
widely discussed by the public, and now by the Congress itself. We
believe that the experience which foundations have had with a second
investigation in 2 years might well be taken into account in such
discussion.

First, in determining that the public interest requires that an in-
vestigation be undertaken, it is suggested that the burden of such an
investigation on private citizens and organizations be fully considered.
The review of a half century of activity which has been required of
our two foundations was costly both in time and energy and in the
diversion of funds intended for philanthropy. We have no way of
estimating the cost to the colleges and universities of the country of
the replies which they were asked to make to inquiries by the com-
mittee's staff, but we have been informed that it was substantial. These
are not arguments against investigations which are deemed, on sober
judgment, to be essential. The regular committees of Congress can
readily ascertain the facts before determining whether a full investi-
gation of an entire field is called for.

Second, if it is determined that an investigation is in the public in-
terest, it is suggested that it is most important that the charges be
fully and clearly stated. The failure to frame issues in specific terms
and from the point of view of established laws and public policy cre-
ates serious difficulties. The foundations have been criticized before
a congressional committee, largely by the committee's own staff, for
actions taken by the Congress itself. The term "propaganda" has
been used by the committee's staff without apparent appreciation of its
use by the Congress and the courts with respect to tax exempt organ-
izations. Allegations cast in general terms present no ascertainable
issue on which to make reply.

Third, it is suggested that there is fundamental injustice in using
the staff members of an investigating committee in both an accusatory
and an adjudicative role.

(4) Maintenance of free enterprise in philanthropy

Since a congressional investigation carries with it implications of
governmental intervention, we urge the committee to reaffirm estab-
lished American policy in support of private initiative and enterprise
in the philanthropic field. Human needs are vast and foundation
funds are a tiny pool compared to them. Those responsible for the
use of such funds would not claim that they always find the right
answers, for each grant must, in a sense, compete with every other
possible use of the same money. But on one point foundations would
generally agree—philanthropy can flourish only in the air of freedom.
Dated August 3, 1954.

Dean Rusk,
President, the Rockefeller Foundation and
General Education Board.
State of New York,
County of New York, ss:

Dean Rusk, being duly sworn, says that he is president of the Rockefeller Foundation and of the General Education Board, the organizations in whose behalf the foregoing statement is made; that the foregoing statement is true to his knowledge except as to the matters occurring prior to the dates (as therein set forth) of his association with said organizations, which are therein stated to be alleged on information and belief, and that as to those matters he believes it to be true.

DEAN RUSK.

Sworn to before me this 3d day of August 1954.

[seal]

HAROLD B. LEONARD,
Notary Public, State of New York.

Term expires March 30, 1955.

## The Rockefeller Foundation—Grants to principal field of interest through Dec. 31, 1953

SUPPLEMENTAL STATEMENT IN BEHALF OF THE ROCKEFELLER FOUNDATION, BY DEAN RUSK, PRESIDENT

The Rockefeller Foundation submits this supplemental statement to the Special Committee To Investigate Tax-Exempt Foundations of the 83d Congress. Its supplements the joint principal statement by the Rockefeller Foundation and General Education Board of the same date and contains the foundation's comments upon certain specific grants which were referred to in the public hearings on committee staff reports.

This statement is verified under oath. Attention is invited to the second paragraph on page 1 of the principal statement, regarding the president's personal knowledge and statements made upon information and belief.

AMERICAN COUNCIL OF LEARNED SOCIETIES

The American Council of Learned Societies has been mentioned in the testimony as an intermediate organization to which authority (in this instance in the field of the humanities) is delegated by the foundations, and the danger of the concentration of power in the hands of such an organization has been stressed. These observations do not conform to the facts.

The American Council of Learned Societies is a federation of 25 national organizations devoted to the encouragement of humanistic studies. These organizations are recognized learned societies of the

---

1 Hearings, p. 601, 602.
2 Hearings, pp. 489, 601, 612.
United States and represent a combined membership of nearly 50,000 American scholars in these fields. The central function of the council is the encouragement of humanistic studies. In serving this central function, the activities of the council include: (1) the initiation and promotion of research, (2) the dissemination and utilization of the results of research, (3) the training of individuals for research and teaching, (4) the representation at home and abroad of American scholarship in the humanities.

It is our understanding that the American Council of Learned Societies has filed a statement with the committee. This statement will undoubtedly provide ample information of the policies, organization, and program of the council. Our comment here is therefore limited to the relation of the council to the work of the Rockefeller Foundation.

The American Council of Learned Societies receives funds from a variety of sources for various phases of its work. While substantial grants ($4,788,775) have been made by the Rockefeller Foundation toward general support and for specific projects of the council during a period of more than 20 years, these grants represent slightly less than 15 percent of the funds appropriated by the foundation for work in the humanities. This foundation plays no part in determination of council policies and exercises no authority in the appointment of the council's staff or committees, and in no sense does it delegate responsibility to the council for the conduct of its program in the humanities. Aside from the funds contributed for the general support of the council, appropriations have been made for specific projects which the council was especially well qualified to carry out and for which it had submitted carefully prepared proposals. Such special projects have been directed, in most cases, by committees representative of American scholarship in the particular academic fields involved. These committees also assume responsibility for the selection of recipients of fellowships and grants-in-aid awarded by the council.

The foundation's support has been given to the American Council of Learned Societies in the belief that the organization was playing an important role in the advancement of American scholarship. This role was well stated by Dr. Charles E. Odegaard, former executive director of the council and now dean of the College of Literature, Science and the Arts, University of Michigan, in his 1950 annual report:

* * * the learned scientific societies based on disciplines or fields of interest * * * have attained national representation in their membership. Useful as these are—and no one could deny their significance—there remains a place for something more, for an association supplementary to colleges and universities, academies, and learned societies. Historically, it is the research councils which, within the limits of their slender resources, have tried to fill this supplementary niche. It is our present duty in this council to see as clearly as possible the needs which are not met by other agencies and to set in motion efforts to meet these additional needs by whatever means can be found.

The contribution which the American Council of Learned Societies has made to American culture is evident from the most casual review of that organization's history. Its reliability is attested by the fact that in 1951 the Office of Naval Research, acting on behalf of the three defense departments, signed a contract with the council for the preparation of a national register of humanists and social scientists.
The report of the committee's Legal Analyst, part II, refers to foundation support of studies carried on by the Russian Institute of Columbia University, studies which the Legal Analyst characterizes, along with others, as "aimed at the single target of world peace." The quoted phrase is taken by the Legal Analyst from Fosdick's The Story of the Rockefeller Foundation, p. 219. Mr. Fosdick's statement was: "There is a sense, of course, in which the foundation’s entire work in all fields has been aimed at the single target of world peace." Whether the expression is given the broad meaning in which it was used by Mr. Fosdick, or a narrower and more specific meaning, it is fairly applicable to the foundation’s grants for support of Columbia University’s Russian Institute.

This report of the Legal Analyst was presented after the committee had cut off public hearings. As a result, we do not have the benefit of any oral testimony by the Legal Analyst, explaining why these grants were thought to be relevant in the committee’s search for error on the part of the foundations.

The Rockefeller Foundation takes modest pride in having given substantial aid toward the Russian Institute, which has become one of the major centers for Russian studies in this country. Knowledge of our powerful and unscrupulous rival is the cornerstone of our defense against communism. It is the business of the Russian Institute to supply such knowledge in all its phases. It has provided more trained specialists in the Russian field than any other center in the country. During the last 7 years, the State Department, the Army, the Air Force and the Navy have sent 99 persons to the institute for training. Of the persons who have completed the institute's program, nearly all are making active use of their training in Government service, Government-supported research projects, teaching, journalism and similar useful occupations.

The importance of affording opportunity for study in the Russian field was well expressed by President Eisenhower in his inaugural address as president of Columbia University, when he said:

There will be no administrative suppression or distortion of any subject that merits a place in this university's curricula. The facts of communism, for example, shall be taught here—its ideological development, its political methods, its economic effects, its probable course in the future. The truth about communism is, today, an indispensable requirement if the true values of our democratic system are to be properly assessed. Ignorance of communism, fascism, or any other police-state philosophy is far more dangerous than ignorance of the most virulent disease.

Before the committee itself condemns foundation support of an institution which is playing such a vital role in our defense against communism, we respectfully suggest consultation with those who are responsible in executive capacities for the conduct of our foreign affairs and for the defense of the country.

CORNELL CIVIL LIBERTIES STUDIES

The report of the committee’s Legal Analyst, part II, is critical of the foundation’s grants to Cornell University in support of these studies on the ground that they were under the direction of "two indi-
individuals” who were not “sufficiently impartial to insure a ‘factual examination’ or an ‘objective finding.’” These two individuals, Dr. Robert E. Cushman, chairman of the department of government at Cornell, and Prof. Walter Gellhorn of the Law School, Columbia University, are then discussed under the heading “The sponsorship of individuals who by their writings are of a Socialist, if not Communist philosophy, dedicated to the idea of world government.”

We will not discuss these charges at length since the president of the Rockefeller Foundation, Mr. Dean Rusk, testified fully before the Cox committee, and was cross-examined, on the grants to Cornell for the civil liberties studies. If he were given the opportunity to testify before this committee, he would not testify differently. We also wish to direct the attention of this committee to the testimony and cross-examination of Professor Gellhorn, who appeared before the Cox committee at his own request and denied under oath past or present membership in or sympathy with the Communist Party.

In 1948, the Rockefeller Foundation made a grant of $110,000 to Cornell University for a study of the relation of civil rights to the control of subversive activities. To permit completion of this work, three additional grants were made, $20,000 in 1950, $6,000 in 1951, and $3,500 in 1952. The director of the survey was Dr. Robert E. Cushman, chairman of the department of government at Cornell and formerly president (1943) of the American Political Science Association. Dr. Cushman chose his own associates, although foundation officers knew who the major ones (including Professor Gellhorn) were to be before the first grant was made.

This was not the first time that the foundation had concerned itself with the question of civil liberties. In 1944 and 1947 grants totaling $28,000 had been made to Cornell for a study of civil liberties in wartime, headed also by Dr. Cushman. This wartime study embraced questions relating to the civil rights of enemy aliens, of conscientious objectors, and of civilians under martial law.

Dr. Cushman, director of the program, was experienced in the field of civil liberties and had (and still has) a reputation for scholarly competence and objectivity. He had been head of the department of government in one of the country’s leading universities. The foundation knew that he intended to associate with him in these studies Prof. Robert Carr, department of government, Dartmouth College, formerly executive secretary of the President’s Committee on Civil Rights; Miss Eleanor Bontecou, formerly an attorney with the Department of Justice and later in the War Department; and Professor Gellhorn of Columbia.

Professor Gellhorn was a well-known and distinguished professor in one of the country’s leading law schools, whose colleagues held (and still hold) him in high regard, and who had been Director of the Attorney General’s Committee on Administrative Procedure in 1939-41.

The results of the research supported by the foundation have not caused us to change our view of Dr. Cushman or his associates, including Professor Gellhorn.

Published reviews of the studies show that they have been widely regarded as scholarly and objective and as constituting a valuable

5 Report of Legal Analyst, hearings, p. 900.
6 Ibid.
7 Cox committee hearings, p. 514 ff.
8 Cox committee hearings, p. 784 ff.
source of information on the issues involved in attaining the two important objectives of national security and civil liberty. The following studies have been published:

Security, Loyalty and Science, by Walter Gellhorn, Columbia University Law School
The Tenney Committee,9 by Edward L. Barrett, Jr., University of California Law School
Un-American Activities in the State of Washington,9 by Verne Countryman, Yale Law School
Loyalty and Legislative Action,9 by Lawrence H. Chamberlain, Columbia University Law School
The States and Subversion,10 partly written and partly edited by Walter Gellhorn
The House Committee on Un-American Activities, by Robert K. Carr, Dartmouth College
The Federal Loyalty-Security Program, by Miss Eleanor Bontecou

A summary volume bringing together the conclusions as a whole is being prepared by Dr. Cushman, and is scheduled for publication in 1954.

These studies, involving as they do a controversial subject, have been criticized by some commentators. But a much more widely held opinion is that they are useful and valuable. Unfortunately, there are some persons who would view as subversive any criticism of any phase of the executive loyalty program or of any activity of legislative committees interested in the problem. But the American tradition of concern about individual liberty is older than the Republic, as reflected, for example, in the Declaration of Independence. One of the first acts of the first Congress was to propose 12 amendments to the States, of which the States accepted 10, which made secure against Federal encroachment the right of individuals in respect of religion, freedom of speech, military service, and the use and maintenance of armies, search warrants, trial in accordance with fixed law and by judgment of juries, criminal accusation, the inflictment of punishment and the exaction of bail. Stories in the press indicate that many Members of Congress from both parties are now concerned about procedures followed by congressional investigating committees, and that new codes of procedure are under consideration.

We are sure that the proper concern for individual liberty in the American tradition evidenced by the studies of Dr. Cushman and Professor Gellhorn will not be considered an indication of Communist or Socialist sympathies.

The Council on Foreign Relations, which has received substantial support from the Rockefeller Foundation, is one of the organizations criticized in the report of the committee's Legal Analyst, part II,11 as biased in favor of an "internationalist" viewpoint, and as maintaining close relations with government.

The council is without doubt one of the principal nongovernmental agencies devoted to a study of our foreign affairs. In this field it has

9 Condensations of these three volumes also appear as chapters in the States and Subversion.
10 Chapters for this volume were also prepared by E. Houston Harsha, University of Chicago Law School, on the State of Illinois; by William B. Prendergast, assistant professor of political science, U. S. Naval Academy, on the Ober Act of the State of Maryland; and by Robert J. Mowitz, department of government, Wayne University, on the city of Detroit.
a distinguished record of service to the public and to the United States Government. Perhaps its major service, undertaken shortly after the outbreak of World War II, developed into the program of war and peace studies which the Legal Analyst seems to regard as in some way suspect. The fact is that it was these studies to which Secretary of State Cordell Hull referred in saying: "I hope you will go on with this important work and that you will continue to give us the benefit of research and thinking done under the council's auspices."

On pages 33 and 34 of the report the Legal Analyst sets forth the names of research secretaries of the war and peace studies who "progressed to other work related to the organization of peace and the settlement of postwar problems. * * *" The intimation seems to be that there was something sinister and evil in this relationship.

We cannot believe that the Congress will view with alarm our support of the Council on Foreign Relations, or will share the strange viewpoint of the legal analyst that the public service of a grant recipient is a ground for criticism of the foundation responsible for the grant.

THE FOREIGN POLICY ASSOCIATION

The report of the committee's legal analyst, part II, devotes considerable attention 12 to the Foreign Policy Association, to which from 1933 to 1950 the Rockefeller Foundation has made substantial grants, largely for the support of its research and educational programs.

The report finds the Foreign Policy Association guilty of an "internationalist trend," 13 said to be exemplified in certain of its Headline Books, and claims that, "in those reviewed little attention was paid to the possibility of a nationalist point of view as opposed to an internationalist one." 14

The facts are that the Foreign Policy Association during the period covered by the foundation's grants has been one of the leading organizations in the country devoted to research and study in problems of international relations. Its series of Headline Books has now reached 104 titles. The legal analyst comments adversely on 4. The authors of others include James B. Conant, former president of Harvard University; Grayson Kirk, now president of Columbia University; Allen W. Dulles, now Director of the Central Intelligence Agency; and other well-known students of foreign affairs. The Rockefeller Foundation cannot claim the credit for these selections, nor is it responsible for those which have been criticized. For the reasons set forth in our principal statement, we do not censor publications resulting from our grants or control the product of research which we support.

We express full confidence in the Foreign Policy Association as an agency for public education in problems of international relations, which has become so vital since the leadership of the free world has been thrust upon the United States.

INSTITUTE OF INTERNATIONAL EDUCATION

A witness has implied that the foundation's funds were used for a summer school in Moscow at which American educators were indoc-

---

trinated with communism. Although the testimony is confused as to the exact title of the agency supposed to have sponsored the criticized summer school, it probably refers to the Institute of International Education. This organization, which is located in New York City, operates a program concerned with facilitating international student-exchange programs. It renders valuable services to colleges, universities, and government agencies in the administration of fellowships and scholarships for foreign students and for American students going abroad. Its support comes largely from grants from a number of foundations and from government contracts which amount to almost one-half of its annual budget.

The Rockefeller Foundation has made grants totaling $396,505 toward the general support of the institute. Prior to 1929, grants were made by the Laura Spelman Rockefeller Memorial chiefly to enable the institute to maintain a travel and information service for American professors and students in France and Great Britain.

Our records do not show that the Rockefeller Foundation appropriated funds for the support of a summer school in Soviet Russia. We have been told that there was a summer school for foreign students in Russia in 1933 with which the institute had no relation; it seems that this summer school was repeated in 1934, with some sponsorship by the Institute of International Education, which had long served as the principal American contact for summer schools in foreign countries. In 1935, plans for repetition were frustrated by administrative inefficiency and lack of cooperation on the Russian side and the program for that year was canceled. We know of no resumption.

To the extent that the Rockefeller Foundation had contributed to the general support of the Institute of International Education, some portion of its funds can be said to have been involved in the sponsorship of the 1934 school, referred to above. Against the background of Russian war relief and business and commercial exchanges of the 1920's, diplomatic exchange beginning in 1933, and the official American policy of encouraging exchanges through the Iron Curtain until as late as 1947, we see no significance in the fact that some of our funds might have been used for such a purpose in 1934.

INSTITUTE OF PACIFIC RELATIONS

Two specific questions in regard to the Rockefeller Foundation's support of the Institute of Pacific Relations have been raised by witnesses before this committee. Both points had been covered in the full, detailed statement on this subject made by the foundation's president before the Cox committee in 1952, but in the discussions before this committee neither counsel nor witnesses made any reference to that previous testimony. It should not be necessary to repeat the entire statement here. We respectfully urge, however, that before undertaking to criticize the foundation for these grants, this committee should familiarize itself with the facts by a careful review of our statement, which appears in the printed report of the hearings of the Cox committee, pages 520 to 528. This present statement will be limited to a discussion of the two matters mentioned by the committee's witnesses, with the addition of such background as seems necessary.

\[15\] Hearings, pp. 267-283.
The first question relates to the charges made against the IPR by Alfred Kohlberg. It was testified by one witness, Dr. Kenneth Colegrove, that what he couldn’t understand was when Alfred Kohlberg was able to get the consent of one of the very high officers in the Rockefeller Foundation, why the foundation would not make an investigation of the IPR. 16

At a later point in his testimony the following exchange occurred:

The CHAIRMAN. To whom was Kohlberg’s request for an investigation made, Professor?
Dr. Colegrove. It was made to Fred Willetts, an official of the Rockefeller Foundation, one of the outstanding men, a man of great integrity and a man of competence and scholarship. I have great respect for Fred Willetts, and he must have had a good reason for not investigating. But that reason, it seems to me, ought to be told to the American people. 17

The actual facts in regard to this episode, which differ materially from Dr. Colegrove’s version, were set forth in the public testimony of the president of the Rockefeller Foundation before the Cox committee, as follows:

In 1944 Alfred Kohlberg sent the foundation copies of his charges of pro-Communist bias in the IPR. The director of the social-sciences division of the foundation suggested that the charges be referred to an independent body of competent persons for hearing and determination. This proposal was accepted by Mr. Kohlberg, but rejected by the IPR. Instead, a special committee of IPR trustees reported to its board that the executive committee and responsible officers of the American council had “investigated Mr. Kohlberg’s charges and found them inaccurate and irresponsible.” The foundation officers would have preferred an independent appraisal of the organization’s activities, I might say, not because of any views which they then held on the merits of the problem but because in their view at the time that was the proper procedure by which you could get rid of this kind of issue one way or the other. 18

The “director of the social-sciences division of the foundation” referred to in this quotation was Joseph H. Willits, who is evidently the person Dr. Colegrove had in mind. As the foregoing testimony shows, there was no plan to have the foundation conduct a public investigation of the IPR, an undertaking for which the foundation was neither equipped nor qualified. Mr. Willits never gave his consent to have such an investigation undertaken by the foundation, and there was no mysterious suppression of such a proposal. On the contrary, Mr. Willits intervened with a suggestion for quite a different type of investigation which was never carried out because the proposal was not acceptable to the IPR.

The second question was raised by the testimony of Dr. David N. Rowe. It related to his understanding “that the Rockefeller Foundation was still contributing money to the IPR after 1950” when, in his opinion, grants should have been terminated. 19 Before turning to the facts in that regard, we call attention to the following point which the chairman of the committee developed in questioning this witness:

The CHAIRMAN. I am not sure about the year, but on up until the late forties, the IPR had an excellent standing; did it not? I am not sure what year it was, but perhaps up to the midforties.
Dr. Rowe. The IPR had excellent standing in educational circles, in governmental circles, and intellectual circles up until the late forties. That is an accurate statement. 20

16 Hearings, p. 557.
17 Hearings, p. 559.
18 Hearings, p. 524.
19 Hearings, p. 537.
20 Hearings, p. 541.
This witness testified that he had joined the IPR around 1939, had accepted election as one of its trustees in 1947, and had continued to serve as a trustee until 1950, when he resigned with a letter which he now feels "was probably altogether too polite." He also testified in regard to the IPR that:

They were known all over the country as the outstanding center in the United States for Far Eastern research and study.

The bulk of the foundation's grants to the IPR was made during a period even earlier than Dr. Rowe's trusteeship, when its prestige was fully as high as he relates.

The foundation's last appropriation for the IPR was made in 1950, payable over 2 years. The circumstances under which this action was taken were fully described in the Cox committee testimony. A highly responsible group, under the chairmanship of Gerard Swope, former president of the General Electric Co., was undertaking to salvage the great values in the IPR program to which Dr. Rowe testified. The foundation officers made a full examination of the problem, within the means proper to an organization like ours. As the committee knows, the FBI and other Government security agencies give information only to Government departments. Four IPR trustees, who had earlier resigned because of dissatisfaction with the situation, had shortly after their resignations urged the foundation to continue its support in order to reinforce the efforts of those who were working to strengthen the organization. Confronted with the strongest recommendations for continuing support, and with no contrary advice from the agencies of Government responsible for security problems, the foundation approved the 1950 grant.

Dr. Rowe's view that the 1950 grant should not have ben made seems to rest largely on hindsight, based principally on evidence brought out in the McCarran committee hearings, which did not begin until nearly a year after the making of the grant.

These hearings obviously prompted the following statement in the report of the committee's legal analyst, part II:

The Institute of Pacific Relations has been the subject of exhaustive hearings by other congressional committees in which its subversive character has been thoroughly demonstrated.

The only exhaustive hearings on this organization known to us are those of the McCarran committee whose report was published in 1952. The foundation does not feel called upon to comment on the legal analyst's statement other than to observe that editorial comment on the McCarran committee's report was sharply divided, that the IPR has not been listed by the Attorney General as a subversive organization, and that it has not been deprived of its tax-exemption privilege by the Internal Revenue Service, a privilege which it would hardly be allowed to retain if the Internal Revenue Service agreed with the committee's legal analyst that the IPR's "subversive character has been thoroughly demonstrated."

THE KINSEY STUDIES

It is not clear from the transcript of proceedings whether or not the committee wishes us to comment upon the foundation's grants for sex research, including its support for the Kinsey group at the University of Indiana. At one point, however, the Chairman states:

* * * As one member of the committee, I don't have much interest in the Kinsey report. Any interest that the committee might have in the Kinsey report arises out of whether that was a desirable undertaking for a foundation, which is quite a different matter * * *

We wish to make the foundation's position clear, even though committee members have expressed a number of reservations about getting into the matter.

In 1931 the Rockefeller Foundation became interested in systematic support for studies in sexual physiology and behavior. This came at a time when the foundation began to concentrate its natural science interest more in the life sciences and less in the physical sciences. The latter decision, a very natural one in view of the foundation's long and large interest in medicine and public health, was primarily based on the conviction that the physical sciences had received large support and were far advanced; whereas there were great undeveloped opportunities in the life sciences to serve the welfare of mankind. Support for studies in reproductive physiology and behavior constituted an obviously necessary part of this program since the ability to reproduce is one of the elementary characteristics of living organisms.

The Rockefeller Foundation began in 1931 to make modest grants to the committee for research in problems of sex of the National Research Council (hereinafter referred to as the NRC committee), support for which had previously come from the Bureau of Social Hygiene. Foundation grants to this committee have been the following:

The NRC Committee, first organized in 1921, has published a summary account of its first quarter century in a volume Twenty-Five Years of Sex Research, which we have supplied to your research director. A reading of it will suggest, we believe, two conclusions. First, the NRC Committee has been made up over the years of a group of our most eminent scientists in biology and medicine. Second, it has achieved an extraordinary record in opening up and developing an entire field of medical physiology.

For example, the three decades during which this program has now been in operation have seen a most encouraging growth in our knowledge of the reproductive process and in the ability of modern medicine to control its disorders and diseases. Many of the most significant advances have stemmed from the work of the NRC Committee and

---

27 Transcript, p. 1854.
the closely related grants made directly by the foundation. Examples may be cited as follows: (1) The isolation and later synthesis of estrogen, the first ovarian hormone to be discovered; this important substance is now widely and safely used to relieve menopausal distress and discomfort and in the treatment of disordered menstruation, sterility, and retarded genital development in girls; (2) a similar identification of the testis hormone, androgen, which is similarly useful in the treatment of disordered physiology in the male; (3) recognition of several different substances from the anterior pituitary glands which are involved in body growth, sugar metabolism, milk secretion, and various disorders which apparently result from unusual stress.

Less completely attributable to the work of the NRC Committee but still importantly influenced by it was the discovery of hormones of the adrenal cortex. Increased knowledge of the interactions of the foregoing hormones in determining the normal physiology of the reproductive cycle has led to far more intelligent handling of women's diseases, problems of sterility, and the commercial breeding of fur-bearing and food-producing animals. Two notable achievements in the field of cancer have resulted from NRC Committee support: the diagnosis of cancer of the uterus by study of the cells of the vagina and the treatment of cancer of the prostate gland by the use of hormones.

Beginning about 1941, the NRC Committee became interested in the work of Dr. Alfred C. Kinsey and others at the University of Indiana in the field of human sexual behavior; between 1941 and 1946 the NRC Committee had allocated to this work $120,100 of the total funds available to it. Beginning in 1946, the NRC Committee and the foundation discussed the needs of the Indiana study more specifically, and it was agreed that the 1946 foundation grant to the committee was to be allocated to Dr. Kinsey's group. Similarly, it was understood that the NRC Committee would allocate up to 50 percent of the grants of 1949 and 1952 for the same purpose. In addition, the foundation made one grant of $14,000 direct to the University of Indiana for Dr. Kinsey's Institute of Sex Research.

Among the published materials issuing from the Indiana group are the widely discussed volumes Sexual Behavior in the Human Male and Sexual Behavior in the Human Female. The aim of the studies was to contribute to the better understanding of some of the elements in a complex aspect of human behavior in which parents, doctors, ministers, teachers, legislators, social workers, penologists, and many others have a serious interest.

A thoughtful reader will understand why these books have evoked the greatest variety of both professional and popular interest, ranging from highest praise to violent condemnation. They dealt with an aspect of behavior about which comparatively little is known; to the extent that they pointed to a possible significant disparity between acknowledged mores and actual behavior, they touched upon sensitive issues. They involved complex problems of statistics and procedure, discussed at length on pages 3-97 of the second of the two volumes and by other authors in many articles elsewhere. The two studies dealt almost entirely with the physical aspects of human behavior and did not purport to speak authoritatively on the moral, legal, social, and psychological aspects which common experience would recognize as
being present. That these studies are not definitive would not need to be said to those who are professionally concerned with the problem, nor would Dr. Kinsey's group claim them to be such.

In addition to grants made to the NRC Committee for Research in Problems of Sex, the Rockefeller Foundation has made grants for studies of various aspects of sex to more than 2 dozen other university and research centers, including the National Committee on Maternal Health, Stanford University, the University of California, the University of Missouri, Yale, Columbia, Harvard, Hebrew University, McGill University, Ohio State, the University of Berlin, the University of Gottingen, the College de France, and the Universities of Pennsylvania, Rochester, Stockholm, Virginia, and Wisconsin.

An examination of this program will show that such studies are an important part of an advance on a broad front in the life sciences, taking their place alongside other foundation-supported research in physiology, psychiatry, genetics, biology, biochemistry, biophysics, marine biology, and related fields.

LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

One of the committee's witnesses was critical of the London School of Economics and Political Science which had benefited from foundation support.29

The facts are the following. Between 1924 and 1928 the Laura Spelman Rockefeller Memorial made grants totaling $1,245,000 to the London School of Economics and Political Science, a division of the University of London. Major aid from the Rockefeller Foundation began in 1931 and continued until 1935, when a 5-year tapering grant was made terminating general aid to the school, in line with the policy then adopted by the foundation of discontinuing grants for general support of social sciences at colleges and universities. Two substantial grants were made after this date, one in 1939 ($51,250) to provide funds required as a result of the wartime emergency and one in 1949 ($50,900) for the new Department of Sociological and Demographic Research. Several smaller grants have been made for support of particular programs of research or for support of particular scholars associated with the London School.

Foundation grants to the London School total $873,348, most of which have been used for physical improvements, for research, and for postgraduate teaching.

The London School of Economics and Political Science is now and has been for many years one of the world's important educational and research institutions. Its faculty has included many distinguished scholars who have served their country in important posts in war and have contributed brilliantly to the increase of knowledge and understanding in peace. Its faculty, like any other university faculty, includes persons of varied shades of political opinion.

It is quite true that Sidney Webb played an important part in the founding of the London School of Economics, and that Harold Laski served on its faculty. That the school does not exist to inculcate any particular political views should be taken for granted in the case of an established university in a country with the highest traditions of free

28 Hearings, p. 215; see also p. 475.
scholarship. That its roster has included such names as Lord Beveridge, Friedrich von Hayek, Lionel Robbins, Michael B. Oakeshott, Sir Alexander Carr-Saunders, Sir Charles Webster, A. J. Toynbee, D. W. Brogan, R. H. Tawney, Herman Finer, and many others of equal distinction attests the wide range of points of view of its leadership.

In the academic year 1953–54, the London School had a faculty of 148 and a student enrollment at 3,376, of which 898 (27 percent) had come from 29 foreign countries.

THE NATIONAL BUREAU OF ECONOMIC RESEARCH

In view of the chairman's statement that the committee is primarily interested in the "errors" of foundations, we must assume that when the legal analyst's report, part II, calls attention to the Rockefeller Foundation's support of the National Bureau of Economic Research, the intent is to be critical. The basis of the criticism is nowhere explicitly stated and is not easy to discover.

There is no effort to disparage the work of the national bureau—rather the contrary. The legal analyst apparently believes that the attack upon these grants is reinforced by sections of Fosdick's history of the foundation, which are quoted at some length. These sections point to the extraordinary value of the service performed by the national bureau in bringing within reach "basic, articulated, quantitative information concerning the entire economy of the Nation"; the quotations conclude with the statement that "without the national bureau our society would not be nearly so well equipped as it is for dealing with the leading economic issues of our times."

The legal analyst does not seem to challenge these statements. If the national bureau performs such a unique and invaluable service, why is the Rockefeller Foundation open to question for supporting it? We have read and reread this section of the report with increasing bewilderment, and without finding an answer which satisfies us.

The author quotes a sentence from the foundation's annual report for 1941 (written, presumably, during the early months of 1942) reading as follows:

If we are to have a durable peace after the war, if out of the wreckage of the present a new kind of cooperative life is to be built on a global scale, the part that science and advancing knowledge will play must not be overlooked.

"In the light of this attitude," the author continues, "some of the individuals and organizations benefiting from foundation funds in the years since 1941 may seem a trifle unusual to say the least." This is the preliminary, in part, to the citation of the national bureau. Again we ask, in what respect is such an outstanding organization an "unusual" beneficiary?

Coming back to the quotations from Fosdick, we find the statement that the "basic, articulated, quantitative information" which the national bureau has brought within reach "has influenced public policy at a dozen points." Here we may possibly have the clue. Are we accused of using our grants to shape public policy because the data and findings of the national bureau studies are cited, as Fosdick says,
in "official documents," because "They are used by businessmen, legislators, labor specialists, and academic economists," because "They are constantly employed in Government agencies like the Department of Commerce and the Bureau of the Census? 35

If this is indeed the intended basis of criticism, it reveals little familiarity with the work of the national bureau. This organization is engaged, not in policy forming but primarily in factfinding. It undertakes to supply the bricks, in the form, for example, of measurements of the national income, measurements of money flows, measurements of the volume of consumer credit, which policymakers will use in developing their legislative and other structures. The best testimony to the national bureau's impartiality is found in the fact that both business organizations and labor organizations make contributions to it, not for specific studies but for general support.

It is unnecessary for us to elaborate on the work of the national bureau, because of the description of this work which will be found in the testimony before the Cox committee of William I. Myers, dean of the New York College of Agriculture at Cornell University, and a trustee of the Rockefeller Foundation and the General Education Board since 1941. 36

We cannot imagine a less fruitful enterprise than to seek for error in the foundation's support of the National Bureau of Economic Research.

THE PUBLIC ADMINISTRATION CLEARINGHOUSE

In the report of the legal analyst, attention has been drawn to the foundation's concern with a "durable peace" as shown in quotations from its annual reports. Its interest in the cooperative activities necessary for such peace is also mentioned. It is then stated that, in view of this concern, some of the individuals and organizations benefiting from foundation funds since 1941 "may seem a trifle unusual, to say the least * * * ." The Public Administration Clearinghouse is mentioned as one such organization. 37

In the light of world events during the past decades, the interest of the foundation in undertakings that may contribute to a durable peace needs no defense. The only apparent reason for the listing of the Public Administration Clearinghouse in this connection appears to be that since peace involves "cooperation" and the Public Administration Clearinghouse is an activity which obviously requires cooperation by those who participate in it and since this cooperative activity relates to the improvement of Government services, the legal analyst considers it one of the agencies whose selection for support by the foundation is considered questionable.

The Public Administration Clearinghouse was set up in 1931 to help meet the need for an interchange of administrative data and experience from one public official or agency to another, so that what happened in one place might be promptly known and perhaps utilized in another. Initial funds for its establishment and major support came from the Spelman Fund of New York, which appropriated a total of $2,805,250 for this work. The Rockefeller Foundation made grants totaling $14,699.

34 Legal analyst's report, Hearings, p. 896.
35 Legal analyst's report, Hearings, p. 896.
36 Cox committee hearings, p. 123 ff.
When the Public Administration Clearinghouse was organized, communication between city and State and between States and the Federal Government was narrowly restricted; administrators of important functions too often worked in isolation without opportunity to benefit from the experience and ideas of others engaged in like functions in other jurisdictions, or from the research and experimentation carried on in various universities and in centers of public administration research. The Public Administration Clearinghouse was established to remedy this situation, and it continues to render important public service to Government officials and agencies. It has a proud record of contributions to the improvement of standards, the exchange of ideas, and the development of stricter codes of ethics among those engaged in the various administrative functions of government. This record is ample justification for its selection as a recipient of foundation funds.

THE SOCIAL SCIENCE RESEARCH COUNCIL

Testimony before the committee criticizes directly and by inference the relationship between the Rockefeller Foundation and the Social Science Research Council. It has been intimated that the Rockefeller Foundation and other large foundations have tended to dominate the Social Science Research Council; that the council, in its turn, dominates the field of the social sciences; that these foundations have used the council as an instrument in forwarding their "collectivist purposes"; and that by overemphasis upon the empirical method, the council has contributed to a lessened reliance on basic principles and a deterioration of moral standards.

The Social Science Research Council is a voluntary association of scholars chosen from seven associated professional societies in the field of the social sciences and from related disciplines. It has spoken for itself and with conviction. Its objectives are aimed at the improvement of research organization and methods; facilitation of research efforts of scholars throughout the country; development of personnel; enlargement, improvement, dissemination, and preservation of materials; and the enhancement of public understanding and utilization of the social sciences.

Since these are objectives in which the Rockefeller Foundation is sympathetically interested, and since the members of the council are outstanding scholars in their own fields, the foundation has found support of the Social Science Research Council an effective means for assisting the growth of knowledge of human affairs. The council no more dominates its field than the American Law Institute dominates the practice of law. The Social Science Research Council does, of course, exert a large professional influence. But it is not the influence of the Rockefeller Foundation; it is the influence achieved by a group of leading scholars as their abilities and accomplishments are recognized and accepted in their profession.

Grants to the Social Science Research Council since its establishment have been substantial, namely, $10,743,000. This, however, represents only 13.24 percent of the appropriations of the Rockefeller
Foundation in the field of the social sciences. Since our total grants in this area amount to more than $81 million, it cannot properly be said that we have delegated our responsibilities to any single organization as an "agent."

UNIVERSITY OF WASHINGTON—FAR EASTERN STUDIES (TAIPING REBELLION)

We refer to this grant only because the testimony about it received by the committee illustrates the effort to build up a case against the foundations from inadequately informed sources. One of the few committee witnesses having an academic background first expressed his personal discontent with what he described as "the so-called cooperative or group method of research." 43 He admitted that in making this criticism he spoke for himself alone. "I certainly don't speak for my university, let alone for all of my colleagues in the university, among whom I am sure will be found many people who will disagree with much that I say." 44 He agreed that "there is a great divergence of opinion on these fundamental matters." 45 Nevertheless, this witness furnished 12 pages of testimony expounding his criticism of foundations for supporting this method of research.

Does the committee feel that the Congress should inquire into and determine the relative merits of a team approach to scholarly research as compared with an individual approach? If so, this would be going far beyond what any foundation known to us has attempted to do.

The witness who expatiated on this subject was asked by counsel for the committee to discuss a grant, "I think it was a quarter of a million dollars for a group study which seemed to be somewhat fallible." 46 He responded by referring to alleged "grants" by the Rockefeller Foundation which "probably came to that much" to the University of Washington for the purpose, as the witness put it, "of group research on the Taiping Rebellion," 47 in China.

The fact is that the foundation made one grant, for a total of $100,000, to the University of Washington's Far Eastern Institute, to be used over a period of 7 years for expenses of research on the Far East. While there have been other grants to the University of Washington, they were not directly connected with this group research project. The university explained that the general aim of the research program was to study Chinese society in transition, with the Taiping Rebellion as the focal point. The committee's witness agreed that "The Taiping Rebellion has long interested historians, and it is worthy of a great deal of study." 48

His sole objection was his individual opposition to the group approach to the problem. The determination to make this approach was the decision of the university authorities, upon whom the foundation exercised no influence in this regard. The foundation has made many other grants to the University of Washington and to other institutions where group research was not involved. The criticism implies, therefore, that help should have been refused in this

43 Hearings, p. 530.

case simply because this witness, on an admittedly personal basis, dislikes such organization of research. We submit that this grant to the University of Washington does not raise issues deserving of the committee's time.

**Dean Rusk,**

*President, the Rockefeller Foundation.*

Dated August 3, 1954.

**STATE OF NEW YORK,**

*County of New York, ss:

dean Rusk, being duly sworn, says that he is president of the Rockefeller Foundation, the organization in whose behalf the foregoing supplemental statement is made; that the foregoing supplemental statement is true to his knowledge except as to the matters occurring prior to the date (as set forth in the accompanying principal statement) of his association with said organization, which are therein stated to be alleged on information and belief, and that as to those matters he believes it to be true.

**Dean Rusk.**

Sworn to before me this 3d day of August 1954.

**HAROLD B. LEONARD,**

*Notary Public, State of New York.*

Term expires March 30, 1955.

**SUPPLEMENTAL STATEMENT IN BEHALF OF THE GENERAL EDUCATION BOARD, BY DEAN RUSK, PRESIDENT**

The General Education Board submits this supplemental statement to the Special Committee To Investigate Tax Exempt Foundations of the 83d Congress. It supplements the joint principal statement by the Rockefeller Foundation and General Education Board of the same date and contains the General Education Board's comments upon certain specific grants which were referred to in the public hearings or committee staff reports.

This statement is verified under oath. Attention is invited to the second paragraph on page one of the principal statement, regarding the president's personal knowledge and statements made upon information and belief.

**COLUMBIA UNIVERSITY TEACHERS COLLEGE**

Witnesses before the committee have interpreted grants made by the General Education Board, particularly grants to Teachers College, Columbia University, as evidence of an alleged intent on the part of the board to propagandize a particular philosophy of education. This allegation is not sustained by the facts.

In 1920, Teachers College, Columbia University, received from the General Education Board a grant of $1 million for endowment. Subsequently a number of smaller grants were made for various projects and studies at that institution, bringing the total aid received to $1,540,397, exclusive of grants for the Lincoln School, which served as

---

a laboratory for the college. Grants in the amount of $667,500 were also made by the Rockefeller Foundation, chiefly for research in child welfare and in nursing education.

In our principal statement (p. 62) we have pointed out that while the major portion of the board's funds was used to strengthen and support traditional education in long established American institutions, some 8 percent of the board's grants were made for studies and experimentation relating to improved educational methods and ways of utilizing new knowledge. Much of this assistance was in the form of endowment and support of graduate schools of education. We assume that few would question educational research as an appropriate function of graduate schools of education. The importance of strengthening and developing such schools was early recognized by our trustees, and sizable grants for educational research and endowment were made to George Peabody College for Teachers in Nashville, and to the schools of education at Stanford University, Harvard, Chicago, and Columbia. In this record of broadly distributed aid there is no evidence whatever that the General Education Board nurtured a particular philosophy of education. These reputable institutions would themselves deplore identification with any one educational philosophy or practice, and a review of various current theories of education would show that most of them have been represented at each of the institutions mentioned.

We understand that a statement has been submitted to this committee by Teachers College. We believe that the committee will find in that statement evidence regarding the wide range of opinion reflected in the writings and activities of the college staff, and also that the college has had a positive program directed toward preventing the infiltration of Communist doctrine into the teaching and activities of its faculty and students.

Lincoln School, Teachers College

Mention has been made of the role of the General Education Board in the establishment of the Lincoln School at Teachers College, Columbia University. Between 1917 and 1929 the board appropriated $5,966,138 for the support of this school. This support was given in response to recommendations made by Mr. Abraham Flexner in his paper on "The Modern School" (a document which may still be read with interest and profit) and in the light of a growing recognition among educators that the curricula of both the elementary and secondary schools were no longer meeting satisfactorily the educational needs of great numbers of their pupils. The Lincoln School was essentially a laboratory. Through it one of the leading graduate schools of education was afforded opportunity to test educational theories that were then receiving attention from many thoughtful educators. From the beginning its history was a controversial one. Many of the theories tested there have since been discarded; some are still being studied; others are now widely accepted. The Lincoln School was closed in 1948 after the trustees of Teachers College, with the approval of the New York courts, had concluded that the purposes set

---

2 As of June 30, 1954: the statement furnished the committee by Teachers College shows a lower figure; our figure includes foundation payments on grants made by the Laura Spelman Rockefeller Memorial, prior to consolidation with the foundation, as well as a grant for nursing education.
3 R. E. Judd, Hutchins, Dewey at Chicago; Cubberley, Cowley, Hanna, at Stanford; Bagley, Kandel, Kilpatrick, Counts at Teachers College, etc.
4 Hearings, pp. 253-255.
forth in the board’s grants for the school could thereafter be more effectively served by the establishment of an Institute of School Experimentation and the discontinuance of the private laboratory school. The board’s grants originally made for the Lincoln School are now being used for this Institute of School Experimentation. Mr. Justice Botein of the New York Supreme Court in his opinion on the matter (March 20, 1947) says:

It is inconceivable that the men who planned this thrilling adventure on the frontiers of educational experimentation with the passionate deliberation of scientists would confine its potentiality for a productive future to one particular medium which might grow sterile. To analogize the unreality of such a position we need think only in terms of the present. The plaintiff [Teachers College] seems quite sanguine about the promise which the institute holds forth for fruitful experimentation. But no educator would dare present it as an immutable medium for perpetual productivity in experimentation.\(^6\)

**International Institute, Teachers College**

Several references have been made in the testimony to the support given to the International Institute by “the Rockefeller interests.”\(^6\) It is true that the General Education Board made a grant to Teachers College in support of this institute. The institute, which was part of the college, was set up in 1923 to develop a specialized service for foreign students. It provided assistance in the form of scholarships, travel grants, and language instruction for some 3,852 students from 53 countries. At one time it served a group of more than 100 Americans on furlough from missionary colleges and other institutions abroad whose special circumstances called for something different from the regular courses in pedagogy and school administration. The staff of the institute kept in close touch with educational developments abroad, and it has to its credit many notable contributions in the field of comparative education, including the Educational Yearbook which constitutes a comprehensive international review of educational history for a decade and a half. The institute was discontinued in 1938 when many of its functions were absorbed by other divisions of the college.

**Faculty members, Teachers College**

A witness has made numerous criticisms of the writings of Prof. Harold O. Rugg and Prof. George S. Counts, both members of the faculty of Teachers College, Columbia University.\(^7\) Inasmuch as no grants were made by either the Rockefeller Foundation or the General Education Board to the persons named for the books mentioned by this witness, we see no necessity for commenting on the criticisms. In our principal statement we have pointed out that it has been the consistent policy of the Rockefeller boards not to attempt to censor or modify the findings of scholars and scientists employed by institutions to which we have made grants; nor do we attempt to determine faculty appointments at these institutions.

**EDUCATIONAL ASSOCIATIONS**

There have been many references in the testimony to the support given by the General Education Board to such educational associations as the National Education Association and the Progressive Education

---

\(^6\) *Teachers College v. Goldstein et al.*, 70 N. Y. supp. 2d 778 (1947).

\(^7\) *Hearings*, p. 257.

\(^8\) See, for example, hearings, pp. 255, 48.
Association, with the implication that through this support the board gave aid to "pro-Socialist and pro-Communist propaganda projects." In our principal statement (pp. 63-65) we have already discussed that phase of the General Education Board's program which was especially concerned with the improvement of general education at the secondary school and junior college levels. We have shown that throughout this diversified program in which a great many institutions and many people with different points of view participated, there was no effort on the part of the Board to slant school and college curricula in a particular direction. We categorically deny that any board grants were ever made for the purpose of supporting pro-Socialist and pro-Communist propaganda projects.

Our annual reports show that large grants were made to the National Education Association and to the Progressive Education Association. When the board began its program in general education, there were three major educational organizations in this country with national membership and general concern with education at all levels. These were the American Council on Education, the National Education Association, and the Progressive Education Association. Among the other large and important groups with broad rather than specialized interests at the secondary school level were the Regional Accrediting Associations, the American Association of Junior Colleges, the American Association of School Administrators, and the National Association of Secondary School Principals, the latter two being part of the National Education Association. These groups were bound to have a strong influence on the future development of education, and it was natural, therefore, that the General Education Board should respond to requests from them for aid in projects concerned with the improvement of secondary education.

Any defense of the character of the organizations mentioned is properly left to the responsible representatives of those organizations. With regard to the board's grants to the National Education Association and the Progressive Education Association, we make the following comments.

National Education Association

The National Education Association, which is a large professional organization of American schoolteachers and administrators chartered in 1906, received grants from the General Education Board totaling $495,743. These grants were used for various projects, the largest one being for support of the Educational Policies Commission ($355,979). When the commission was organized in 1935, its purposes were presented to the board as follows:

To stimulate thoughtful, realistic, long-term planning within the teaching profession on the highest possible level, looking toward continued adaptation of education to social needs.

To appraise existing conditions in education critically and to stimulate educational thinking on all levels so that desirable changes may be brought about in the purposes, procedures, and organization of education.

To consider and act upon recommendations from all sources for the improvement of education.

To make the best practices and procedures in education known throughout the country and to encourage their use everywhere.

To develop a more effective understanding and cooperation between various organized groups interested in educational improvement.

* Hearings, p. 36.
Board funds aided the commission over a period of 9 years. During this time its prestige was such that the following eminent persons were at various times members of the commission:

Dwight D. Eisenhower (then president of Columbia University)
James B. Conant (then president of Harvard University)
Edmund E. Day (then president of Cornell University)
Arthur H. Compton (then chancellor of Washington University)
George D. Stoddard (then commissioner of education for the State of New York)
Frederick M. Hunter (then chancellor of the University of Oregon)
J. B. Edmondson (then dean, School of Education, University of Michigan)
J. W. Studebaker (then United States Commissioner of Education)

**Progressive Education Association**

The Progressive Education Association was an organization established in 1919 to foster a continuous improvement in educational practices. At the time when the board made its first grant to the association, its purposes were set forth as follows in a leaflet published by the association:

The association is the only organization devoted to the work of spreading knowledge of progressive education principles. Its membership, numbering over 7,000, is confined to no single group, profession, or locality. It includes administrators, teachers, and students in public and private schools and the colleges, parents and the laity generally from every State of the United States and in 20 foreign countries. It is constantly growing, widening its influence, making new contacts, assuming new obligations, engaging in new enterprises in the field of education.

The association is not committed, and never can be, to any particular method or system of education. In regard to such matters it is simply a medium through which improvements and developments worked out by various agencies can be presented to the public.*

In the 1930's the association was doubtless the most active group of educators concerned with studies looking toward the improvement of education, and it was among the first to direct attention to problems in secondary education. While its members came from both public and private schools and held a wide variety of beliefs as to what constituted educational improvement, on one thing they were agreed—that experimentation and change were necessary if American education was to keep abreast of the needs of modern life.

The Progressive Education Association worked through national commissions engaged in research and investigation of educational problems and through conferences and summer institutes. It was in the work of these several commissions that the General Education Board was interested. There were three of them with large and representative memberships. One conducted an 8-year study of the relation between school and college in which 30 schools participated; another engaged in an extensive study of the secondary school curriculum and in a study of adolescents; a third experimented with the use of new materials, such as films, in helping young people gain a better understanding of personal relationships.

A few small projects related to the studies of these commissions were also aided, and while the commissions were active the board made contributions toward the general support of the association so that it might respond to the interest aroused by studies being conducted by its commissions and coordinate their activities through its central office. A total of $1,622,506 was made available by the board to the association.

*Pamphlet—Progressive Education—What it is, how it is promoted, why it is of interest to you (Progressive Education Association, Washington, D. C., 1934), pp. 3–4.
The major grants made to the Progressive Education Association were:

General support (8½ years).............................................. $119,407
Commission on Relation of School and College (30 schools and a group
of higher institutions participated).................................. 605,799
Commission on the Secondary School Curriculum.................. 359,965
Commission on Human Relations....................................... 222,969
Service program......................................................... 260,298

The board's last grant for the service program of the association (a program involving summer workshops in which 14 of the major universities cooperated) was made in 1939. Meanwhile the commissions had just about finished their work. With the development of war tensions there was a rapid decline in interest in educational experimentation; the association's membership dropped off sharply; and as members entered war service there was a turnover in leadership. A final grant was made to the association in August 1943—$1,500 to meet the expenses of a meeting of its full board of directors for the purpose of defining future policy and program. It was made clear at that time that no further assistance might be expected from the General Education Board. Sometime during 1944 the Progressive Education Association changed its name to American Education Fellowship. We understand that in 1953, after a study and revision of policy, it once more assumed its old name.

SOCIETY FOR CURRICULUM STUDY, BUILDING AMERICA

The charge has been made that the Building America series, which the General Education Board supported with 3 grants to the Society for Curriculum Study totaling $51,000, made in 1935, 1936, and 1938, was propaganda showing that "The United States is a place of desti-
tution, failure, unsound conditions" and that "sympathetic Russia is sweet
ness and light." 10

Building America, which was developed as a new type of teaching material, was a periodical dealing with important phases of social, political, and economic life and designed principally to help secondary schools meet the need for instructional materials dealing with modern life. The magazine emphasized pictures and graphs as a means of presenting facts and suggesting problems.

The Society for Curriculum Study was a national organization of professional workers in public and private schools and in State departments of education, and of university professors who were especially interested in curriculum matters. The business of the society was conducted by an executive committee of reputable and representative educators, including at various times between 1935 and 1950 the following:

Fred C. Ayer, University of Texas
H. L. Caswell, Teachers College, Columbia University
Doak S. Campbell, George Peabody College
Prudence Cutright, Minneapolis Public Schools
Edgar Draper, University of Washington
Samuel Everett, Northwestern University
Helen Heffernan, California State Department of Education
O. Robert Koopman, Michigan Department of Public Instruction
J. Paul Leonard, Stanford University
Paul J. Misner, Superintendent of School, Glencoe, Ill.

10 Hearings, p. 399.
The editorial board of Building America was selected by the society's executive committee and was under the chairmanship of Dr. Paul R. Hanna of Stanford University. The editorial board's statement of policy, on the basis of which the General Education Board's grant was made, indicated that the magazine would strive to present social data and problems in a fair and scientific spirit. The project clearly related to the board's program in general education which was concerned with the improvement of secondary education.

In accordance with the board's basic policies, the aid given to Building America was considered temporary and was expected only to give the Society for Curriculum Study an opportunity to explore and evaluate a new type of teaching material. When board support terminated in 1940, the Society for Curriculum Study 11 continued the development and publication of Building America in both magazine and book form. The article on Russia, which was severely criticized in the testimony before this committee, 12 was published in 1944, 4 years after board support terminated.

In summary, the board made grants for the benefit of Building America on the basis that the funds would be used to support a worthwhile test of new teaching material which would be presented objectively. The board had good reason to believe that the funds would be so used because of the representative and responsible educators who sponsored the project, their assurances as to the nature of the publication, and the preliminary material furnished the board. Although the board does not attempt to supervise the studies supported by its funds, as we point out in our principal statement (p. 11-13), we believe there is no ground for the charge that the Building America series was propaganda for communism or socialism.

Dean Rusk,
President, General Education Board.

Dated August 3, 1954.

STATE OF NEW YORK,

County of New York, ss:

Dean Rusk, being duly sworn, says that he is president of the General Education Board, the organization in whose behalf the foregoing supplemental statement is made; that the foregoing supplemental statement is true to his knowledge except as to the matters occurring prior to the date (as set forth in the accompanying principal statement) of his association with said organization, which are therein stated to be alleged on information and belief, and that as to those matters he believes it to be true.

Dean Rusk.

Sworn to before me this 3d day of August 1954.

[seal]

Harold B. Leonard,
Notary Public.

Term expires March 30, 1955.

11 In 1942 the Society for Curriculum Study and the Department of Supervisors of the National Education Association merged to form the Department of Supervision and Curriculum Development of the National Education Association. In 1946 the name of this group was changed to the Association for Supervision and Curriculum Development. National Education Association. Upon the merger, Building America became a property of the department and then of the National Education Association.

12 Hearings, pp. 209 et seq.
STATEMENT OF WILLIAM G. CARR, EXECUTIVE SECRETARY, THE
NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES

We understand that your committee is authorized and directed, among other matters, to conduct "an investigation and study of educational and philanthropic foundations, and other comparable organizations which are exempt from Federal income taxation, to determine if any of them are using their resources for purposes other than the purposes for which they were established, and especially to determine which, if any, are using their resources for un-American and subversive activities; for political purposes; propaganda, or attempts to influence legislation."

It is also understood that during the public hearings which you have now terminated, your committee heard testimony derogatory to the National Education Association. From such of the testimony as we have been able to collect and examine, we assert that those derogatory statements are inconsistent, unfounded, and erroneous.

Since we may not testify before your committee in public, we are unable to learn whether any of the previous testimony is regarded by your committee as worthy of further examination. If you wish further information on any specific allegations in this previous testimony, which is not adequately provided in this memorandum, representatives of the association, upon suitable notice, will be prepared to supply such information as may be appropriate and relevant.

Therefore, in the brief statement which is hereby submitted for your record, we have not attempted to deal with previous testimony on a point-by-point basis. This testimony, insofar as we have been able to examine it, is so vague and so self-contradictory, that detailed comment seems unnecessary. We have, therefore, included in this statement a body of information about the association which we deem adequate to establish that the National Education Association of the United States has a proud record of loyalty to this country and to its ideals; that the association is controlled by its members; and that it cooperates with the public in the study and solution of educational problems.

We urge that your committee, in any report it may issue, explicitly reject any implication that the resources of the National Education Association are used in an improper manner.

UN-AMERICAN ACTIVITIES

Before presenting this brief statement, it is desirable, however, to make certain preliminary observations.

It seems obvious that in order to determine what associations and foundations, if any, are "using their resources for un-American and subversive activities," it will be necessary for the committee to identify our basic American traditions and ideals. Unless these criteria are well established in the minds of the committee and its staff, as well as in the minds of witnesses who may appear before it, testimony and inquiry would seem to be of little value.

The American tradition is a complex one with a long and splendid history. Your attention is respectfully directed to several components of this tradition which we deem to be important in the task assigned to your committee and in the work of the National Education Association.
1. One component of the American tradition is the freedom to form voluntary organizations for the promotion of all lawful purposes and for the advancement of the principles and ideals to which a group subscribes.

2. A second tradition dear to all Americans is resistance to what Jefferson called tyranny over the minds of men. In positive terms, this means the right to express opinions, even minority opinions on controversial questions, without fear of direct or indirect reprisal, and the right to revise opinions as conditions change and new circumstances come to light.

3. A third tradition basic to the American way of life, and of particular importance to your committee and to the National Education Association, is the value attached to the education of all the people. By this means, the founders of our country believed, popular government may long endure, because its citizens have learned to exercise independent and informed judgment in the direction and control of their own personal affairs and in the affairs of state.

4. There are many other elements in the rich and varied pattern of our country's tradition. At least one more such tradition should be mentioned. To state it negatively first—it is not the American ideal to be hostile to change. On the contrary, this country is great because its citizens have been free to propose and to adopt modifications in the structure of their Government, and of their other institutions. They have believed it is the right and the duty of good citizens to adapt their political and social institutions, within the broad framework of our constitutional freedoms, to meet new circumstances and conditions.

These are some of the American traditions. If loyalty to such traditions is loyalty to the United States, then the whole program of the National Education Association and of the teaching profession in this country has been, and will remain, a basic strength to our country and to her traditions.

The members of the National Education Association are proud that they have given effect to these traditions by combining their efforts to elevate their profession. They are proud of the free and voluntary nature of their association, and of its sense of responsibility to the children and youth of this country. They are proud of its ability to present the views of the teaching profession, on every appropriate occasion, to the lawgivers and statesmen who enact legislation which profoundly affects our schools.

We consider that an association which brings together citizens voluntarily for a lawful purpose, which encourages freedom of thought and expression, which promotes the education of all the people, and which leaves the door open to change and growth, is essentially in accordance with the American tradition. Conversely, of course, we believe that efforts to impede this process, to impair the efficiency of our voluntary organizations, to hamper and circumscribe their work, to cast doubts upon the propriety of free discussion, to narrow and impoverish the education of the people, or to deny the possibility of all modifications in our social arrangements, are profoundly un-American and hostile to the best traditions of our country.
SOME FACTS ABOUT THE NATIONAL EDUCATION ASSOCIATION

The remainder of this statement about the National Education Association of the United States will include condensed facts on the following:

1. Purpose, history, and records.
2. Membership.
3. Organization and officers.
4. Foundation grants to the agencies of the association.
5. Cooperation with other agencies.
6. International activities.
7. State and local responsibility for public education.
8. Public participation in the formation of public-school policy.

1. Purpose, history, and records

The National Education Association is an independent, voluntary, nongovernmental organization. In the briefest possible terms, the association may be said to support the following ideas: That educational opportunity is the right of every American child; that sound education is essential to the safety, happiness, and progress of the United States; that our decentralized school system is a valuable part of the American tradition; that the preservation of freedom in this Nation depends on a citizenry which has been educated to know, to appreciate, to understand, and to defend the American heritage.

The ramifications of this general point of view can be traced in detail in the platform and resolutions of the association, which are filed as exhibit A.

With such premises, the association is strongly opposed to all forms and philosophies of Government which deny freedom or ignore the worth of each individual human being.

The National Education Association was organized August 26, 1857, at Philadelphia, Pa. It was incorporated by the Congress of the United States on June 30, 1906.

The act of incorporation clearly states the purpose of the organization:

To elevate the character and advance the interests of the profession of teaching, and to promote the cause of education in the United States.

The act of incorporation also provides for the establishment of departments, and for the framework within which the members of the association administer and control its affairs.

The association as a matter of regular procedure makes available full reports of its meetings, reports, and financial transactions. These reports and proceedings are published annually and are widely distributed. Its reports to the Bureau of Internal Revenue, as a tax-exempt organization, are also a matter of public record.

2. Membership.

On May 31, 1954, the National Education Association had enrolled 561,708 members. This number amounts to approximately half of the total number of persons engaged in teaching in the public elementary and secondary schools.

The members of the National Education Association live and work in nearly every city, town, village, and hamlet in this country.
The bylaws, a copy of which is attached as exhibit B, state in detail the conditions and classes of membership in the association. They also provide that—

No person shall be admitted or continued in membership in the National Education Association, who advocates or who is a member of the Communist Party of the United States or of any organization that advocates changing the form of government of the United States by any means not provided for by the Constitution of the United States.

Most of the members of the National Education Association teach in the public elementary and secondary schools as employees of the Nation's 60,000 local school boards. The membership includes kindergarten teachers, teachers in the elementary and secondary schools, professors in colleges and universities, principals, deans, college presidents, school superintendents, and all other professional workers in education.

Within the association there are many different civic and professional opinions. Individually, the members of the National Education Association belong not only to all communities, all States, and all levels of educational effort, but also to all the major churches, civic bodies, and political parties. However, the National Education Association itself is not affiliated with any of the political, economic, or religious groups within the United States. The independent professional status of their association is greatly cherished and respected by its members.

3. Organization and officers

From June 27 to July 2, 1954, the National Education Association held its 92d annual convention in New York City. The representative assembly included 4,970 delegates. They represented all the State and Territorial affiliates, and most of the 5,000 affiliated local education associations. These delegates selected their own officers, evaluated reports, scrutinized their association's budget for the next year, studied their professional needs and problems, and developed the official policy of the association.

The affiliated units, both State and local, which send their delegates to this policy-forming agency are autonomous. The policies that guide the National Education Association are established by these representatives of responsible teacher-citizens from coast to coast.

The decisions of the representative assembly are binding. They are carried out by the executive committee and the board of directors. Every member of the executive committee must stand for reelection every 2 years. A member of the board of directors is elected for a 3-year term by his colleagues in his own State. The executive secretary and his staff work under the direct supervision of the executive committee and the board of directors. All elections are by secret ballot.

Roughly, two-thirds of all delegates are classroom teachers. Others hold administrative or other nonteaching educational positions. On the average, each delegate represents about 113 members of the organization. The NEA representative assembly is extremely well attended. Proposed resolutions and other policy-forming decisions are vigorously debated and frequently amended. The budget is reviewed, line by line, on the request of even a single delegate.
With the exception of certain former presidents of the association, who were elected prior to July 1, 1937, there are no permanent officers whatever in the National Education Association. The surviving life directors now number only 12.

A full account of the origin, purpose, functions, and programs of each committee, commission, division, department, or other unit of the National Education Association, is published annually in the NEA handbook. The NEA handbook, like the annual proceedings, is published and is available for public reference in all important libraries. A copy is filed with this report as exhibit C.

The charter and bylaws provide for the departments in the National Education Association. There are currently 29 of these departments. Their scope is defined in terms of subjects of instruction or of some other special aspect of educational service. Each department, except in a few routine respects, is autonomous. Most of the departments have their own dues-paying members. Every department has its own constitution and its own separate, elected, policymaking board, responsible to the members of that department.

In short, the National Education Association is a highly decentralized body of educational workers.

In 1950, the association adopted a code of principles on the extent to which association policy may be expressed by subordinate units. Relevant sections of this code are Nos. 6, 7, 8, and 15. They are quoted below:

No. 6. No NEA unit action becomes association policy without official action.—No action or pronouncement of any NEA unit is binding upon the NEA until it has been approved by the representative assembly or, during intervals between meetings of the representative assembly, by the executive committee.

No. 7. Freedom within general policy.—Units of the NEA are free, within their respective fields of work, to publish conclusions upon any matter where no general NEA policy has been established.

No. 8. Adherence to official NEA policies.—(a) Committees and commissions: When the NEA decides upon an official policy through action or resolution of the representative assembly, through its charter and bylaws, or through its platform, then every committee and commission must adhere to that policy as long as it is the policy of the association.

(b) Departments: Departments of the association, before adopting policies, should consider the question of possible differences with official NEA policy. All NEA units should seek at all times to present a united front.

No. 15. Authority to speak for the association or its units.—Only the National Education Association, through its own duly-authorized bodies or agents, can speak for the association on matters of policy. The same principle applies to the departments, commissions, and committees of the NEA; only the unit itself or its own duly-authorized officers or committees can speak for the unit. For this reason, no cooperative council, committee, or other agency in which the association or a unit of the association is a member is authorized to speak for or represent the National Education Association or any of its units unless written authorization covering the specific matter involved has been granted.

4. Foundation grants to agencies of the association

Approximately 90 percent of the National Education Association revenues come from the dues of its individual members. Most of the remaining 10 percent comes from such incidental sources as sale of publications, exhibits, and advertising. Grants from foundations have been even less important as a source of revenue for the association. In the rare instances where units of the association have been awarded such grants, the award and its purposes and results have been publicized.
By provision of the charter granted by Congress, the National Education Association must annually report to the United States Commissioner of Education, stating the property held by the corporation, and the disposition of the income thereof during the preceding year. In practice, a very much more complete report than this is filed with the Commissioner of Education, showing in detail the entire financial operation of the association, as well as of its committees, commissions, and departments.

A study has been made, covering the past 11 years, of all gifts, grants, and foundation awards to the association and its subordinate units. The value of such gifts, grants, and awards, in the 11 years, totals slightly over $2,500,000. Over $750,000 of this amount was given to the NEA by thousands of its own members in small, individual gifts to the war and peace fund and to the overseas fund. These funds were used to finance the special wartime services of the association and, after the war, to assist teachers in war devastated countries. The overseas fund continues at present to provide material assistance to teachers in the Republic of Korea.

The total grants by the Ford Foundation, the Rockefeller Foundation, and the Carnegie Foundation, during the 11-year period, have been less than $400,000. The association has received 13 times as much income from such minor sources as the sale of publications and advertising space in its magazine as it did from these foundations.

5. Cooperation with other agencies

The association has a standing policy of active cooperation with responsible civic and professional groups. It maintains joint committees, for example, with the American Legion, the American Medical Association, the National Congress of Parents and Teachers, and the Magazine Publishers Association. It invests a substantial part of its resources in endeavoring to discover what the American people expect of their schools, and in turn to interpret the needs of the schools to the American people.

For 8 years the National Education Association has cooperated with the United States Department of Justice in the annual Conference on Citizenship. The ninth such conference will be held in Washington on September 15–17, 1954.

In 1950, the NEA helped to organize the All-American Conference to Combat Communism. It has sent representatives to the meetings and participated in other ways. Other groups in this conference include the American Legion, Lions International, the Federal Council of Churches of Christ, and many other national organizations.

The above are merely examples of the many kinds of cooperation which the NEA, as a matter of policy, extends to other groups.

6. International activities

The National Education association has endeavored to support the policies of the United States Government regarding good will to people of other lands, and regarding the success of the United Nations and its specialized agencies. The association has cooperated with the United States Government, and with private agencies, in facilitating the exchange of teachers and students with friendly, foreign countries. It has promoted the establishment of a democratic international teachers organization.
Through the generosity of its individual members, the association has sent about one-half million dollars' worth of clothing, school supplies, food, book, and medical supplies, to overseas teachers who were victims of aggression and war devastation.

In its relations with current international issues, the association has been guided by the following policy which is quoted from the NEA platform and resolutions:

As a measure of defense against our most potent threat, our American schools must teach about communism and all forms of totalitarianism, including the practices and principles of the Soviet Union and the Communist Party in the United States. Teaching about communism does not mean advocacy of communism. Such advocacy should not be permitted in American schools.

The association is opposed by longstanding policy to the employment of members of the Communist Party in the schools of the United States.

The international governmental agency most closely allied to the work of the NEA is UNESCO. This organization was established after both Houses of Congress unanimously approved resolutions introduced by Senator Fulbright, the late Senator Taft, and by Senator (then Representative) Karl Mundt, in favor of international cooperation in this area.

7. State and local responsibility for public education

The control of public education is the responsibility of the States and localities. The policy of the National Education Association is unequivocal on this point. A glance at the NEA platform and resolutions will show this clearly.

As a professional association, the National Education Association does not possess the authority to instruct its members with respect to curriculum or content of teaching, or to issue any kind of directives on such matters. It has never issued such directives.

The policies, suggestions, and recommendations offered by the National Education Association derive their strength from the reasoning and evidence which lies back of them. They may be adopted or rejected by individual members of the profession, or by individual members of the association, or by local or State school systems as seems best to those who do have such responsibility.

8. Public participation in the formation of public school policy

The National Education Association is committed to the principle that the people of each local community, in each State, and throughout the Nation should participate actively in the formation of public school policy. The association has encouraged the growth of the National Congress of Parents and Teachers. It has cooperated actively with the National School Boards Association. It has supplied material to, and welcomed the creation of, the National Citizens Commission for the Public Schools. The association does not advocate that the teaching profession should have exclusive authority with respect to public school policy. It recognizes that public interest in these matters is great, and has a legitimate channel of expression.

The best safeguard for our free, democratic schools, is the kind of wide understanding and broad public participation which the association has consistently advocated.

The association is proud of the record it has maintained. Approval has been extended to its work by the highest military and civil lead-
ers of our country. For example: In 1950 President Truman wrote to the national conference which the NEA sponsors jointly with the Department of Justice:

You are making a magnificent contribution to the general welfare of the Nation. As long as patriotic citizens of every faith and creed, group and interest, gather in harmony and in unity to discuss the problems of the hour, we need have no fear of ideologies inimical to our precious democratic way of life.

And in 1952, President Eisenhower wrote:

The significant contribution of the National Education Association to the Nation's children and youth, and its excellent service to the teaching profession, is well known.

The members and officers of the National Education Association believe that their professional association merits recognition and commendation from these national leaders. They are proud to affirm that the teaching profession is devoted and will remain devoted to the development of freemen.

DISTRICT OF COLUMBIA,
City of Washington, ss:

William G. Carr, being duly sworn, deposes and says:

1. I am the executive secretary of the National Education Association of the United States and am familiar with the objects, purposes, and operations of the association.

2. I have prepared the foregoing statement under the direction and in cooperation with the executive committee of the association and declare that it is true and correct with respect to those matters stated upon personal knowledge; and that with respect to matters not stated upon personal knowledge, it is true to the best of my knowledge and belief.

WILLIAM G. CARR.

Sworn to before me this 9th day of August 1954.

[seal]  MARY E. WIBEL, Notary Public.

My commission expires November 1, 1955.

STAFF REPORT ON AMERICAN LABOR EDUCATION SERVICE, INC.

This memorandum is submitted for the purpose of setting forth some of the activities of American Labor Education Service, Inc., which bear on that part of the scope of this committee's investigation directed to the question of whether certain foundations "are using their resources * * * for political purposes, propaganda, or attempts to influence legislation" (H. Res. 217).

The American Labor Education Service, Inc. (hereinafter simply referred to as "ALES") is a tax-exempt foundation, listed on page 9 of the 1952 Supplement to the Cumulative List of Organizations (contributions to which are deductible) published by the Bureau of Internal Revenue of the United States Treasury Department. According to United States Citizens in World Affairs, a directory of nongovernmental organizations published by the Foreign Policy Association in 1953, ALES has 10 full-time staff members at headquarters and in the field. The same booklet reports that ALES is a mem-
ber of the International Federation of Workers' Educational Associations and that its objectives in international affairs are "to cooperate with the labor movement in intensifying education in the field of international affairs; to stimulate the interest of leaders in international affairs; and to encourage the study of such issues within the groups and unions."

A perusal of ALES annual reports and conference programs reveals that "intensifying education" is very closely related to, if not identical with, propaganda and political action. Moreover, the background of ALES staff members, together with the list of personnel participating in ALES conferences, suggest an interlocking directorate of individuals and groups who have been associated with militant socialism, and even, in some cases, with Communist fronts.

For instance, as set forth in exhibit 1 annexed hereto, Eleanor C. Anderson (also known as Mrs. Sherwood Anderson) listed in the ALES annual report for 1953 as its treasurer and a member of its board of directors, was cited 10 times in the Dies committee hearings and 20 times in the appendix IX of the House Committee on Un-American Activities; Max Lerner, its former treasurer and member of the board of directors, was cited 20 times by the Dies committee and 31 times in appendix IX; J. Raymond Walsh, a director and vice chairman up until at least 1948, was cited 22 times by the Un-American committee; and 12 times in appendix IX; Edward C. Lindeman, a director until his death in 1953, was cited 8 times by the Dies committee and 19 times in appendix IX.

The American Labor Education Service sponsors an Annual Washington's Birthday Workers' Education Conference. According to page 1 of an ALES invitation to one of these affairs, dated February 25-26, 1950, this general conference for leaders, teachers, and others professionally interested in workers' education "was started at Brookwood Labor College in 1924 under the auspices of Local 189 of the AFT" (American Federation of Teachers). (In 1928, the A. F. of L., with one dissenting vote, issued a ban against Brookwood Labor College as "an incubator of Communists." (See New York Times, Nov. 29, 1928, p. 12.)

Under letter of October 2, 1946, ALES invited its members to attend a conference in Milwaukee, stating, among other things:

"The topic for this year's discussion is a timely one 'How Can Worker's Education Advance Labor's Economic and Political Objectives'.

"At the dinner, we shall consider methods labor must use when collective bargaining does not work, especially methods of dealing with the Government." [Italics ours.]

The agenda for the 1947 ALES Midwest Workers' Education Conference (weekend of November 1-2 at Hotel Moraine, Highland Park, Ill.) notes the following discussion groups on the subject of Defining and Advancing Labor's Objectives in 1947-48: A. Collective Bargaining Under New Federal and State Legislation; B. Labor's Community Relations; C. How to Maintain Union Strength in the Face of Inflation and Depression; D. Political Action for Labor [Italics by ALES.]

Workshops on Education, according to the same agenda, included these topics: "F. Developing Radio Program; G. Utilization of the
Press; H. Political Action Techniques; J. Improving Farmer-Labor Relations.” [Italics by ALES.] These are the kind of workshops that would be appropriate for a gathering of politicians; they do not suggest the ordinary seminar.

An ALES letter, dated January 30, 1948, which announces the annual conference for that year, reads in part:

This year special emphasis will be placed on workshops for the discussion of practical problems of current interest to those working in the field. * * *

Six technical workshops are scheduled from 2 to 5 o'clock on Saturday afternoon, the topics for which will be: how to integrate educational work in the unions, the use of sociodrama in the training of shop stewards, specific curriculum and content needs for labor education activities, practical methods for developing labor’s interest as consumers, techniques for more effective farmer-labor cooperation, and advances recently made in the use of audiovisual aids. The first three workshops listed on the enclosed program will be open to all those engaged in any form of workers’ education. The second three will be open to those who carry on labor education in unions. * * *

On Sunday morning a panel of experts will discuss methods and materials which will implement labor’s foreign policy. * * *

Developing farmer-labor cooperation and “implementing labor’s foreign policy” might be characterized as education for labor in order to obtain political objectives, rather than education of labor.

An ALES letter, dated June 4, 1948, asking for financial aid from friends reads in part:

Two trends in American life make workers’ education an issue of paramount importance. One is the attempt to eliminate racial discrimination in trade unions and the other is the Taft-Hartley labor bill and what it symbolizes. * * *

Certainly, the passage of the Taft-Hartley bill indicates among other things, the need for an intensive “push” in labor education. The American Labor Education Service is equipped to furnish this “push,” equipped in every way save one, namely adequate budget. I am writing, therefore, to ALES friends, who realize the strategic role which organized labor must play in our democratic struggle, asking for continued financial help. * * *

“Pushing” against the Taft-Hartley bill—and soliciting funds for such a “push”—would seem to be activities related to lobbying and, therefore, not tax exempt.

The tentative program of the ALES Midwest Workers’ Education Conference, November 13–14, 1948, in Milwaukee, Wis., noted that the keynote session would be “The union's responsibility in forward- ing democracy in the world scene today.” Workshops dealt with the problem of “How can workers’ education stimulate democratic participation * * * through legislative activity, through winning community understanding and more effective participation in community organization, through political activity and farmer-labor cooperation.” The dinner meeting on Saturday evening was concerned with the “Development of program of the Economic Cooperation Administration and labor's responsibility for supporting it.”

An ALES conference at the New School for Social Research, held February 25–26, 1950, discussed The Contribution of Labor in Rebuilding Democratic Society and the Role of Workers’ Education in Political Action. (See p. 2 of ALES Agenda that date.) It was noted that a “panel discussion will cover the urgency of participation in political action by labor, and the reevaluation of education in relation to political action.”

It seems clear that a significant portion of the ALES program is devoted to planning and promoting political action. It appears to be especially active in recruiting mass labor support for a private
brand of interventionist foreign policy, the U. N. and its various agencies, foreign aid, and the concept of worldwide social and economic security. Some of the money for "discussion programs in international affairs for labor-union representatives" has been granted to ALES by a subsidiary of the Ford Foundation, the Fund for Adult Education. On page 34 of the fund's report of its grants from January 1, 1952, to June 30, 1953, it is noted that ALES had been granted a total of $190,000 of which $95,000 was still unpaid.

It is admittedly difficult to draw the line between discussion programs which are truly "educational" and those which are designed to proselytize for a particular viewpoint. But it would be safe to say that no one can accuse the ALES of leaning over backward to present both sides of the "great debate" on foreign policy.

Here is an extract from the 1953 Annual Report of the ALES (p. 9) which described an ALES–CIO World Affairs Institute, a 2-week affair at Haven Hill Lodge, north of Detroit, Mich.:

The study program will be developed around these topics: World Population and Food; the U. N. and Its Specialized Agencies; the Economics of Foreign Trade; Comparative Labor Movements; the Role of the CIO in World Affairs; How Foreign Policy Is Made. Throughout the course there will be consideration of how attitudes are formed and of educational methods for local work. Among those who will serve as faculty and discussion leaders will be: Isidor Lubin, former United States Representative on the Economic and Social Council of the U. N.; Victor Reuther, assistant to Walter Reuther, president of the CIO; James Calderwood, associate professor of economics at Ohio State University (now on leave); Stanley H. Ruttenberg, CIO director of education and research; and Paul Nitze, former Chief of the Policy Planning Board in the State Department. These will be supplemented by staff and officials from the United States Labor Department, the ILO, and UNESCO; delegates from foreign countries, including Sweden, Germany, Haiti, Tunisia, the Philippines, and New Zealand; trade union leaders with experience in Latin America, Europe, the Middle East, and the Far East.

ALES also runs a Philadelphia center for leadership training in world affairs. On page 6 of the 1953 annual report it is noted:

A variety of techniques are used: discussion groups, classes, institutes, conferences, film discussion, planning sessions, board and committee meetings, membership meetings. It is true here, as in all parts of the ALES international project, that the study of world affairs has covered many topics including, for example, foreign trade, economic aid, labor movements abroad, and world economic conditions.

During the period of the Philadelphia project, the study groups on the U. N. and the U. N. trips have increased in number and have proved effective in broadening international outlook and sense of responsibility. Preparations for the trips include always a review of the general purposes of the U. N., the issues under discussion, the foreign policy of this country and its position on current U. N. issues, and a briefing or film about the nation whose delegates the group is to meet. The work of special agencies always is emphasized, particularly the Social and Economic Council, the Trusteeship Council, and UNICEF. There always is keen interest in underdeveloped countries.

ALES sponsors a number of short, regional conferences throughout the year. In 1952 it organized a Second Annual North Dakota Conference of Farmers and Workers. Delegates from unions, farm organizations, and cooperatives discussed goals and methods of economic action by organized farmers and organized workers (p. 7, 1953 annual report).
According to the same annual report (p.7):

Discussion moved from everyday problems of farmers and workers—the effects of price supports, the need for organization, opportunities for joint farmer-labor action—to such questions as the needs of underdeveloped countries, the importance of foreign trade, and the relationships between foreign aid and military purposes.

Other excerpts from the 1953 annual report which indicate the nature and scope of the ALES activity include these:

Since the curriculum and study programs relate to the many-sided interests of adult workers with special reference to their economic and social outlook, ALES also has cooperative relationships with many types of educational, governmental, and community agencies (p. 14).

In its work with organizations outside the labor movement, ALES serves as a bridge between labor education organizations and many community and educational bodies (p. 14).

It goes without saying that the ALES international project has worked in many ways with community and governmental organizations chiefly concerned with world affairs and foreign policy (p. 14).

Cooperative relationships of great educational value to the ALES program have been developed with members of the Secretariat and the delegations at the United Nations (p.14).

On the local level, ALES works constantly with such organizations as the American Association for the United Nations * * * (p. 14).

* * * the entire ALES program may be described as leadership training, since it is planned for those who carry responsibilities within the labor movement—union officers, committee chairmen, shop stewards, delegates, and others (p. 14).

As a national agency giving service to a great variety of groups concerned with labor education in this country, it has become the accepted function of ALES to carry extensive responsibilities for interpreting labor education to friends, critics, and the uninformed (p. 13). [Italics ours.]

Cooperation also is extended to student bodies and to social and community agencies. Board and staff members of ALES serve on the committees of these organizations * * * (p.13).

In recent years, ALES has given special attention to areas of work where the labor movement believes that, through education, responsible action might be strengthened (p. 1). [Italics ours.]

Our work with foreign trade unionists has included helping to plan programs; to make contacts; and to utilize the skills of unionists from 33 * * * widely scattered countries * * *. Among the visitors have been experienced labor educators, teachers, in labor schools, officers of trade unions, and government department and adult education personnel concerned in labor education (p. 1).

In carrying out its exchange activities, ALES cooperates with various organizations, among them the Institute of International Education, UNESCO, the National Social Welfare Assembly * * * (p. 1).

ALES * * * itself sponsors foreign trade union visitors * * * ALES extends opportunities to American workers to study abroad * * * (p. 2).

The ALES director and certain members of the board now serve as members of the National Selection Committee on Workers' and Adult Education; of the American Selection Committee for Ruskin College Scholarships (both of the Institute of International Education); and of the Advisory Selection Committee for Workers' Education of the Conference Board of the Associated Research Council's Committee on International Exchange of Persons (p. 2).

With every passing year it becomes more urgent for white-collar workers to face their economic realities and to establish their rightful place in the labor movement * * * . This is the challenge that White Collar Workshops sets out to meet through its unique resident labor school planned to serve these workers * * * (p. 11).

White Collar Workshops this year planned a shorter school—1 week—where intensive work could be carried on, focused on a common concern. The emphasis throughout the week was on how white-collar workers themselves, as citizens and trade unionists, can make themselves felt in the local and national scene (p. 12).

The study program included an analysis of the factors affecting the business cycle, with special reference to the current situation; the economics of collective bargaining; the legislative and political scene in Washington; with special em-
phasis on legislative and community action carried on by organized labor; and
discussions of the significance and the social attitudes of white-collar workers.
There was also a series of workshops, highlighted by a stimulating panel on
organizing and strengthening white-collar unions in which union staff members,
participated (p. 12). [Italics ours.]

By its own admission, therefore, ALES is in the center of a network
of educational groups, many of whose activities border on propaganda
and political action. ALES is in a position to make its impact felt on
a wide front by virtue of its staffing of interlocking directorates. It
feels that a legitimate function is to convince white-collar workers that
they should join in economic and political action with unionists. It
outlines the legislative terrain in Washington and trains troops for the
battle.

It would appear that ALES relates education to action favored by
the labor movement. It interprets the meaning of education to the
general public. It staffs the committees of student groups and social
agencies. It provides the funds for a two-way transmission belt that
holds American trade unionists to Socialist Europe and brings
Socialist leaders here. It serves as a bridge between many govern-
mental agencies and community groups interested in world affairs. It
trains the leadership of the labor movement, and that leadership, of
course, has a great responsibility for planning and implementing
political action.

In 1938, ALES published for sale a 45-page pamphlet entitled
"Annotated List of Pamphlet Material for Workers Classes." While
this pamphlet is now 16 years old, it should be noted that it contains a
foreword by Eleanor G. Coit, the then and now director of ALES. In
addition, the sections on The Labor Movement, Labor Economics,
English and On Methods and Materials were prepared by Orlie Pell,
who is still listed on the ALES staff as the publications and research
associate. In reading ALES' own description of the contents of some
of the books which it recommends for use in workers' classes and in
also considering the organizations which sponsored the publication of
such books, one seriously questions how education is served and rather
asks oneself why tax exempt moneys should be used to further class
hatred, social unrest, and economic warfare. One of the books recom-
mended is entitled "Toward a Farmer-Labor Party" written by Harry
W. Laidler, and published by the League for Industrial Democracy,
of which he is the executive director. As stated by ALES, this book
contains:

A brief analysis of the problems confronting an Independent Farmer-Labor
Party in America, and an account of past and present developments in that di-
rection. Labor party movements in Minnesota, Wisconsin, New Year, Illinois,
Detroit, Pennsylvania, California, and Oregon included.

On the question of regulating labor unions, the recommended book
is Should Labor Unions be Regulated? by Hubert Herring and Harold
O. Hatcher, published by the Council for Social Action. Arguments
for and against compulsory incorporation of trade unions are con-
tained in this volume "with conclusion in favor of the negative" as
described by ALES.

Another book entitled "Shall Strikes Be Outlawed?" by Joel Seid-
man, and published by the League for Industrial Democracy, deals
with "discussion of compulsory arbitration of labor disputes, its dan-
gers to workers in countries where labor is politically weak, and experiments in compulsory arbitration here and abroad."

Another book published by the League for Industrial Democracy and written by Carl Kaushenbush is entitled "Fordism", and is recommended by ALES as being "useful for workers' classes in showing concretely some of the methods used to combat organization among workers, and some of the influences a large company can have on the surrounding community."

The ALES pamphlet also contains a bibliography of labor plays, some of which deserve special mention. For instance, two plays sponsored by the Highlander Folk School (referred to in appendix IX as a revolutionary theater organization) are Gumbo where racial and antilunion discrimination is depicted and Labor Spy which "shows methods used by antilunion detective agency to 'hook' an innocent worker into being a labor spy."

Many plays are recommended which were sponsored by the Brookwood Labor College, on which comment has already been made. For instance, there is the play Step which is described as a "mass recitation on psychology of unemployed", and Uncle Sam Wants You, the message of which is "a reminder of what recruiting posters really ask for. Excellent for trained speech chorus."

Under the sponsorship of Southern Summer School, we find other labor plays depicting "standing in line before a closed bank" in Bank Run, and "plight of unemployed and hungry southern millworkers in Job-Huntin'," and "Southern mill strikers around a fire on a picket line at night. Effective use of real strike songs," in On The Picket Line.

Then there are found additional plays about labor and organization as Black Pit by Albert Maltz (cited by House of Representatives on October 24, 1947, for contempt of Congress) which ALES describes as follows:

A miner, framed because of union activity, after coming out of jail, attempts to find work but is blacklisted everywhere because of union record. Is driven to accept position as stool pigeon. Requires convincing use of Slavic dialect and intelligent direction.

A play which has been particularly marked "recommended" by ALES is Rehearsal by Albert Maltz, which revolves around the following situation:

During a rehearsal of a stirring mass chant on the Detroit auto strike, one actress finally succeeds in playing the part with almost too much realism. Excellent drama; one rich emotional part.

Also winning the highly recommended award is Waiting for Lefty by Clifford Odets, described as: "One of the best plays for labor and leftwing groups. Realistic treatment of strikes, rackets, and stool pigeons. Requires intelligent directing."

Also recommended is The Maker of Swords by Sterling Olmsted, described as follows:

Fantasy laid in imaginary country. A maker of swords has become fabulously rich through selling his product and then stirring up international hatred to the point of war. Caught and convicted of his crimes, he is condemned to die but cleverly plants the seeds of mistrust in the hearts of his keepers, two brother princes, who in their turn declare war against each other, and each secretly orders more swords from the swordmaker. Play ends on ironic note, with no solution offered.
Classified under the category "fantasy and satire" is a play, Blocks, by Mollie Day Thatcher, and sponsored by Vassar Experimental Theater, which is:

A powerful satire in which Green Worker and Tan Worker symbolize all the masses forced unwillingly to war, while the Green Man and the Tan Man symbolize all the leaders, generals, and capitalists making war without engaging in it.

Finally, ALES refers to two plays from Soviet Russia, one being Bread by Vladimir Kirshom, and described as "the best known and most significant Soviet play of the gigantic effort to change the life and economic organization of the Russian peasantry."

In 1942, ALES published and distributed a pamphlet entitled "Songs Useful for Workers' Groups," which is hoped "would be helpful to groups of workers who want to sing together."

Among the song collections listed in said pamphlet was the following:

"87 Socialist and Labor Songs," including a number of revolutionary songs translated from the Russian, German, Finnish, Italian, and so on. Also, union and organizing songs, IWW and strike songs. In most cases the text is set to old familiar melodies, but there is also some stirring original music by Hanns Eisler, Herman Epstein, Liebich, and others. The songs are well adapted for mass singing in unison, with moderately easy accompaniments.

Certainly the question arises whether a tax-exempt fund should be used to further the sale and use of a rebel song book which contains among other things organizing songs, IWW and strike songs, many of which are set to the "stirring original music by Hanns Eisler."

It was pointed out by the two ALES participants that labor education is no longer a frill but "well on the way to being considered an integral part of the process of building a strong, effective labor movement." The reasons why labor education is changing from a utilitarian approach, with emphasis on techniques, to the kind of education appropriate for successful political action were clearly pointed out:

As our lives in the 20th century become more complex and interdependent, unions are finding themselves concerned with a wider range of problems. Less and less is collective bargaining with the employer a fully adequate answer to their needs; price levels that affect their standard of living, the housing conditions under which they live, the effects of the cold war, the atmosphere of loyalty oaths and suspicion—these problems can be met only with action on the community, national and international scenes (p. 2). (Italics ours.) Consequently labor education has increased the scope of its responsibility. The study program for example, of the 1952 union summer institutes held in all parts of the country, includes among their areas of work such fields as international affairs (including point 4), wage stabilization, community services, human relations, political action, public relations, and civic rights * * * (p. 2).

One of the outstanding developments of recent years has been the increased involvement in international affairs on the part of labor leaders (p. 2).
ALES staff members would seem to be preoccupied with the absolute necessity of promoting worldwide labor action.

As we look to the future, we see, perhaps, an intensification of the trend already apparent. A sober, responsible labor movement, aware of its increasing responsibilities in a world at crisis, turning to its educational arm for help in meeting its responsibilities; seeking to understand the problems faced on the community, the national, and above all, the international levels. Here may lie the direction of growth during the coming years ** so that the labor movement may take the lead in the development of insight and action that will be worldwide in scope (p. 3).

Irvine L. H. Kerrison, chairman, labor program, Institute of Management and Labor Relations, Rutgers University, took part in the same symposium. Here is his concept of “successful” labor education at the university level, as set forth in the reprint circulated by ALES:

Institutions of higher learning now achieving the greatest success in workers' education ** believe that effective workers' education helps the worker become a better individual, a contributing member of his union group, and a participating citizen in his community. They base all their work with unions on three operating principles:

1. Every activity planned jointly by the union and the university.
2. Every activity designed to deal with individual problems of union groups requesting service.
3. Close cooperation with the labor movement maintained through union advisory committee members and regular consultation with National, regional, and State union education directors **

University officials, in these troubled times, are fond of extolling academic freedom and the right of scholars to teach the facts without fear or favor, pressure or censorship. Yet, in the field of labor education, it would seem that union leaders exercise the right of veto and the privilege of constant consultation. Mr. Kerrison, the author of this concept of controlled education, then asserts that:

** organized labor is one of the few bulwarks, and perhaps strongest of the few, against a violent dropping of the Iron Curtain on modern civilization (pp. 4-5).

Larry Rogin, vice-chairman and a director of ALES, and a director of the education department, Textile Workers Union of America, also participated at the symposium and emphasized the point that the purpose of labor “education” is to make a good union man:

To the extent that the educational needs and desires of workers are more widely met, the workers will become more effective trade unionists and better citizens of their country and of the world (p. 6).

Mr. Rogin raises another question which may be central to labor education:

Finally, in these days of Taft-Hartley and McCarthy and Zell, will the educator stand up for the right to deal with controversial subjects honestly and without fear? From how many subjects will he beg off, saying, “This is a job for the union?” (p. 6).

Another project of the ALES is the holding of conferences which promote Farmer-Labor Understanding—And Action (the title of a reprint from the Journal of Educational Sociology, February, 1952, which is currently circulated by ALES). The author noted that some of the following were points agreed upon by a joint committee at the 1951 Northwest Farmers' and Workers' Education Conference:

The official publications of people's organizations such as labor unions, cooperatives, and farmer organizations are important instruments for translating the common agreements of educational conferences into better rank-and-file under-
In recent years nearly all labor papers have protected the working farm families from legislative attack (by powerful exploiting interests) on their price-support program by showing urban consumers that working farmers get a very small percentage of the dollar paid by the consumer for food and clothing (p. 5).

Cooperative publications and Farmers Union papers have carried the story to farmers about the very small percentage of the price of farm machinery and supplies which goes to the worker in the form of wages. These same publications have informed farmers of the basic threat, not only to organized labor but to organized farmers, in such legislation as the Taft-Hartley Act (p. 5).

As an example of substantial "interlock" it might be pointed out that the vice chairman of the American Labor Education Service, Mark Starr, has also been a chairman of the board of the League for Industrial Democracy. Further, he is the director of education for the ILGWU and a member of the United States Advisory Commission on Educational Exchange. He has been appointed to responsible policy positions in the field of education: as labor consultant to the Office of War Administration; as a member of the American delegation to establish UNESCO; as a labor education consultant to American military government in Japan; as a member of President Truman's Commission on Higher Education during the period 1945–47.

Mr. Starr is also listed as chairman of the board of the Public Affairs Committee which publishes a great many pamphlets on significant topics of the day. In view of his prominence in the field of education and his position as a key link in the interlocking directorate of certain groups whose activities border on propaganda and political action, it is perhaps desirable to examine his philosophy of education in some detail. Following are excerpts from Labor Looks at Education by Mark Starr, published by the League for Industrial Democracy in 1947:

Later they (the poor) read Marx and Veblen, to name only two of the most effective intellectual commandos who utilized their own college training as bombs to blast away the intellectual girders supporting the modern economic system. Inevitably such individuals are rejected as heretics because the ideas which they espouse do not support things as they are (p. 4).

This passage is characteristic of Mark Starr and his associates in ALES who regard education as a weapon which should be used to destroy the foundations of the present social order. Certainly he had in mind the use of education as a weapon in what Socialists love to refer to as the class struggle when he wrote:

The labor movement cannot rest content until there are 30 million people organized in the trade unions of the United States. This means that workers' education should keep in mind the conversion of the community to labor's point of view.

(See Mark Starr's article entitled "Worker's Education, 1900–1940," published in May-June 1940 issue of the Workmen's Circle Call).

Note in the following passage Mr. Starr's contempt for the dispassionate search after truth. To him, education is propaganda—there is no distinction.

Some educators endeavor to satisfy their consciences by suggesting that education with an aim is propaganda and that true education deals only in immutable, unalterable, fundamental truths, as if abstract ideals could be isolated from their daily changing content. After all, there is only a relative distinction between education and propaganda. Your education is always propaganda to the other fellow (p. 5).

A new philosophy of education is striving to be born—a planned community to replace the jerry-built dwellings produced by the haphazard efforts of the past (p. 10).
The "planned community" of thought is the lever which can help build the cooperative commonwealth whose highest ideal is "group-think." The "haphazard, jerry-built dwellings of the past" housed Plato, Aristotle, Thomas Aquinas, Milton, Dante, Chaucer, Tolstoy, Newton, Darwin, Emerson, Edison, Locke, Hume, Kent, Luther, and a handful of others whose contributions to civilization should not be overlooked in the new passion for the intellectual collective.

Mr. Starr, whose own projects have been heavily subsidized by the Ford Foundation's fund for adult education, has a few words to say about foundations and their work. He leaves no doubt that the business of education is to change society.

One factor in influencing the relation of colleges and universities to labor and to the type of education which would facilitate necessary social changes by consent, is the role of the foundations. Educational activity in the United States cannot be fully studied without evaluating the effects of the foundations thereon (p. 11).

But colleges too often have to go cap in hand and exploit personal contacts with the uncrowned kings and agents of philanthropy * * *. There are, of course, some foundations which dehouse effectively the millions accumulated by monopolies and dynastic fortunes; but if one could choose a way for the long-time support of education, it would be done by community intelligence rather than the caprice of the big shots of big business who wish to perpetuate their names in a spectacular fashion, a process which may not in all cases coincide with the real educational activity of the college (p. 12).

Mr. Starr constantly reverts to the premise of "progressive" education—that the school should build a new social order.

Our frame of reference needs revision. Can the school help us to meet the changed world? Perverted and misused in the past, education can be a cure for many social ills and labor can help to make it so. Labor's consistent support of education in the past and its role as the largest organized unit of parents gives it the right to speak in constructive criticism (p. 14).

Mr. Starr defines "workers' education" in a way which suggests that it is almost equivalent to "political action."

At its best, workers' education serves simultaneously as a discipline, a directive, and a dynamic force to labor organizations. It emphasizes the study of group problems to the end of group action for their solution (p. 22).

The CIO department of education and research undertakes extensive activity in public relations among religious, educational, and civic groups in addition to education for its own membership. Its activity heads up politically into the political action committee * * * over 500 labor papers, and other publications ranging from first readers, colored comics, striking posters, and lively leaflets to ponderous tomes of union history and research use the printed word as an agency for education and propaganda (p. 23).

Mr. Starr urges that the public schools be used to sell the concept of the closed shop:

Permit me to make some specific suggestions on what schools and textbooks should say about trade unionism:

(1) They should give an explanation of the "closed shop" and the "union shop" to show that they are no more tyrannical or unfair than our system of public taxation under which the individual cannot escape his contribution to the public revenues from which he benefits * * * (p. 37).

(2) The school and the textbook should be at pains to describe the actual functions of trade unions in improving the wages, hours, working conditions * * *
Teachers in high schools and elsewhere should be able to see behind the headlines of newspapers which report strikes on page 1 and their settlement on page 20, if at all. They should be able to understand the "lusty immaturity" of unions originating in the New Deal decade, which had to fight bitterly to keep alive in previous years * * * (p. 38).

(3) Textbooks—should also let the facts of experience speak concerning the results of technological unemployment—and also the effects of the centralization of power in the hands of the banks and the big corporations, with the resulting dangers of monopoly prices as well as unemployment.

(4) The textbooks and the school should also examine carefully the role played by the middleman and the speculator, who often escape the censure which falls on high wages as an alleged cause of high prices (p. 39).

Finally, it would appear that political science and civics classes are to indoctrinate students with the notion that labor unions and their leaders have a monopoly on patriotism, while Congress, business, and everybody else are selfish.

Teachers should currently help their students to see the real factors behind the industrial unrest and strikes of 1946, namely, the strain of overwork and the accumulated grievances unexpressed, for patriotic reasons, in wartime; the disappointment of the unions because Congress failed to act in * * * securing full employment; and the indignation against * * * huge wartime profits (pp. 41-42).

Another important member of the ALES board of directors was Hilda W. Smith, who, like Starr, has played an important role in labor movements. She has been referred to on pages 565 and 703 of the Dies committee report as an endorser of Brookwood Labor College, which was finally disavowed by the A. F. of L. because of its communist activities. Hilda Smith also served as a member of the advisory committee of Commonwealth College of Mena, Ark. (cited in Attorney General's list) which was finally closed by the State legislature because of its questionable practices. She is also listed in volume 10, page 6404, of the House committee report on Un-American activities, and a member of American League for Peace and Democracy, which was branded as a Communist-front organization by the Government.

We respectfully submit that the activities of ALES, spearheaded as they have been by such dynamic persons as Mark Starr and Hilda W. Smith, raise a serious question whether they have not gone far beyond the ordinary field of education, and is actually engaged in political propaganda.

Submitted herewith, with the request that they be deemed part of the record, are the following documents issued or published by ALES:

2. Letter to members, October 2, 1946.
8. Annotated list of pamphlet material for workers' classes.
9. Pamphlet entitled "Songs Useful for Workers' Groups."

College" 619, 621
Mr. Matthew: * * * here is the name of James H. McGill, who contributed $2,000. Mr. McGill, according to Sidney Hillman's list presented to the campaign expenditures committee, is a manufacturer in Valparaiso, Ind. In the early postwar days of World War I, two men who are now members of the National Citizens Political Action Committee, one of whom is McGill, signed a contract with the Russian Red Cross, stating in the contract that it was done because of prejudice against the Communist regime in Russia.

Mr. McGill was one of the signers of this particular contract. His organization, the American subsidiary, began to raise funds for the relief of the destitute in Russia, but according to the record, at the time, the organization immediately degenerated into a political propaganda machine, and Mr. McGill and one other who will be named tomorrow, who signed that contract, were associated with an organization which put out the statement: 'We will milk the American bourgeoisie in order to destroy it.' That is in the record of some 25 years ago.

Mr. Thomas. How much did he contribute?

Mr. Matthews: $2,000.

Mr. Thomas: Anyone else.

Mr. Matthews. J. Raymond Walsh has quite a Communist record. He contributed $4,750.

Mr. Stripling. Mr. Chairman would it be agreeable to make this list of contributors a part of the record?

Mr. Costello. Yes; I think that should be in the record.

Congress of Industrial Organizations Political Action Committee Individual contributions account—Loans, July 23–Sept. 9, 1944.

J. Raymond Walsh, New York, N. Y., $4,750.
STATEMENT OF J. B. MATTHEWS, RESEARCH DIRECTOR, SPECIAL COMMITTEE TO INVESTIGATE UN-AMERICAN ACTIVITIES

"Mr. MATTHEWS * * * I offer a list of the 25 organizations (which the Attorney General has characterized as subversive and Communist), followed by a list of the 82 individuals, who have been affiliated with them * * * J. Raymond Walsh, 2."

TESTIMONY OF WALTER S. STEELE, JULY 21, 1947

"A World Armenian Congress was held in New York City in May 1947. In attendance were delegates representing 3½ million Armenians in 26 countries. The Congress condemned the Truman doctrines in foreign affairs. Speakers included S. Edwin Smith of the National Council of American-Soviet Friendship, John Roy Carlson, and J. Raymond Walsh of Friends of Democracy."

"Frank Kingston and Jo Davidson were selected cochairmen of Progressive Citizens of America, each having previously served as cochairman of two of the major merging groups. Both have extensive front backgrounds. Herman Shumlin, who has a record-breaking background of front activities, was elected secretary. Michael M. Nisselson, with some 12 Red-front affiliations, was chosen treasurer. Executive vice chairmen are C. B. Baldwin and Hannah Dorner. Both have participated in Red-front activities in the past. Vice chairmen are * * * J. Raymond Walsh"
"As an example of the manner in which Red fronters operate through Progressive Citizens of America, I call attention to the 22 simultaneous public protest meetings held in New York City earlier this year in an attempt to stop antilabor legislation. The meetings were under the auspices of the movement. Speakers at these meetings included Norman Corwin, Dorothy Parker, Olin Downes, William S. Galmor, Elinor S. Gimbel, Frank Kingdon, Canada Lee, Lillian Hellman, Dwight Bradley, Dean Dixon, Henry Pratt Fairchild, Goodwin Watson, Alfred Stern, and J. Raymond Walsh”

REPORT ON SOUTHERN CONFERENCE FOR HUMAN WELFARE (JUNE 12, 1947)

"J. Raymond Walsh, a frank apologist for the Communist line, according to Prof. John H. Childs of Columbia University, speaking for the Southern Conference in Washington, flayed President Truman’s foreign policy in Greece and Turkey"  
J. Raymond Walsh is shown being affiliated with statement defending Communist Party, December 14, 1939; American Committee for Protection of Foreign Born; National Federation for Civil Liberties; and American Committee for Soviet Relations

"The Win-the-Peace Conference (Congress) was expanded into the movement behind the candidacy of Henry A. Wallace for President, which crystallized into the Progressive Citizens of America and the Progressive Party.  
"From its inception this movement had the active approval and support of Moscow and the Communist Party of the United States. Among the sponsors of the New York Cultural Conference were the following Wallace supporters * * * J. Raymond Walsh”

"A tabulation of the numerous Communist-front affiliations of the sponsors of the Scientific and Cultural Conference for World Peace shows the following interesting figures: 49 have been affiliated with from 11 to 20 Communist-front organizations, and include * * * J. Raymond Walsh”

EDUARD C. LINDEMAN

DIES COMMITTEE

Friends of the Soviet Union in the United States (national committee) .................................. 376

Mr. Matthews. * * * Mr. Goff, can you identify the members of the managing board and of the editorial board listed in Champion as members of the Young Communist League? .......... 5605-5606

Mr. Goff. I can identify the managing board. I can identify Francis Franklin. As to the editorial board, right offhand, I cannot say, but I can identify, of the contributing group, Edward Strong, James Wechsler, Angelo Herndon, Abbot Simon, Al Levitt, and there may be some others. On the advisory committee, they have some other people who are not Communists.

Mr. Matthews. The advisory editors are also listed there, and that is a pretty fair indication—

The Chairman (interposing). Read the list of advisory editors.

Mr. Thomas. You mentioned a man named Lindeman. What are his initials?

Mr. Matthews. Eduard C. Lindeman.

Mr. Thomas. Before you get away from that in the record, I think we should know something about Mr. Lindeman, or what his activities are. Do you mind bringing that up now, or will you do that a little later?

The Chairman. Does the witness know?

Mr. Thomas. I am asking Mr. Matthews.

Mr. Matthews. I am not testifying now.

Mr. Thomas. Will you bring that up later?

Mr. Matthews. Subsequently Mr. Lindeman will be identified as on an important committee of the national organization.

(Listed as E. C. Lindeman)

Brookwood College (endorser) ................................................................. 565, 703

(∗ ∗ ∗ In this exhibit, I also call the attention of the committee to the record contained therein of Dr. Harold Rugge, a member of the advisory committee of the Progressive Education Association, as shown in their publication which is in evidence.

"Other members of the organization, as shown in that magazine are Mr. Arthur E. Morgan, Mr. Alvin Johnson, Mr. E. C. Lindeman, and Mr. Carleton Washburne, all of whom are listed in the Red Network as radical professors. ∗ ∗ ∗")

STATEMENT FILED IN BEHALF OF THE FOREIGN POLICY ASSOCIATION, INC.

Part II of the report entitled summary of activities of the Carnegie Corporation, Carnegie Endowment, and Rockefeller Foundation contains certain criticisms of the Foreign Policy Association. The present statement is made in answer to these criticisms. We ask that it be filed as part of the official records of the committee.

These criticisms or allegations are in some cases explicitly stated, in others implied. They can be summarized as follows: (1) that under the guise of education it has engaged in propaganda; (2) that this propaganda takes the form of advocating an internationalist viewpoint, without attention to the "nationalist" position; (3) that its propaganda further favors a trend toward socialism and left wing viewpoints; (4) that it has employed subversive individuals; and (5) that other individuals connected with the association, although not actually subversive, have lacked objectivity and hold views which are questionable.
I

Before answering these criticisms in detail we present the following general information concerning the association:

The Foreign Policy Association was founded in 1918 by a group of distinguished citizens who were deeply concerned over World War I and the need to create a peaceful world. First known as the League of Free Nations Association, the name was changed in 1921 to the Foreign Policy Association, and the organization was incorporated under the laws of the State of New York in 1928. The FPA is a private membership organization financed by membership dues, contributions from individuals and corporations, grants from foundations, and proceeds from the sale of its literature and other services. The purpose of the association, as set forth in its bylaws, is as follows:

The object of the Foreign Policy Association, Inc., is to promote community organizations for world affairs education, to provide assistance to such local organizations through a national service center and regional offices, and to advance public understanding of foreign policy problems through national programs and publications of a nonpartisan character based upon the principles of freedom, justice, and democracy.

The FPA publishes material on current issues in world affairs attempting always to present a balanced view. The masthead of the foreign policy bulletin carries the statement:

The Foreign Policy Association contributes to public understanding by presenting a cross-section of views on world affairs. The association as an organization takes no position on international issues. Any opinions expressed in its publications are those of the authors.

The association has a speaker's bureau to aid organizations interested in programs on world affairs. It has a pamphlet service, a film program service, and other services of value to local community educational groups. It maintains at the present time four regional offices to encourage the formation of additional community committees or councils concerned with American foreign policy and to provide additional service to existing group.

The first president was the Honorable James G. McDonald, subsequently the first United States Ambassador to Israel. Raymond Leslie Buell served as chief officer from 1933 to 1939, Maj. Gen. Frank R. McCoy from 1939 to 1946, and Brooks Emery from 1947 to 1952. The present head is John W. Nason, formerly president of Swarthmore College. The names of the present board of directors are listed in appendix A.

II

This statement is submitted as a reply to the criticisms or misinterpretations which appear in the report.

(1) *That under the guise of education the association has engaged in propaganda*

The distinction between propaganda and education is neither simple nor clear-cut. Both words are loosely used in modern parlance.

As used in the income tax law, propaganda means the promulgation of doctrines or views for the purpose of influencing legislation. Thus,
section 101 (6) of the Internal Revenue Code enumerates organizations entitled to tax exemption as follows:

(6) Corporations, and any community chest, fund, or foundations, organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation.

That this is the correct construction of the section is confirmed by the relevant provision of Income Tax Regulations 118, namely section 39.101 (6)-1 (3) which states, as one of the tests which an organization seeking tax exemption must meet, the following:

(3) It must not by any substantial part of its activities attempt to influence legislation by propaganda or otherwise.

There is no suggestion in the report that the Foreign Policy Association has ever attempted to influence legislation.

The report, however, is based on its own interpretation of propaganda, namely, that given by Mr. Dodd in his preliminary report as contained in the transcript for May 10, page 37:

Propaganda—action having as its purpose the spread of a particular doctrine or a specifically identifiable system of principles and we noted that in use this word has come to infer half-truths, incomplete truths, as well as techniques of a covert nature.

This definition breaks down into two parts. The first clause is so general and inclusive as to become meaningless as a definition. According to it any intelligible set of convictions once stated becomes an act of propaganda. This is as true of teaching in support of democracy, constitutional government, free enterprise, private property, Christian morality, scientific research, technological advances, and public health as it is of international understanding and cooperation. Schools, colleges, health societies, and civic organizations of many kinds become automatically vehicles of propaganda according to the interpretation used in the present report, and the absurdity of so wide an extension of the term becomes at once obvious.

We submit that most, if not all, of our educational institutions on some issues advocate a cause or take a point of view, and that the requirement of complete neutrality on all controversial questions would be a deathblow to our whole American educational system.

Take, for example, the issue of democracy versus dictatorship. The great majority, if not all, of American colleges are run by trustees and taught by faculty who believe in democracy and who are opposed to dictatorship whether of the left or the right. Yet faculty lectures or books advocating democracy and opposing dictatorship would constitute propaganda according to the definition proposed by Mr. Dodd and used in the report.

We strongly urge that it is essential to the operation of the democratic system to give every possible freedom to the presentation of conflicting viewpoints, in the belief and hope that as a result of that process the American people will make wiser decisions than they would without benefit of such information.

The second half of the definition of propaganda referring to “half truths, incomplete truths as well as techniques of a covert nature” comes closer to the usual meaning of the word. Under that test the Foreign Policy Association is clearly not a propaganda organization.
The Foreign Policy Association in publishing information on foreign affairs makes a determined effort to avoid any half truths or incomplete truths and to present a balanced view as stated on page 2 of this statement. Particular effort is made to find exponents of varying points of view. No evidence of the use of techniques of a covert nature has been presented in the report, and it seems hardly necessary to state that the association does not indulge in such devices.

(2) That this propaganda takes the form of advocating an internationalist viewpoint only, without attention to the "nationalist" position

We desire to make two answers to this charge.

In the first place, the Foreign Policy Association has not exclusively presented an internationalist point of view in its publications. As evidence we cite a few examples only. In recent issues of the Foreign Policy Bulletin Vera Micheles Dean has written articles stating and defending the arguments against further foreign aid to Europe and summarizing the current arguments against United States participation in the UN. Between February 15, 1953, and March 15, 1954, issues of the Bulletin have carried articles by Senator Watkins of Utah and Senator Malone of Nevada on tariffs and trade, by Senator Bricker of Ohio on curtailing the treaty-making power, and by Governor Lee of Utah on the United States leaving the UN.

In the second place, the Foreign Policy Association by virtue of its title and nature has been from its founding in 1918 concerned with the problems of American foreign policy. It has sought to make the American people more aware of the issues involved. It has tried to provide useful information regarding these issues. While it has presented from time to time in its publications and on its platforms views which would variously be described as isolationist, hemispheric, or "nationalist," the association has put major emphasis on international understanding, cooperation, and good will as means to the development of a peaceful and prosperous world.

(3) That its propaganda further favors a trend toward Socialist and left-wing viewpoints

The report gives the impression by the selection of certain statements that the Foreign Policy Association also supports a socialistic or left-wing position. The only evidence offered in support of this charge is the extensive quotation from a Headline Series booklet by Max Lerner entitled "World of Great Powers." Mr. Lerner is well known for his views on the economic, social, and political issues of our time. Many who do not agree with his position nevertheless find it provocative and stimulating. A complete analysis of FPA publications would have revealed many instances of strong support of free enterprise and private capital. The roster of public men who have written for the Bulletin and the Headline Series is sufficient to discredit charges of leftism or of deliberate emphasis on only one point of view.

(4) That it has employed subversive individuals

In paragraph 2 of page 63 of the report it is stated of the Headline Series booklets that:

Many were written by persons cited to be of Communist affiliation and are questionable in content.
With respect to the first half of the above quotation, while "many" are referred to, the only author of a headline series mentioned in the report as possibly being a Communist is Lawrence K. Rosinger, who was named as a party member by witnesses before the McCarren committee, but declined to answer.

Mr. Rosinger was on the staff of the FPA from July 1, 1942 (at which time the late Maj. Gen. Frank R. McCoy was the FPA president), until June 30, 1948. During the time of his employment no one at the FPA had any reason to think Mr. Rosinger might be a Communist. The testimony above referred to before the McCarran committee was not given until 1952, which was 4 years after he had ceased to be employed by the FPA.

Maxwell Stewart, also mentioned in the report, was a staff member of the FPA from 1931 to 1934 during which time he wrote several articles for the Foreign Policy Association reports. So far as we know, he has never been cited as a Communist.

(5) That other individuals connected with the association, although not actually subversive, have lacked objectivity and hold views which are questionable

Various individuals are selected from among the board, staff, and authors of the Foreign Policy Association for special mention. Included among these names are Roscoe Pound, one of the most distinguished American students of the law, dean for many years of the Harvard Law School, author of many books in the field of jurisprudence, recipient of many awards and distinctions for distinguished academic and public service. Another is Anna Lord Strauss who has had a notable career as businesswoman, editor, member of local, national, and international boards and committees, active in public service in many private organizations and governmental agencies.

Vera Micheles Dean, member of the FPA staff since 1928, is singled out for special comment of an unfavorable nature. For instance, on page 28 of the report it is stated that she "is referred to frequently in the MacCarran committee report on the Institute of Pacific Relations." Again, on page 64 a brief newspaper report of a single speech is used to describe her point of view as socialistic. In the same section a quotation is lifted from a book review in the New York Herald Tribune which read out of context might tend to support the newspaper story. It is interesting to note that the review begins:

At a time when virtually every book about Europe presents, usually with passionate urgency, some solution for the complex problems of that continent, it is refreshing to read Mrs. Dean's calm and measured discussion of Europe's place in today's world.

In the quotation from the report cited on page 7 of this statement it is alleged that "many (of the Headline Series booklets) were written by persons cited to be of Communist affiliation and are questionable in content." The first half of this allegation has been dealt with. With respect to the second half we submit that this charge evidences a point of view underlying the entire report, which is violative of the most fundamental principles of our government.

What does "questionable in content" mean? It apparently means that the book in question contained views which the author of the
report disapproved of. It is obvious from a reading of the quotations from the books of Mr. Lerner and Dr. O. Frederick Nolde, whose writing is referred to in the report as “one further illustration of the internationalist trend of the Foreign Policy Association,” that there is nothing in either of them which could possibly be considered as subversive. All that “questionable in content” therefore means is that the author of the report does not agree with it.

Whether views in a book meet with the approval or disapproval of the author of the report or any Member of Congress should, we submit, wholly irrelevant to the questions before the special committee. To adopt any other point of view would be tantamount to adopting the Soviet position, which is that no book may be published which expresses views not approved of by the Kremlin.

CONCLUSION

While there are a few other incidental references to the Foreign Policy Association in the report, we believe that we have dealt with the important allegations.

We submit that the evidence presented in no way justifies the charges which the report makes against the Foreign Policy Association.

FOREIGN POLICY ASSOCIATION.
By ————, President.

FOREIGN POLICY ASSOCIATION,

By JOHN W. NOON, President.

Subscribed and sworn to before me the 24th day of August 1954.

CARLOYN E. MARTIN,

Notary Public, State of New York.

EXCHANGE OF CORRESPONDENCE WITH MR. SPRUILLE BRADEN

April 5, 1954.

Hon. Spruille Braden,
New York, N.Y.

Dear Mr. Braden: Mr. Ettinger has told me of your willingness to help us in our study and investigation of tax-exempt foundations and comparable organizations. A copy of House Resolution 217, 83d Congress, creating this committee, is attached for your information.

Your testimony before the Senate Internal Security Subcommittee suggests that your observations of trends in the conduct of foreign affairs coincides with one of our research hypotheses—namely, that our foreign policy is influenced by persons and groups operating under a veil of anonymity, but nevertheless effectively promoting ideas detrimental to the welfare of this Republic.

Specifically, we would like to know:

1. What is the influence of tax-exempt foundations on our foreign policy? (e.g., Carnegie Endowment, Rockefeller Foundation, Ford Foundation, Rhodes Scholarship Trust, etc.)

2. How do foundations operate in the field of foreign relations? (Support of pressure groups, interlocking directorates, development of literature, sponsorship of experts, frequent appointments of foundation officers by Government, etc.)

3. Is the influence of tax-exempt bodies, that are free from public control and responsibility on our foreign policy directly or via control of public opinion and propaganda media desirable?

We will appreciate your comments on these problems. I would, of course, be obliged if you would telephone me at your convenience at my New York office (Murray Hill 2-0127) and perhaps arrange for a meeting.

Very truly yours,

General Counsel.

New York, N.Y., April 10, 1954.

Mr. Rene A. Wormser,
New York, N.Y.

Dear Mr. Wormser: Please excuse my delay in answering your April 5 letter, as I have been absent from the city.

As I told Mr. Ettinger, presently I have not enough concrete information in my possession to be of any real assistance to you as a witness. I have the very definite feeling that a number of the foundations have been taken over by what I described in my testimony before the Senate Internal Security Subcommittee, not so much by the Communists, as by State interventionists, collectivists, misguided idealists, “do-gooders” and “whatnots,” and that this is one of the greatest perils confronting our country today.

Similarly, my respect for the Rockefeller Foundation in connection with its health work in such places as Colombia, in yellow fever, malaria, etc., has been severely jolted when I read that Chester Bowles has now been made a director of that institution. The reason for my concern is that only a few months ago, I heard the former Ambassador and Governor of Connecticut declaim against the Farewell Address and George Washington as typifying the evils of isolationism [sic].

Perhaps, given time, I could check up on some matters which would make my testimony more authoritative than it could possibly be now. But, in answer to your specific questions, all I could say is that I have the very definite feeling that these various foundations you mention very definitely do exercise both overt and covert influences on our foreign relations and that their influences are counter to the fundamental principles on which this Nation was founded and which have made it great.

While I feel that something should be done about this situation, I would regret to have even more Government controls, though I recognize that at times it is necessary to fight fire with fire. But I have not thought through to a conclusion in the premises.

With all best wishes,

Faithfully and cordially yours,

Spruille Braden.
EXCHANGE OF CORRESPONDENCE BETWEEN GENERAL COUNSEL AND SELECTED UNIVERSITY PROFESSORS

Shortly after the committee began its hearings in May 1954 the general counsel wrote the following letter to professors at leading universities soliciting their comments on the operation of foundations in the social sciences:

MAY 13, 1954.

DEAR PROFESSOR: In connection with the current hearings of the House of Representatives committee investigating foundations, we shall consider, among other things, the criticism that the foundations and associated organizations having to do with social-science research have promoted an excess of empiricism. It has been suggested that you might be good enough to give us your reflections in that area.

Would you be good enough, therefore, at your early convenience, to give us any comments which you might be willing to offer, particularly on these points:

1. Whether there has been an unfair or undesirable preponderance of empirical research.
2. Whether this has had any unfortunate results and if so what.
3. Whether the apparent emphasis on training researchers in the empirical approach almost to the exclusion of the theoretical approach is desirable for our society.

We would appreciate any further comments of any kind which you might wish to make regarding the operation of the foundations and/or the associated research organizations in the social sciences.

We would, of course, expect to be permitted to use your comments in our record.

I would deeply appreciate an early reply.

Sincerely yours,

RENE A. WORMSER, General Counsel.

The professors to whom it was sent were:

Prof. Theodore Abel, sociology department, Columbia University, New York, N. Y.
Prof. C. Arnold Anderson, department of sociology, University of Kentucky, Lexington, Ky.
Prof. Herbert Blumer, chairman, department of sociology and social institutions, University of California, Berkeley 4, Calif.
Prof. James H. S. Bossard, University of Pennsylvania, Philadelphia 4, Pa.
Prof. R. E. DuWars, chairman, sociology department, Bucknell University, Lewisburg, Pa.
Prof. Charles S. Hyneman, professor of political science, Harris Hall 105, Northwestern University, Evanston, Ill.
Prof. Oliver Martin, University of Rhode Island, Kingston, R. I.
Prof. William M. McGovern, Northwestern University, Evanston, Ill.
Dr. Helmut Schoeck, visiting research fellow in sociology, Yale University, 206 Highland Avenue, West Haven, Conn.
Prof. Pitirim A. Sorokin, Harvard University, Emerson Hall, Cambridge 38, Mass.
Prof. Ludwig von Mises, 777 West End Avenue, New York 25, N. Y.
Dr. K. A. Wittfogel, Chinese history project, Low Memorial Library, Columbia University, 420 Riverside Drive, New York, N. Y.
Prof. Carle C. Zimmerman, department of social relations, Harvard University, Cambridge 38, Mass.

No reply was received from Professor Abel, Professor DuWars, Professor McGovern, or Professor Martin. Correspondence with the others arranged alphabetically follows:

**UNIVERSITY OF KENTUCKY,**
**COLLEGE OF ARTS AND SCIENCES,**
**DEPARTMENT OF SOCIOLOGY,**
*Lexington, May 26, 1954.*

Mr. René A. Wormser, General Counsel,

Dear Mr. Wormser: Your inquiry about the work of tax-exempt foundations is most difficult to answer. It will be necessary for me to write at some length in order to avoid giving you an ambiguous statement. The delay in sending you this statement has been occasioned by my taking the time to read with some care the report of the 1952 hearings on this same subject.

The following comments should be regarded as my professional judgments, not merely opinions. I am, however, expressing my own judgments and not those of my university, department, or any group of scholars to which I may belong.

In order that you may interpret my remarks, I should state that I am not connected in any way with a foundation. At one time I received a stipend from a foundation for a year of graduate study. Some years ago, also, I was an editor for a publication by a foundation. On the other hand, two applications within recent years for research grants were rejected by foundations. My knowledge of foundation-supported research is nonetheless rather extensive in that I attempt to read very widely in both my own and related scientific disciplines. I am also on the advisory editorial board of a professional journal; in that connection I read a considerable number of manuscripts, including some that do not receive publication.

It is not within the scope of questions raised by your letter for me to consider the problem of registration or other methods of insuring that foundations conform to the stipulations implied in their tax-exempt status. A clear distinction between foundations engaged in partisan propaganda or mere tax-evasion and those engaged in research is obviously necessary. So far as my limited acquaintance or that of my colleagues extends, the foundations devoted to the sponsoring of research and learned studies have an excellent record.

It would seem to be clearly imperative that no effort should be made to influence by governmental means the manner in which foundations carry out their support of scholarly work. It would seem prudent to leave the balance between various kinds of research to be decided by the foundations and the learned disciplines. Too many efforts are being made today to control science because one or another group does not find the results of research palatable.

In judging the work of scientists it is too often forgotten that any research in either the physical or the social sciences has practical implications. Such research will inevitably affect adversely the prestige or the prosperity of some groups, agencies, or interests in the Nation. Thus, for example, to demonstrate that one metal is superior to another for some engineering use favors the manufacturers of that metal and injures the interests of the makers of competing metals. In a world of change where we can exist and prosper only with the aid of research, such effects are inevitable, and indeed desirable. To have judged research by whether its results were congenial to the buggy industry would have stifled the automobile industry.

I should like to comment particularly on the relationship of what you have called the "empirical approach" to the "theoretical approach." Insofar as we are hopeful that the American way of life may be safeguarded by scholarly research and study, we must recognize that it is impossible to have too many empirical facts. The reason for this situation is simply stated. It is easy to draw up the blueprint for an ideal society; there have been thousands of such utopias in human history. But to improve actual societies has proven more difficult. That our society has manifested a high degree of freedom and progress is demonstrated by facts. It is empirical fact also that demonstrates the wide gap between utopian blueprints of communism and communism in practice. Facts are the most convincing answer to any who may be swayed by communist propaganda.

A democratic society cannot be preserved without freedom of inquiry. Freedom of inquiry is the only road to truth. For any body of men to use power or the regulative agencies to constrict the field of scientific study would be to imitate the worst features of Soviet society. The future welfare of American
society cannot be assured without freedom of research into facts—facts about our social organization as well as about our natural resources. Whoever would limit the search for facts in our civilization stands self-convicted of special pleading. The answer to inadequate facts is more facts.

Critics of the social sciences forget that social scientists are responsible scholars. The ethical code of science is a strict disciplinarian. We social scientists spend a large part of our time—and the professional journals devote a large portion of their space—to debating the merits of one type of facts or method for obtaining the facts against the merits of other methods. We constantly weigh the importance of particular facts against the analytical concepts or theories by which we organize those facts into generalizations that will accurately portray the structure of society. Theories and facts are siamese twins. The best searchers for facts are usually also the best organizers of facts into sound theories and vice versa. Fact and theory are constantly at play, one upon the other. Every reputable social scientist strives constantly to balance and integrate those two facets of scientific work.

An enticing theory can be developed while stretched out in an easy chair; all that is needed is pencil and paper. But of the thousands of theories, however conscientiously conceived, only a handful will prove valid when subjected to the crucible of facts. Unfortunately, to obtain facts requires money. Knowledge is the most expensive commodity in the world. Few professors have private wealth to underwrite their research. Few colleges or universities have money to support more than a meager research program. The uniquely sustaining service of foundations in America has been to provide the money for this indispensable purpose.

If one reads the prefaces of current books or the footnotes of technical articles, whether they be reports of empirical research or works devoted primarily to theory, he must be impressed with the large proportion of contemporary scholarly work that has received subsidy from some foundation. Unless we are to turn almost exclusively to the Government for such aid—and this would entail results more deplorable than any charge that can be brought against the foundations—scholarship will wither without foundation assistance.

At one time I was an editor for a publication by the Social Science Research Council. In that publication an effort was made to integrate theory and research. At no time during the work was any influence brought to bear by the sponsoring foundation. I read most of the publications by this council. To me they balance very sagely the needs for fact gathering and the need for integrating theory. Most of the major foundations, at least, so far as I can observe or hear, are similarly scrupulous and farsighted.

More than anything else, the foundations desire the good opinion of the world of scholars. Scholars are the first to censure loaded or biased work. They are the first to condemn poor work. They are constantly scrutinizing the operations of the foundations. There is no surer path to professional fame than to have one's name associated with an acceptable theory and no easier path than to demonstrate that some grand project has been bumbled.

By its very nature, science is a self-correcting activity. No other human agency—except a free enterprise economy—has a mechanism for correcting error built into its very structure.

Every study, whether or not subsidized by a foundation, has defects. But we have to apply the test of prudential judgment to the work of foundations as we do to that of any other group in Government or private life. And by that test, in my judgment, it can be shown that only a small portion of foundation-supported research studies have been biased or poorly conducted.

To answer your specific questions categorically, on the understanding that these categoric comments will not be used without the foregoing discussion, I would make these statements:
1. There has not been an unfair or undesirable preponderance of empirical research. What the social sciences need is enormously more money for the collection of facts, and for the testing of theories by facts.
2. The only unfortunate result has been the all too slow accumulation of facts. The more rapidly we can accumulate reliable facts, the more rapid will be the codification of sound theory and reliable principles of human behavior—for the use of our political representatives or other responsible individuals and organizations.
3. There has not been, in my judgment, a disproportionate emphasis in training researchers in the empirical approach. To refer to my own year of training by courtesy of a foundation, I was enabled to attend one of our best uni-
versities specifically to obtain a better grounding in theory. Innumerable other individuals have been similarly assisted. The experience of a close friend with a current committee supported by a foundation leads me to conclude that once more a strong emphasis is laid upon adequate theory to guide the collection of facts with which to develop better theory. Theories by themselves cost little but sound theory must rest on valid facts, which are enormously expensive.

If I may judge by news items in the New York Times during recent days, the purposes being expressed through your inquiry are not only multiple but perhaps contradictory. It seems to me to be imperative that research work be judged by those who are trained in scientific methods. It is to be hoped that the conclusions of the committee may be praised in later years principally for having encouraged the launching of new foundations devoted to the advancement of human knowledge.

It has been a pleasure and a privilege to have the opportunity of contributing my judgments on this important question. I should be happy to extend my remarks in a further communication, or in person, at your pleasure.

Sincerely yours,

C. Arnold Anderson.

JUNE 7, 1954.

Prof. C. Arnold Anderson,
Department of Sociology, University of Kentucky, Lexington, Ky.

Dear Professor Anderson: Many thanks for your letter of May 25, which I have read with great interest. I wish I had time to answer it in considerable detail, but the pressure of work prevents.

I would like to suggest, however, that the accounts in the newspapers cannot give you any fair understanding of the objectives of our inquiry, or of the limitations which the committee has put upon itself. It stands unanimously behind the theory of free inquiry, whereas the newspapers have rather broadly given the impression that ours is an attempt at censorship.

There is, of course, one factor of possible “censorship” involved. The tax law itself proscribes certain areas of activity (principally subversion and political propaganda). After all, these are tax-free funds with which we are concerned and, thus, public trusts. The public is entrusted to be protected against having tax-free money used for things against the public interest. Outside of this element of what might be called (but unfairly) “censorship,” foundations are free to do as they choose. Far from being against free inquiry, we are concerned with the validity of frequent criticism that the major foundations which operate in some close association through intermediate organizations, etc., have virtually exercised a form of censorship themselves. This consists of supporting primarily certain approaches in research in the social sciences to the virtual exclusion of the opposites. As research in the social sciences in the United States is now almost entirely foundation supported (except for that financed by the Government itself—and this, in turn, seems under the control or direction of organizations and individuals financed by the foundations) it seems to us necessary to inquire whether this criticism is justified. There should obviously be free competition in matters of the intellect as well as in business.

Nor is there any validity to any newspaper suggestions that this inquiry is directed against foundations as such. The committee is unanimous in its appreciation of the desirability of foundations. Its interest is in discovering what abuses may exist, to the end of doing what it can to make these organizations even more socially desirable than they now are. It may well be that the disclosure of criticisms and the airing of abuses may help the foundations to increase their acceptability and utility.

May I thank you again for taking the trouble to answer my letter in detail.

Sincerely,

René A. Wormser, General Counsel.

Wharton School of Finance and Commerce, University of Pennsylvania, Philadelphia 4, June 1, 1954.

Hon. René A. Wormser, General Counsel.

Dear Mr. Wormser: To answer your letter of May 13, I must first attempt to qualify, and then to disqualify, myself as a witness.

First, as to qualifications. I have been a professor of sociology now for 44 years. This includes services at the University of Pennsylvania, the University
of California at Berkeley, and Yale University. In the course of this period, I have written, wholly or in part, and edited, wholly or in part, more than 30 volumes and contributed about 75 articles to scientific journals. Research activities include the direction of two nationwide surveys and the development of several volumes of research papers. Since 1938, I have devoted myself largely to the development of research studies in the field of child behavior.

As to disqualifying myself, I am indicating the reasonable suspicion that I may be prejudiced, in that I have never been able to obtain a single grant from any research foundation or organization. On the other hand, I have a number of times asked for, and I have always been granted promptly, research moneys from the faculty committee of my university. I have also obtained, without a single refusal, money for research purposes from people of means who are familiar with my work.

As a lifelong student of social problems and policies, I am impressed with the great difficulties and grave responsibilities of administering large amounts of money for research or any other social purpose. Naturally, this makes me hesitant to criticize those persons who are charged with these responsibilities. I am willing, however, to express a viewpoint in the hope that it may in some slight way contribute to the formation of sound judgments.

For some years, I have regarded with increasing apprehension the development of what I have called the comptometer school of research in social science. By this I mean the gathering of detailed social data and their manipulation by all the available statistical techniques. Not that I am objecting to such methods—my reluctance rather lies in an unwillingness to accept these as the core of research in human behavior.

My own interest lies more in the development of qualitative insights. This accords with my judgment of the nature of the life process, that it cannot be reduced to statistical formulas but that it is a richly diversified complex of relationships. The chief purpose of research for university people, most of whom are limited to working with small groups, should be weighted heavily in the direction of research in qualitative insights rather than manipulation of mass data.

I am particularly concerned with the impression which the recent emphasis upon the comptometer approach has created among younger sociologists as to what constitutes social research. The moneys and the influences of the large foundations naturally do a great deal to set the norms of professional acceptance in a given field, and it is in this respect, difficult to measure statistically but possibly of very great importance, that a distinct disservice may be done to sociological research by an undue emphasis upon any particular emphasis or methodology.

Cordially yours,

JAMES H. S. BOSSARD,
Professor of Sociology.

UNIVERSITY OF CALIFORNIA,
DEPARTMENT OF SOCIOLOGY AND SOCIAL INSTITUTIONS,

Mr. RENÉ A. WORMSER, General Counsel.

DEAR MR. WORMSER: I am relying to your gracious inquiry of May 13 soliciting an expression of my judgment on the character of social science research fostered by foundations and associated organizations.

I have been critical and am critical of much of this research. However, questions of what is appropriate in social science research are not in the competency of congressional committees, but should be determined, properly, by the scientific professions in whose fields such issues fall. Good avenues of communications exist between the social science societies and the foundations interested in social science research. Such channels are the proper medium for the consideration of criticisms and the correction of whatever foundation policies are judged to be faulty by members of the professions. Since I am wholly unsympathetic to placing the determination of these matters in the hands of legislative groups, I am refraining from answering your points.

I trust that this letter will be entered on the records of your committee.

Respectfully yours,

HERBERT BLUMER, Chairman.
Mr. René A. Wormser, General Counsel.

DEAR MR. WORMSER: I did not sooner reply to your letter of June 24 because I wanted to think over the questions you put to me. I will take them up in the order of their appearance in your letter.

1. I have always supposed that there is indeed a "close interlock or a concentration of power" between the foundations on the one hand and the so-called learned societies, such as the Social Science Research Council and the American Council of Learned Societies, on the other hand. I have long understood that few, if any, of the learned societies have an endowment of notable size or receive current income from memberships. It is my understanding that these learned societies have depended mainly upon the foundations for the principal part of their financial support. If they did not get money out of the foundations, I don't know how they would ever be able to do anything of genuine significance. Where a learned society is dependent on foundations for money, I think it is inevitable that the men who direct the learned society will try to maintain close and friendly personal relations with the men in the foundations who decide whether they will hand over any money and how much. I have never heard from any source that the foundation people try to dictate or influence the appointment of men to positions of any character in any of the learned societies. When an important position in a learned society is to be filled, it is probable that the people who must make the choice will try to find out whether people in the foundations have respect for and confidence in the man they propose to appoint. I have been told, that both the Carnegie Corp. and the Rockefeller Foundation have pretty consistently, if not in all cases, refused to make any expression on this point. But you can read men's minds; you don't always have to be told who the foundation officials have confidence in and who they don't have confidence in. I think it is a safe guess that the selection of men for high positions in learned societies is influenced by such a reading of the minds of people who are high up in the foundations. I have more than once been told by people who manage colleges and universities that "we want to find" a man for president, or dean, or department head, "who can get money out of foundations." I suppose that people who choose men for positions in learned societies are just as conscious of the need for winning or maintaining good will in the foundations.

2a. This question asks whether the relationship between foundations and learned societies has resulted in promotion of empirical research, and if so, whether that promotion has been excessive. Certainly the foundations have underwritten empirical research. I don't know to what extent their support of empirical research is due to a close relation between the men who manage the foundations and the men who manage the learned societies. One can form a judgment as to whether the promotion of empirical research is excessive only by considering other purposes for which the money is needed and might have been used. Empirical research is inquiry into factual evidence. This costs money. For several years I have been trying to make a comparative study of American State legislatures to see what we can learn in the experience of one State which will help people in other States decide whether they want to do something and what they can do to improve the legislative process at home. This means, among other things, that you have to travel about the country to talk to a lot of people who have had experience in State legislatures and who have thoughtfully observed the lawmaking process. I can tell you that it costs a lot of money to do this kind of job. The alternative to underwriting empirical study, if a foundation wants to support scholarly research, is to underwrite men who sit in the library and read books and think. These people don't need much money. So I would say that a fair balancing of empirical study in comparison with historical and speculative study requires that much more than half the money be put into empirical study. I can add to this my personal belief that what we need more than anything else in the social sciences right now is a whole lot more effort to get at the facts. Personally I don't think that either the learned societies or the foundations have been giving excessive support to empirical research.

2b. Your question inquires whether there is a general political slanting of research toward the left and whether such a slanting, if it exists, is due to a tie-up among the foundations and the learned societies. I suppose I am a middle-of-the-roader in politics; I voted for Dewey in 1948, for Dirksen in 1950, and...
for Stevenson in 1952. I think that the college professors who teach in social-science departments in this country are overwhelmingly left of my position. Furthermore, I think that many of them show a near disgraceful tendency to overstate the liberal cause and deride the position of people who hold more conservative or right-wing views. I think many of these people show entirely too little respect for what I consider to be the obligations of a man who claims that he is an objective student and a scientist. But I must say that I have no evidence whatever to support a view that either the foundations or the learned societies have supported or wish to support this lack of objectivity and favoring of the left-wing position. If a foundation or learned society wants to be neutral in the matter of politics, the safest thing for it to do, in underwriting the social sciences, is to give its money for empirical research. As I said above, empirical study is search for factual evidence. In picking the thing he is going to study, the empirical researcher can choose a problem in terms of his own political beliefs. But when he is looking for and examining factual data, he is of necessity restrained from shooting the works in favor of his political views.

2c. The question asks whether there is a tendency toward monopoly and conformity, and, if so, whether this is due to a tieup between foundations and learned societies. I don't see any tendency which I think leads to monopoly, but I do think there is a piling up of foundation money for support of research in universities on the east coast. I think this is due to two things: First, the eastern universities are close to the headquarters of the older foundations and the headquarters of the learned societies. They find it easy to talk their problems over with these people. They are in a better position to make a case for what they want to do than are the rest of us who live in the South, Middle West, and far West. The second factor in favor of the East is that generally those people have smaller teaching loads, have more time to plan research and get it started, and eastern universities on the whole have more men who have actually gotten forward with research. Now the foundations and learned societies could follow a policy of trying to find and underwrite the really good men who have not had a good chance to do research. I personally think they ought to do more of this. But on the other hand, they can with good reason argue that they ought to invest their money in men who have already shown what they can and will do. I suppose they avoid criticism by doing the latter. If they put their money in men who are already going ahead with research the foundations and learned societies can say that they are not trying to remake the country or cause it to go in different directions from the way it is already going. If they go about hunting up men and underwriting men who have not yet done much research, they will be accused of trying to determine the direction in which research will go and of trying to remake the mind of the Nation to suit the people who manage the foundations and learned societies.

3. I have no evidence to cause me to think that the foundations have any wish or intention to slant research or slant the mind of the Nation toward collectivism. But I do think that an overwhelming part of the social science professors in this county lean toward collectivism. Insofar as the foundations underwrite social science professors they probably help along more men who favor collectivism than men who oppose collectivism. Furthermore, many social science college professors present their personal beliefs when they ought to be trying to do objective inquiry. Now it may be that the foundations ought to give every man a test before they give him any money, the purpose of the test being to find out whether he is really an objective scholar and not a preacher. I will not offer an opinion as to what they ought to do on this point.

I have tried to address myself to the specific questions you put. Now I will tell you about my experience with one learned society, the Social Science Research Council. For 3 years I was a member of its committee which awarded grants-in-aid for research. The top amount we were permitted to grant any man was $1,000 for a period of 1 year. When we had more applications than we had money to satisfy we always favored the little fellow and the man who seemed to be overlooked. If a man had a salary of $9,000 it was a rare case indeed when we gave him any money. We gave our money to the youngsters who were having trouble making a living and to men who had heavy teaching loans in colleges and universities with limited resources. The questions we asked about all applicants were these: (a) Is he an intelligent man; (b) can he actually do the job he is trying to do; (c) can we be sure he will carry this project to completion; (d) is the thing he proposes to do worth doing? We gave money for both empirical research and historical and speculative study. I never knew any member of the committee to raise the question as to whether this man is conservative or lib-
eral or to raise the question whether this project will tend to support a conservative or a liberal point of view. I can say with absolute confidence that if any member of the committee had ever raised either question he would have been smacked down promptly by other members of the committee.

Now I suppose you need to know what kind of a man I am so that you can judge whether I may be speaking honestly or trying to pull the wool over your eyes. I have already told you how I voted in the last three elections. I may add that I have insisted in conversation with my friends on this faculty that there are two sides to the McCarthy question. I have furthermore spoken in favor of McCarthy in these conversations in order to counter what I consider to be extremism and unwillingness to look at evidence on the part of the anti-McCarthyites I talk to. The consequence of this is that I hear I am a pro-McCarthy man who wants to destroy freedom of speech for the Nation and render the university incapable of functioning as a place for freemen to make objective inquiry. Finally, the total amount of money I have personally received from all foundations and learned societies for my own research is $750.

Sincerely yours,

CHARLES S. HYNEMAN,
Professor of Political Science, Northwestern University.
all the main currents in American social thought. In addition, at the present time I am completing a special volume, the title of which is somewhat self-explanatory, namely, Fads and Delusions in Modern Sociology, Psychology, Psychiatry, and Cultural Anthropology. In this volume which I hope to complete by the end of June or July of this year, I am critically examining exactly all the main currents of empirical research in the social sciences particularly favored by the foundations—sometimes by colleges and regularly by the United States Navy, Army, and Air Corps—spending a considerable amount of funds for this sort of research.

The final conclusions which I have reached in this volume are identical with the answers which I have given to your questions. I hope that the volume gives the necessary minimum of evidence to corroborate that my conclusions are correct. The futility of excessively favoring this sort of research particularly is well demonstrated by its sterility, in spite of the many millions of dollars, enormous amount of time and energy expended by research staffs. Almost all of the enormous mass of research along this line in the United States of America for the last 25 or 30 years has not produced either any new significant social theory or any new method, or any new technique, or any scientifically valid test, or even any limited casual uniformity. This sterility is perhaps the most convincing evidence of unwise policies of the foundations, colleges, and Army, Navy, and Air Corps research directors.

My book is going to be published by the Henry Regnery Co. I do not know exactly when it will be published, but probably in 1955; or, if it is somewhat urgently hurried, it may be published at the end of this year. I hope, anyhow, to deliver my manuscript to the publisher sometime the end of June or July. I hope, also, that when it is published this volume may be of some help to your committee.

With my best wishes.
Sincerely yours,

PITRIM A. SOROKIN.

NEW YORK 25, N. Y., May 24, 1954.

Mr. René A. Wormser, General Counsel.

Dear Mr. Wormser: Referring to your letter of May 13, 1954, I should like to submit the following remarks:

I have in my books and articles critically analyzed the epistemological and political prepossessions that are responsible for the scientific sterility of the present-day academic treatment of the problems of human action, in this country as well as abroad. I think that the fanatical dogmatism prevailing in many faculties and the virtual boycott of all dissenters are among the most alarming symptoms of the actual crisis of western civilization.

It is a fact that the intolerant practices of many university departments of the social sciences are lavishly financed by some rich foundations. These foundations are uncritically committed to the epistemological ideas and the political bias prevalent in the university faculties. But it was not foundations that inaugurated this tendency and converted the professors to their own tenets. It was, on the contrary, the universities that converted the foundations to their opinions. The trustees and the staffs of the foundations were convinced that the best method they could choose was to put their trust in the professors. They were deluded by the prestige that the name universities enjoyed. They adopted the professor worship current in some European countries.

In the reports of the foundations and in the public utterances of their leading functionaries one does not discover any propositions about methods and techniques of social studies that would not be stereotyped repetitions of the slogans coined by the self-styled "unorthodox" professors long before American foundations began to spend money for these studies.

My answer to each of the three questions you formulate in the second paragraph of your letter is emphatically yes. For a justification of my point of view I refer to my publications.

With kindest regards,
Sincerely yours,

LUDWIG VON MISSES.
TAX-EXEMPT FOUNDATIONS

CHINESE HISTORY PROJECT,
(Sponsored by University of Washington, Seattle,
in cooperation with Columbia University),
LOW MEMORIAL LIBRARY, COLUMBIA UNIVERSITY,

Mr. René A. Wormser, General Counsel.

Dear Mr. Wormser: Thank you for your letter of June 25. I am deeply aware of the importance of the problems which it raises.

Some weeks ago, I had a stimulating conversation about these problems with a member of your staff, Dr. Karl E. Ettinger. In the course of this conversation I conveyed to him whatever ideas I have on the subject. But it became evident that his study of the matter has gone far beyond my limited insights. I, therefore, am afraid that I have no further contribution to make to your investigation.

Yours sincerely,

Karl A. Wittfogel.

Harvard University,
Department of Social Relations,

Mr. René A. Wormser, General Counsel.

Dear Mr. Wormser: The matter of false and specious empirical research initiated and supported by our tax-exempt foundations is so grave that it is highly proper the Congress of the United States take up the matter. However, an analysis of it requires such detailed time that I would not even answer your letter if it were from a body less important than the United States Congress.

QUESTION I

The tax-exempt foundations in the United States have unfairly and undesirably emphasized empirical research to such an extent that the whole meaning of social science research has come to be ridden with sham and dubious practices.

QUESTION II

This has had undesirable and unfortunate results as follows:

A. It has made research grants large and expensive and few in number.

B. A special class of fund getters has grown up who spend all their time getting funds, and have little time or capacity to do original work.

C. A special class of administrators of these funds has grown up and research is dominated by the administrators rather than the persons who pursue ideas.

D. As a result the large institutions, or a few institutions with prestige, get the most of the money in large grants. Smaller institutions, or professors there, get scant encouragement in seeking out new ideas. These large grants are to big and unity percent wasted and equally brilliant Ph. D.'s, who graduated in the same classes, get no support at all. In the meantime a careful analysis of the origins of scientific men who make a mark (Ph. D.'s who finished by 1940 and were outstanding by 1945) shows that they come from these smaller institutions. Of course some argue that all the best men are at the big institutions with prestige but that is not true. Finding jobs for young Ph. D.'s puts more good over at the small institutions because there are only a very few places each year opened at the others.

E. Since social science is concentrated in a few urban institutions and bossed both at the foundations and at the institutions by "public opinion" men, prosaic and important aspects of our life (where real social science needs exist) never get studied. Illustrations among many possible, it is apparent that no institution in the United States pays great attention to the problems of our Appalachian-Ozarkian people, although institutions located in that region do get grants for extraneous things, involving cultures far away (like South America). No institution in our arid West studies the total relations of modern man to arid or semiarid conditions. A biologist will turn naturally to dirty pond water, because the "cultures" he is interested in are found there, but our human ponds do not have public opinion prestige, and are not generally studied. (These statements are not a reflection upon any of the provincial groups in America.)

F. The emphasis upon false empiricism is not only a matter of the biases of the "bosses" or administrators, the biases of the concentrated favored institutions, and the neglect of the provincial and needed problems for study, but it also has led to a malfeasance or injury in method and has harmed the growth of social science.
1. Social science is about 95-percent macroscopically, or broad-scale observational. It is not necessarily less scientific for that reason, as geology and astronomy are not less scientific than zoology or chemistry. The extreme methods of overabundant empiricism on a few prestige problems is as ridiculous as trying to build a house with the use of a micrometer for each measurement.

2. As a result we overstudy certain aspects of a few problems and never touch the others. As a professor, well renowned for his own social science researches (which have not been supported by the big tax exempt foundations), remarked, "We research ceaselessly upon getting married, but never study what to do about the problems involved in the act over the next 40 or 50 years."

3. We have many persons who can work out correlation coefficients but no one so far has told us what they mean in "causal" analysis. Our social science is increasingly dominated by meticulous clinical procedures and becoming more and more illiterate as to logic and common observation.

4. As a result we are creating a social science merely which is the doctrine of a "cult," read only by a few other social scientists, abstruse to the point of illegibility, valueless for social direction, constantly repeating itself upon immaterial problems, and ending in an aimless existential philosophy. As a prominent European philosopher indicated clearly within the past decade, "modern social science is becoming an aspect of the existential philosophy of decadence." (This is a paraphrased quotation from Nordberto Bobbio, Existentialism the Philosophy of Decadence, New York, 1947 (English translation).)

QUESTION III

The above analysis leads me to your question 3, which is concerning the desirability of the exclusive training of researchers in the empirical approach. The situation outlined in answers to questions 1 and 2 shows that the overemphasis upon empirical training and support lead to a division in the social scientists between those who follow abstruse theoretical "systems" and those who follow equally abstruse pointless research. Our abstruse theoretical systems have become increasingly only taxonomic (classifying a society into minute details according to one scheme or the other) and useless repetition. There is little or no integration between theory and research, because they deal with different things. As a result the empiricist has no theoretical foundation for valid conclusions.

To illustrate this, without citing names, one man gathered numerous empirical facts upon the existence and widespread use of small-scale torts within our society and came to the conclusion that torts (he did not use this word because he had only empirical training) should all be classified as crimes. Another group gathered a million facts of the same nature in regard to sex ramification and came o the conclusion that there should be no social control of sex. Both studies were, in the opinion of many thoughtful persons, extremely socially disadvantageous and misinforming and both received tax-exempt support in large sums.

As a result of this I feel that the whole emphasis in training, as dominated by our tax-exempt foundations, should be overhauled. Our research of an empirical nature is so unrelated to theory that it becomes interpreted in extraneous surface philosophies, socially harmful, and of no material meaning. (I can prove this but it would involve me into polemics, and that I consider inadvisable in a public document.)

One of the aspects, and results of this, is the general feeling that social science should have "aim" nor "utility," but should be a "study for study's sake." "We might discover something which will be good 50 years from now," is a shibboleth of this school. Now cast back to 1900, and tell me what could have been discovered by such an activity then, which could have been valuable in the changed social conditions of today? The idea is ridiculous. Yet this feeling is most prevalent in the groups who have the easiest access to tax-exempt foundation funds. On the other hand, it is fitting with our culture that the activities of men should aim to do some "good" or create some understanding, directly or indirectly, I imagine these foundations are created by funds from persons who are in the very high brackets of taxation, and the public, in a large sense, supports almost entirely these exaggerated empirical falsities. Now just why should the public contribute to an activity which has no social aim?

I hope these remarks and this evaluation is of use to you. The situation is more serious than most persons think. However, there are all that I care to mention in a public document.

Sincerely,

CARLE C. ZIMMERMAN.
During the course of the hearings, reference was made to letters written by Prof. J. Fred Rippy, professor of American history, the University of Chicago, Chicago 37, Ill. The correspondence referred to follows:

The University of Chicago,
Department of History,
Chicago, Ill., August 4, 1951.

Hon. E. E. Cox,
United States House of Representatives,
Washington, D. C.

Dear Congressman Cox: I take the liberty of writing you this note because I was born and educated in your part of the country. I hope a committee of Congress will investigate the foundations in order to determine their influence and whether the National Government should lay down some general principles regarding the manner in which their funds are distributed. Several years ago these funds were usually distributed by some of the major foundations to faculty committees of various major universities and were, in turn, distributed by the faculty committees among such members of the various university faculties as were deemed competent and reliable. More recently this policy has been changed, so that the funds are now likely to be distributed by a central committee at the headquarters of each foundation. This, in my opinion, means a dangerous concentration of power in the hands of a little group of men who either engage in favoritism or fail to secure adequate information regarding the recipients of subsidies. Distribution of funds through widely scattered university faculty committees would guard against these evils and assure a wider measure of equality of opportunity based upon relative merit.

At present and for years to come, scholars in our universities will not be able to do much research on their own because of high prices and heavy taxes. The recipients of these tax-free subsidies from the foundations will therefore have great advantages that will be denied the rest of the university staffs. The favored few will get the promotions and rise to prominence. The others will tend to sink into obscurity and have little influence in the promotion of ideas and culture. Unless the power to distribute these immense foundation funds is decentralized, the little controlling committees and those to whom they award grants and other favors will practically dominate every field of higher education in the United States. Even granting them great wisdom and patriotism, one might still complain against this injury to the great principle of equality of opportunity. But I have never been impressed by the superior wisdom of the foundation heads and executive committees. The heads tend to become arrogant; the members of the committees are, as a rule, far from the ablest scholars in this country.

I make these suggestions: First, examine the methods now employed in distributing these funds and the qualifications and attitudes of the heads and executive committees of the foundations; second, consider the wisdom and prudence of decentralization in the control of these tax-free funds. If you should conclude that it would be wise to force decentralization, consider the possibility of either taxing these foundations, or a number of them, out of existence or compelling them to distribute their funds annually among the best universities and permitting faculty committees in these universities to distribute these funds among the most capable members of the faculties of the recipient universities. In numbers there will be more wisdom and justice. I believe our way of life is based upon the principles of local autonomy and equality of opportunity. I strongly approve those principles and I believe you
do likewise. I should not be surprised if your proposed committee of investigation should discover that concentration of power, favoritism, and inefficient use of funds are the worst evils that may be attributed to the foundations. If they have supported any Communists, such support has probably been unintentional. A little group drawn from restricted areas cannot know the attitude and allegiance of recipients hundreds of miles away who are given grants on the basis of letters of recommendation and perhaps a brief interview. Locally chosen faculty members will know more about applicants from each university than can possibly be learned through casual letters and investigations of little groups far removed from these campuses. Those who govern this Nation and the people who pay heavier taxes because of the exemptions granted these affluent foundations have a right to lay down the general principles for the distribution of their funds and favors.

Very sincerely,

J. Fred Rippy,
Professor of American History.

THE UNIVERSITY OF CHICAGO,
DEPARTMENT OF HISTORY,
Chicago, Ill., November 8, 1952.

Hon. E. E. Cox,
United States House of Representatives,
Washington, D. C.

Dear Congressman Cox: Since I wrote you on August 4, 1951, Dr. Abraham Flexner, a man who has had much experience with the foundations, has published a book, entitled "Funds and Foundations," in which he expresses views similar to those contained in my letter. I call your attention to the following pages of Flexner's volume: 84, 92, 94, 124, and 125. Here Dr. Flexner denies that the foundation staffs had the capacity to pass wisely on the numerous projects and individuals for which and to which grants were made and contends that the grants should have been made to universities as contributions to their endowments for research and other purposes. The problem is clearly one of the concentration of power in hands that could not possibly be competent to perform the enormous task which the small staffs had the presumption to undertake. This, says Flexner, was both "pretentious" and "absurd." In my opinion, it was worse than that. The staffs were guilty of favoritism. The small committees who passed on the grants for projects and to individuals were dominated by small coteries connected with certain eastern universities. A Committee on Latin-American Studies, set up in the 1940's, for instance, was filled with Harvard graduates. A single professor of history on the Harvard faculty had the decisive word regarding every request for aid presented by historians.

By granting these subsidies to favorite individuals and favored ideas, the foundations contribute to inequalities in opportunity and interfere with free trade in ideas. They increase the power of favored groups to dominate our colleges and universities. Men whose power exceeds their wisdom, or men who are not guided by the principle of equality of opportunity, could become a menace. If possible, under the terms of our Federal Constitution, these foundations should either be taxed out of existence or compelled to make their grants to colleges and universities, to be distributed by faculty committees of these institutions. Even-handed justice may not prevail even then, because such justice is rarely achieved in human relations. But a greater approximation of even-handed justice will be made because these local committees will have more intimate knowledge of recipients. This, as you know, is the fundamental justification for decentralization of power, for the local autonomy which was so prominent in the thinking of our Founding Fathers.

Very sincerely,

J. Fred Rippy.
TAX-EXEMPT FOUNDATIONS

STATMENTS OF INDIVIDUALS

STATEMENT BY BERNARD L. GLADIEUX, OF THE FORD FOUNDATION, JULY 8, 1954

The purpose of this statement is to place on record the facts concerning allegations made about me by Congressman Carroll Reece, of Tennessee, on July 27, 1953, in the course of a prepared statement to the House of Representatives supporting H. R. 217 which authorized the current investigation of tax-exempt foundations. Congressman Reece's statement concerning me has been incorporated in the record before this investigating committee in substantially its original form. These allegations, imprecise as they were, generally parallel certain obscure charges originally made in 1950 by Senator George W. Malone, of Nevada, concerning some of my official actions on loyalty and security matters while serving in the Department of Commerce.

I am convinced that both Congressman Reece and Senator Malone have been unwittingly misled by false and malicious innuendoes growing out of the performance of my official duties. As an officer of the Federal Government I held responsible posts of administrative control for over 10 years. It was necessary during this time that I make many decisions concerning personnel, budget, or organization matters which adversely affected the personal interests of particular employees and officials. I am satisfied that these wholly untrue allegations had their origins in such administrative situations.

My statement which follows fully and accurately answers every allegation or inference of Congressman Reece and Senator Malone. Fortunately, most of the cases and subjects discussed herein concern official actions taken by me or by my superiors in the Department of Commerce and are verifiable by reference to Government records and published congressional hearings.

I. EMPLOYMENT BACKGROUND

The Congressional Record of July 27 contains some factual inaccuracies concerning my employment experience. I will therefore summarize my background briefly.

Following graduation from Oberlin College in 1930 I was for 4 years a teacher and later principal of the American School in Japan, an institution established by United States missionary groups in Tokyo. Then, after graduate training in public administration at Syracuse University, I served during 1935-36 as executive secretary of the City Manager League of Toledo, Ohio, my hometown. Thereafter I entered the employ of Public Administration Service of Chicago, as a governmental consultant with major assignments successively in the State governments of New York, Michigan, and Virginia, and in a number of Federal agencies. These all dealt with reorganization and efficiency projects.

My Federal Government career in a civil-service capacity began at the United States Bureau of the Budget in 1940, where I was first management consultant, then Chief of the War Organization Section. My work there included planning and setting up the new wartime agencies, examining and revising war agency budgets and working on special White House assignments. Early in 1943, I became administrative assistant to the Chairman of the War Production Board, Donald M. Nelson. For a short period in 1944 and early 1945 I was associated with the United Nations Relief and Rehabilitation Administration under Herbert H. Lehman.

In 1945 I became executive assistant to the Secretary of Commerce under circumstances described hereinafter. As a career officer, I remained in that post until 1950, serving under 3 successive Secretaries of Commerce—Henry A. Wallace, W. Averell Harriman, and Charles Sawyer. Here I served as staff director of operations with responsibilities for general management of the Department, including budget control, personnel administration, and reorganization work.

I resigned from the Government in November 1950, when Paul G. Huffman, newly designated president of the Ford Foundation, offered me an attractive position as one of his assistants. It involved substantially more salary than I had been receiving in the civil service and gave promise of opportunities for advancement far beyond what was possible for a career officer in Government. My decision to leave public service was taken strictly on my own initiative and was based solely on my belief that this opportunity was one that I could not afford to pass up in the best interests of my family, as well as myself.

A fuller statement by way of a detailed biography, including a list of my organization affiliations, is attached as a part of this statement.
II. LOYALTY CLEARANCE

The statement was made by Congressman Reece that no investigation of my loyalty had "ever been requested or made" while in the Federal service. The contrary is the fact.

1. Because of the sensitive nature of my duties in both the Bureau of the Budget and the War Production Board it was necessary that I undergo special investigation for clearance purposes during the war period. I am not fully informed as to the character of these inquiries, but I believe they were extensive. At any rate, I was given the requisite clearance and in both agencies had full access to top-secret information and reports.

2. When W. Averell Harriman became Secretary of Commerce in 1946, one of his early actions was to cause a comprehensive investigation to be conducted by the FBI covering the senior officials of the Department immediately associated with him. These investigations were not initiated as the result of any allegations, but were undertaken simply as a precautionary security measure to assure full protection at the upper echelons of the Department. The results of the FBI inquiry in my case were stated in a memorandum from Secretary Harriman dated August 12, 1947, as follows:

"This memorandum is to place on record the fact that the Department's loyalty review board, after conducting an investigation at my direction, found nothing derogatory in the record of Bernard L. Gladieux which reflects adversely upon him or raises any doubt as to his loyalty. On the contrary, the investigation revealed a constant record of public service of a high order, vouched for by outstanding Government officials.

"I approve the findings of the board, said approval to be placed in Mr. Gladieux's official record."

3. By direction of the Secretary of Commerce in 1948 I served as the official representative and liaison of the Department of Commerce with the Central Intelligence Agency. In this capacity I was authorized to handle top-security information. It was necessary that I be given special clearance for this highly confidential work in which I continued until I left the Government in 1950. I assume that such clearance resulted from the usual reinvestigation concerning loyalty and security required of all those engaged in such work. My service in this capacity is attested in a letter dated November 21, 1950, from Gen. Bedell Smith, then Director of CIA, to the Secretary of Commerce on the occasion of my leaving the Department. An excerpt from his letter follows:

"I should like to take this opportunity to express my keen appreciation of the consistent and highly valuable aid which Mr. Gladieux has rendered the Central Intelligence Agency. His unfailing cooperation has been a great help in solving some of the problems which we have faced during the past 2 years."

4. In 1952 and subsequently I served in a consultant and liaison capacity with the Central Intelligence Agency involving certain highly sensitive matters. Under its security standards I am certain that this Agency would not have initiated this new relationship without further investigation and clearances which gave me access to classified information.

III. ROLE IN LOYALTY APPEALS

Senator Malone has implied that I nullified adverse loyalty or security decisions without authority and contrary to the interests of the Government. Nothing could be farther from the truth. Here are the facts concerning my relationship to the administration of the loyalty program during my years in Commerce:

In June 1948 I was formally directed by Secretary Sawyer, in addition to my other duties, to serve as his special representative in hearing all appeals from adverse decisions of the Department's loyalty board. This appeals procedure was required by the provisions of Executive Order 9835. In fulfillment of this duty, I heard on appeal a substantial number of loyalty cases. The procedure was to consider carefully the decisions of the loyalty board against the employee, to screen and evaluate the FBI reports, to hold hearings at which the defendant and his legal counsel appeared, and then to write a formal report and recommendation to the Secretary.

Though 2 of the 3 members of our loyalty board were administrative subordinates of mine, we scrupulously observed our respective functions and proper relations in matters concerning loyalty appeals. Contrary to an inference by Senator Malone in the Lee case that I might have influenced the loyalty board's
original clearance of him I followed a fixed policy of not discussing the substance of this or any other case with loyalty board members during the time they were under adjudication.

Several months after assuming this appellate responsibility the burden of cases became so heavy, when coupled with my other duties, that I obtained the Secretary's approval for the designation of the Director of the Field Service of the Department to serve as my associate in reviewing these cases and to act as joint presiding officer with me at the formal hearings. At my request the Solicitor of the Department and the Deputy Director of Personnel, who was in charge of personnel security, also sat with me in the hearings on these cases. While the responsibility was basically mine, I counseled with these associates closely, and we invariably agreed on the recommendation to be submitted to the Secretary.

In making these recommendations on loyalty cases to the Secretary I exercised my best judgment, keeping in mind the paramount interest of Government security. It should be understood that during this period, under the terms of Executive Order 9835, an employee could be separated on disloyalty charges only if there existed "reasonable grounds" for a finding of present disloyalty. This required a more positive finding and represented a policy more favorable to the employee than the "reasonable doubt" standard which later became effective in 1951. Obviously, some cases which were favorably decided in 1949 or 1950 under the "reasonable grounds" standard might have been given an adverse decision in 1951 when the "reasonable doubt" standard was instituted.

The standards of evidence required by due process of law were in no way called for in these proceedings. Nevertheless a finding of "present disloyalty" under the "reasonable grounds" language of Executive Order 9835 necessarily required some basis in tangible and credible information clearly adverse to the defendant. This became a matter of judgment on the part of the reviewer, since there could be no precise criteria for determining the weight of the evidence normally available in connection with these cases. While governed by the provisions of Executive Order 9835, I nevertheless felt it incumbent upon me to determine questionable or borderline cases in favor of the Government—even during that period when a more positive preponderance of evidence was required for a disloyalty finding. This policy did not at the same time prevent me from dealing with these cases in a manner fair and equitable to the employees concerned. All my findings and recommendations as to these appealed loyalty cases are a matter of record, and even with the advantage of hindsight I stand by my decisions.

Regardless of final decision in the Department, all loyalty cases during the period under discussion were subject to further appeal to or audit by the President's Loyalty Review Board—the final authority. During my service in the Department of Commerce, no decision made by the Secretary pursuant to my recommendation, either for or against the loyalty of any individual, was overruled or reversed on subsequent appeal to or audit by the Loyalty Review Board. The policy and attitude of the Department in connection with these loyalty cases were perhaps best stated by Secretary Sawyer in a hearing before the Senate Appropriations Committee on April 21, 1950:

"In every case we have made a prompt investigation of any information which came to us that would even justify an investigation, whether it would indicate disloyalty or not. * * *"

"* * * as far as any dereliction in pursuing disloyal persons or any willingness to defend them or protect them, there is not one word of truth in any such claim. * * *"

In addition to scrupulous administration of the loyalty program, the Department, under my supervision, inaugurated its own special personnel security program in 1948. This program exceeded the requirements and standards of the loyalty program and resulted in the elimination of many dubious employees who were otherwise cleared under the official criteria established for loyalty.

IV. THE REMINGTON CASE

Senator Malone accused me of "violently defending" William Remington about whose loyalty case there was much public comment in the period 1948-50. Congressman Reece stated furthermore that I had engaged in "social contacts" with Remington. Both of these statements and other innuendoes about my part in this case are completely false. The facts are these:

I had nothing to do with the selection or recruitment of Remington as a staff member of the Department of Commerce in March 1948. As a matter of fact,
I met him for the first time only after his case became the subject of congressional investigation. Though we now know as a result of public disclosures that Remington was the subject of FBI information received in late 1945 linking him to an espionage ring, I did not know nor was I personally informed of this fact until some time in June 1948. I am also confident that Secretary Harriman was not alerted or otherwise informed about these suspicions and allegations during his incumbency in Commerce. In fact a check by the Department with the central investigative index maintained by the Civil Service Commission for the entire Government revealed no derogatory evidence about Remington as late as May 1948.

To my knowledge Secretary Sawyer and Under Secretary Foster were first alerted by a communication dated May 11, 1948, from Attorney General Clark to the effect that Remington was under FBI investigation on charges of espionage. Following receipt and review of this FBI report in June, Secretary Sawyer immediately placed Remington on inactive duty status. In July, after the facts became more fully known to us and pending adjudication of his loyalty case, I arranged for Remington’s formal suspension from the Department of Commerce.

On August 5, 1948, as spokesman for the Department, I appeared before the Senate Investigating Committee, Senator Homer Ferguson serving as chairman, to describe the circumstances leading to this suspension and to assure the committee that we were exercising proper vigilance in such cases as soon as we were given an FBI alert. I was interrogated on this occasion as to why the Department of Commerce was not advised by the FBI or the Department of Justice that Remington had been under investigation since 1945 and could only reply that I assumed the FBI had its own reasons for keeping Remington under surveillance without general disclosure of this fact.

The matter of Remington’s loyalty was never under the jurisdiction of the Department of Commerce, and I, therefore, had no part in the decisions concerning this matter. The adjudication of this case was the responsibility of the Civil Service Commission according to the loyalty regulations existing at the time.

In the fall of 1948 the Regional Loyalty Board of the Civil Service Commission found Remington disloyal. On appeal the President’s Loyalty Review Board in February 1949 overruled this adverse decision and declared there was no reasonable grounds for believing Remington disloyal. The Board thereupon ordered the Commerce Department to reinstate him in his former position and to his former status. It was my responsibility to carry out this order on behalf of the Secretary. I took the precaution of placing security restrictions on Remington and located him in a nonsensitive position in his former organization, the Office of International Trade, with duties completely unrelated to his former responsibilities. In July 1949 I took further steps to minimize his duties and reduce him in civil-service grade, since his usefulness was now greatly limited.

The Remington case illustrates the earlier difficulties and uncertainties surrounding the handling of security cases following clearance on loyalty grounds. In 1949 there was no clear legal authority and no civil-service standards or procedures for the dismissal of those considered to be of dubious security as this term is now being used. Actually, it was not until about August 1950 that the Congress enacted legislation, which had been initiated by the Department, authorizing the Secretary of Commerce to effect security dismissals in his discretion and without regard to civil-service regulations. Had we been vested with such authority earlier Remington’s case could have been disposed of with dispatch in 1949.

A year or more after Remington’s reinstatement new derogatory information, which eventually formed the basis for his indictment, was developed on him by the House Committee on Un-American Activities. I requested a transcript of this information, in a letter from me to Chairman John S. Wood dated May 5, 1950, and obtained it from the committee. After review of this new information and consideration of the entire case, Secretary Sawyer decided Remington must somehow be removed from the Government. After discussion with me, and with the Secretary’s concurrence, I called Remington and his attorney into my office on May 26, 1950, and, with the Director of Personnel Operations as a witness, demanded his resignation. (The forced resignation technique was much simpler, if successful, than the slow and uncertain civil-service separation procedures in the absence of the summary dismissal authority referred to above.) Remington refused. Accordingly, I then signed and filed formal charges for his dismissal in a letter from me to him dated June 5, 1950. Thereupon, a few days later, Remington resigned from the Department.
The first time I ever met or even saw Remington or had any relationship with him was after his suspension in 1948, when he came to my office in connection with some aspect of this action. My subsequent relations were also strictly official, and I never met him outside my office. I certainly had no social contacts with him at any time or had any personal interest in his case; nor have I ever defended his character or conduct before congressional committees or otherwise. This was an involved case to handle in view of Remington's civil-service rights under the Veteran's Preference Act and his loyalty clearance by the Loyalty Review Board. It properly fell to me to handle in view of my position.

V. THE LEE CASE

Congressman Reece claimed that I had "social contacts" with Michael E. Lee about whose loyalty case there also was much public comment at the time. Senator Malone stated that I nullified adverse decisions regarding Lee, accused me of "violently defending" him and made other insinuations concerning my role in this matter. The record shows that these allegations are false and have no foundation in fact.

My first contact with the Lee case was to initiate the Department's original request for a full-scale FBI investigation of this employee as follows: Sometime in October 1948 I recall the Department's Chief Investigations Officer bringing to me an unidentified statement, which he had in turn received from a staff member of the House Committee on Un-American Activities, citing Lee's background and raising questions as to his character and suitability. I believed this information, though sketchy, warranted inquiry and accordingly directed the investigations officer to turn it over to the FBI.

A few weeks later I received further information about Lee from a reliable private source. This information in particular, and when coupled with that received earlier, disturbed me in view of Lee's sensitive position in our Office of International Trade since it raised in my mind serious question as to his loyalty or at least his security status. Accordingly, on this occasion sometime in November 1948 on my own responsibility I directed our investigations officer to make a formal request to the FBI for a full-scale investigation. Shortly thereafter the assigned FBI agent came to see me, and I informed him of my information and its source.

This all led to the submission some months later of a comprehensive FBI report on Lee which was turned over to our loyalty board. At no time in all the subsequent consideration of Lee's case, however, did I myself have any part in adjudicating its loyalty aspects.

After the usual process of charges and hearings the Department's loyalty board in July 1949 made a favorable decision as to Lee's loyalty—a decision confirmed by the Loyalty Review Board on audit. However, while clearing him on loyalty charges the Department's board recommended that careful study be given Lee's fitness for holding a sensitive position in which he would have access to classified materials. This recommendation came to me in accordance with normal procedure. Since Secretary Sawyer was by now fully familiar with the facts concerning Lee, and in view of the nature of this particular case, I referred the matter to him. He informed me that he had decided no security restrictions should be imposed on Lee, and I so advised our personnel office in a memorandum dated August 8, 1949. I believe the Secretary again reviewed the matter of Lee's security status in February 1950 and found no reason to reverse his earlier decision.

Subsequently further information from the FBI came to the attention of the Department causing our loyalty board to file new loyalty charges against Lee in March 1950. This led to an adverse finding against Lee in September 1950. Secretary Sawyer personally assumed jurisdiction over the appeal submitted by Lee since again he alone could make a decision in a case of such public interest.

In November 1950 the Secretary overruled the loyalty board and cleared Lee of disloyalty charges. The Secretary reached his own decision, and I did not advise on it this all taking place in the period when I was preparing to leave Government.

My connection with the Lee case principally dealt with the pressing of charges concerning his administrative capacity. He was a constant source of personnel problems because of his failure to exert proper direction of his staff in the Far Eastern Division, Office of International Trade. Several administrative actions were brought against Lee, the course of these paralleling the separate loyalty proceedings during 1950. After a series of charges and countercharges involving
Lee and his associates in the Office of International Trade and in consideration of all the facts in the totality of this case Secretary Sawyer came to the decision that steps must be taken to remove Lee from the Department. Accordingly, after discussion with me and with his approval, I called Lee into my office on May 26, 1950, and, with the Director of Personnel of the Department as a witness, demanded his resignation from the Department. (Here again we were handicapped in dealing with such cases by the absence of summary dismissal authority.) Lee refused to resign, he said, until he had been given loyalty clearance by the Secretary. On June 1, I again demanded Lee's resignation. When he again refused, I signed and issued formal charges on administrative grounds for his dismissal from the Federal service in a letter to him under date of June 1, 1950. I filed additional charges on July 17. The required civil service hearing on these several charges was never held, because of Lee's certified illness. These charges, however, later facilitated his forced resignation.

When Secretary Sawyer advised Lee of his final clearance on loyalty charges in November 1950, I believe that the Secretary then threatened to use his recently enacted summary dismissal powers unless Lee resigned. Having been finally cleared on loyalty grounds, he resigned at last from the Government.

I had nothing to do with Lee's entrance into Government employment and had no dealings of any kind with him until it was necessary that he see me in my office on various occasions in connection with his case. My relationships were strictly official and in line of duty. I had no personal interest in him and certainly at no time engaged in social contacts with him.

Senator Malone has repeatedly stated that I appeared before the Senate Committee on Interstate and Foreign Commerce and defended Lee in 1950. This is simply contrary to fact. I never appeared before this committee in connection with the Lee case, as the record of this particular hearing will show, and at no time before this or any other committee did I undertake to defend Lee's character or conduct.

As to Congressman Reece's reference to the fact that I never appeared before the Committee on Interstate and Foreign Commerce to answer Senator Malone's charges about me in connection with the Lee matter, I should like to point out I was never requested to appear before this committee as were some other officials of the Department of Commerce. Lee was the one being investigated by the committee under Senate Resolution 230—not I. Furthermore, Under Secretary Whitney's authoritative statement, when testifying before this committee on March 30, 1950, made the circumstances of Lee's security clearance, which were at issue, quite clear.

This was another highly complicated case in civil-service terms and much confusion surrounded its course. Many differences of opinion were expressed at different stages as between those familiar with the case. I believed then as I do now that the decision of Secretary Sawyer to separate him was justified and proper.

VI. RELATIONSHIPS WITH HARRY S. MAGDOFF

Congressman Reece on July 27, 1953, stated that he had been advised by a reliable and responsible source that I had engaged in social contacts not only only with Remington and Lee, but also with Harry S. Magdoff, who was a subordinate staff member in the Office of Program Planning for about a year during the time I was in the Department of Commerce.

I have never at any time engaged in personal social relations with Magdoff by any stretch of that term as it is universally understood. I have searched my memory and believe the only association with Magdoff which could conceivably be twisted into alleged social contact concerns my presence on 1 or 2 occasions as an invited guest, because of my official position, at a staff luncheon held by the Office of Program Planning at which Magdoff was also present along with the other employees of this unit. I also remember noting his presence at a local group meeting of the League for Women Voters back during this period. But there was no basis of mutuality for social relationships, and I simply didn't associate with him outside the office—in fact, I didn't know him very well even there.

I had nothing to do with Magdoff's employment in the Government and did not meet him until this time (1945 or 1946). He was not under my direction and my official contacts with him in Commerce were not extensive, though I saw him in line of duty now and then. I have not seen him since Commerce days.
Subsequent to Magdoff's resignation from the Department in December 1946, information from the FBI about him came to my attention. In accordance with our established procedure, his name was flagged in our Personnel Office for purposes of blocking reemployment in the future. This was the first that I was aware of the fact that he was considered a "suspect" person. I did not know that he had been the subject of FBI inquiry and comment as early as 1945 until recent public disclosures. I am certain that neither Secretary Harriman nor Under Secretary Foster were likewise made aware of the existence of this adverse information about Magdoff until after his resignation from the Department.

VII. RELATIONSHIP WITH PHILIP M. HAUSER

Congressman Reece claimed that I also engaged in social contacts with Dr. Hauser and drew an unfavorable inference from this relationship. I considered Dr. Hauser, who was for 2 or 3 years Chief of the Office of Program Planning in the Office of the Secretary, a respected associate. I came to know him well in the office and had a high regard for his capabilities. I was familiar with the facts involved in his FBI report. More importantly, I was aware that he had been given full loyalty and security clearance following review by the Department's loyalty board. He enjoyed the confidence of successive Secretaries of Commerce and I likewise have had no reason at any time to question his loyalty or his security. (Incidentally, as I recall it, Dr. Hauser's case principally involved allegations concerning other members of his family as well as a matter of confused identities.)

VIII. RELATIONSHIP WITH HENRY A. WALLACE

Senator Malone has claimed that I was a protege of Henry A. Wallace, former Vice President. This statement, with its derogatory insinuation, has been repeated by Congressman Reece.

I have been no man's protege.

I was originally recommended to Mr. Wallace in 1945, when he became Secretary of Commerce, by Harold D. Smith, Director of the United States Bureau of the Budget. I had met Mr. Wallace a few times earlier in connection with my duties at the Budget Bureau, when I was assigned to assist in establishing the new Board of Economic Warfare of which he was Chairman. But I knew him only slightly before 1945; I had not been associated with him in the Department of Agriculture at any time.

As his executive assistant at Commerce for about a year and a half I was concerned exclusively with the internal operations of the Department and never played any part in any of Mr. Wallace's political speechmaking or other political activities. I did not approve of his 1948 campaign for the Presidency and have practically no contact with him since 1946. On 2 or 3 occasions in that time he has phoned me to inquire as to my recollection concerning factual matters relating to his incumbency as Secretary of Commerce, and I have had 2 chance encounters with him since coming to reside in the New York area in 1951.

IX. CONGRESSIONAL HEARING

Reference was made in the July 27, 1953 Congressional Record to my appearance before the House Appropriations Subcommittee on February 27, 1950. This hearing was called to inquire into the policies and practices of the Department of Commerce regarding loyalty and security. As the officer in general charge of administration, including security matters, it was my function to serve as official spokesman.

I presented to the committee facts and statistics which outlined the "tough, but fair" policy we had adopted. In addition to advising them as to the substantial number of employees already released on loyalty grounds, I explained that on our own initiative we had extended the program beyond the requirements of Executive Order 9835 to provide for the designation of security risks and for dismissals on security grounds wherever this was feasible. More specifically I was able to report that as of February 21, 1950, a total of 71 Commerce employees had been dismissed or otherwise separated on loyalty or security grounds as a consequence of our departmental action following the receipt and consideration of adverse FBI information submitted pursuant to the new loyalty program.

I explained the legal and civil-service difficulties we were encountering in dealing with security cases which had been cleared on loyalty grounds and indicated that the Department needed, and was seeking, legislative authority which would
empower the Secretary to dismiss dubious employees in his discretion without reference to the usual civil-service procedures. There is reason to believe that my testimony on this occasion helped obtain this summary authority as a rider to our pending appropriation bill.

In spite of the above record of the Department, some of the committee members protested at my refusal to reveal certain information concerning individual cases and claimed I was not cooperative with them. I was obliged to explain repeatedly that I was under specific instructions from the White House, reinforced by instructions from the Secretary of Commerce, to reveal nothing but broad statistics and general policies and to refrain from comment on, or information about, specific loyalty cases. (Incidentally, President Truman's Executive order prohibiting the release of loyalty information to congressional committees has not been rescinded by President Eisenhower, and it continues in full force and effect.) The committee was adamant in its attitude, however, and insisted that I discuss specifics. Since under the terms of my instructions I could not accede to this demand, some committee members were obviously not completely satisfied.

In conclusion, I wish to state that, like any other loyal American, I deeply resent these false and malicious insinuations. I am proud of my career in the public service. I have nothing to conceal. I will stand by the record of my official actions and decisions.

STATE OF NEW YORK,
County of New York, ss:

Bernard L. Gladieux, being duly sworn on his oath, deposes and says that he is the person who subscribed his name to the foregoing statement and that the matters and facts set forth in said statement are true.

(Signed) BERNARD L. GLADIEUX.

Subscribed and sworn to before me this 13th day of July 1954.

(Signed) JANICE B. LA VINE,
Notary Public, State of New York.

Term expires March 30, 1955.

Biographical Statement of Bernard L. Gladieux, of the Ford Foundation, July 7, 1954

Birth, Family, Residence

My name is Bernard Louis Gladieux. I was born April 12, 1907, in Toledo, Ohio.

My father, Victor Modest Gladieux, resides in Toledo at 724 Utah Street where, together with my mother until her recent death, they lived for almost 50 years. He is of French-Irish descent, his paternal ancestors migrating to this country from Alsace, France, about 1832. Until his retirement a few years ago, my father was employed by the City Water Department of Toledo. My mother, Anna Cook Gladieux, was of English descent and a member of the Daughters of the American Revolution.

I married Persis Emma Skilliter, also of Toledo, in June 1930. We have 4 sons: Bernard, Jr., age 17; Russell, 14; Larry, 10; and Jay 7. My family and I now live at 3 Walworth Avenue, Scarsdale, N. Y.

Education

I attended Navarre School, a Toledo public school, through the eighth grade and was graduated from Waite High School of Toledo in 1926. In high school I participated in athletics and during my senior year was president of the student council, president of the Hi-Y Club, and a class officer. I attended and later joined Trinity Episcopal Church at this time.

In the summer of 1926, following graduation from high school, I was selected as 1 of 3 youth representatives from Ohio to attend the first world conference of YMCA's in Helsingfors, Finland.

I entered Oberlin College in the fall of 1926 and received an A. B. degree in 1930. My major course of study was American history. At Oberlin I partici-
pated in athletics and was president of the college YMCA, a member of the men's senate (student governing body), and a founder of the Outing Club. In my senior year I was elected to Phi Beta Kappa.

During the summer of 1929, while still at Oberlin, I received a fellowship covering travel in Europe and study at the Zimmern School of International Studies, at Geneva, Switzerland.

In 1934, I took graduate training in public administration at the Maxwell School of Citizenship and Public Affairs of Syracuse University. Later, following submission of a thesis, I was awarded a master of arts degree in public administration.

CAREER

1930–34—American School in Japan: Teacher and principal

Upon graduation from Oberlin in 1930, I accepted a position as teacher in the high-school department of the American School in Japan, located in Tokyo. This private school was established by United States missionary groups to educate the American and other English-speaking children of the foreign resident communities in Tokyo and Yokohama. My principal teaching assignments were American history and government, European history and physics; I also coached the school's athletic teams. Mrs. Gladieux taught in the elementary department of the school.

In 1933 I was appointed principal of the school by its board of trustees, a position that I agreed to hold for 1 year since I had already delayed my planned return to the United States. As principal I was responsible not only for academic administration, but for the business management of the institution as well.

1934–35—Graduate work at Syracuse University

Upon returning from Japan in the summer of 1934 I entered graduate school at Syracuse University intending to train for and eventually enter public service. This course of training was interrupted early in 1935, when I was invited by a group of civil leaders in Toledo to become executive secretary of the City Manager League.

1935–36—City Manager League of Toledo, Ohio: Executive secretary

This civic organization was dedicated to revamping and modernizing the municipal government of Toledo. I was responsible for planning and directing its work. The league successfully sponsored a new city charter, electing a majority of the new city council, and instituted a number of improvements in municipal management and city finances.

Upon completion of this program of municipal reform early in 1936, I returned briefly to Syracuse University in order to complete my course work in public administration.

1936—Regents' education inquiry: Research associate

In April 1936 I became research associate on the staff of the regents' inquiry into the character and cost of public education in the State of New York. Here I conducted field surveys covering the administrative organization and business management practices of 15 New York State school districts, derived and analyzed data on unit costs of education, and assisted in designing the improved budgeting, accounting, and other administrative practices recommended in the published reports of this inquiry.

1936–40—Public Administration Service: Management consultant

I had been associated with Public Administration Service during the course of the regents' inquiry and at the conclusion of this work was invited to join its permanent staff. Public Administration Service is a nonprofit corporation, with headquarters in Chicago. It provides technical consultant services on a contract basis to Federal, State, and local governments.

From December 1936 to June 1937 I assisted in preparing and executing plans for the reorganization of the New York State Department of Social Welfare, including consolidation of the functions of the temporary emergency relief administration. I was also responsible for designing a system of district offices and for preparing and presenting a budget to the Governor's office for the reorganized department.

During this same period I developed and taught a course on "The Organization and Administration of Public Education" to the graduate class in public administration at Syracuse University.
From July 1937 to March 1938 I was engaged on a project initiated by the Governor of Michigan, Frank Murphy, the purpose of which was to develop an improved system of financial administration for the State government. I was specifically concerned with formulating and installing revised budgetary procedures to control State expenditures more effectively.

I was next assigned to the Federal Social Security Board where I developed and installed revised plans of administrative organization and procedures for the Bureau of Old Age Assistance. This program included simplified administrative methods, more economical procedures for adjudicating and paying insurance benefits, and plans for decentralizing operations to the field.

As consultant to the Administrator of the United States Housing Authority, Nathan Straus, from October 1938 to February 1939, I was charged with the development and installation of a revised plan of organization for this public housing agency. I recommended a number of basic changes in both line and staff functions and upon approval of these by the Administrator, prepared the necessary implementing orders. I also supervised the preparation of special reports on financial administration and personnel practices.

I was next invited to serve as consultant to the Administrator of the Wage and Hour Division of the Department of Labor which was having considerable program and management trouble administering the Fair Labor Standards Act. I was able to institute several organizational and procedural changes including the development of a revised plan of regional administration. Later, when in the Bureau of the Budget, I was requested to continue my work here, under Budget Bureau auspices now, however, since the situation was of concern to the White House. Major personnel and program changes became necessary.

Harold D. Smith, newly appointed Director of the United States Bureau of the Budget arranged with Public Administration Service to use my services during the period from June 1939 to March 1940. Here I carried out a number of special assignments: (1) Served as adviser to the Administrator of the Federal Works Agency in the developmental stages of this new agency; (2) supervised a survey of the organization and administration of the Bituminous Coal Division at the request of the Secretary of the Interior; (3) advised the Secretary of Labor on the continuing problems of administering the Fair Labor Standards Act.

While working in the Bureau as above, I also carried on various activities for my employer, Public Administration Service. Thus, I gave general supervision to a survey of the administration of Virginia State welfare services undertaken at the request of Governor Price. Recommendations were submitted for legislative action and for the internal organization of the department of welfare. I also developed a plan of administrative organization and formulated an operations budget for the newly established New York State Division of Housing.

1940-43—United States Bureau of the Budget: Chief, War Organization Section

In March 1940, I resigned from Public Administration Service to accept a full-time position as chief investigator with the Budget Bureau. At about the same time I filed application for open competitive civil-service examinations to qualify for budget examiner and management analyst. I was given a sufficiently high rating on these examinations to permit my appointment shortly thereafter as Chief Budget Examiner with full civil-service status.

When President Roosevelt established the National Defense Advisory Commission in June 1940, I was designated as the representative of the Budget Bureau in observing its operations, maintaining liaison between it and the Bureau and advising on management problems.

As the defense effort merged into preparation for all-out war, I was placed in charge of a special staff within the Budget Bureau into which were centered all new activities dealing with the war effort. My staff and I were responsible for planning the development and establishment of the new war agencies, submitting proposals through the Budget Director to the President. Thus during 1941 and 1942, I prepared or supervised the preparation of and cleared and negotiated the Executive orders which the President signed establishing, defining the functions of, and delegating powers to: the War Production Board, the Office of Price Administration, the Board of Economic Warfare, the Office of Strategic Services, the Office of Civilian Defense, the Lend-Lease Administration, the Office of Scientific Research and Development, the Office of War Information, the Office of Defense Transportation, and others.

My group continued working with these emergency agencies after they were created by helping with their organization and staffing problems. All budget requests were reviewed, revised, and approved by my staff in the Budget Bureau.
As the war organization evolved our principal function came to be to exercise a continuous surveillance over the war agencies on behalf of the Executive Office of the President, in order that program gaps, jurisdictional conflicts, organizational and leadership breakdowns might be detected, reported, and acted upon by the Budget Director or President before serious damage was done. Programs and operations were continuously being evaluated for their contributions to the war effort. Frequently changes in personnel, program policy, and basic organization were recommended to the Budget Director for submission to the President.

During this time I was also frequently on special assignment to the White House working with Judge Samuel I. Rosenman. Judge Rosenman was then serving as special assistant to the President helping to resolve many of the difficult situations arising from the unusual pressures, tensions, and personalities of wartime Washington. I assisted him in working out proposals for the President concerning the assignment of major war powers as between competing administrators and in developing organizational plans and mechanisms for coordination of war policies at the White House level.

1943–44—War Production Board; Administrative Assistant to Chairman

In January 1943 I was invited by Donald M. Nelson, Chairman of the War Production Board, to become his chief administrative assistant. In this capacity I served as Mr. Nelson’s principal adviser and assistant in the administration of the War Production Board.

I was directly responsible for organization planning, budget and fiscal administration, personnel management, business services, and operating procedures for the entire Board. Five divisions covering these activities were under my direction. I was also Chairman of the Administrative Council.

Much of my time at WPB was devoted to adjusting its organization to meet new program needs arising from the war particularly with regard to plans for the Normandy invasion. I was also engaged in directing an effort to streamline the agency and reduce its excessive staff. By a process of freezing recruitment, consolidating functions, reducing budgets, and generally tightening up, we were able to report to the House Appropriations Committee in April 1944 that the 1944 appropriation of approximately $80 million had been reduced to $69 million for fiscal 1945. In personnel terms I was able to report that the total WPB staff of 22,000 in January 1943 had been reduced to 17,500 by March 1944.

1944–45—United Nations Relief and Rehabilitation Administration

In August 1944 I accepted an invitation to join the staff of the newly formed United Nations Relief and Rehabilitation Administration. My first task was to make some surveys toward improving certain management and fiscal aspects of the organization. Then Herbert Lehman, Director General of UNRRA requested and urged me to serve as Deputy Director of the Bureau of Areas, which was responsible for all relief operations abroad. I was informed that the program was being seriously impaired because of poor direction of this Bureau by its Chief, Michail A. Menshikov, a Soviet national. I accepted this post with reluctance, and only because I considered it a matter of duty; then was requested to initiate and expedite the work in liberated areas of Europe and the Far East. I was able to make some progress and improvements in the situation, reporting directly to Governor Lehman on critical decisions such as the formation of country missions.

At the end of 3 months, however, I asked Governor Lehman to be relieved of this assignment since I saw no hope of achieving the degree of improvement the situation called for as long as the obstructionist and dilatory tactics of the Director of the Bureau of Areas continued. The international political situation apparently did not permit the removal of this senior representative of the Soviet Union at that time. I was permitted to withdraw in accordance with the agreement made when I originally consented to take on the task.

During most of the remainder of my time in UNRRA I served as Assistant and Acting Director of the Bureau of Finance and Administration.

1945–50—United States Department of Commerce: Executive Assistant to the Secretary

In March 1945 I received an offer from Henry A. Wallace, newly designated Secretary of Commerce, to serve as his Executive Assistant. I left UNRRA to accept this post for which I had been recommended by Harold D. Smith, my former chief in the Bureau of the Budget. I continued in this position under Secretaries W. Averell Harriman and Charles Sawyer until November 1950.
The following excerpt from my official position description indicates the scope of my duties during my tenure in the Department of Commerce:

"As the Secretary's principal career assistant and staff director of operations for the entire Department, the incumbent of this position provides overall direction, guidance, and coordination in the Secretary's behalf and pursuant to his general policies for all programs of the Department, to obtain optimum efficiency, economy, and effectiveness in the administration of the affairs of the Department and its constituent bureaus."

My principal effort during my 6 years in this large and diverse Department was to work toward its revived importance following the neglect of the war years and to help make it of more dynamic and efficient service to the business and industrial community. Much of my work centered around the $1 billion annual budget: its development, approval, adjustment, and control. Budget requests and new programs were subject to my approval on behalf of the Secretary before submission to the Budget Bureau or to congressional committees.

Another activity which took considerable of my personal time was the work incident to the Hoover Commission. I was designated by the Secretary as the official liaison and representative of the Department in regard to this Commission while it was formulating its recommendations. Subsequently, during the period of implementation and installation, it was my responsibility to work out the transfers of functions and agencies and to assure their smooth integration into the Department's structure.

In addition to these duties, I was responsible for personnel management in the Department covering some 55,000 employees. With the inauguration of the loyalty program in 1948, the Secretary of Commerce designated me as his representative in hearing appeals from cases determined adversely by our Loyalty Board under Executive Order 9835. This, together with the related security program, came to demand an increasing amount of my official time. I also served as the central liaison and representative of the Department in relation to the Central Intelligence Agency.

Note.—During my years of service in the United States Government, I invariably and without exception received civil service efficiency ratings of "excellent" from my various superiors.

1950 to date—Ford Foundation

In November 1950 Paul G. Hoffman, newly designated president of the Ford Foundation, invited me to become associated with him as assistant to the president. I accepted, as this offered me challenging work at an attractive salary with good prospects for higher advancement than a career officer could expect in the Government. During Mr. Hoffman's incumbency I served as chief of the New York office of the foundation in which were centered the operational activities of the organization.

Following the election of President Eisenhower in 1952 I was requested to serve as a consultant to the committee headed by Mr. Nelson Rockefeller dealing with reorganization of the Federal Government. I assisted the committee in developing its plans and in outlining some of the principal management, organization and civil-service problems which would confront the new administration (temporary assignment).

During the recent school year, in association with Prof. Arthur MacMahon, I conducted a graduate seminar on the subject American Political Institutions for the department of public law and government at Columbia University.

At Oberlin on October 31, 1953, I was awarded an alumni citation "in recognition of outstanding achievements and services which reflect honor upon Oberlin College."

My writings have all been in the field of public administration. The following articles of mine have been published:

2. "Top Management in the War Agencies," graduate school, Department of Agriculture, 1949
MEMBERSHIPS AND AFFILIATIONS

In the political sphere I consider myself an independent. Since coming of voting age I have been registered at different times both as a Democrat and as a Republican and have contributed funds to both parties dependent on my convictions at the time.

My other affiliations have been largely limited to religious, professional, or social organizations in which I have had a direct and tangible interest.

During our 4 years residence in Japan Mrs. Gladieux and I were members of Tokyo Community Church. During our residence in Maryland, my wife and I helped establish and attended a community church—Pilgrim Lutheran Church—though we are not Lutherans ourselves. Since resident in Scarsdale, N. Y., my wife and I have joined Hitchcock Memorial Presbyterian Church.

I have searched my memory and my records going back to the 1935 period when I reestablished myself in Toledo following residence in Japan and to the very best of my knowledge and recollection, the following constitutes a comprehensive list of my organizational memberships and affiliations during this period.

National Municipal League, 1936-40, approximately.
International City Manager's Association, 1936-40, approximately.
Governmental Research Association, 1936-39, approximately.
Ys Men's Club, YMCA, of Toledo, Ohio, 1935-36.
American Society of Public Administration (charter member), 1938 to date.
Group Health Association of Washington, D. C., member board of directors, 1944-47, approximately.
YMCA of Washington, D. C., 1945-47.
Advisory Council on Public Administration of the Graduate School of the Department of Agriculture, 1945-46, approximately.
Alumni Board of Oberlin College, treasurer, 1945-48.
Board of managers of the YMCA schools of New York City, 1951 to date.
Planning committee of Board of Education of Scarsdale, New York, 1952.
Town Club of Scarsdale, New York, 1953 to date.
Men's Club of Hitchcock Memorial Church, 1951 to date.
Greenacres Association (neighborhood association in Scarsdale) 1951 to date.
Advisory council of the department of politics, Princeton University, 1953, to date.
Advisory group, Japan International Christian University, 1953 to date.
Various parent-teacher's associations.

Though it represented a completely futile exercise, I have carefully reviewed the Attorney General's list of subversive organizations, as well as the broader Guide to Subversive Organizations of the House Committee on Un-American Activities, I can say without reservation that I am not now and never have been a member of any such listed organization, nor have I otherwise been associated or affiliated in any way therewith. I can make the same statement on behalf of my wife.

Furthermore, I should like to state for the record and under oath that I am not now nor ever have been a member of the Communist Party or any of its affiliates or sympathetic in any way with its objectives or doctrines.

Bernard L. Gladieux being duly sworn on his oath deposes and says that he is the person who subscribed his name to the foregoing biographical statement and that the matters and facts set forth in said biographical statement are true.

(Signed) BERNARD L. GLADIEUX.

STATEMENT OF JOSEPH H. WILLITS IN REPLY TO INQUIRY OF GENERAL COUNSEL OF THE SPECIAL COMMITTEE TO INVESTIGATE TAX-EXEMPT FOUNDATIONS DATED AUGUST 4, 1954

My name is Joseph H. Willits. My residence address is North Greenwich Road, Armonk, N. Y. I was director of the division of social sciences of the Rockefeller Foundation from 1939 until my retirement on June 30, 1954, in accordance with the bylaws of the foundation.

This statement is made in response to a letter which I have received from Mr. Rene A. Wormser, general counsel of the committee, dated August 4, 1954, containing the following paragraphs:

"It is my understanding that following the statements made by Mr. Kohlberg regarding the Institute of Pacific Relations you agreed, on behalf of the Rockefeller Foundation, to have his charges investigated. However, at a later date you informed Mr. Kohlberg that no such investigation was to be made, explaining this seeming reversal by a statement to the effect that the Institute of Pacific Relations was undertaking an investigation of its own.

"The chairman has asked me to take this matter up with you and I would appreciate your advising me as soon as you conveniently can whether the above statement is an accurate résumé of what took place."

The above statement is not an accurate résumé of what took place.

The statement that I "agreed, on behalf of the Rockefeller Foundation, to have his (Mr. Kohlberg's) charges investigated" appears to be based upon testimony given before the special committee by Dr. Kenneth Colegrove on June 8, 1954. This witness testified that he could not understand, "when Alfred Kohlberg was able to get the consent of one of the very high officers in the Rockefeller Foundation, why the foundation would not make an investigation of the IPR.

"* * * We ought to have the whole story of why the Rockefeller Foundation failed to make the investigation in 1945" (transcript, p. 1235). The chairman later asked: "To whom was Kohlberg's request for an investigation made, Professor?" Dr. Colegrove answered:

"It was made to Fred Willetts, an official of the Rockefeller Foundation, one of the outstanding men, a man of great integrity and a man of competence and scholarship. I have great respect for Fred Willetts, and he must have had a good reason for not investigating. But that reason, it seems to me, ought to be told to the American people" (transcript, p. 1238).

The fact of the matter is that I never "agreed, on behalf of the Rockefeller Foundation, to have his (Mr. Kohlberg's) charges investigated." I suggested to both parties that they jointly select an impartial committee of inquiry to hear and determine the charges, and I acted as an intermediary in trying to bring about an agreement between them on terms of reference and procedure. The attempt broke down when the IPR rejected the proposal and decided to act on its own. There was no "seeming reversal" on my part. I proffered my help to bring the parties into agreement on the terms and conditions of an independent inquiry into the charges. I continued to use my best efforts in that direction until the IPR declined to go further with my proposal. I then informed Mr. Kohlberg that the IPR (not I and not the Rockefeller Foundation) had broken off the negotiations. That is the sum and substance of this particular incident. As will be noted later, however, the Rockefeller Foundation, in coming to a decision as to whether or not further support should be given to the IPR, made through its own staff, and for its own purposes, a careful inquiry into the IPR situation.

The particular incident about which counsel for the committee inquires was the subject of testimony by both Dean Rusk, president of the Rockefeller Foundation, and Mr. Kohlberg during the hearings before the Cox committee in 1952. Mr. Rusk's testimony (Cox committee hearings, p. 524) is quoted, with additional comments, in the supplemental statement of the Rockefeller Foundation (verified under oath by Mr. Rusk) filed with this committee on August 3, 1964, as follows (pp. 10-11):

"The actual facts in regard to this episode, which differ materially from Dr. Colegrove's version, were set forth in the public testimony of the president of the Rockefeller Foundation before the Cox committee as follows:

"In 1944 Alfred Kohlberg sent the foundation copies of his charges of pro-Communist bias in the IPR. The director of the social-sciences division of the foundation suggested that the charges be referred to an independent body of competent persons for hearing and determination. This proposal was accepted by Mr. Kohlberg, but rejected by the IPR. Instead, a special committee of IPR
trustees reported to its board that the executive committee and responsible officers of the American council had "investigated Mr. Kohlberg's charges and found them inaccurate and irresponsible." The foundation officers would have preferred an independent appraisal of the organization's activities, I might say, not because of any views which they then held on the merits of the problem but because in their view at the time that was the proper procedure by which you could get rid of this kind of issue one way or the other.'

"The 'director of the social-sciences division of the foundation' referred to in this quotation was Joseph H. Willits, who is evidently the person Dr. Colegrove had in mind. As the foregoing testimony shows, there was no plan to have the foundation conduct a public investigation of the IPR, an undertaking for which the foundation was neither equipped nor qualified. Mr. Willits never gave his 'consent' to have such an investigation undertaken by the foundation, and there was no mysterious suppression of such a proposal. On the contrary, Mr. Willits intervened with a suggestion for quite a different type of investigation which was never carried out because the proposal was not acceptable to the IPR."

In further amplification of Mr. Rusk's statements I submit the following:

Toward the end of 1944 the foundation received a copy of Mr. Kohlberg's charges against the Institute of Pacific Relations. This was followed by an interview between Mr. Kohlberg and myself in the spring of 1945, in the course of which he sought to enlist any interest or help we might appropriately give toward resolving the situation.

Although I gave Mr. Kohlberg no encouragement at the time of our interview, after further consideration, I felt that there would be no objection to an entirely unofficial personal suggestion on my part that the parties agree to refer the charges to an impartial committee of inquiry, of their own selection, for hearing and determination. This would not involve any interference or inquiry by the foundation, which would not even propose names for the committee of inquiry, much less determine its membership, and which would leave it to the parties themselves to agree upon the terms of reference and the procedure to be followed by the committee. I offered to act in the role of mediator only, and even in that role, I was a mediator, not of the issues in dispute, but of questions relating to a possible procedure for settling those issues, a procedure in which the foundation would not be a participant.

Accordingly, I sounded out both parties as to their attitude toward this proposal. Mr. Kohlberg indicated his willingness to proceed, on condition that the committee's inquiry should include both the Pacific and American Councils of the IPR, and that the committee should be free to make its inquiry and search for evidence as it wished.

The IPR was noncommittal, but I continued discussions with them on a basis which I regarded as encouraging. On July 26, 1945, in an effort to bring the matter to a head, I wrote a letter to Mr. Kohlberg, with copies to the representatives of the American and Pacific Councils of the IPR, enclosing a statement of certain points of agreement between the parties, as I understood them, and stating that when both sides were in complete agreement as to charges, terms of reference and methods of procedure I would send each a copy of the final agreement, and a meeting to decide upon the membership of the committee of inquiry should follow. This letter and the enclosure to which it refers read as follows:

[Letterhead of the Rockefeller Foundation]

JULY 26, 1945.

Mr. ALFRED KOHLBERG,
Shorehan Hotel, Spring Lake, N. J.

GENTLEMEN: I enclose a statement of my understanding of the points of substantial agreement reached in my separate conversations with you concerning a committee of inquiry to examine into the charges of bias in the IPR.

If this statement does not correctly state your own views, please write or telephone me the corrections you desire to have made and I shall continue my efforts as your secretary. If you approve, please write me your approval.

When both sides are in complete agreement as to charges, terms of reference, and methods of procedure I shall send each of you a copy of the final statement. An exchange of letters direct or via me accepting the statement would seem then to be in order. A meeting to decide upon the membership of the committee of inquiry would follow.

In these mediation efforts I am not functioning as an official of the Rockefeller Foundation but solely as a citizen interested to see the dispute resolved. I distinctly am not urging a committee of inquiry, but raised the question be-
cause each side had expressed sympathy for such a procedure. I am ready and
glad to step out and drop the whole matter at any time, if you can find some
more satisfactory alternative procedure or mediator.

Sincerely yours,
JOSEPH H. WILLITS.

Copy to Mr. Raymond Dennett; copy to Professor Corbett, whom Mr. Edward
Carter has designated as representative of the Pacific Council.

Enclosure:

POINTS OF AGREEMENT BETWEEN ALFRED KOHLBERG AND THE INSTITUTE OF
PACIFIC RELATIONS

(The following statement represents an attempt to set down the points of
agreement with respect to an impartial committee of inquiry to hear and examine
the charges made by Alfred Kohlberg against the Pacific and American Councils
of the Institute of Pacific Relations. This statement covers my tentative under-
standing of the points of agreement as to charges, terms of reference, and meth-
ods of procedure as reached in separate conversations with Alfred Kohlberg on
the one hand and with Raymond Dennett of the IPR on the other.—Joseph H.
Willits.)

CHARGES

Mr. Kohlberg charges an anti-Chungking, pro-Communist bias in the IPR's
attitude toward China as evidenced by—
(1) Distorted and inaccurate articles on China and the Chinese Government
appearing in publications of the Institute of Pacific Relations. Mr. Kohlberg
charges that this attitude has changed from time to time to correspond with atti-
tude reflected by articles appearing in Communist publications such as The New
Masses, The Communist, and The Daily Worker.
(2) Membership of staff writers on China of the Institute of Pacific Relations
(both American and Pacific Councils) at some time in the last 8 years in Com-
munist or Communist-front organizations or employment by them.

TERMS OF REFERENCE

The committee of inquiry is charged with responsibility for examining the
charges of bias in the publications of IPR and rendering an opinion thereon.

METHOD OF PROCEDURE

It is agreed by both parties that—
(1) The membership of the committee of inquiry shall consist of three
persons, mutually agreed to by both parties.
(2) The inquiry shall embrace both the Pacific and American Councils.
(3) The committee of inquiry shall be free to determine its own procedure
and search for evidence as it sees fit; and to decide also what testimony is
relevant.
(4) The hearings shall not be public.
(5) Each party to the dispute shall, within reasonable limits, be free to
bring such assistants and advisers to the hearings as he may wish. The
committee of inquiry shall determine what constitutes "reasonable limits."
(6) Each party to the dispute binds himself (and his organization) to
keep the proceedings secret and specifically to give no report of the proceed-
ings to the press.
(7) A complete transcript of the proceeding shall be made and one copy
each furnished to Mr. Kohlberg and to the IPR. Other copy or copies shall
be the property of the committee of inquiry.
(8) Each party shall limit its presentation of testimony to 2 days' time.
(9) Mr. Kohlberg agrees to drop his court suit against the IPR and not
again to revive it in case the committee of inquiry comes into being and
reports.
(10) The expenses of the committee of inquiry shall be provided equally
by the two parties to the issue.
(11) A copy of the report of the committee of inquiry shall go to each
member of the American Council.

No decision was reached during August, probably because of the absence on
vacation of a number of those interested in the matter.
Under date of September 6, 1945, I received the following letter from the secretary of the American Council, IPR:

[Letterhead of American Council, Institute of Pacific Relations, Inc.]

SEPTEMBER 6, 1945.

Mr. JOSEPH H. WILLITS,
Rockefeller Foundation, New York, N. Y.

DEAR MR. WILLITS: The executive committee of the American Council of the IPR has considered your letter of July 26 in which you transmit a proposed understanding between the IPR and Mr. Alfred Kohlberg for the constitution of a committee of inquiry to examine into charges of bias in the IPR.

The committee has instructed me to inform you that it has decided not to accept the proposals which have been made, and is instead forwarding to Mr. Kohlberg, through his lawyers, an alternate proposal, to wit; an offer to mail all the members of the American Council whatever material he may wish to send regardless of whether or not it may not contain libelous material.

The reasons for the rejection of this offer and the substitution of an alternate proposal include a desire on the part of the executive committee of the American Council to conclude this matter as quickly as possible by offering Mr. Kohlberg the opportunity to present his charges to the membership, collect his proxies, and have the matter settled by the decision of the members of our own organization, who, since they represent a cross section of the American public are presumably in a position to judge intelligently on the matters at issue.

The committee was further impelled to this decision by noting that Mr. Kohlberg had continued two additional general circularizations: one an open letter to Mr. Raymond Gram Swing, and another an open letter to the trustees of this organization, under date of August 31. Both of these communications occurred during the time when we were both presumably engaged in considering the proposals which you were kind enough to suggest.

The committee has also asked me to express to you its deep appreciation of your courtesies and kind efforts to bring this matter to a conclusion. We feel indebted to you for your personal interest and kindness in this matter and I am sure that you will realize that our decision stems from a conviction that our proposed method, if Mr. Kohlberg accepts it, will be in the best interests of our organization.

With cordial best wishes,
Sincerely yours,
RAYMOND DENVERT, Secretary.

This letter left me no choice, as a mediator, but to drop the proposal which for several months I had been trying to bring to fruition. Accordingly, I telephoned Mr. Kohlberg reporting the IPR's decision to him. I received in reply the following letter:

[Letterhead of Alfred Kohlberg, Inc.]

SEPTEMBER 11, 1945.

Mr. JOSEPH H. WILLITS,
New York 20, N. Y.

MY DEAR MR. WILLITS: I desire to take this occasion to thank you for the time and effort spent in attempting to arrange for an impartial hearing of the charges I have preferred against the management of the Institute of Pacific Relations. In our future relations with the nations of the Pacific Basin, the institute should play an important part.

As I understood you over the telephone yesterday, the institute will take up directly with me the question of a hearing on my charges and have asked you to withdraw from a part in such arrangements. As I understand it, I will hear from the institute in due course.

Your fairness, impartiality, and patience I hope will bring about a satisfactory investigation, which will result in strengthening the institute as an organ of international good will.

Very sincerely yours,

ALFRED KOHLBERG.
This exchange of correspondence was closed with my answer, as follows:

SEPTEMBER 14, 1945.

Mr. Alfred Kohlberg, New York, N. Y.

My Dear Mr. Kohlberg: Thank you for your letter of September 11. I am glad if my efforts to bring about some adjustment of the differences between yourself and the Institute of Pacific Relations have helped toward a mutually satisfactory conclusion. As you appreciate, I was merely trying to be a mediating middleman.

Perhaps I should correct one small point in your letter. The institute has not asked me to withdraw. They have merely said that they were prepared to make a direct proposal to you and in the meantime the question of a committee to hold a hearing is withdrawn. I don't know just what their proposal is. That they will make clear to you.

Sincerely yours,

Joseph H. Willits.

My statement that I did not "agree, on behalf of the Rockefeller Foundation, to have his [Mr. Kohlberg's] charges investigated" is borne out by Mr. Kohlberg's testimony before the Cox committee. After referring to the filing of his charges and to his interview with me, Mr. Kohlberg testified:

"A little bit later in the summer of 1945, Mr. Willetts (sic) proposed that the institute and I get together and agree on a committee of three impartial persons to hear my charges and evidence, and hear the institute's side, and make a report to the institute and to the Rockefeller Foundation" (Cox committee hearings, p. 652).

Mr. Kohlberg's further testimony as to my report to him on the breakdown of my negotiations with the IPR (Cox committee hearings, p. 654) is also generally corroborative of what I have said above.

A special committee of IPR trustees later reported that the executive committee had investigated Mr. Kohlberg's charges "and found them inaccurate and irresponsible."

The fact that no investigation of Mr. Kohlberg's charges was made by a committee of inquiry such as I proposed did not mean, however, that the matter was dropped by the Rockefeller Foundation. As was fully explained in Mr. Rusk's testimony before the Cox committee (Cox committee hearings, pp. 524-526) the question of whether or not a further grant should be made to the IPR came before the foundation in 1946. As part of a very thorough inquiry into the whole IPR situation by the foundation staff, we sought the advice of, among many others, four former trustees of the American Council of the IPR who were understood to have resigned from its board because of dissatisfaction with conditions in the organization. After referring to the concern which these former trustees expressed in regard to certain aspects of the IPR's personnel and organization, Mr. Rusk correctly summed up their position in his testimony as follows:

"But the overall feeling among this group of former trustees was that the Kohlberg charges had been exaggerated, and that the most important service the Rockefeller Foundation could render was not to destroy the American Council by abruptly ending its support but, rather, to renew its grants and thereby reinforce the efforts of the group who were working to strengthen the organization in line with its original objectives."

The foundation's 1946 grants to the IPR were made only after a careful investigation by us and after obtaining the advice of such men as these who were in a position to understand conditions within the IPR. It is interesting also to note that the committee's witness, Dr. David N. Rowe, who had joined the IPR around 1939, became a member of its board of trustees in 1947, the year after these grants were made, and continued to serve as a member of its board until 1950. His testimony in support of the reputation which the IPR still enjoyed "up until the late forties" has been quoted in the Rockefeller Foundation's Supplemental Statement, dated August 3, 1954, at page 11.

Joseph H. Willits.

State of New York, County of New York, ss:

Sworn to before me this 9th day of August 1954.

[Seal]

Term expires March 30, 1955.
REPORT ON INTERNATIONAL RELATIONS CLUBS WHICH ARE SPONSORED BY THE CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE

(By Felix Wittmer, Ph. D., formerly associate professor of the social studies, New Jersey State Teachers College at Montclair)

When I taught history and political science at the New Jersey State Teachers College at Montclair, I was faculty adviser of the International Relations Club for a period of about 12 or 13 years, from about 1937 to 1950. This club was and is one of a network of many hundreds, if not close to a thousand college clubs, known as International Relations Clubs, all of which are sponsored by the Carnegie Endowment for International Peace.

For most of the time when I served as faculty adviser, said club received a large amount of printed material from the Carnegie Endowment free of charge. At the beginning of each school year I had to notify the secretariat of the Carnegie Endowment regarding the number of free copies of the bulletins of the Foreign Policy Association which we required for our study groups. We were regularly supplied with various types of publications of the Foreign Policy Association, including the pamphlets known as Headline Books. In an article, Pamphlets Spread Soviet Propaganda, which appeared in the November 1952 issue of National Republic, I have analyzed the subversive character of these pamphlets.

Mrs. Vera Micheles Dean figured for many years as research director of the publications of the Foreign Policy Association. Mrs. Dean belonged among those who in 1937 signed their names in the Golden Book of American-Soviet Friendship, a memorial which appeared in the Communist-front magazine Soviet Russia Today of November 1937. According to the testimony of Walter S. Steele before the House Un-American Activities Committee on July 21, 1947, Mrs. Dean's writings figured in the Communist propaganda kit for teachers of the National Council of American-Soviet Friendship.

Mrs. Dean cooperated with the world's toughest Communist agents, such as Tsola N. Dragoicheva, of Bulgaria, and Madame Madeleine Braun, the French Communist deputy, in helping to set up the Congress of American Women, a Communist front so important in its worldwide ramifications that the House Un-American Activities Committee devoted a 114-page pamphlet to it. At one of the preliminary meetings of this Communist front Vera Micheles Dean, according to the New York Times of October 14, 1946 (p. 26), told 150 foreign and 50 American delegates to "whittle away their conceptions of national sovereignty" and to pull themselves out of the "ancient grooves of nationalism."

The Carnegie Endowment also supplied our International Relations Club with a large segment of the publications of the Institute of Pacific Relations, whose subversive character has been documented at the hearings of the McCarran committee. For a great many years the Carnegie Endowment twice a year, i. e., each semester, provided our club with about half a dozen books, free of charge. There was never any opportunity for the faculty adviser to suggest titles of conservative books which uphold the principle of competitive enterprise and individual responsibility, and which warn against close association with state-controlled nations. The Carnegie Endowment stipulated that these gift books be kept in a separate department in the college library. In the course of years our club built up a substantial IRC library comprising several shelves.

Among the books received from the Carnegie Endowment for International Peace there were publications of the American Russian Institute, such as The Soviet Union Today. The American Russian Institute has been cited as Communist by Attorney General Tom Clark. To the best of my knowledge the authors of these gift books included such stalwarts of the Communist causes as Ruth Benedict, T. A. Bisson, Evans Clark, Corliss Lamont, Owen Lattimore, Nathaniel Peffer, and Alexander Worth.

At the hearings on the Institute of Pacific Relations, which were held by the Internal Security Subcommittee of the Senate Committee on the Judiciary, from July 25, 1951, to June 20, 1952, T. A. Bisson, Corliss Lamont, and Owen Lattimore were identified under oath as Communists.

At the hearings on the Institute of Pacific Relations, which were held by the Internal Security Subcommittee of the Senate Committee on the Judiciary, from July 25, 1951, to June 20, 1952, T. A. Bisson, Corliss Lamont, and Owen Lattimore were identified under oath as Communists.

The late Ruth Benedict, along with Gene Weltfish, was coauthor of Races of Mankind, a public affairs pamphlet which was barred by the War Department following upon congressional protest. Dr. Weltfish resigned from Columbia University after she had refused to tell a congressional committee whether she was or ever had been a member of the Communist Party. Dr. Benedict has been a sponsor of American Committee for Democracy and Intellectual Freedom;
American Committee for Protection of Foreign Born; American Committee To Save Refugees; American Friends of the Chinese People; and the League of American Writers, all of which have been listed in the Guide to Subversive Organizations and Publications, which was released by the House Un-American Activities Committee on May 14, 1951. According to the Communist Party publication Daily Worker of January 6, 1944, page 3, Dr. Benedict was a lecturer at the Jefferson School of Social Science, which Attorney General Tom Clark has cited as an “adjunct of the Communist Party.”

Evans Clark, quondam director of the Twentieth Century Fund, which has supported radical, leftwing publications, along with such oldtimers of the Communist fronts as Louis Adamic, Erskine Caldwell, Henry Pratt Fairchild, Langston Hughes, Rockwell Kent, George Marshall, Maxwell S. Stewart, and Max Yergan, sponsored the Council for Pan-American Democracy, which has been cited as subversive and Communist by Attorney General Clark. He was also involved in the sponsorship of American Investors Union, Inc.; Committee for a Boycott Against Japanese Aggression; and Consumers’ National Federation, all of which are listed in the official Guide to Subversive Organizations and Publications of the House Un-American Activities Committee (82d Cong., 1st sess.). Mr. Clark also was at one time secretary to Ludwig C. K. A. Martens, the first Communist ever to be deported from our shores.

Prof. Nathaniel Peffer, of Columbia University, whose Basis for Peace in the Far East was included in the free shipments of the Carnegie Endowment, has been exposed by Ralph De Toledano, in the Gravediggers of America, part I (American Mercury, July 1951), as one of a cabal of 16 authors and book reviewers who through the media of the New York Times Book Review, the New York Herald Tribune Book Section, and the Saturday Review of Literature systematically praised pro-Communist books and discredited anti-Communist publications. In the New York Times Book Review Peffer called George Creel’s valuable Russia’s Race for Asia a foolish book. In this review he reprimanded Creel because “he fears Russia and does not like or trust the Chinese Communists.”

The Challenge of Red China, by Guenther Stein (whom a SCAP intelligence report named as a Soviet agent) was praised by Latimore in the New York Herald Tribune Book Section and by Peffer in the New York Times Book Review. In this eulogy of an all-out apologia of communism in the Far East, Columbia University’s Nathaniel Peffer said that the leaders of the Chinese Communists “are exceptionally straightforward, simple, of unquestionable integrity.”

Alexander Werth is the well-known European apologist for various Communist causes. His book, Leningrad, was sent as a gift to college clubs by the Carnegie Endowment for International Peace.

Many other books which the Carnegie Endowment sent to our college clubs as gifts, while not quite so outspokenly pro-Communist, were of the leftwing variety. Among these I would include Sir Bernard Pares, Russia and Russia and the Peace; Sumner Welles, the World of the Four Freedoms; and Henry Morgenthau, Jr., Germany Is Our Problem. I do not recall that the book gift packages of 10 to 12 publications per year ever included a single conservative or anti-Communist work.

When, in an effort to counteract the pro-Communist influence of the Carnegie Endowment I ordered some anti-Communist books for our library (including works by David J. Dallin and Freda Utley), students asked me: “Are you sure that these are trustworthy publications? If they are reliable, why is it that the Carnegie Endowment for International Peace has not included them in its gift packages?” (This, at least, was the meaning of the students’ questions.)

While faculty advisers of the International Relations Clubs corresponded with a woman secretary of the endowment, it was understood that Dr. Howard Wilson, well-known leftwing internationalist and one of the top officials of the Carnegie Endowment for International Peace, was in charge of the nationwide IRC project. Dr. Wilson was a frequent speaker at radical conferences and institutes. Thus he participated in a conference of the education committee of the National Council of American-Soviet Friendship, in New York City, along with such veteran Communist fronters as Frank E. Baker, Robert S. Lynd, and Arthur Upham Pope. Another of these education conferences of the National Council of American-Soviet Friendship, which was held at Boston, included such well-known sponsors of the Communist cause as Herbert Davis, Corliss Lamont, Prof. Dirk Struiks (who has in the meantime been dismissed from Massachusetts Institute of Technology because of his membership in the Communist Party) and the Carnegie Endowment’s Dr. Howard Wilson.
The annual regional conference of International Relations Clubs was the most widely heralded feature of this Carnegie Endowment project. The club of the New Jersey State Teachers College at Montclair belonged to the regional group of the northeastern seaboard and Canada, which to the best of my recollection included from 125 to 150 college clubs. There must have been at least 7 or 8 similar regional conferences, in other parts of the United States.

According to the detailed reports of the student-delegates of Montclair State Teachers College, a large majority of those students who attended such conferences favored the views which came close to that of the Kremlin. Students from Catholic colleges, though in the minority, were known to challenge the pro-Soviet delegates.

For many a year I made it a point to supply speaker-delegates of our college with reading material which would counterbalance the radical tendencies of publications with which the Carnegie Endowment had provided us. As a result of such tutoring the student-delegates from Montclair Teachers College regularly clashed with the majority.

Either in 1947 or in 1948, the regional conference of the northeastern section of IRC's was held on the campus of the New Jersey State Teachers College at Montclair. Our college was not the choice by vote, but substituted for another college whose facilities had become unavailable. The best our program committee could do with regard to speakers was to select known anti-Communists who were far enough to the left not to cause bedlam among the about 300 delegates who attended the 3-day conference. Dr. Harry D. Gideonse, the liberal, anti-Communist president of Brooklyn College and Prof. George S. Counts, of Columbia Teachers College, the one-time pro-Communist who had become anti-Communist, were chosen by the program committee of our college club.

It is worth mentioning that Mr. Alger Hiss, who then was president of the Carnegie Endowment for International Peace, was forced upon our club not merely as a speaker, but as the speaker of the final meeting. Having observed the activities of Mr. Hiss in the State Department for several years, including his role at the Bretton Woods Conference and the San Francisco Conference (at which the United Nations was founded), I vigorously protested to the secretary of the Carnegie Endowment against the appearance of Mr. Hiss.

I was reminded in no uncertain terms that our club, like all the other hundreds of clubs, was under the direction of the Carnegie Endowment for International peace, which had for years liberally supplied it with reading material, and which contributed funds to cover the honoraria of conference speakers. My repeated protestations were overruled by the secretary of the endowment.

It turned out that a large group of enthusiastic ladies, most of whom were members of the local chapter of the United Nations Association, flocked to our campus to hear and see in person the principal American architect of the United Nations. This United Nations group has held State-accredited summer institutes on the United Nations at the New Jersey State Teachers College at Montclair, for the past few years.

I might conclude in adding the personal note that soon after the IRC conference on our campus had taken place a group of radical leftwing students made successful efforts to infiltrate our International Relations Club by electing some officers who were hostile to my anti-Socialist-Communist views. As a result of systematic radical agitation in the club I resigned as its adviser. My successor was one Dr. Frank L. Clayton who had been granted a leave of absence to work at Columbia Teachers College as a member of the staff which developed the citizenship education project. The subversive and collectivist tendencies of said project were exposed by Frank Hughes in the Chicago Tribune of August 12–16, 1951. The project, according to the New York Times of April 20, 1953, page 27, during the first 4 years of its existence received $1,367,000 from the Carnegie Corp. of New York.

STATE OF NEW JERSEY,
County of Essex, ss:

I, Felix Wittmer, swear and affirm that I have read and am familiar with the contents of the foregoing report; and that to the best of my knowledge and belief, every statement of fact contained therein is true.

FELIX WITTMER.

Subscribed and sworn to before me this — day of August 1954.

HELEN S. MOUNTJOY,
Notary Public, State of New Jersey.
Hon. Carroll Reece,
Chairman, Special Committee To Investigate Tax Exempt Foundations,
House Office Building, Washington, D. C.

My Dear Representative Reece: Under date of July 1, 1954, a report was made to your committee by Kathryn Casey, legal analyst, purporting to summarize some of the activities of the Rockefeller Foundation and others. I have only recently seen that document for the first time. At pages 69-71 the legal analyst’s report contains references to me and my work that are erroneous. In all fairness to me they should not stand without correction. I therefore respectfully request that my attached statement should be made a part of your committee’s records, and that it be included in your printed proceedings if the above references are similarly included. In this way the committee can undo some of the injury that has been done me under its authority.

You will observe that I have made my statement under oath.

So that they too may be informed of the facts, I am sending copies of this letter and the attached statement to your colleagues on the special committee, as well as to the committee’s general counsel and research director.

Very truly yours,

WALTER GELHORN,
Professor of Law.

STATEMENT OF WALTER GELHORN BEFORE THE SPECIAL COMMITTEE TO INVESTIGATE TAX EXEMPT FOUNDATIONS, HOUSE OF REPRESENTATIVES, 83D CONGRESS

The following statement is made for the consideration of the Special Committee To Investigate Tax Exempt Foundations of the 83d Congress. I am moved to make it because erroneous information concerning me has been given to the committee, appearing at pages 69-71 of the (mimeographed) report by Kathryn Casey, legal analyst, under date of July 1, 1954. At no time was an effort made on the committee’s behalf to verify the report’s contents by interviewing or interrogating me. I should like to stress that the statement I am now presenting to the committee is made upon my own initiative and, moreover, is made under solemn oath.

My name is Walter Gelhorn. I am now and for 21 years have been a professor in the Law School of Columbia University. I am a member of the bar of New York. I reside at 186 East Palisade Avenue, Englewood, N. J.

1. The central question toward which the legal analyst’s attention was apparently addressed was whether I am an objective scholar and thus qualified to participate in an analysis of governmental security and loyalty programs, as part of the Cornell studies in civil liberty supported by the Rockefeller Foundation. As bearing on this question the legal analyst sets forth 5 brief paragraphs purporting to characterize or synopsise the extensive materials set forth in my 300-page book, Security, Loyalty, and Science. Inevitably this involves quotation out of context, incompleteness, and distortion.

A fairer impression of my volume may be derived from its evaluation by the many reviewers who appraised it in professional as well as popular publications. From the large number at hand, I shall quote only from a few by commentators who are, I am sure, well known to and much respected by this committee.

President James R. Killian, Jr., Massachusetts Institute of Technology (in Yale Review): “This is by all odds the best-informed, the most objective, and the most thorough study yet to appear of the effects of military secrecy and loyalty tests on scientific progress in America. * * *”

Professor Jay Murphy, University of Alabama (in Vanderbilt Law Review): “In the most objective manner conceivable and with real scholarship, Professor Gelhorn has examined the laws and policies of the Federal Government * * * Professor Gelhorn has written this book in a manner which other scholars may emulate. He has conducted exhaustive, often firsthand, studies of the places, persons, and methods involved. There is restraint in his orderly analysis. He has not destroyed without creating. The book is a real contribution * * *”
President L. A. Du Bridge, California Institute of Technology (in Standford Law Review): “This is a desperately needed and most valuable book. In it the thoughtful American will find a cool and unbiased appraisal of the issues * * * The more it [the book] can be read and understood by laymen—lawyers, newspaper editors, Congressmen, and the public at large—the greater will be our hope that we can achieve military security without unnecessary sacrifice of the democratic principles which our military power is intended to preserve.”

Rear Adm. Roger W. Paine, United States Navy (retired) (in Naval Institute Proceedings): “Any officer of the Defense Department presently or likely to be assigned to duty where he must participate in the administration of the laws and executive orders devised to safeguard military secrecy or national security, should have this book in his background. * * * The author * * * is satisfactorily objective in his approach to this highly controversial problem.”

Professor W. Mansfield Cooper, University of Manchester, England (in The Political Quarterly): “The present writer, whose interest derives not from any knowledge of science but from having met some of these problems in university administration, has found it [the book] fascinating and has laid it down with an increased faith in the American people. And it is a measure of Professor Gellhorn’s achievement that, criticizing certain practices in his own country, he yet induces in a foreigner a greater respect for it.”

I shall not burden this statement with further excerpts from the reviews, but I should add that in 1952 the first presentation of the Goldsmith memorial award was made to Security, Loyalty, and Science; the award is made annually “for the best article, book, or public pronouncement which contributes to the clarification of the right relations between science and politics.”

These reactions to my work by recognized authorities should adequately refute any insinuation that I am not a qualified and objective scholar. It is unnecessary, however, to rest upon one book alone. My writings extend over a period of 25 years. One of my books is more widely used than any other in the teaching of administrative law in American law schools. In 1946 Harvard University awarded me its Henderson memorial prize for work done in that field. Within the years immediately past I have been invited to lecture at leading universities not only in this country, but in Great Britain, Japan, New Zealand, and Western Germany. In 1952 Amherst College conferred on me the degree of doctor of humane letters, the citation that accompanied this honor referring among other things to the “wide recognition” accorded my “judicious examination of the problem of whether and how liberty and security may be combined in the field of scientific research.” In 1953, I was unanimously elected a member of the executive committee of the Association of American Law Schools. I have directed the research of the New York Law Society. The section of judicial administration of the American Bar Association, under the chairmanship of Judge Harold R. Medina, requested my direction of a study of the functioning of courts in the New York metropolitan area.

These are not the sorts of distinctions that come to a scholar whose work is infected by bias.

Moreover, in the community where most of my professional life has been lived and where there has therefore been the most sustained knowledge of all my activities, the derogatory appraisal suggested by your legal analyst is directly repudiated. Two years ago the Association of the Bar of the City of New York, widely regarded as the leading legal association of the Nation, requested me to conduct in its behalf an extensive study of the administration of laws affecting families and children. The results of that study have been supported and endorsed by the bar association, and have been praised in the editorial columns of the newspapers. They have recently been published by Dodd, Mead & Co., in a volume entitled “Children and Families in the Courts of New York City.”

This record of scholarly integrity should not be impugned by uninformed comment.

2. The Legal Analyst asserts (mimeographed p. 70) that in the Harvard Law Review of October 1947 I published an article “specifically defending the Southern Conference for Human Welfare, exposed as a Communist organization, and violently attacking the House committee.”

The actual facts demonstrate beyond question the inaccuracy of the allegations.
At the very outset of the Harvard article to which reference is made (Report on a Report of the House Committee on Un-American Activities, 60 Harvard Law Review 1193), I stated that the author does not "propose to serve in the role of defense counsel, as it were, for the southern conference. He is not connected with the conference, has no authorization to speak for it, and has access to no special body of knowledge about its activities." And again, at the end of the article, I repeated that I "disclaimed any intent to appraise the Southern Conference for Human Welfare." These unequivocal and unmodified statements adequately show that I was not "specifically defending" the southern conference.

As for the alleged "violent attack" upon the House committee, I did no more than examine its own report in order to analyze the techniques used in that particular instance. I found—and demonstrated by precise citation of chapter and verse—that those techniques had in that case included partial and misleading quotations out of context, the repetition of unverified charges that would have been dispelled by even a cursory inquiry, the loose and damaging characterization of persons of good standing, the ignoring of relevant information that, if recorded, would have affected the opinion of fairminded men, and insensitivity to a cherished American value, the preservation of an individual's reputation against unfair attack. I did indeed severely criticize those techniques. They deserve condemnation when used by or in behalf of any committee of the Congress.

3. The Legal Analyst says (mimeographed p. 70) that I am cited as an "active leader" of the National Lawyers Guild.

The simple fact is that I have not even been a member of the National Lawyers Guild for a number of years, and that during the period of my membership I was not prominent enough in its affairs to be deemed an "active leader." I doubt that activity in the guild could properly be regarded as reprehensible, in and of itself, without reference to what the activity was; but in any event I was, on the whole, an inactive rather than an active member, and am no longer a member of any sort.

4. The Legal Analyst reports (mimeographed p. 69) that I am "listed in appendix IX, page 471, as a 'conscious propagandist and fellow traveler.'"

A word needs to be said about the appendix IX upon which this statement so directly leans.

The Legislative Reference Service of the Library of Congress informs me that appendix IX, with its cumulative index, was prepared late in 1944 by a subcommittee of the old Dies committee, and fills seven volumes containing 2,166 pages. A large number of copies of the report were printed. But, continues the letter to me from the Director of the Legislative Reference Service, "When the report was brought to the attention of the full committee it was ordered restricted and the existing copies were destroyed. A number of copies were distributed by the Government Printing Office to subscribers before the distribution was cancelled by the committee."

The conclusion seems inescapable that appendix IX was found unacceptable by the very committee to which it was presented—and very possibly for the precise reason that it contained just such unsubstantiated comments as the one referred to by your staff member.

Here again the facts are quite clear. The characterization of me by some unidentified person in appendix IX is in connection with a little known travel organization, Open Road, Inc., of which I was a director in 1929-31. My sworn testimony concerning this organization was freely given before this special committee's predecessor, the Cox committee, and appears at pages 738-739 of the hearings conducted by that committee in 1952 pursuant to H. Res. 561. Suffice it now to say that I was 23 and 24 years old at the time of my association with the Open Road; that I was then a student in law school; and that I resigned from it when in 1931 I left New York to become law secretary to Supreme Court Justice Harlan Fiske Stone and, later during the Hoover administration, an attorney in the Office of the Solicitor General under Judge Thomas D. Thacher.

The Open Road, as my earlier recorded testimony shows, was a purely educational and nonpolitical organization devoted to facilitating travel abroad. Its chief sponsors were distinguished college presidents such as Farrand of Cornell, Garfield of Williams, and MacCracken of Vassar. It became defunct, some years after I had terminated my relationship with it, because wartime conditions from 1939 onward made travel impossible. As I observed before the Cox committee, "All I can say about the organization is that certainly during the years of my association with it, it had no political orientation or motivation what-
The worst that can be said about the young people who were interested in that organization, as I was at that time, is that they entertained the perhaps naive belief that the world would be a friendlier place if its inhabitants became a little better acquainted.

This is the setting of the charge that, at the age of 23 and while busily engaged in professional studies, I was a "conscious propagandist" and "fellow-traveler" in the Open Road, Inc., immediately before becoming the confidential assistant of a Supreme Court Justice.

5. The Legal Analyst remarks (mimeographed p. 70) that on March 15, 1948, the Daily Worker quoted from an article by me concerning the House Committee on Un-American Activities.

The plain fact is that I wrote an article entitled "In Defense of American Activities" upon the invitation of the American Scholar, in which it appeared in the spring of 1948. The American Scholar is a quarterly journal published by Phi Beta Kappa. Subsequent references to the article, whether by the Daily Worker or by others, are not within the author's control. Since the entire article is available in the pages of one of the most respected of all American magazines, I suggest that it be read in full. It cannot be characterized, as the staff report attempted to do, by lifting two noncontextual quotations from a notably unreliable secondary source.

6. The Legal Analyst correctly states (mimeographed p. 69) that I was at one time a national committeeman of the International Juridical Association, but wrongly implies that an impropriety lurks in that fact.

This association went out of existence some 12 years ago. It was a nonprofit organization. Throughout my connection with it of about 5 years, it was so far as I know devoted exclusively to legal research with particular emphasis upon labor law and civil liberties. Its primary function was the publication of a monthly bulletin, which appeared in 11 volumes. The bulletin, as examination of these volumes will show, was a legal periodical devoted to reporting, analyzing, and discussing decisions of the courts and administrative bodies and the actions of the executive and legislative branches of Government. It had widespread recognition as a scholarly journal and as a source of otherwise unreported legal material. Among its subscribers were the Library of the Supreme Court, the Library of the Department of Justice, 28 State supreme court libraries, various court and bar association libraries, and the libraries of every major university in the United States. My interest in the IJA was an interest in its bulletin, related to my academic duties.

7. The Legal Analyst asserts (mimeographed p. 69) that I "was a leading member of some 11 Communist fronts."

This statement is unsupported by factual specifications. It is not true. Not even a superficial inquiry was directed to me to ascertain its accuracy. I repel the allegation with indignation and with a sense of outrage that, under your committee's authority, a charge of this nature has been published.

8. The Legal Analyst describes me as "apparently actually the director of the Cornell Studies in Civil Liberties (mimeographed p. 69) and as "coauthor of a study on States and Subversion (with William B. Prendergast, assistant professor of government at the Naval Academy), and of a study on the Tenney Committee (with Edward Barrett, Jr., professor of law, University of California * * *)" (mimeographed p. 71).

Obviously there is nothing derogatory to me in these particular remarks. I set them forth here only because they reveal how easily error can creep into a report untested by the scrutiny of one who knows the facts.

The director of the Cornell studies is and was at all times Prof. Robert E. Cushman of Cornell, one of America's most distinguished political scientists. The studies were initiated under his direction before my association with the project, and they have continued under his direction long after I had completed my portion of them. I am proud to have been a part of the project, but at no time and in no manner was I either "apparently" or "actually" its director. There is not the slightest basis for a contrary statement.

As for the States and Subversion, I was coauthor not merely with Professor Prendergast, but with five others as well, and was in addition the editor of this volume. As for the Tenney Committee, I was in no sense coauthor; Professor Barrett alone deserves the credit for that able volume. I emphasize these simple facts not because they have importance in themselves, but because misstatements in matters that are so readily subject to verification tend to emphasize the unreliability of other observations as well.
In closing this statement I desire to add only this: I have held responsible posts in three national administrations; my professional career has had its share of distinctions; the university of whose faculty I have been a member for 21 years has reposed a confidence in me that is not extended to one whose probity as a man or as a scholar is suspect. Half a dozen inaccurate paragraphs in a staff report are a poor offset against the whole record of my adult life.

WALTER GELLHORN.

Dated September 1, 1954.

STATE OF NEW YORK,
County of New York, ss:

Walter Gellhorn, being duly sworn, says that he is the individual who prepared the foregoing statement and in whose behalf it is made; and that the statement is true to the best of his knowledge, information, and belief.

WALTER GELLHORN.

Subscribed and sworn to before me this 1st day of September 1954.

CECELIA SCHLESINGER.

CORRESPONDENCE WITH DR. MORTIMER GRAVES, EXECUTIVE DIRECTOR, AMERICAN COUNCIL OF LEARNED SOCIETIES

AUGUST 19, 1954.

Dr. MORTIMER GRAVES,
American Council of Learned Societies,
Washington, D. C.

DEAR DR. GRAVES: The committee had intended to ask certain questions of you about the time of your scheduled appearance before it and since, in line with the resolution of the committee, no further public hearings will be held, it becomes necessary to raise those questions through correspondence and request that your answers be furnished in affidavit form.

The particular information desired concerns the statements which have been made to the committee and which for convenience in answering, I will list seriatim below:

1. According to the biography appearing in the 1948-49 issue of Who's Who, you stated that you were a member of the board of directors of the American Russian Institute and chairman of the Washington Committee To Aid China. Are you now or have you been connected with either the institute or the committee, and, if so, during what period?

2. In the Washington Post of May 11, 1942, page 9, your name appeared as a sponsor of the Citizens Committee To Free Earl Browder. Were you a sponsor of the committee?

3. Were you a sponsor of the National Council, American-Soviet Friendship?

4. Your name is listed as one of the signers of an open letter, referred to in the September 1939 issue of Soviet Russia Today, which urged closer cooperation with the Soviet Union. Is that a fact?

5. We are informed that in February 1941, you presided at a meeting of the Washington Committee To Aid China, at which the two principal speakers were Owen Lattimore and Frederick Vanderbilt Field. Is that a fact?

6. We are informed that following the arrest of John Stewart Service in June 1945, you were treasurer of a voluntary committee soliciting funds for his defense. Is this a fact?

7. We are informed that you have now or have had in your employ, or the employ of the American Council of Learned Societies, a man named Emanuel Larson. Is this a fact? Did Mr. Larson receive a fellowship from the American Council of Learned Societies?

8. Did Andrew Ross receive a fellowship from the American Council of Learned Societies? Are you acquainted with Mr. Ross?

9. The committee is informed that you at one time maintained files on numerous students of the Far East and on persons given grants and engaged in research as Far Eastern specialists. Is this a fact? Are these files still available and, if not, what disposition was made of them? If they are intact, the committee desires to see them.

10. Did you at any time keep a roster of the scientific and specialized personnel for the use of various Government agencies or for any other use?
11. The Reporter for April 29, 1952, contains the following statement at page 22:

"The personnel selected for Government agencies in the Far East was picked from a roster of 'Experts' made up by the Council of Learned Societies under the direction of Mortimer Graves."

Is this an accurate statement? If so, please attach a list of the persons named by you in this list.

12. Are you acquainted with any of the following individuals?

William Walter Remington
George Shaw Wheeler
Maurice Halperin
Luke I. Wilson
Mary Jane Keeney
Owen Lattimore
Robert Selberstein
Antoli Gromov
Harriet Moore (Gelfan)
Joseph Fels Barnes
Kathleen Barnes.

13. You are shown as a vice chairman and trustee of the Institute of Pacific Relations in Who's Who from 1942 to 1848. Please name the persons, directly or indirectly, concerned with the institute with whom you had contact with regard to the activities of the institute, or with regard to Far Eastern matters.

14. Was your connection with the institute terminated by resignation or by expiration of a specific term of office? If the resignation was at the suggestion of some other party, please identify fully. If the resignation was your own decision, please give the reasons therefor.

As I stated in the opening paragraph of this letter, your answers should be either in affidavit form or should have the same attestation clause which was requested in connection with the statement you filed with the committee earlier. I shall appreciate it if you will submit an original and five copies of this affidavit.

Sincerely yours,

RENE A. WORMSER, General Counsel.

AMERICAN COUNCIL OF LEARNED SOCIETIES,
Washington 6, D. C., November 1, 1954.

Mr. RENÉ A. WORMSER,
General Counsel, Select Committee To Investigate Tax Exempt Foundations,
House of Representatives,
Washington, D. C.

DEAR MR. WORMSER: I am enclosing the master of the replies to the questions which you have asked of me; the copies which you requested will be sent you as soon as they come from the machines. The lists of persons requested, and mentioned on page 10 of my replies, will reach you at the same time.

I regret what may seem to you a delay in submitting these materials, but the exigencies of a full-time job and the fact that I could not recall the details of these minor episodes of years ago in an active life made impossible an earlier reply which might be useful.

Sincerely yours,

MORTIMER GRAVES,
Executive Director.

REPLIES BY MORTIMER GRAVES TO QUESTIONS IN THE LETTER OF RENÉ A. WORMSER OF AUGUST 23, 1954

1. According to the biography appearing in the 1948–49 issue of Who's Who, you stated that you were a member of the board of directors of the American Russian Institute and chairman of the Washington Committee To Aid China. Are you now or have you been connected with either the institute or the committee and, if so, during what period?

1. (a) The American Russian Institute of New York was founded in the early 1930's and continued until 1950. I was a member of the board of directors of the institute from about 1938 until its dissolution, during which time the principal purpose of the institute was the establishment and maintenance of a library
of contemporary Russian materials in various scholarly fields for the use of American students of Soviet affairs.

During the time I was a director of the institute I did not attend directors' meetings, since they were held in New York, while I was kept by my work in Washington for the most part. I was notified of forthcoming meetings and of the subjects to be discussed at them. Whenever items on the agenda were of special professional interest to me, in that they concerned the humanities, I transmitted my views in writing to the board.

Sometime after the issuance of the President's loyalty order in 1947, it was rumored that the institute was listed on the Attorney General's list of "subversive" organizations, and after discussion among the directors, the then chairman of the board, Mr. Ernest Ropes, formerly of the Russian Division of the Department of Commerce, consulted Attorney General Tom Clark about the matter. Thereafter, Mr. Ropes informed the directors that he had received a written assurance from the Attorney General that the institute was not listed. I am under the impression that this entire episode arose because of confusion between the American Russian Institute of New York with which I was associated, and the American Russian Institute of San Francisco which was in no way connected with the New York organization.

In the late 1940's Columbia University established a Russian Institute which began to collect published materials about Soviet Russia. In my opinion this accomplished the main task of the American Russian Institute much more effectively than that organization could do. As a consequence of this my interest in the American Russian Institute declined and I requested several times that I not be reelected to the board. My requests were ignored and I continued to be reelected in absentia until the dissolution of the organization.

(b) The Washington Committee for Aid to China was a local group in the District of Columbia which protested and carried on agitation against the shipment of oil, scrap iron, and other strategic materials to Japan as a part of an attempt to influence the Government of the United States, in the years prior to World War II, in support of Chiang Kai-shek and the Government of China and against the Japanese Government which was at war with Chiang. The wisdom of the course supported by the committee was fully confirmed by later events.

The committee was founded in 1938. I became associated with it in early 1939 and was its chairman from late in that year until the committee dissolved about the time of the outbreak of World War II. The declaration of war eliminated the need for the committee and, so far as I know, it has had no subsequent existence. At any rate, I have had no subsequent connection with it.

The operations of this committee were carried on through meetings, some large and some small, which were addressed by persons with special experience or knowledge of Far Eastern affairs and who were generally sympathetic to the committee program outlined above. Among those who addressed meetings of the committee were Congressman Judd, then recently returned from service as a medical missionary in China, former Ambassador William Dodd, Paul Yu Pin, the Roman Catholic Bishop of China, Mr. Owen Lattimore, Mr. Frederick V. Field, Mr. Evans Carlson, and others. I have no present recollection of any of the dates of the meetings at which these individuals spoke.

2. In the Washington Post of May 11, 1942, page 9, your name appeared as a sponsor of the Citizens Committee To Free Earl Browder. Were you a sponsor of the committee?

2. On or about May 11, 1942, I was requested to and did sign an appeal to the President of the United States to grant clemency to Earl Browder, who was then serving a 4-year prison sentence which I and others thought was excessive for a minor violation of the passport laws. Beyond signing the appeal with knowledge that it was to be used as the basis of a newspaper advertisement, I had no connection by way of sponsorship or membership with any such committee.

3. Were you a sponsor of the National Council, American-Soviet Friendship?

3. I cannot now recollect whether or not I was ever a sponsor of the National Council for American-Soviet Friendship. As I recall, this council was organized in the early 1930's, shortly after our Government recognized the Soviet Union, with the purpose of making a sincere effort to see whether normal cultural relations were possible with that country. At that time, I was sympathetic with that goal, which was indeed the declared policy of the United States Government.
4. Your name is listed as one of the signers of an open letter, referred to in the September 1939 issue of Soviet Russia Today, which urged closer cooperation with the Soviet Union. Is that a fact?

4. Toward the end of the summer of 1939, I signed a letter urging closer cooperation between the Western democracies and the Soviet Union as a means of combating the menace of Hitler and Japan. Although most of the public attention given to this letter has been in connection with the reference to it in the September 1939 issue of Soviet Russia Today, the letter was signed by me well before the announcement of the Hitler-Stalin pact of August 21, 1939, and, according to testimony given before the Senate Internal Security Subcommittee in 1952, the letter in question was first released to the public on August 14, 1939.

5. We are informed that in February 1941, you presided at a meeting of the Washington Committee To Aid China, at which the two principal speakers were Owen Lattimore and Frederick Vanderbilt Field. Is that a fact?

5. See paragraph 1 (b).

6. We are informed that following the arrest of John Stewart Service in June 1945, you were treasurer of a voluntary committee soliciting funds for his defense. Is this a fact?

6. In June 1945, Mr. Service and five other individuals were publicly accused of unauthorized use of classified material in connection with the magazine Americas. On the day that this news was released I happened to be at lunch with a group of people interested in China who knew Mr. Service more or less well. All of us believed him to be innocent of any unlawful activity, a belief supported by his ultimate complete clearance. In the course of our luncheon conversation, it was suggested that Mr. Service would need funds for the conduct of his defense. In the informal discussion that followed, each of the people at luncheon agreed to contribute $50 and to speak to others in an effort to accumulate a fund of perhaps $1,000 to be turned over to Mr. Service for this purpose. For some reason it was suggested that the money should be forwarded to Mr. Service through me. The luncheon, so far as I know, was not called or arranged with this purpose in mind.

Thereafter several checks were mailed to me. I made a contribution of $50 from my own pocket but did not solicit any one else. When the sum amounted to $500, I turned it over to Mr. Service. Later an additional sum came in of perhaps $200 or $250 which I offered to Mr. Service but which he refused to accept. The money was returned to the donors.

7. We are informed that you have now or have had in your employ, or the employ of the American Council of Learned Societies, a man named Emanuel Larson. Is this a fact? Did Mr. Larson receive a fellowship from the American Council of Learned Societies?

7. Mr. Emanuel Larsen was 1 of 22 individuals to whom the American Council of Learned Societies granted study aids to attend a summer session on far eastern studies inaugurated by Columbia University from June 8 to August 16, 1935. The total amount divided among the 22 students was $1,200. From September 1 to November 30, 1935, Mr. Larson worked at the Library of Congress in the center for Far Eastern studies. His activities were in connection with a project carried out by the Library of Congress, but sponsored in its early stages by the council. The project was the preparation of a biographical dictionary of the eminent Chinese of the Ching Dynasty which was subsequently published by the Library of Congress and printed by the Government Printing Office. As a part of its sponsorship of this project the council made grants to a number of those working on it, among them Mr. Larsen, who received a stipend of $400 from the council on this account.

From June through October 1945, Mr. Larsen worked temporarily on an hourly basis in the office of the council for its committee on far eastern studies. He was paid at the rate of $1 per hour and his total remuneration for this period, according to the council's records, came to $650.

At no other time has Mr. Larson been employed by the council or has he received any council funds by way of fellowship or other grant in aid.

8. Did Andrew Ross receive a fellowship from the American Council of Learned Societies? Are you acquainted with Mr. Ross?

8. Mr. Andrew Ross never received any grant from the council, nor am I able to place him in any way.

It occurred to me that the object of the committee's interest might be Mr. Andrew Roth and I caused the council's files to be searched in regard to him.
I find that the council never awarded any grant to Mr. Andrew Roth. Our records show that in 1940-41 he made application for a $200 grant which was rejected.

9. The committee is informed that you at one time maintained files on numerous students of the Far East on persons given grants and engaged in research as Far Eastern specialists.
   (a) Is this true?
   (b) Are these files still in existence?
   (c) If not, what disposition was made of them, at what time?
   (d) If they are still in existence the committee desires to see them.

9. The statement submitted to your committee by the council on July 21, 1954, under the heading "The Problem of Highly Trained and Specialized Personnel" (p. 10 of the mimeographed statement) describes the nature and character of the information on Far Eastern specialists which in the past was contained in the council files. For the period from about 1935 to the middle of the war these were by far the best files in existence on the professional qualifications of persons in academic life with special competence on Far Eastern subjects. Of course, since the council's interest is mainly in academic fields, these files were deficient with regard to persons outside the academic sphere—businessmen, missionaries, diplomats and the like—with Far Eastern training and experience.

During the war a national roster of scientific and specialized personnel was developed by the Federal Government. In addition the Ethnogeographic Board, located in the Smithsonian Institution and financed by the Rockefeller Foundation, prepared a list of area specialists for use of various Government departments. Much of the material which had been in the council files was included in these compilations which supplied the need for complete and centralized information about such personnel more effectively than the more or less haphazard activity of the council. As a result the council files gradually disintegrated and got out of date during the wartime period. After the war, the council made some effort to rejuvenate them, but it was generally unsuccessful. A remnant of these files still remains in the council's office. They have always been open to any organization, including Government agencies, looking for people with special competence in the area covered by the files. Consequently the committee is free to examine what is left of them at any time.

Information with respect to the council's activities in this field since 1949 is contained in paragraph 10 below.

10. (a) Did you at any time keep a roster of scientific and specialized personnel for the use of any other Government agency in any other area or for any other use?
   (b) Are such files still in existence?
   (c) If not, what disposition was made of them, at what time?
   (d) If they are still in existence the committee desires to see them.

10. Prior to 1949, the council, from time to time, for specific and limited purposes related to its own activities, gathered information about the professional qualifications of persons with special competence in such fields as Byzantine studies, Slavic studies, American studies, musicology, Indic studies, near eastern studies, and the like. These collections were of only temporary value, and are no longer in existence.

Since 1949 we have collected information of this kind in connection with the national registration in the humanities and social sciences. The character of that registration and the work on it is described fully in the statement submitted by the council to the committee on July 21, 1954, both under the heading, "The Problem of Highly Trained and Specialized Personnel," and on pages 17 and 18 of the mimeographed version of the statement. The committee is at liberty to examine the files, in which such information is recorded on IBM cards.

11. (a) If such a roster was maintained, what use was made of it?
   (b) To what Government agencies were names suggested?
   (c) Were names suggested to any other agencies, or to individuals? If so, please name all such agencies or individuals.
   (d) Who compiled such lists?
   (e) Were they requested by someone outside the Council of Learned Societies? If so, please explain fully the circumstances.
   (f) If the names were suggested spontaneously by the council without prior request by the person or agency to whom given, how was the decision to do so arrived at by the council?
The general purposes served by the national registration of the humanities and social sciences and the council's practices in regard to requests for information about personnel contained in the registration is described in the council's statement to the committee of July 21, 1954. The registration has been open to the inspection of Government agencies or any other employer. The Division of Exchange of Persons of the Department of State and the Division of External Research of the Department of State have made use of the information contained in the registration in this way: viz., members of these divisions visited the council's offices and the workings of the filing system were explained to them. These representatives went through the files themselves and made their own selections of names for them. Officers of the council were neither concerned with nor consulted about the use that was made of these names, if any. The only information of this character supplied by the council to the Department of the Army related to one historian, and was given as illustrative of the type of information available in the national registration upon request.

The following private agencies have received information from the registration on or about the dates indicated in regard to the types of specialized personnel indicated below.

June 1954: Johns Hopkins University, instructor of French literature.
June 1954: Reed College, Instructor of philosophy.
May 1954: University of Minnesota, teacher of Scandinavian history.
April 1954: Lewis W. and Maud Hill Family Foundation, director for St. Paul Council of Arts and Sciences.
January 1954: Rice Institute, instructor of modern European history.
November 1953: University of Rochester, senior economist, international economics.
March 1953: Board on Overseas Training and Research (Ford Foundation), political scientists with experience in Turkey, Iran, India, and southeast Asia.

In each of these cases the council was requested to supply the information. It was compiled under the supervision of Mr. J. F. Wellemeyer, Jr., staff adviser on personnel studies, on the basis of IBM cards containing in code the responses to questionnaire submitted by persons with specialized training. The names of persons as to whom information was submitted to the foregoing groups are attached in triplicate as requested.

The council is a member of the Conference Board Committee on International Exchange of Persons, which participates in the selection of recipients of Fulbright awards. In this connection the registration has been used on several occasions to develop lists of persons for the use of the council's representative on the conference board committee.

12. The Reporter for April 29, 1952, contains the following statement at page 22:

"The personnel selected for Government agencies in the Far East was picked from a roster of 'experts' made up by the Council of Learned Societies under the direction of Mortimer Graves."

Is this an accurate statement?

12. The full text of the quotation to which you refer is as follows:

"[Mr. Kohlberg's] thesis, a simple one, he has summed up substantially as follows, to the student previously quoted:

"'There is a great conspiracy aimed at the destruction of the United States. Its method is to say "Europe first" in order to throw away Asia, then to do something about Asia only after it is too late, thus throwing away Europe as well. (Kohlberg does not appear to consider that the Asia Firsters could, with equal justice, be accused of the same strategy in reverse.) Recruiting for the great conspiracy has been going on for years. Its main tools are Communist ideology and heavy bribes; $20 million a year is spent on buying members and operating the ring, says Mr. Kohlberg with conviction. During the Second World War the great conspiracy worked to deliver Asia to Russia. The personnel selected for Government agencies in the Far East was picked from a roster of "experts" made up by the Council of Learned Societies under the direction of Mortimer Graves.'"
I need not point out that the statement you quoted is not asserted by the Reporter magazine to be a fact; it is asserted to be Mr. Alfred Kohlberg's version of the facts. I have no firsthand knowledge as to how the personnel for Government agencies in the Far East was selected, hence I cannot vouch for the truth or falsity of the statement quoted. My belief is that it is nonsense.

13. Are you acquainted with any of the following individuals?

William Walter Remington
George Shaw Wheeler
Maurice Halperin
Luke I. Wilson
Mary Jane Keeney
Owen Lattimore
Robert Selberstein
Antoli Gromov
Harriet Moore (Gelfan)
Joseph Fels Barnes
Kathleen Barnes

A George Wheeler (middle name unknown) was active in the Washington Committee for Aid to China in 1939-41 (see paragraph 1 (b)), and I knew him in that connection. I would not recognize him if I met him on the street today.

In 1945 or 1946 a committee on world area studies was set up by the American Council of Learned Societies and the Social Science Research Council. I was a member of that committee as was Mr. Maurice Halperin. I attended only one meeting of the committee and at that meeting I met Mr. Halperin. I have not seen him since and I would not recognize him if I met him on the street today.

I have never met Mr. Luke I. Wilson. While I was in the Near East in 1948-49, a Washington real-estate agency (Gilliat of Georgetown) rented my house to a Mrs. Luke Wilson. I met her only once, upon my return, as she was taking the last of her belongings from my house. I do not know whether her husband lived with her in the house, or, indeed, whether she had one or not at the time. At any rate, I never met him.

I have met Mrs. Mary Jane Keeney, perhaps 3 or 4 times at gatherings concerned with the Far East. Most of these meetings were from 10 to a dozen years ago, and the last such meeting was at least 6 or 7 years ago. I do not think I would recognize her if I met her on the street today.

I first met Owen Lattimore many years ago when we were brought together by our common interest in matters connected with the Far East. As he is one of the most eminent scholars concerned with the Far East, it was inevitable that I should meet Mr. Lattimore very early in the course of my own work for the council in stimulating interest in Far Eastern studies in American institutions of higher learning. Drawn together by this common interest, we became close friends and have remained so for perhaps 25 years.

I have never heard of Robert Selberstein or Antoli Gromov.

I met Harriet Moore, Joseph F. Barnes, and Kathleen Barnes several times from 10 to 12 years ago. The meetings were in connection with my duties as trustee of the Institute of Pacific Relations and were of the character described in paragraph 14 below. I have not seen any of these persons since my term as trustee of the Institute of Pacific Relations expired in 1948.

14. You are shown as vice chairman and trustee of the Institute of Pacific Relations in Who's Who from 1942 to 1948. Please name the persons, directly or indirectly, concerned with the institute with whom you had contact with regard to the activities of the institute, or with regard to policy or recommendations in Far Eastern matters.

14. I was a vice chairman and trustee of the Institute of Pacific Relations from 1942 to 1948. The activities of the Institute were primarily directed toward the fields of economics, politics, and social sciences in the Far East. I considered my function on the board to be that of stimulating greater interest in the part of the institute in the Far Eastern cultural activities and the humanities with which the council is principally concerned, as explained in the statement filed with your committee on July 21, 1954. So far as I know, I was appointed trustee of the institute for this reason and was regarded in this light by my fellow trustees and by the staff of the institute. When I had occasion to discuss the question of institute activity and policies along the lines described above I did so with my fellow trustees and with members of the staff of the organization, principally Mr. E. C. Carter and Mr. William L. Holland.
TAX-EXEMPT FOUNDATIONS

15. Was your connection with the institute terminated by resignation or by expiration of a specific term of office? If the resignation was at the suggestion of some other party please identify fully. If the resignation was your own decision, please give the reasons therefor.

15. When my term of office expired I requested that I not be renominated. I did this because I think one ought not to occupy a post of this character for more than 4 or 5 years. I am still a dues-paying member of the American Institute of Pacific Relations.

VERIFICATION

DISTRICT OF COLUMBIA,
City of Washington, ss:

I, Mortimer Graves, swear and affirm that I am executive director of the American Council of Learned Societies; that I have read and am familiar with the contents of the foregoing statement; and that to the best of my knowledge and belief every statement of fact contained therein is true.

Mortimer Graves,
Executive Director, American Council of Learned Societies.

Subscribed and sworn to before me this 1st day of November 1954. My commission expires November 1, 1955.

Mary E. Noel, Notary Public.
